THIS tasteful volume is, we understand, the production of Mr. Emerson Tennent, M.P. for Belfast, and portions of it have already appeared in the columns of the *Ulster Times*. It contains the records of a tour in the south of Ireland during the summer of last year. It is written in a particularly lively and attractive style, and, without any pretensions to laborious investigation or profound reflection, either moral or political, presents such notes and observations of his travel, as a man of taste and information can, without any great effort, render instructive and amusing, even in the most hurried excursion through an interesting country. The author observes, in his Preface, that the letters which form the volume "were despatched every evening to the post, whilst his thoughts were still occupied with the scenes and impressions of the day to which they refer, without correction or finish; and that they go to the press as they thus came from the pen." "I do not pretend to describe," he adds, "what I have seen, but merely to point out to others, who are so disposed, what they may see for themselves: and, above all, to suggest to those who are on the wing for some distant excursion; that there are some things worth a visit at home." From our perusal of the volume we are disposed to believe that this statement is literally correct. The scenes are evidently coloured on the spot, "and the remarks struck off at a heat," at the very moment of their suggestion. The author's tour extends through the most picturesque portions of the counties of Antrim, Down, Louth, Meath, Dublin, Kildare, Carlow, Kilkenny, Tipperary, Cork, Waterford, Kerry (including Killarney), Limerick, Clare, Galway, Westmeath, Longford, Cavan, Monaghan, and Armagh; and we have no hesitation in pronouncing his "Letters" to be one of the best manuals we have met with to direct the attention of any traveller, who designs visiting Ireland, to the most interesting and remarkable scenes which he ought to seek for in his route.

As an appropriate commencement, we shall extract, as a specimen of Mr. Tennent's lively style, his account of that singular vehicle, an Irish post-chaise.

"In all the provincial towns in Ireland, one of the most important objects is the post-chaise of the 'head inn,' as the best hotel is usually called. Its 'goings out and its comings in' are matters of record, and materials for history to the inhabitants—subjects of deep speculation, before the nature of the expedition is ascertained, and of most interesting gossip and discussion, after its occupants and destination have been officially made public. With this important vehicle are associated all the reminiscences of those intelligent remembrancers, 'the oldest inhabitants,' and its slightest movements are the wonder and delight of all the urchins of the village. Like Wordsworth's ancient beggar, who was so aged that people wondered if he ever could have been young, the genuine Irish post-chaise is always found so much worn

out, that we almost doubt whether it ever could have been new. But even this apparent imperfection of its nature, is a vast advantage to the household servants of its immediate proprietor; for its endless craving for repairs affords constant employment for every vacant hour, and any idler who would plead in his defence 'that he had nothing to do,' is sure to be asked, 'Why he does not take a turn at mendin' the chay?' Notwithstanding this never-failing necessity for mending, the repairs, in nine cases out of ten, are never performed till the very minute of starting; and then the box of rusty nails, together with all manner of ropes and cordage, are put into brisk demand, whilst the sound of the hammer, as it rings on the splinter-bar, gives the signal to all the gossips to crowd round the inn door, and eagerly inquire the names, the destination, and the business, of the intended travellers. Some important departure seemed to have been intimated to the landlady of the Wheat-Sheaf, at Carlow, on the evening we slept there; for long before day-light we were awake by the 'clang of arms' beneath our windows, where no less than three of these interesting machines were undergoing the process of preparation for the road, under the hammer and wrenches of as many long-coated postillions. Two of these, we afterwards learned, were destined to accompany the funeral of what was esteemed a very unusual character in Carlow—a non-agitating priest—who was to be buried that morning; and the other was to convey an old lady and her daughter in some direction on the north road. The latter party drove off as we were sitting down to breakfast; but we felt a little alarmed on seeing them return in about half an hour—the old lady in a state of the highest agitation, and the post-boy vociferating at the top of his voice. In reply to our inquiries as to what had frightened the ladies—"Och, nothin' in life, then, replied the old waiter, Phil Henesay," but could Mrs. P., in the *po-chay*, that's scared out of her wits, bekase that stupid *omadaun* of a post-boy was taking her to Ballitore in place of Athy!"

We regret that we have not space to insert the author's striking description of the superb ruins which crown the celebrated Rock of Cashel, and which he pronounces to be "the most extraordinary, interesting, and beautiful in the British dominions." They consist of a vast assemblage of round towers, antique ecclesiastical edifices, Saxon chapels, a Gothic cathedral of immense extent, and the ancient palaces of the kings of Munster, all crowded together on the summit of a bold and insulated cliff, which starts up to the height of 200 feet, in the centre of a plain 90 miles in length by 40 broad. From the summit Mr. Tennent states, that the traveller can take in, at one glance, this vast plain, bounded by the Galtee mountains, and covered with the ruins of upwards of one hundred abbeys, castles, monasteries, and other ancient edifices.

The following passage gives a fine conception of the echoes at Killarney:—

"Leaving the upper lake by one of those tortuous channels, we reached the foot of the magnificent conical cliff called the Eagle's Nest. Here we landed to fire off a cannon, in order to

awake the echo, which, in this spot, is grand beyond description. At each shot, the report was echoed and returned from a thousand points at the same moment; and, each repeating its own sound, again and again, till it died away, the whole amphitheatre of hills resounded with one mingled roar of artillery, closely resembling, but louder a thousand times, than the wildest thunder I ever heard. In my existence, I never listened to any sound so truly sublime as the cannon's echo at the Eagle's Nest. This being ended, the bugle-player who accompanied us, Mr. Spillan, belonging to the band of the Kerry Regiment, played some airs at the foot of the mountain, and any thing more heavenly than the echo which accompanied them, it is totally impossible to conceive. Each note was re-echoed with a sweetness that made the original appear but discord; as if Nature in this, the only instance in which she stoops to imitate art, only made the effort, in order to shew how infinitely she can surpass her master. Each cadence, as it fell, was caught up by the echo of the nearest cliff, and then repeated by each surrounding height, the sound at each reiteration diminishing in volume, but redoubling in sweetness, till the whole died away in sound so delicious, and 'withal so fine, that nothing lives 'twixt it and silence.'

'A voice, we know not whence, repeats the strain,  
A thousand tongues invisible reply,  
In mimic note again, and yet again;  
Till faint in distance the sweet echoes die—  
Like reascending choirs of angels to the sky!"

The following notice of the residence of Spenser, the poet, in Ireland, during the reign of Elizabeth, will be read with much interest:

"The Castle of Buttevant, now modernised, and fitted up as the residence of Sir James Anderson, is built on a cliff above the river Awbeg, on which the town is situated. On this stream, about four miles further down, are the ruins of Kilcolman, the residence of Edmund Spenser, the poet. Of this truly interesting ruin, in which Spenser composed his 'Fairy Queen,' and where he received the visits of Sir W. Raleigh, little now remains, save a single turret and a few lonely walls upon a little elevation, beneath which flows the neglected waters of the Awbeg, or, as Spenser has named it, the

'Mulla, mine, whose waves I whilome taught to weep; and where he describes himself as wandering in

"The coolly shade  
Of the green alders by the Mulla's shore."

Kilcolman, with its castle, and three thousand acres of the forfeited Desmond territory, were conferred on Spenser by Elizabeth; and here, having married (as he himself describes her) 'a country lass of low degree,' he continued to reside for nearly ten years, in compliance with the terms of the grant, which enjoined residence on his estates; this being one of Elizabeth's favourite schemes for tranquillising Ireland by the location of English settlers. But the turbulent spirit of the Irish regarded little the peaceful pursuits of the gentle poet. In one of those wild commotions excited by the Earl of Tyrone, his castle was fired by the Irish, his infant child perished in the flames, and

Spenser, broken-hearted and impoverished, returned to England, and died in an obscure residence in King Street, Westminster. His name and his reputation seem now alike forgotten, amidst the very scenes which he has contributed to immortalise. We sounded several of the peasantry to discover whether they knew any thing of the poet, but in vain; the only answer in the affirmative was a characteristic one from our postilion, who, in return to our inquiry whether he had ever heard of Spenser at Kilcolman, replied, 'Is it Mr. Spenser of Kilcolman, your honour? Troth, then, I can't just say that I ever heard tell of him; but I suppose he goes round by Doneraile way, for he never took horses in Mallow in my time, sir.'

To this we would wish, if space permitted, to append a similar notice of Goldsmith's residence at Auburn; but we are compelled to omit these lighter extracts, in order to make room for one of more national interest.—Mr. Emerson Tennent's account of that superb but neglected source of national improvement and prosperity, the River Shannon. In every sentence of the following rapid but masterly description of that superb river we are prepared, from personal knowledge, most fully to concur.

Banagher, Oct. 4th, 1836.

"I have now sailed along the principal portion which has, as yet, been rendered available of the Shannon navigation. I have seen that magnificent river, with its lakes, its bays, and its tributaries, and I have not words to express my admiration of its beauties, and my astonishment at the extent of its hitherto dormant capabilities. I defy any Irishman to survey this unrivalled river, navigable from the sea up to its very mountain source, and not to return with a more exalted idea of his country and its resources. We have no river in the empire that can vie with it. What is the Thames, or the Mersey, or the Severn, compared with the Shannon? Nor do I know a navigable river in Europe, that can be put in comparison with what the Shannon may be, and I trust, ere long, will become. Can the Rhine, or the Elbe, or the Seine, or the Tagus, for one moment, compete with a river which, with its tributaries, exhibits upwards of three hundred and fifty miles of uninterrupted navigation, opening up seven hundred miles of the richest coast in Ireland, rushing like an artery through the very heart of the kingdom, and only exploring enterprise and adventure, to burden its waters with the teeming produce of one of the most fertile regions in the universe? Although I had paid no inconsiderable attention to the Shannon before, I confess I was comparatively ignorant of its importance and vast resources, till I had seen them with my own eyes. This we were enabled to do by the kindness of Mr. Williams, the intelligent and enterprising director of the Navigation Company—a man whose name will be immortalised by his present exertions and undertakings on the Shannon. Mr. Williams is doing more real practical good to Ireland in any one month, than all the brawling patriots in the kingdom have ever effected in their united existences. By his kindness we were enabled to proceed up the river in one of the Company's steamers; and a more splendid excursion imagination cannot conceive. The only alloy to its pleasures, is the irresistible indignation which one momentarily feels, to see such a source of national wealth and prosperity so utterly and cruelly neglected and abandoned. There is scarcely a practical cause to which the present evils of Ireland are attributed, for which a panacea

might not be found in the waters of the Shannon. Produce, employment, and capital, are all to be drawn from this glorious stream; and yet here it flows away, despised and rejected, whilst we are making hourly and bitter complaints about a starving peasantry, a dearth of employment, irremunerative labour, and a tide of famishing emigration. Let us remove but the obstructions of the Shannon, and we shall pour a flood of wealth not only over Ireland, but over Britain. At the present moment the river is freely navigable from the sea to Limerick, a distance of sixty miles. From Limerick to Killaloe, owing to the rapids I have mentioned at Castle Connell, vessels are obliged to pass through three short canals, to avoid the shoal water: O'Brien's bridge likewise presented an obstacle; but this has been removed by the Company's taking down and enlarging one arch for the passage of their boats. From Killaloe to Portumna, and thence to Banagher, the passage lies chiefly through the broad waters of Lough Derg, and the only obstruction lies again in the shoals below the latter town, which are passed by means of another lock and canal. Above Banagher, the navigation to Athlone has little or no obstruction, except from the smallness of the arches of the bridges across the river, which, especially during the floods of winter, are too small to admit the free passage of the steamers; and, singular as it may seem, the trustees of these bridges have thrown every obstacle in the way of the Company to enlarge or to alter them! But, independently of the difficulties I have mentioned, there are a host of other desiderata which are still indispensable to the free navigation of the Shannon: the opening of proper channels for the water where it is obstructed by shoals; and the construction of weirs, for the purpose of retaining in summer a sufficient supply, and in winter for letting off the surplus, which otherwise overflows the low grounds, and frequently, remaining too long upon the soil, destroys instead of irrigating it. These, with the making of landing places, the fixing of cranes and sheds, the building of stores, the cutting of roads inland, and a thousand other minor improvements, are still wanting to render the deep water available for all the purposes of trade and speedy intercourse. The passage from the source of the Shannon to the sea, some years back, occupied the country-boat from four to five weeks: it is now much shortened by the operations of the Steam Navigation Company; but were the improvements to which I have alluded—and all of which are embodied in the reports of the engineers who, from time to time, have surveyed the river—were these all carried into effect, the passage could be made in one day from Leitrim to Limerick, between the counties Sligo, Roscommon, Mayo, Galway, Clare, Longford, King's County, and Tipperary. Can you conceive a national object so vast and so important as this?—and yet this stupendous enterprise, worthy all the energies of a powerful government, has hitherto been abandoned almost altogether to private speculation, or tantalised with the show of an assistance that was little better than an impediment. Since the reign of Queen Anne, down to the sixth of William IV. we have been haranguing, and writing, and surveying, and reporting, and making speeches and motions, and appointing commissions and committees for "improving the navigation of the Shannon," and, with the exception of what has been done by the Dublin Steam Company, literally nothing has been yet effected. Never was there a more practical

illustration than the case of the Shannon, of the well-known fact, that a committee of the House of Commons is but a postponement of a remedy. Oh! if all the Irish members would only imitate the conduct of the Scotch representatives, who, whatever may be their political differences, pull together like one man for any national object, how soon should we have steam-boats smoking round Lough Allen! But, whilst Scotland has been getting million after million to improve her navigations—whilst England is covered with a net-work of canals and of railroads—whilst we are even spending the taxes of Irishmen in navigating the rivers of Canada, and cutting canals to enable the Americans to send their flour and their corn to undersell us in the Liverpool markets, the Shannon stagnates behind its shoals, or tumbles in cataracts over its unnavigable rapids; and, to use the words of Colonel Burgoyne, of the Board of Works—"where forests of masts, and the bustling activity of commerce should be witnessed, the scene is desolate."

The above extract, coupled with our preceding ones, affords a fair specimen of Mr. Emerson Tennent's volume, which abounds with passages of equal interest and elegance; and we can strongly recommend it as a post-chaise companion to all who meditate an instructive as well as an amusing tour of the South of Ireland.

*The Married Unmarried.* By the Author of "Almack's Revisited." 3 vols. 12mo. London, 1837. Saunders and Otley.

THIS is the stirring story of an orphan boy, brought up among poor fishermen on the coast of Devon, and stoutly painting Toryism in its worst colours, as would become a Reformer of the present day. The first volume is addressed to his boyhood; and the workshop, school-flogging, and other incidents enable the author to shew up squires, vicars, overseers, clerical schoolmasters, and other notorious characters. But calamity attends the unfortunate youth; and, though he nobly saves the life of a companion, the son and heir of a peer, he is, through some villany, convinced of being a thief, and ignominiously expelled from the school to which he had been sent by an unknown friend in Wiltshire. He now embarks in various wandering adventures, mostly in low life; and draws vivid, occasionally a little coarse, pictures of them. Gipsies, poachers, strolling players, soldiers, robbers, &c. figure on the scene. These occupy Volume II., and Volume III. shifts to London. Here we give a specimen of the work; and have only to add, that, in the end, the hero turns out to be somebody. He is sent out to be new-clothed by his mistress, on an important event in his favour which causes him to be invited by a lady of high rank.

"'Dear me!' added my mistress, with that kind of maternal feeling which, in despite of her apparent vulgarity, formed the basis of her character, 'if you are to dine with the Countess of Castlerose, have you got a nice frilled shirt, and decent things? You can't go in that kind of tumble-come-trundle dress; you'll want a pair of pumps, and silk stockings, and a white waistcoat. I'd advise you to step out with Simon into Cheapside, and order some ready-made fashionable clothes, and I'll tell Mary to get you a shirt nicely plaited, and a cravat done up with some starch: you can't dine with a countess without starch.' This important part of the morrow's ceremony had never struck me; nor, indeed, was I aware, until I looked at myself in the handsome mirror which decorated the lower end of the worthy

citizen's dining-room, that my cravat was twisted round my neck like a halter, and that my coat, which formerly belonged to Captain Rightford, hung upon me like a sack. Simon was now summoned; and, under his guidance, I was taken first to a tailor's, celebrated for fitting-out the young city bucks, and then to a hosier's and shoemaker's, where I was furnished with the essential articles recommended by Mrs. Figmat, who desired me to tell the tradesmen to send my purchases and the bills to the house, and by no means to put a farthing in my pocket, or the pick-pockets would soon discover my being a stranger, and rob me of every shilling; for that the police was so bad that it was not safe for any one to walk the streets. It was fortunate that I did so; for, as I was turning round the corner by the Bank, I felt a pull at my coat, and saw my pocket-handkerchief transferred to other hands: and, although I turned round and seized the culprit, and although a city constable was standing by, he was allowed to escape, because 'he had not got it;' and all I got for attempting to act the part of a thief-taker, was a laugh from the bystanders, and some severe blows on the head from some of the rogue's accomplices, who surrounded and hustled me. As it was not exactly accordant with my notions of honour to receive a blow without retaliating, and as my blood was up, I requested a well-dressed, civil-looking gentleman, who was crying, 'Shame! shame!' to hold my coat whilst I avenged myself. He kindly consented, saying that I was a brave young cock, and that he would stand by me. I, therefore, threw it off, and in a moment pitched into one of my aggressors with such vigour that he soon gave up the contest; and, as no one came forward to take his part, I turned round to thank my bottle-holder and recover my garment. But he had disappeared like Asmodeus, bottle, coat, and all; and the only consolation I heard was,—'Why, you flat, he was one of the swell mob; you'll never see it again.' A crowd having collected, and there being no danger, the police thought it time to interfere; so three or four watchmen came up, collared me, swore I also was one of the gang, and that I had only got up a sham-fight in order to make a stoppage in the street, and thus give a better opportunity to my confederates for picking pockets. In vain I protested, declaring I was a total stranger, and clerk to Mr. Figmat of Lothbury; and called upon Simon to bear witness to my respectability. I might as well have sung lullaby to the falls of Schaffhausen. The footboy shrunk back, and left me to my fate; and the watchmen, whose numbers increased when they found there was no one to contend with, dragged me to the watchhouse, amidst the shouts and laughter of the thieves, and other vile characters who had assembled around. When we reached this filthy, inodorous palace of nocturnal justice, I was poked into a sort of cellar, or under-ground strong-room, where I found two or three unfortunate women in a brutal state of intoxication; an Irish paviour, who had been unmercifully beating his own wife; a footman from the Mansion House, who had been caught in the act of kissing the spouse of the lord-mayor's valet, and had kicked the husband's shins for objecting to his proceedings; a hackney-coachman, who had broken a tapster's head with a porter-pot, for questioning the genuineness of a most unminlike sixpence; two miserable Savoyards, who had been incarcerated because they thought they had as much right to treat the citizens to the music of their organs as the old fish-women had to em-

ploy theirs in the inharmonious operation of crying, 'sprats!' and lastly, a jolly tar, who considered himself entitled to spend the prize-money he had won from the French, in breaking the French plate-glass windows of a citizen's shop. In a few minutes I was called up to answer for my misdeeds before the sort of Midas who gloried in the title of 'constable of the night;' and who was sitting with a pipe in his mouth, a Welsh wig on his head, a Welsh rabbit and a pot of porter on his table, and, by his side, a pale-faced lad who acted as scribe, the chirographic portion of his worship's education having been omitted. At the moment I entered, this worthy was disposing of the domestic dispute between the Irishman and his wife. 'You are a proper vagabone!' exclaimed he, addressing the former; 'how could you ill-use this here poor woman after that there brutal manner? why, you must have taken a stick as thick as my wrist, and the law says it mayn't be bigger nor your thumb.' 'Faith, your worship,' replied the culprit, 'it isn't myself sure that never used no unlawful instrument.' 'Gammon!' exclaimed the judge. 'It's thrue as Gospel,' rejoined the paviour; 'for I knows the law, your honour, and all I bate her wid was my pockyhandkychee.' 'Gammon!' ejaculated the other. 'It may be a whole hog, your worship, and a farrow of pigs besides,' replied the husband; 'but I'll take my Bible out it's thrue by that same. Isn't it, Judy, darling?' 'Gammon!' again puffed out his honour. 'Faith, and what Dennis says is as true as the wig on your worship's head,' answered the wife, with a curtesy. 'Gammon!' once more exclaimed the constable; adding, 'what, beat a woman's eyes black and blue with your pocket-handkercher! It's downright impossible. Write down 'brutal assault and battery.' 'That's just as your worship places,' rejoined Dennis; 'but I never could a lie in my life, only barrin when I didn't spake the whole thruth at confusion: and if you'll ask Judy, she'll tell you that what I bate her wid was the handkychee; for your honour must know, that I always blows my nose wid my fingers.' This witicism threw his worship into such a fit of laughing, and so completely softened his heart, that he told the sufferer she had better forgive her husband, and settle the matter out of court. This offer was accepted; and, the case being dismissed, I was pushed forward. 'And what's the charge against this here fellow without a coat on his back?' demanded the constable; 'he's a bad un, no doubt—a regular Old Bailey bird.' 'The worst I ever seed in my beat, your honour,' answered one of my captors; 'he's one of Sllp-knot Bob's gang. We knows him as well as our boxes.' 'Write down 'well-known thief,' said the constable to his amanuensis; 'and what was he arter when you grabbed him?' 'Why, we heard a cry of 'stop thief!' and when we runs up, we found he'd prigged a gentleman's bandanny; and when we come to seize him, as in duty bound, he offs with his coat, chucks it, bandanny and all, to one of his cumfrederates, and then purtends to get up a mill, to give time to t'other to bolt with the swag.' 'Write down, 'picking pockets—caught in the fact—breaking the king's peace.' That's enough. Hand him into the hole. It's a case for the Mansion House.' This summary mode of dispensing injustice was little to my taste: so I said, 'I assure you, sir, the watchmen are mistaken; I only came to London yesterday, and—' 'Gammon!' replied the constable. 'Upon my word, if you will let some one of them go with me to Mr. Figmat's,

in Lothbury, you will find—' 'Gammon!' again retorted he, whiffing forth a stream of pigtail. 'Sir, if you will not allow me to speak—' 'No more of your gammon,' retorted he again; 'do you think I sits here to do nothing else but listen to your flash? Bring up the next.' Hereupon I was once more transferred to the cellar."

*Semilasso in Africa. Adventures in Algiers and other parts of Africa.* By Prince Pückler Muskau, author of the "Tour of a German Prince." 3 vols. 8vo. London, 1836. Bentley.

PRINCE PÜCKLER is the Dick Jones, and often the Wrench, of Tourists. With a smattering of every thing, he is always chattering about something; lively, bustling, affected, and pleasant. He is so much of a Frenchman, according to our John Bull *idéal*, that it is difficult to believe him to be a German; and so frequently resembles a valet, that we cannot comprehend him when he appears *en prince*. His pronunciation of *Vaderland* sounds like *Vive la nation! vive la gloire!* and, quite the reverse of the German pig, which spoke the French "oui, oui," with a Teutonic accent, he delivers his High Dutch with the tone of a Parisian.

These volumes are extremely amusing; amusing, from the character of their author, and amusing from the scenes he has visited, and the people he has seen and described. Algiers, Bona, Tunis, and interesting excursions into the interior or along the coast, form the subject; and we shall endeavour, in our usual way, to convey to our readers a notion of its mode of treatment,—observing, however, as little order as Prince Pückler himself. We begin with his account of two purchases—a pipe and a bridle.

"This pipe was half of wrought silver, with *pauillettes* hanging in chains, and choice sentences from the Koran written on them: for instance, 'If speech is silver, silence is gold;' or, 'Riches do not belong to the miser, but the miser to riches,' &c. The rest of the pipe consists of a sweet-smelling brilliant, with satin and gold embroidery wound round a part of it, a mouth-piece of red coral, and a bowl covered with a thin plate of gold. The student J— declares it to be finer than any thing of the kind he has seen, even in the German universities: 'though,' he adds with pride, 'we had Turkish pipes there of such a length, that, when smoked out of the second-story window, it was necessary to fill them in the street. It is a pity that Hoffman, when he wrote (oh! ungrateful country!) the now forgotten *Klein-zaches*, had not seen my superb pipe!—he would have immortalised it.' I must add a word about the Arabian bridle of gold and variegated silk. It differs from all others in this respect—it has winkers; and, strange though it be, winkers, not before, but behind the eyes. What a subject for reflection to a profound philosopher! If this new bridle were introduced into Europe, how easy to deduce from it the strangest political conclusions!"

One of the country residences near Algiers is thus delineated.

"Beyond the estate of Colonel Bernelle stands just such a villa, which the French have christened *la maison riche*. It is still the property of a Moor; but, since the occupation, it has been let and inhabited by French subaltern officers. The consequences of this change seemed to me really tragic; and the devastation committed in four years scarcely imaginable. The marble fountains, the staircases, inlaid with porcelaine, were every where

damaged, and so covered with dirt that one feared to approach them. The orange-trees that grew up in the extensive courts, paved with porcelain, were mostly dead for want of care; and in the aviaries, once filled with parrots and singing-birds, hens and swine now run about. The terraces were partly broken in, and the magnificent covered avenues of vines and jasmines, which formed shady trellis-walks between them, considerably spoiled; while, in some places, plants as strong as trees have been shamefully cut down. The majestic cypresses alone were still standing in uninjured groups, and seemed to look sternly and sorrowfully on the destruction that surrounded them. What might not have been made of this estate, had it fallen into good hands! A hundred times have I imagined our crown prince settled here, who displays so much talent and taste for this southern architecture and ornament—a hundred times have I wished him to see and possess it. In the present state of affairs at Algiers, I doubt whether any one will be able to do any thing of use in that way: even the English who are here seem to change their nature; for the villa of the British consul, although well situate, is as dirty and poor as most of those in the hands of other Europeans. To return, however, to the *maison riche*, which possesses, with architectural beauty and a grand appearance, most enchanting views. With all its galleries, courts, and numerous gardens, it is situated on the declivity of a porous rock, almost entirely overgrown with *cactus* and serpentine plants, which forms part of the circle of hills that surround the gulf. On both sides the hills around are covered with innumerable villas and rich vegetation: to the left they extend to the projecting light-house of Algiers; to the right they decline near the promontory called Cape Motifu. A great part of the Atlas is still visible over them; and between the garden and the sea is a long green, enlivened by the manœuvres of the troops,—not, however, too near to be disagreeable, but affording, on the contrary, an interesting sight."

A long and romantic story of Jussuf, a military adventurer and hero, occupies much of the first volume, and is sufficiently marvellous—wonderful, if true! as the Americans say; and, indeed, the biographies of many similar adventurers, given in these pages, would, like the particulars of this renegade Rinaldo, do honour to the most incredible invention. The prince colours them up to the height of—? the Atlas! The sketches of manners are in more likely keeping; but, as many previous writers have treated of them, we will pass to the inland tour, when Zugar, Keruan, and other places rich in Roman and Carthaginian remains, and of much interest to the antiquary, were traversed in a circular jaunt from Tunis. Of the former we hear,—

"From the temple to Zugar the aqueduct is almost always under ground. At the distance of every hundred paces are seen little round open towers, six to eight feet in diameter, projecting like chimneys, and destined, probably, to collect the rain-water. The aqueduct is evidently Carthaginian, and the temple of Roman construction; for I found the same plan and arrangement (only much more in ruins) at Uthina, on the spot where the aqueduct loses itself in the mountain: misled by the many remains of round towers, I was induced at first to take it for the ruins of a city wall. The distant horizon being to-day much clearer than yesterday, I ascended a considerable mountain, at the foot of which the ruins are

situated. My trouble was, however, of little avail, higher peaks rising beyond it: still I discovered, looking towards the desert, a veiled portion of Numidia, in the direction of Thala and Capsa, where Jugurtha had his strongest fortresses, and where Cæsar also made a very fatiguing campaign. That part of the country is full of ruins; and I would fain have made an excursion to explore it, if I could have spared the time without sacrificing other and more important plans."

Some inscriptions are briefly mentioned, and one or two copied; but both are without the precision or knowledge so necessary to render them of value. The prince adds:—

"I cannot ascertain what ancient place this may have been, as on the few maps I have with me nothing is marked in this direction, and I have not got here the other works which might afford information. Even Dr. Shaw makes no mention of these ruins, which, from their former splendour, and their proportionably small extent, seem to have been, not a city, but a group of temples, with, probably, the dwellings of the priests lying about them. The Arabs call the place Sidi Massud Ladsbeni, after the marabut; for, wherever there are remains of antiquity, you may be almost always sure of finding one."

Keruan has ruins still more striking and important.

"At ten o'clock in the morning I returned the governor's visit. The shechs, who were come to accompany me, wished me to walk, as the sapatapa himself never rode through the streets of the holy city, except when on a journey: but, as the governor had visited me on horseback, I insisted upon riding as far as his house, agreeing to visit the rest of the city with them on foot; to which proposal no difficulty was made. I found at the caïd's some of the heads of the clergy, who appeared pleased with the veneration which I manifested for Mahomet, and with my particular inquiries respecting all that concerned the sanctity of Keruan. On this occasion I learned that Keruan owed the high advantage of being the fourth city in the empire of Islam to the circumstance of containing the sepulchre of the friend and barber of the prophet. This is an important charge among the retainers of an eastern sovereign, because it implies a high degree of confidence. His name was Uhait Iâ, which signifies a man of God; and this worthy is said to have marked out the site of the great mosque erected, at a later period, by Sultan Benirlib. All the ruins in the vicinity were plundered to provide materials for this colossal temple, said to contain no less than five hundred granite columns. Its appearance and extent, surrounded as it is by a wall, give it, notwithstanding its beautiful cupolas and towers, the appearance of a citadel rather than a church. We walked round the whole edifice, accompanied by five or six grandees of the town; and, like a fox round a dove-cote, I tried anxiously to peep into the inside. I did not, however, succeed, for every aperture was carefully closed. Before one of the gates lay an old iron cannon; and the spiritual chief of our escort had the face to tell us, very seriously, that Mahomet had been in the habit, during his wars, of sitting on this cannon, to pray to Allah for victory. We afterwards wandered through the whole of the city, which contains about 60,000 inhabitants, and is much cleaner than Tunis.

"The governor assured me, that, to the best of his knowledge, I was only the fourth Christian traveller that had visited the place;

and to no one had it been hitherto permitted to remain so long, or to examine the city in such detail. This, it appears, was conceded on the particular recommendation of his highness the bey, who had sent a mamaluk express to the caïd for that purpose, a few days before my arrival,—a piece of courtesy which I have every reason to acknowledge with all possible gratitude. All my wishes on this point being now fulfilled, with the exception of a visit to the interior of the temple, which was evidently impracticable, I did what I could to repair this deficiency; and sent, in my stead, my valet Mustapha, who was, fortunately, a true believer, and brought me the following report of the marvels of the place. But, first, I must begin by describing the narrator himself. He is a good-natured young fellow, about eighteen years old, consequently of very little experience, and in that happy age, and yet happier disposition, when every illusion is readily taken for truth, and the marvellous is just what is most willingly believed: he is, moreover, a good Mussulman, and a well-meaning creature, without distinguishing himself by any exaggerated power of intellect. I had given him the good advice to insinuate himself into the favour of the *lukill* who accompanied him, by the present of a few piasters; this, as we shall see, did not fail to produce its due effect. I had commissioned him to count the granite columns and the steps in the tower, and to pay particular attention to every thing that occurred,—commissions which his superstition prevented him from executing in a satisfactory manner. According to his report, he was first conducted through two large folding-doors into an enormous hall, filled partly with rows of columns, and partly with groups of two, three, or four of them, and paved with polished marble. Mustapha endeavoured to count the columns; but, as the *lukill* had before told him would be the case, when he got beyond a hundred he became giddy, and a higher power prevented him from seeing distinctly, so that every thing began to turn before his eyes. As soon as he gave up his design, this unnatural condition ceased. He then beheld, at a great elevation on the wall, the wooden coffin of the negro saint, Sidi Nablal, who died the death of a martyr, while fighting in the suite of Mahomet, and performing great achievements. At this grave there appears every Friday, early in the morning, wrapped up in a long white *talar*, another saint, Sidi Achmet Ochhodder (Lord Achmet the Green), who offers up his prayers before other men are awake. The *lukill* had respectfully contemplated him more than once in the early dusk of the morning, and had seen him appear and disappear, without announcing his presence by any kind of sound. So far all had been matter of wonder and admiration for Mustapha; but now came a more severe trial. There are three magic columns of dark granite, placed in a corner, and standing before a small door. Whoever is in favour with the prophet passes easily through to open the door, even though he were of the thickness of an elephant; but the slenderest child is caught fast between them, if not firm in its faith to Islam, or if Mahomet bears it a spite on any other ground. Many here turn back, and leave the menacing columns untouched: but whoever wishes to go further, and see the objects of chief veneration, must submit to the ordeal, in which, according to the *lukill*'s account, many a sinner is said to have lost his life; and which, only a few weeks ago, had so far proved fatal to a young man that he

was dreadfully squeezed, and was not able to get free again till he had made a multitude of vows of pious largesse and reformation. But he who passes safely through, independently of being invigorated for life by the sight of the relics, acquires a degree of religious dignity, something like that of the pilgrims to Mecca. My first *hamba*, a wild fellow and a bit of a scapegrace, accompanied Mustapha; and, though he might be a firm believer, could have little confidence in his own purity. This man was so terrified by the lukill's account that he began to weep, and to utter every imaginable form of prayer, before he ventured to comply with the invitation boldly to attempt the passage: nor did he get through without remaining for a while in great anguish, jammed in between the pillars; and, according to his own account, it was not without suffering severe pain that he made good his passage. Mustapha went to work with no less dread, but found the execution of his design a much easier matter: this may have been the effect of a clear conscience, or because his *douceur* to the lukill was three times as large as that of the *hamba*. The visitors were then conducted into the holy of holies, a splendidly ornamented cabinet, in which are preserved six metal skull-caps, formed like helmets, worn formerly by six disciples of the prophet: also, a kind of small sword, which Sidi Abdel Kader, on his first arrival at Keruan, stretched out towards heaven, commanding the sea, which at that time was close to the city, instantly to withdraw, and no longer to incommodate the holy city with its briny presence; whereupon fertile meadows, covered with rich harvests, immediately occupied the place of the water. Here, also, was shewn the wooden toy-sword of Sidi Akbar, the conqueror of Barbary, with which he slew more foes than the best Damascene blade had ever done before,—besides various other wonders of the same kind. The cabinet suffered a serious loss some years ago, when the five steel cuirasses of the disciples were taken away by his highness the bey, to send them to Constantinople as a present to the sultan. The pious wanderers next entered a spacious court, surrounded by arcades, reposing on beautiful double columns. In the centre of the court was a large cistern inclosed in marble, with six smaller ones forming a circle around it. They next arrived in a tolerable hall, somewhat smaller than the first, and then proceeded through a long double gallery to the loftiest tower, from which the *mueddin* calls the faithful to prayer. The lukill warned them, as they ascended, to beware of any attempt like that in the hall; for a man who, some years ago, had attempted to count the steps, had, on reaching the last, fallen down dead, as though he had been struck by lightning. You may imagine that Mustapha had no inclination wantonly to provoke a premature death. The tower seemed to him to be much higher than it had appeared when seen from without; and he felt much fatigued on reaching the top, whence he enjoyed a most magnificent prospect over the various courts, wells, galleries, and columns of the mosque, which looked like a little town in itself. He descended quite proudly, and was received by my whole Mussulmanish suite with perfect veneration, on account of his having so easily and happily passed through the dangerous columns. *'E un santo adesso,'* said my dragoman in his broken *Lingua Franca* (he had shrunk from the ordeal of the columns), *'e mio paura da lui.'* Kertan is supposed to be the ancient *Vicus Augusti*; but there are no ruins to be

found, with the exception of an old cistern, situated not far from the mausoleum of the thrice-blessed barber. In the time of the Arabs, it was long the metropolis of their African empire, and the seat of the sciences; at present it is famous only for its sanctity and its shoemakers, the morocco boots made here being considered the best in Barbary. Nothing can be more naked and lifeless than the environs of this town, as far as the eye can reach; and it is difficult to conceive that this province can ever have been so fertile and flourishing as it is represented to us by ancient writers, and as it is proved to have been by the remains of so many large cities found in every direction."

We shall reserve a few further extracts for a future notice.

*A Memoir of the Life and Works of Wm. Wyon, Esq. A.R.A., Chief Engraver of the Royal Mint.* By Nicholas Carlisle, Esq., Sec. S.A. For private circulation. Pp. 213.

It may seem a novel mode of reviewing, to begin at the end, but such shall be our plan in this instance. In the penultimate page of his work, Mr. Carlisle disarms criticism by the following observation:—"How fearfully do I pause before I venture to give even private circulation to a tribute so imperfect as this! But candour and generosity will easily distinguish between the sterling substance of merit and the humble attempt of a friend, if it fail in the delineation. Yet I may venture to anticipate, that neither the fame nor the fortune of Mr. Wyon—honoured by all the best artists for his abilities, and by the good for his integrity—will suffer the smallest injury or animadversion for this inelegant, though well-intended, Narrative."

Having, so far, done with the end, we must now try back and consider the earlier parts; and we feel bound to award the meed of praise to the work, whether we consider it as an amiable tribute of friendship to high talent and genius, or as a work of information on British coinage. It is partly original and partly compiled, and consists of three divisions—the Introduction, the Life of Mr. Wyon, and a Catalogue Raisonné of his numismatic and medallic productions. The Introduction, occupying twenty-eight pages, contains a concise, but well-drawn, history of British coinage, from the reign of Henry I., and of the moneyers or artists who excelled in that line, commencing the history thus:—"So early as the reign of King Henry the First, and about the year 1125, the English goldsmiths seem to have been eminent for the excellence of their workmanship, and to have been sometimes invited to practise their art in foreign courts. Anketil, who was afterwards a monk in the Abbey of St. Alban, and made the shrine there, resided during seven years in Denmark, by the command, and at the request, of the reigning monarch. Whilst he continued there, he was employed in a variety of goldsmiths' work, and was appointed the keeper of the Royal Mint, and chief moneyer."

The author then notices "Philip Aymary, a native of Tours, as the first foreign artist introduced into the Mint, in the year 1180; William de Turnemire, of Marseilles, in 1279; from that time a long hiatus appears in the artists, as the next mentioned is Walter Basbee, assay master to Goldsmiths' Hall, sent by James the First to the Emperor of Russia, about 1608, to make "a standard of gold and silver in his mint equivalent to that of the Tower of London, a strong fact to shew the high estimation in which that standard was holden upon the

continent;" Nicholas Briot, in 1628; Peter Blondeau, sent for to Paris by the Council of State and Commons, in 1649; our countryman, Thomas Simon, 1649; John Roetier, 1661; and John Croker, in the reign of Queen Anne.

Mr. Carlisle makes the following observations on one of the finest early English coins and the alchymic notions of our ancestors respecting it:—"The gold coins of Edward the Third, at this period [1343], seemed [seem?] to have derived their name (*nobles*) from the noble nature of the metal, of which they were composed."

It is, indeed, extraordinary, that they were not rather entitled, from the new and singular type of a ship, with which they were impressed, and thus remarkably distinguished from every other coin at that time existing. This could have been adopted only for the purpose of commemorating some great and well-known event, which Mr. Ruding conceives to have been the signal victory which King Edward obtained over the French fleet off Sluys, on Midsummer-day, in the year 1340, when two French admirals and about 30,000 men were slain, and above 230 of their large ships were taken, with but inconsiderable loss on the part of the English: and it seems highly probable that this mighty victory suggested to Edward an idea of his superiority over every other maritime power, and that these coins were struck for the purpose, as Selden supposes, of recording his claim to the sovereignty of the seas, which was supported by a navy of eleven hundred ships. An old *varsier* sings,—

"For four things our noble sheweth to me,  
King, ship, and sword, and power of the see."

These coins were so beautiful, that various fabulous reports were framed respecting the material of which they were formed. Such reports continued in force even in the time of Camden, who says, "our alchymists do affirm (as an unwritten verity), that the gold was made by projection or multiplication, alchymical of Raymund Lully, in the Tower of London, who would prove it as alchymically, beside the tradition of the Rabbis in that faculty, by the inscription; for, as upon one side there is the king's image in a ship, to notify that he was lord of the seas, with his titles, so upon the reverse, a cross fleury with lioness, inscribed, *Jesus autem transiens per medium eorum ibat* (Luke, chap. iv. v. 30), which they profoundly expound, as Jesus passed invisible, and in so secret a manner by the midst of the Pharisees, so that gold was made by invisible and secret art amidst the ignorant. But others say, that the text was the only amulet used in that credulous age to escape dangers in battle! It appears, from a passage in a contemporary author, that these words were considered not only as a preservative from the perils of war, but supposed also to answer a humbler purpose, that of defending men from the peril of thieves; and, surely, if they were allowed to possess that power, a more proper inscription for a coin could not have been easily chosen. \* \* \*

"It is highly honourable to King Charles the First, that, in all his difficulties, he never debased his coins. Had he done so, the Parliament would not have failed to state the existence of such money, in their Ordinance of the 6th of September, 1647. But he preserved the standard inviolate, even when, by necessity, the workmanship of some of his coins was so rude as to justify the suspicion that the dies were sunk by a common blacksmith."

Mr. Wyon's great-grandfather was a native of Cologne, in Germany, a silver-chaser, and was brought from Hanover to England in the suite of George the First; his descendants seem

all to have followed the profession of medallists. The subject of this memoir was apprenticed, in 1809, to his father, at the age of 14: his first production, of consequence, was a head of Hercules, about the year 1811. In 1813, he received the large gold medal, of the Society of Arts, for his head of Ceres; and, in the same year, he executed a groupe of figures, intended as a naval prize medal, for which the Society of Arts again awarded him their large gold medal, on which Mr. Carlisle observes:—

"Here we see a youth of eighteen, unaided but by natural genius, breaking through all the impediments of his difficult art, and claiming and receiving the highest rewards, such as might only be conferred upon matured excellence!"

The author follows his friend through his career of talent and excellence to the present time; but we have not space to notice more of it than that Mr. Wyon was appointed second engraver to the Mint in 1816, and chief engraver in 1823; and that, in May 1834, he delivered a lecture at the Society of Arts, on Coins and Medals; of which Mr. Carlisle has given an analysis; a good deal of it, by the way, a repetition of the information given on the subject in the introduction.

The book concludes with a long descriptive list of Mr. Wyon's works in coins, medals, and seals.

*The Exposition of the Vedanta Philosophy, by H. T. Colebrooke, Esq. vindicated.* By Sir Graves C. Haughton, Knt. K.H. M.A. F.R.S. &c.

SIR GRAVES C. HAUGHTON affirms, against Col. Kennedy, that Mr. Colebrooke considered the Hindoos had a word to express matter, in the Sanscrit language; and his own conviction is consonant with this. The question is subtle enough, and Sir Graves quotes Rammohun Roy as supporting the same proposition from the Vedas. Let us premise for the unlearned, as Sir Graves does not write for them, that Vedanta means the object or aim of the Vedas.

Our own humble opinion (see *Lit. Gaz.* No. 1021, p. 514) on this subject, in, we are glad to find, supported by so high an authority as Sir G. C. Haughton. In fact, we esteem it difficult or impossible to conceive, as did the early Eastern philosophers, that Deity is the one universal principle, including all else of existence as portions of itself, without coming, in the course of carrying out this principle, to the very conclusion of the Hindoo system aforesaid: that is, that Deity, itself a perfect repose, possesses a consciousness of all actuality in the shape of impression—diversifying it (Deity) "into an infinite but fallacious individuality." "Such," observes Sir Graves, "is the ancient doctrine." How different is this from that which it has been represented by modern writers, when the Deity is summarily described as the cause of all things, and all appearances to be mere juggle and illusion!

Col. Kennedy considers *maya* a simple illusion; Sir Graves calls it that self-induced hypostasis of the Deity by which he presents to himself the whole of animate and inanimate nature. Dr. J. Taylor affirms *maya* to exist as motion or energy, not as being; that it is neither true nor false: not true, because it has no essence; and not false, because it exists as the power of the universal Being. Is not *maya*, then, we would submit, Deity in one process of its action or operation? Well may Sir Graves say, that such a system, even if comprehensible, cannot be represented by language, but is left to be inferred by the mind from the principles

laid down. For ourselves, so soon as we find settled what action or operation is as regards matter, so soon shall we hope to see the same question determined with regard to spirit.

It is fair to confess that we have not had Col. Kennedy's argument: but even the difficulty of the controversy may be guessed, by the unlearned in Sanscrit, from the appendix; added, as Sir G. Haughton states, with the especial view of elucidating the question of cause and effect, as well as of demonstrating the absurdity of the celebrated ancient maxim, *ex nihilo nihil fit*.

*Cosmo de Medici; a Historical Tragedy.* By R. H. Horne, author of "The Exposition of the False Medium," &c. 8vo. pp. 118. London, 1837. Templeman.

IN this drama considerable powers are displayed; the author aiming not so much, however, at poetry and imagination, as at "action vividly addressed to sensation," which he considers to be all "that at present is requisite for the English stage." It must be confessed that this is nearly the truth; but the consequence is, that it links the dramatist to an inferior standard. He does not write for the highest capabilities of the stage, but for the stage as lowered by melo-drama and show. Effects are his ambition; effects, which at best are but secondary adjuncts to dramatic excellence, and which, if solely relied on, form only a succession of striking tricks. Where, in the mean time, are the essence and soul of high-styled Tragedy? Where is the Muse, the neglected and forgotten Melpomene? The former are in *tableaux*, and the latter lies with the dead bards of elder times.

Yet, though we make these remarks on Mr. Horne's abstract principle, we are not disposed to deny that he frequently evinces much force in his style and dialogue, blemished by occasional incongruities, and even rendered ludicrous by ill-timed attempts at lofty language. Thus, Cosmo speaks of his son Garcia in a manner which reminds us of "Tom Thumb:"—

"*Dalmasso.* Sir, shall we know your thoughts?  
*Cosmo.* Nor friars nor counsils are for him fit peers.  
Now, gentlemen, I'll tell you candidly:  
Without the least false harmony of disguise,  
Or any counter-thought beneath my words,  
Upon my soul I know not what to think!"

But let us, in justice, add that, without attempting prolonged poetical ornament, Mr. Horne often exhibits poetical thoughts; and we might quote a hundred passages, from a line to two lines in length, which would illustrate this feature. Their want of connexion, however, would be felt; and we must, therefore, rather rest with commending *Cosmo de Medici* as a fatal tragic story relating to the family of the first Grand-duke of Tuscany.

*Lockhart's Life of Scott.*  
(Second notice.)

TO most of our readers in England and Scotland, this review will be a *pass-over*; for we daresay, the charming volume has by this time been pursued with pleasure by that literature-loving majority. But they will excuse the room it occupies; for, though a repetition for them, they may think what a treat even these small portions will be to distant friends—to our own countrymen scattered over the Indies, east and west, and other colonies on the face of the globe, and to the admirers of the wizard Scott, throughout the continent of Europe. Wherever the *Literary Gazette* goes into these quarters—and where does it not go?—this page will be most welcome; and the welcome, the less we say of ourselves and the more of

the author. A letter, speaking of the earliest strong manifestations of Scott's predilection for letters, is of high interest.

"Mrs. Cockburn, mentioned by him in his memoir as the authoress of the modern 'Flowers of the Forest,' born a Rutherford, of Fairnallie, in Selkirkshire, was distantly related to the poet's mother, with whom she had through life been in habits of intimate friendship. This accomplished woman was staying at Ravelstone, in the vicinity of Edinburgh, a seat of the Keiths of Dunnotar, nearly related to Mrs. Scott, and to herself. With some of that family she spent an evening in George's Square. She chanced to be writing next day to Dr. Douglas, the well-known and much-respected minister of her native parish, Galashiels; and her letter, of which the doctor's son has kindly given me a copy, contains the following passage:—

'Edinburgh, Saturday night, 15th of the gloomy month when the people of England hang and drown themselves.

"\* \* \* 'I last night supped in Mr. Walter Scott's. He has the most extraordinary genius of a boy I ever saw. He was reading a poem to his mother when I went in. I made him read on; it was the description of a shipwreck. His passion rose with the storm. He lifted his eyes and hands. 'There's the mast gone,' says he; 'crash it goes!—they will all perish!' After his agitation, he turns to me. 'That is too melancholy,' says he; 'I had better read you something more amusing.' I preferred a little chat, and asked his opinion of Milton and other books he was reading, which he gave me wonderfully. One of his observations was, 'How strange it is that Adam, just new come into the world, should know every thing—that must be the poet's fancy,' says he. But when he was told he was created perfect by God, he instantly yielded. When taken to bed last night, he told his aunt he liked that lady. 'What lady?' says she. 'Why, Mrs. Cockburn; for I think she is a virtuous, like myself.' 'Dear Walter,' says aunt Jenny, 'what is a virtuous?' 'Don't ye know? Why, it's one who wishes and will know every thing.' Now, sir, you will think this a very silly story. Pray, what age do you suppose this boy to be? Name it now, before I tell you. Why, twelve or fourteen. No such thing; he is not quite six years old.\* He has a lame leg, for which he was a year at Bath, and has acquired the perfect English accent, which he has not lost since he came, and he reads like a Garrick. You will allow this an uncommon exotic.' Some particulars in Mrs. Cockburn's account appear considerably at variance with what Sir Walter has told us respecting his own boyish proficiency."

It is a remarkable thing, that, with this precocity, and the nourishment of his tastes by constant habits, that so long a period should have elapsed before Scott appeared as a public writer. Born in 1771, his first printed appearance was the translation of the German ballad of "Lenore," in 1796. Was he not, during the period, amassing those treasures which he afterwards poured out with such prolific activity; and which, being drained, rendered his later productions of an inferior quality—the same speed, but not the same abundance? Pursuing this subject, we are told—

"Although the *Ashetiel* Memoir mentions so very lightly his boyish addiction to verse, and the rebuke which his vein received from the apothecary's blue-buskin wife, as having

\* He was, in fact, six years and three months old before this letter was written.

been followed by similar treatment on the part of others, I am inclined to believe that, while thus devouring, along with his young friend, the stores of Italian romance, he essayed, from time to time, to weave some of their materials into rhyme;—nay, that he must have made at least one rather serious effort of this kind as early as the date of these rambles to the Salisbury Crags. I have found among his mother's papers a copy of verses headed, 'Lines to Mr. Walter Scott, on reading his poem of Guiscard and Matilda, inscribed to Miss Keith of Ravelston.' There is no date; but I conceive the lines bear internal evidence of having been written when he was very young;—not, I should suppose, above fourteen or fifteen at most. I think it also certain that the writer was a woman; and have almost as little doubt that they came from the pen of his old admirer, Mrs. Cockburn. They are as follows:—

"If such the accents of thy early youth,  
When playful fancy holds the place of truth;  
If so divinely sweet thy numbers flow,  
And thy young heart melts with such tender wo;  
What praise, what admiration! shall be thine,  
When sense mature with science shall combine  
To raise thy genius and thy taste refine!  
Go on, dear youth, the glorious path pursue  
Which bounteous Nature kindly smooths for you;  
Go, bid the seeds her hand hath sown arise,  
By timely culture, to their native skies;  
Go, and employ the poet's heavenly art,  
Not merely to delight, but mend the heart.  
Than other poets happier may'st thou prove,  
More blest in friendship, fortunate in love;  
Whilst Fame, who longs to make true merit known,  
Impatient waits to claim thee as her own.  
Scorning the yoke of prejudice and pride,  
Thy tender mind let truth and reason guide;  
Let meek humility thy steps attend,  
And firm integrity, youth's surest friend.  
So peace and honour all thy hours shall bless,  
And conscious rectitude each joy increase;  
A nobler mood be thine than empty praise:  
Heaven shall approve thy life, and Keith thy lays."

Aud, again,—“It is affirmed by a preceding biographer, on the authority of one of these brother apprentices, that, about this period, Scott shewed him a MS. poem, on the ‘Conquest of Granada,’ in four books, each amounting to about 400 lines, which, soon after it was finished, he committed to the flames. As he states, in his ‘Essay on the Imitation of Popular Poetry,’ that, for ten years previous to 1796, when his first translation from the German was executed, he had written no verses, ‘except an occasional sonnet to his mistress’s eyebrow.’ I presume this ‘Conquest of Granada,’ the fruit of his study of the *Guerras Civiles*, must be assigned to the summer of 1786; or, making allowance for trivial inaccuracy, to the next year at latest. It is probably composed in imitation of Meikle’s ‘Lusiad:’ at all events, we have a very distinct statement, that he made no attempts in the manner of the old minstrels, early as his admiration for them had been, until the period of his acquaintance with Bürger. Thus, with him, as with most others, genius had hazarded many a random effort ere it discovered the true key-note. Long had

‘Amid the strings his fingers stray’d,  
And an uncertain warbling made,’

before ‘the measure wild’ was caught, and

‘In varying cadence, soft or strong,  
He swept the sounding chords along.”

So much for his earlier poetical habits; but there is a still greater charm in this biography, from its describing his various movements in youth, by which he acquired his knowledge of scenes and characters that are now immortal in his novels. The traces of these originals are delightful; and those frequent country excursions (noticed in our last) were certainly most favourable for the supply of his fancy with food, and his mind for observation.

His own young character appears to have been an uncommon mixture of enthusiasm and prudence: the former, perhaps, constitutional; the latter, perhaps, national. “I find,” says Mr. Lockhart, “in another letter of this collection, and it is among the first of the series, the following passage: ‘Your Quixotism, dear Walter, was highly characteristic. From the description of the blooming fair, as she appeared when she lowered her *manteau vert*, I am hopeful you have not dropt the acquaintance. At least, I am certain some of our more rakish friends would have been glad enough of such an introduction.’ This hint I cannot help connecting with the first scene of the *Lady Green Mantle* in ‘Redgauntlet:’ but, indeed, I could easily trace many more coincidences between these letters and that novel; though, at the same time, I have no sort of doubt that William Clerk was, in the main, Darsie Latimer, while Scott himself unquestionably sat for his own picture in young Alan Fairford. The allusion to ‘our more rakish friends’ is in keeping with the whole strain of this juvenile correspondence. Throughout there occurs no coarse, or even jocular suggestion, as to the conduct of Scott in that particular as to which most youths of his then age are so apt to lay up stores of self-reproach. In this season of hot and impetuous blood he may not have escaped quite blameless, but I have the concurrent testimony of all the most intimate among his surviving associates, that he was remarkably free from such indiscretions; that, while his high sense of honour shielded him from the remotest dream of tampering with female innocence, he had an instinctive delicacy about him which made him recoil with utter disgust from low and vulgar debaucheries. His friends, I have heard more than one of them confess, used often to rally him on the coldness of his nature. By degrees they discovered that he had, from almost the dawn of the passions, cherished a secret attachment, which continued, through all the most perilous stage of life, to act as a romantic charm in safeguard of virtue. This (however he may have disguised the story, by mixing it up with the Quixotic adventure of the damsel in the green mantle)—this was the early and innocent affection to which we owe the tenderest pages, not only of ‘Redgauntlet,’ but of the ‘Lay of the Last Minstrel,’ and of ‘Rokeby.’ In all of these works the heroine has certain distinctive features, drawn from one and the same haunting dream of his mazy adolescence.”

The lady of this his first love married another; and his biographer observes—

“I have neither the power nor the wish to give in detail the sequel of this story. It is sufficient to say, that after he had through several long years nourished the dream of an ultimate union with this lady, his hopes terminated in her being married to a gentleman of the highest character, to whom some affectionate allusions occur in one of the greatest of his works, and who lived to act the part of a most generous friend to his early rival throughout the anxieties and distresses of 1826 and 1827. I have said enough for my purpose—which was only to render intelligible a few allusions in the letters which I shall by and by have to introduce; but I may add, that I have no doubt this unfortunate passion, besides one good effect already adverted to, had a powerful influence in nerving Scott’s mind for the sedulous diligence with which he pursued his proper legal studies, as described in his *Memoir*, during the two or three years that preceded his call to the bar.”

His subsequent meeting with Miss Carpenter at Gilsland, and his union with her in 1797, leads to the insertion of some very characteristic correspondence; and the lady’s letters are, truly, very graceful and captivating. But we must leave them, and the volume, now, with two brief extracts.

“He (Sir Walter, says Mr. L.) could, when I first knew him, swallow a great quantity of wine without being at all visibly disordered by it: but, nothing short of some very particular occasion could ever induce him to put this strength of head to a trial: and I have heard him many times utter words which no one in the days of his youthful temptation can be the worse for remembering,—‘*Depend upon it, of all vices drinking is the most incompatible with greatness.*”

Trait of the Northumberland drovers, in a letter of Scott’s (1792):—

“The inhabitants of this country speak an odd dialect of the Saxon, approaching nearly that of Chaucer, and have retained some customs peculiar to themselves. They are the descendants of the ancient Danes, chased into the fastnesses of Northumberland by the severity of William the Conqueror. Their ignorance is surprising to a Scotchman. It is common for the traders in cattle, which business is carried on to a great extent, to carry all letters received in course of trade to the parish church, where the clerk reads them aloud after service, and answers them according to circumstances.”

Intellect has marched into the north since then.

#### Ward’s Human Life, &c.

(Concluding notice.)

THE varieties of Mr. Ward’s illustrations of human life are, like the fruits in a macedoine, of so many different kinds, that we must, at this rather busy period of the year, be content with picking out only a very few more of them, and recommending the jelly entire to our readers. The annexed extract from “Atticus” appears to be worthy of our selection:—

“What may be a duty in youth or middle age would be inconsistent when past the meridian. Even to the veteran, I would not say that all worldly uses were flat and unprofitable. But it is inconceivable how poor and shapeless the objects most dazzling to the glittering throng appear to him who is going to where he knows they will all sink to nothing, or worse than nothing. Could men carry their pomp and power with them, or women their beauty, when they quit the world, it would be different; but, as pomp and power, and beauty too, are doomed irrevocably to be ‘food for worms,’ ‘to lie in cold obstruction, and to rot,’ I often think, when I see them in their very zenith, how soon they must be stripped of all that they pride themselves upon here, and how soon the millions they have despised may be more than their equals elsewhere.” Our friend here paused again for some minutes; and, as I was sure he was sincere, I esteemed him more than ever. I felt, even, almost as grave as himself, and waited for him to go on. He therefore rather surprised me by a change of tone, when he laughingly wound up by saying,—‘No, no! there are no orators, aristocrats, or exclusives in heaven, whatever they may think of it.’ ‘All this is incontestable,’ said I; ‘but do you mean that, because all must quit the world, we are not to attend to its interests while in it?’ ‘Clearly not,’ he replied; ‘but the difficulty is to distinguish between the world’s interests and our own. A grandiloquent minister, finding his grandeur in a little danger, cries out, ‘Vain

pomp and glory of the world, I hate you !” He assures his audience that he took office against his will, knowing he was too old for it ; but he must not abandon the king. He therefore remains a little longer ; that is, as long as he can. Another grandee has also a duty to perform (of course, to the country), and cannot refuse to save that country by refusing to coalesce with the party that is uppermost. A third suddenly discovers that he has been in error all his life, but has become open to conviction : that is, he sacrifices all the principles for which he had fought for years when his friends were in power ; but, in consequence of this conviction, sides against them, now they are out. These are admirable examples ; but, my good friend, would you have me one of these ?”

This portion of the publication, which is not very susceptible of being fairly appreciated without perusal from beginning to end, has also a just and glowing eulogy on Shakespeare.

“ Who so inexhaustible in his varieties ? who so profound in his knowledge — his knowledge of all the hidden springs of the heart, and of the causes or effects of human events ? What feeling is there undescribed ? What motive unexplored ? What passion not developed ? What duty not enforced ? Ambition, avarice, prodigality, revenge, patriotism, filial piety, conjugal love ! All the romance and witcheries of imagination ! All the home-felt realities of life ! If we look for pathos, who so pathetic ? for wit, who so witty ? for humour, who so humorous ? In epic, beyond all, heroic ! In tenderness, beyond all, sweet ! Indeed (to use his own words),

‘ Sweet as summer.’

In description, ever appropriate, he is gorgeous, and sublime, or gentle and soothing, as the subject requires ; whether Cleopatra sail down the Cydnus, or ‘ towers topple on their warders’ heads.’ In short, in such immeasurable varieties of knowledge and imagery, who could ever find an end ? or, closing the book, say he had finished ? No ! a thousand lives might pass, and the lessons not be terminated.”

In “ Fielding,” after the first desultory part, the author goes more into narrative and adventure. The happy loves of Etheldreda, and the rambles of his hero, with the story of a remarkable companion named Willoughby, whom he encounters, complete the work, to which (as we have said) we can afford no further space than the following brief examples.

“ Dermot, for the first time, met Judy at a fair ; treated her ; danced with her ; and the next day, having got her consent, went to the priest. Father Murphy did not approve of love at first sight. — Dermot differed. ‘ Please your reverence,’ said he, ‘ I am bound to you for your advice, but I hope you will excuse me for differing, and thinking my scheme better than yours.’ ‘ Why ?’ said the father. ‘ For this reason,’ replied Dermot ; ‘ love, at first sight, sparkles and burns like whisky ; but an old engagement is like dead small bare.’ We have said, that as love may come, so it may go, we scarce know why in either case ; but when it does go, care should be taken to make all decent in the separation ; so that, though there may be no love remaining, there shall be a great deal of esteem. The situation is not quite so pleasant, but it is better than the *éclat* of a rupture. However, I cannot fail to recollect here the pathetic lamentation of a lively French marquess, who had loved his mistress to distraction, but somehow or another cooled off. Calling upon him one day, I asked him how his suite

to Madame de F. went on. ‘ Oh ! mon ami,’ he replied, ‘ nous sommes dans toutes les horreurs de l’amitié !’ ‘ I suppose,’ said I, ‘ this friendship will soon turn to hate, as love itself very often does.’ ‘ Vous vous trompez,’ said he ; ‘ I did not love her enough to hate her.’ This reply is so full of meaning, and lets in so much light upon this intricate subject, that I recommend it to the notice and study of all my brother-philosophers.”

Our author’s opinion of Hampden will startle many a patriot and liberal.

“ I willingly went a few miles out of my way to see Chalfont and Hampden, where Milton sang and Hampden plotted. The earliest and sweetest notes of the poet were breathed at the first, and the treasons of the rebel concocted at the last. In these times how many will start, how many will smile, at the appellation I have bestowed on the canonised martyr of liberty. ‘ Oh ! that word of fear !’ how many knaves has it not profited ! how many fools not beguiled ! That Hampden of Hampden did essential service to liberty when liberty was in danger, no one can deny ; and, had he known where to stop, it would be difficult to praise or honour him enough. But, like almost all the great actors of the world, who have, perhaps, been sincere in their outset, he made patriotism only a stepping-stone to ambition ; that besetting sin by which, as Wolsley too late found out, ‘ the angels fell.’ Was Hampden, then, the seat of happiness, when thus the seat of treason ? for it was here, as the tradition is, that, with his fellow-conspirators, he settled those plans which drenched his country in misery, although the causes of discontent were fast subsiding. Could, or can, traitors then be happy ? was the question raised by my visit to this abode.”

We conclude with a passage in a still stronger tone of conservatism.

“ I left Oxford in a pensive, or, rather, melancholy mood. I stopped often to look back upon its towers, its battlements and spires, the growth of ages, and, for all that time, the parent of those who have most enlightened, polished, or protected the land. This, indubitably, was not the cause of my melancholy ; but to think how soon Oxford may be overthrown, and her foundations destroyed, under pretence of the public good — how soon she may become a prey to the sinister designs of knaves, with economy in their mouths, and pillage in their hearts, distressed me. The all-destroying fiend of mischief and robbery, under the mask of reformation, which is too irksome for him to wear, even for the few minutes necessary to his designs, has already whetted his beak and sharpened his talons, which, if Providence doth not fight for us, will, in the end, destroy these once happy seats. I say, unless Providence fight for us ; because it should seem we dare not fight for ourselves, but are left to the will of the spoiler. Oxford, therefore, will and must sink in the general wreck, and her magnificent institutions and august associations will be talked of as things that have been.”

We must refrain from the characters drawn in the latter portion of the work ; and merely state, that those who prefer story to reflection will be more gratified with this than with the preceding moiety of Mr. Ward’s literary performance.

*Family Poetry : chiefly Devotional.* By the Editor of “ Family Worship,” “ The Sacred Harp,” &c. Pp. 236. London, 1836. Tilt. Very few would be led to suppose that this

work by the editor above named, was a literary robbery — a collection of poems, and some of them stolen from works published within the last twelve months. But this is not all : what was before sense, the editor has rendered nonsense. For instance, The “ Evening Hymn,” which will be found in Mr. Miller’s “ Day in the Woods,” is thus given in the present selection :

“ Until eternity is gained  
That bound the sea without a shore ;  
That without time for ever reigned,  
And will when time’s no more.”

The second line will be found to read in Mr. Miller’s work thus :

“ That boundless sea without a shore.”

How many more such errors there may be we know not. The editor has also the bravery to state, that, “ should this little work receive the approbation of the public, it is the intention of the publisher to bring out a similar volume next year.” That is, should not some author or publisher put a stop to this practice, he will continue to plunder new works, and bring them forth, while purchasers will countenance the piracy. We trust that every honest publisher will set his face against such proceedings.

*Spain.* By H. D. Inglis. 2 vols. Second Edition. London, 1837. Whittaker and Co.

NOTWITHSTANDING all that has been written about Spain since poor Inglis’s first edition appeared, it must still remain a standard book on the subject. An introductory chapter on the present (ever changeable ?) state of the country, is ably written : we cannot, however, but look for such revolutions, both in the seat of war, and the seat of government, as to render all speculation idleness.

*Concealment ; a Novel.* 3 vols. R. Bentley. A story rather belonging to the school which has been followed, if not superseded, by higher efforts in this walk of literature. The circulating library readers, however, may find its incidents, loves, disappointments, misfortunes, and happy events, quite to their taste.

#### MISCELLANEOUS.

*Britannia ; or the Moral Claims of Seamen stated and enforced.* An Essay in Three Parts, by the Rev. J. Harris, author of “ Mammon,” &c. Pp. 195. (London, Ward and Co.) — A premium of 50*l.* having been offered for the best essay on this subject, Mr. Harris has carried off the prize. The affair belongs to the British and Foreign Sailors’ Society, whose views and opinions the author appears to have enforced with great ability.

*Thoughts in Times Past tested by Subsequent Events,* by the Duke of Newcastle. Pp. 164. (London, Boone.) — A highly conservative view of national affairs, and taken by one whose eminent rank has afforded him great opportunities for observation. As politics, however, are better discussed in other pages than ours, we shall be content to pay our tribute of admiration to the good sense, talent, and obvious sincerity, which pervade these pages.

*A Familiar Account of Trees,* &c. Pp. 117. (London, G. East.) — A pretty little book, in which many interesting anecdotes, &c. relating to trees, are related in a manner well calculated to excite the attention and improve the mind of youth.

*Tales of the Martyrs,* &c. 18mo. Pp. 223. (London, Dean and Munday.) — The compiler of these melancholy episodes from church history, thinks the subject too much neglected. At all events, they are sad stories, and teach us how cruel human nature must be when it can commit such atrocities in the name of a religion of peace and mercy.

*The Pocket Guide to Commercial Book-keeping,* &c. by R. Wallace, A.M. Pp. 120. (Glasgow, M’Phun ; London, Cotes.) — A very useful little work for mercantile people.

*Sermons for Children,* by M. E. Bourlier. Pp. 66. (London, Hatchard and Son.) — Such publications seem to us to spring out of odd notions ; though, we doubt not, extremely well meaning. To simplify the moral lessons of the church, and adapt them to the capacities of children, is praiseworthy ; but sermons (short as they are) are not the fittest vehicles for such instruction.

*Encyclopædia Britannica*, Vol. XIV., Part 2. (Edinburgh, A. and C. Black ; London, Simpkin, Marshall,

and Co.; Whittaker and Co.; Hamilton, Adams, and Co.; Dublin, Cumming.]—Professor Napier proceeds nobly with his seventh edition, improving with every step he advances. This Part concludes the important subject of Mechanics; and the paper on medals (we wish our illustration of the art of engraving them had been in time for it) Medical Jurisprudence, Medicine, Metaphysics, and Meteorology, are all excellent of their kind.

*The Student's Cabinet Library, Nos. XXI., XXII.* (Edinburgh, Clarke).—These two Nos. are truly useful tracts; for the one is the "Life of Lady Russell," and the other Dr. Channing on Slavery; very different, but both very interesting.

*Dr. Lardner's Cabinet Cyclopaedia, Vol. LXXXVIII. History.* (London, Longman and Co.).—The fourth volume of Mr. Thirlwall's History of Greece is here added to this series, and brings us down to 387 a.c.

*Biblical Cabinet, No. 12.* (Edinburgh, Clarke).—Exposition of the 1st Epistle of Peter, translated from the German of W. Steiger, by the Rev. P. Fairbairn. It displays a good deal of biblical erudition and a highly evangelical spirit.

*A Philosophical and Practical View of the Social bearing and Importance of Education, &c.*, by J. Antrobus. 8vo. pp. 302. (London, Longman and Co.; Hatchard and Son).—We rejoice to see this most important subject employing the minds and pens of so many intelligent men. Mr. Antrobus's essays, demonstrating that the only true foundation of a good education is to be laid in the Christian religion, deserve great attention on account of the principles they so ably maintain; while his historical illustrations will be found to bear with strong interest on his graver arguments.

*A Treatise on Painful and Nervous Diseases, and on a new Mode of Treatment of the Eye and Ear*, by A. Turnbull, M.D. 3d edition, 8vo. pp. 161. (London, Churchill).

Dr. Turnbull thinks he has discovered in the tincture from *Aconitum napellus*, which he calls aconitine, a specific for various nervous diseases, and supports his opinion by strong cases and arguments in this volume.

*The Abuses Swept out of the Church, &c.* Pp. 19. (London, Relfe and Fletcher).—"A Member of the Senate," Cambridge, has, in this brief pamphlet, addressed to the university representatives in parliament, shewn, in a calm and dispassionate manner, that much of the evil of which the church has to complain, may be ascribed to the anomalous and unpriestly condition of curates, who, instead of being independent functionaries, are subject to various errors of position, which tend to the wrong and injury of the whole ecclesiastical body.

*Letter to H. W. Tancrèl, Esq. M.P. on the Ballot*, by the Rev. Alex. Crombie, LL.D. F.R.S. Pp. 51. (London, Simpkin, Marshall, and Co.).—A temperate and sensible exposition of the system of ballot; in which the political benefits said to be anticipated from that subterfuge are contrasted with its moral effects, in depraving and debasing the electors of England. Ballot may truly be called the *Oceanic and Rascally Refuge*, and the only wonder is, to see manly and honest individuals so badly sorted as to suppose it could ever be productive of any sort of good.

## ORIGINAL CORRESPONDENCE.

### ANGLO-CHINESE COLLEGE.

As it may be interesting to the public to know the nature and objects of the Anglo-Chinese College, to which we lately alluded (*Lit. Gaz.* No. 1050), we insert the following extract from a recent proceeding of the committee of correspondence of the Royal Asiatic Society upon the subject:—

"The chairman (Sir Alexander Johnston) states to the committee, that the letters which he has received from the various corresponding members of the Society, in China and in India, shew that the Anglo-Chinese College at Malacca is likely soon to become a most powerful engine in diffusing moral and political knowledge and civilisation throughout China, and the islands of the Chinese seas; and that the Asiatic Society, anxious as it always is, to continue and increase the influence of such an engine, may advantageously, at the present moment, direct the attention of the British public and the British government to this valuable institution, by recalling to their recollection the very enlightened and statesmanlike opinions upon the subject which have been given, as well in his speeches in the House of Commons as in various interesting accounts which he has written on China, by Sir George Staunton, to whose liberal patronage and munificent donations the college is so much indebted. The chairman further submits, that such measures as may be necessary ought, as soon as possible, to

be taken for drawing up such a catalogue of all the books in the Chinese language, presented by Sir George Staunton to the library, as may enable the members of this Society and the public to become acquainted with the contents of those very curious and very valuable works; and that the following short account of the nature and objects of the Anglo-Chinese College should be copied upon the proceedings of the committee from Sir George Staunton's speech in the House of Commons on the 13th of June, 1833:—

"*Object.*—*The Reciprocal Cultivation of Chinese and European Literature.*—On the one hand, the Chinese language and literature will be made accessible to Europeans; and, on the other hand, the English language, with European literature and science, will be made accessible to the Ultra-Ganges nations who read Chinese. These nations are, China, Cochinchina, the Chinese colonies in the Eastern Archipelago, Loo-Choo, Corea, and Japan. The Malay language, and Ultra-Ganges literature, generally, are included as subordinate objects.

"*What Advantages the College Proposes to Afford to Students.*—1. The college will be furnished with an extensive library of Chinese, Malay, and European books. 2. The assistance of European professors of the Chinese language, and of native Chinese tutors. The European professors will be Protestants. 3. A fund will be formed for the maintenance of poor students. 4. To European students, the Chinese language will be taught for such purposes as the students choose to apply it—to religion, to literature, or to commerce. 5. To native students, the English language will be taught; geography, history, moral philosophy, and Christian theology, and such other branches of learning or science as time and circumstances may allow. 6. There is at the station an English, Chinese, and Malay press, which literary students may avail themselves of. And it is intended ultimately to form a botanical garden, in connexion with the college, to collect under one view the tropical plants of the Eastern Archipelago.

"*Students to be Admitted.*—Persons from any nation in Europe, or from America; persons of any Christian communion, bringing with them proper testimonials of their moral habits, and of the objects they have in view; persons from European or other universities, having travelling fellowships; persons belonging to commercial companies; and persons attached to the establishments of the official representatives of foreign nations, who wish to become acquainted with the Chinese language, will be admitted. Also native youths belonging to China, and its tributary kingdoms, or to any of the islands and countries around, who either support themselves, or are supported by Christian societies, or by private gentlemen, who wish to serve them, by giving them the means of obtaining a knowledge of the elements of English literature, will be admitted."

## ARTS AND SCIENCES.

### STATISTICAL SOCIETY.

MR. PORTER in the chair.—The communication read was by the chairman, being some account of the public works which were in progress, or recently completed, in France, at the end of 1835. Part 1st, Inland navigation. By a law passed in June 1833, a special credit, amounting to forty-four millions of francs (1,760,000*l.*), for the completion of ca-

nals; of fifteen millions of francs (600,000*l.*), for perfecting high roads; of twelve millions of francs (480,000*l.*), for constructing military roads in the western departments; of two millions and a half of francs (100,000*l.*), for completing the system of lighthouses along the coast of France; and of half a million of francs (20,000*l.*), for prosecuting inquiries concerning rail-roads; making together seventy-four millions of francs, or 2,960,000*l.*—was placed at the disposal of the government by the legislative chambers: and the author gives a brief account of the progress that had been made, at the end of 1835, towards the completion of the objects contemplated at the passing of the above law, full particulars of which are contained in papers presented to the French chambers last year by the minister of commerce and public works. More than half the sum voted by the chambers was made applicable to the formation and completion of canals. The statement of the minister of public works describes eleven lines of canals, besides operations by which two rivers have been rendered navigable. These works appear to have been all undertaken at periods anterior to June 1833, and to have had considerable progress made towards their completion at that date: funds were wanting, however, and they were finished under the vote of the chambers. The following table presents an abstract of the whole:—

Names of Canals.	Length in English Miles.	Number of Locks.	Rise and Fall in English Feet.	Money expended previous to 1825, stated in English Money.	Amount of Loan raised in August 1825, stated in English Money.	Advanced out of Public Treasury beyond the foregoing sums, previous to the law of June 1833.	Expended under the law of June 1833, stated in English Money.	Total cost at the end of 1835, stated in English Money.
Rhone and Rhine— Saône..... Ardennes..... Burgundy..... Nantes and Breteuil..... Lille and Rance..... Blavet..... Arles and Bouc..... Nièvre..... Bretagne..... At the anniversary meeting, held a few days previously, a very gratifying report was read. It stated, amongst other things, that the secretary of state for the colonies had expressed himself willing and anxious to promote a correspondence between the Society and the colonies; and had offered to transmit to the authorities there any communication from the Society, and to recommend such inquiries as it might be desirable to institute.—Sir Charles Lemon was re-elected president: the other officers stand nearly as heretofore.—The auditors' report gave much satisfaction.

# METEOROLOGICAL SOCIETY. Anteordinary Meeting.

On Tuesday, 14th, Dr. Birkbeck, president, in the chair, after the routine proceedings, several interesting papers were read, from Poole, Gussport, Cheltenham, High Wycombe, London, and Edmonton, descriptive of the remarkable atmospheric phenomenon which was seen on the night of the 18th of February last. Other papers were read on various meteorological subjects; one of which was from New York, America, giving an account of the weather, and the state of the thermometer at noon, on the first eight days in January, 1837, proving the low temperature that prevailed in both continents at that period. The laws of the Society, in their revised state, were then read, and ordered to be confirmed at the next ordinary meeting.

*Ashmolean Society, March 6.*—Professor Rigaud gave an interesting account of a portion of the MS. collections in the library of the Earl of Macclesfield, at Shirburn Castle, from which it appears that much has been said of the valuable library possessed by the father of Sir William Jones; but the accounts of it have all agreed in stating that, as a collection, it is no longer in existence. Dr. Hutton distinctly says that, after Mr. Jones's death, his manuscripts were dispersed; another story fixed the dispersion at the death of George, the second earl of Macclesfield, to whom the whole was left in 1749; and Nichols speaks of the library being sold in 1801: but, notwithstanding these circumstantial statements, the collection has been kept together entire, and is now preserved at Shirburn Castle. The letters which it contains from mathematicians of the seventeenth and beginning of the eighteenth centuries are particularly curious; and, although a certain number of them has been inserted in various works, and particularly in the General Dictionary, by Birch and Lockman, the larger part still remains unpublished, and the whole are now (by the liberal permission of the Earl of Macclesfield) in Oxford, that a selection may be made from them, and communicated, through the university press, to the scientific world.—Dr. Daubeny read some scientific notices from Mr. Tancred, in which Mr. Tancred gave an account of an unusual flood of the river Lerchis, near the Baths of Lucca, which took place on the 2d of October last, when the river rose suddenly to the height of 18 feet 4 inches above its usual level. At Florence, Mr. Tancred saw the collection of specimens of the different parts of the human body, and other animal substances, which the Signor Segato has contrived to preserve from putrefaction. The method by which the preservation has been effected is unknown, and will remain so, as the Signor Segato died without imparting the knowledge of his method to any one. His death was occasioned by vexation, brought on by the refusal of the government to assist him in his undertaking, to which they were persuaded by the priests. Now, however, that he is dead, they so far value the collection that they have refused to permit it to go out of the country. Mr. Tancred also gave an account of an instrument invented by Professor Amici, of Modena, for measuring angles; and mentioned the recent discovery of some microscopic infusoria in a white sort of tripoli, called in Tuscany *pietra della luna*, from Monte Sta. Tiora, which has hitherto been considered a volcanic production. Dr. Buckland informed the meeting that he had received a letter from Mr. Crosse, detailing the results of a new series

of experiments, by which he has succeeded in obtaining 100 more animals, of the same description as those obtained by previous experiments. On a piece of volcanic slag, connected with the electric wires at both ends, a fluid, containing silicic and muriatic acid, was gently dropped. The animals, soon after their formation, were washed off from the slag, and deposited in a wooden funnel underneath. Without muriatic acid, the same animals were formed; but when no electricity was used, the animals did not appear. The animals have been exhibited at the Royal Institution, by Mr. Faraday; whence originated the erroneous report that Mr. Faraday had, by a series of similar experiments, produced the same animals. The animals were, at first, supposed to be *infusoria*, similar to those discovered by the microscopic observations of Ehrenberg; but, upon being shewn to naturalists in London, they are discovered to be of a much higher order, very closely resembling the well-known *acari* which infest cabinets, with the exception that they have no hairs. It was, however, suggested by Dr. Buckland, that the hairs, most probably, had adhered to the gum used to stick them on the card, or had been rubbed off by friction during their carriage to London.—*Oxford Herald*.

## LITERARY AND LEARNED. ROYAL SOCIETY.

THE Earl of Burlington in the chair.—A communication on the tides, by Mr. Lubbock, was read. The author, in the commencement of his paper, notices the striking agreement between Bernoulli's theory and the results of the tide observations made at the London Docks. He then inquires whether the removal of the old bridge has occasioned any difference in the time or flow of the tide. In 1832, none of that ancient structure was removed; in the following year, almost the whole of it was taken away; and, in 1834, it was finally removed. During these periods, high-water was nearly as late as in 1804, and as it is now. Mr. Lubbock, in handsome terms, acknowledges the liberality of the British Association, in granting a sum of money for the purpose of obtaining good tide observations; he then notices a curious MS. on the tides, written in the thirteenth century, by an Abbot of St. Alban's; from the remarks in which it appears, that the difference in these phenomena at that period, as compared with the present, is considerable. Mr. Lubbock's results are laid down in diagrams, without which he himself admits they cannot be well understood. A ballot was had for Dr. Roberts; the result was, 16 negative to 10 affirmative balls. Dr. Roberts was, consequently, not elected into the Society. The meetings were adjourned over the Easter recess, until the 6th of April.

## ROYAL ASIATIC SOCIETY.

MARCH 18. At the meeting this day, the president, Mr. Williams Wynn, announced that, in consequence of the recent decease of Mr. Henry Thomas Colebrooke, to whom the Society owed a debt of exceeding gratitude, not only for its formation, but, also, for the constant labour and attention he had bestowed upon it from the first year of its existence, the council had judged proper, as a mark of respect due to the memory of the venerable founder of the Society, and as a token of regret for the loss the Society had sustained, to adjourn the meeting of that day without proceeding to any business whatever. The meeting was consequently adjourned.

## LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

*Monday.*—British Architects, 8 p.m.; Marybone Library (Mr. J. Hemming on Chemistry), 8½ p.m.; Russell Institution (Mr. H. Goadby, Third Lecture on Insect Anatomy), 8 p.m.  
*Tuesday.*—Royal Medical and Chirurgical, 8½ p.m.; Civil Engineers, 8 p.m.; Zoological, 8½ p.m.; Lambeth Literary (Mr. Henderson on Education), 8½ p.m.  
*Wednesday.*—Society of Arts, 7½ p.m.  
*Thursday.*—Western Literary (Mr. Brindley on the Causes of Shipwreck), 8½ p.m.; Russell Institution (Mr. Oxford's Second Lecture on German Literature: Goethe), 8 p.m.

## FINE ARTS.

### THE EXHIBITION OF THE SOCIETY OF BRITISH ARTISTS.

Of this pleasing Exhibition, with its novelties and varieties, it is now "our hint to speak;" which, as it has been open to the public for some days, we are better able to do than after a hasty glance at a private view. We are much mistaken if it will not be generally considered more attractive than any of its precursors.

First in our regard stands

190. *The Prisoner of Chillon, from Byron's Poem.* F. Y. Hurlstone.—The subject is one of deep pathos, and well calculated to develop the talents of an artist. As Byron's description much resembles Dante, so Mr. Hurlstone's picture cannot fail to remind every one of the *Ugolino* of Reynolds. The expression of the eldest of the brothers, wan as his features have become, is full of the energy prompted by what may be termed quiet despair. To him is well contrasted the yet unfaded bloom of the youngest,—

"——— the favourite and the flower,  
Most cherished since his natal hour."

doom'd, however,

"——— day by day,  
To wither on the stalk away."

In the back-ground is the third brother, over whose otherwise determined spirit hopeless captivity is prevailing. It is impossible to contemplate the group without emotion.

On the opposite side of the room we find subjects nearer home, and which belong to the age we live in.

35. *The Fruits of Idleness.* 45. *The Fruits of Industry.* E. Prentiss.—It is much to the credit of this artist that his works are all of a domestic and highly moral character. He has here illustrated the contrast between good and evil with great skill. In the one, the family of a young poacher, who has returned, wounded, from the scene of his illicit practices, are represented as anxiously employed in affording him relief. In the other, a labourer, surrounded by every comfort, is sitting down, with his wife and children, to a cheerful repast—the superfluity of which furnishes the means of charity. These pictures are painted in Mr. Prentiss's usual and careful style. In rural districts, lithographic prints of them might be advantageously distributed among the working classes.

65. *A Conference in the Shades: Buonaparte is vindicating his policy; Byron listening in lofty abstraction; Scott deliberately scrutinising the arguments of Napoleon.* J. P. Davis.—The title too fully describes this production to render any further explanation necessary. It is an ingenious device to bring together the portraits of three master-minds. The effect of it upon the spectator must very much depend upon the power of his own imagination: while one person will bestow upon it only a transient glance, another will stand before it for hours, absorbed in deep reflection.

132. *The Valley of Mexico.* D. T. Egerton.—In extent of prospect, and in the multiplicity,

and we may add beauty, of the objects introduced, we have seldom seen so novel and interesting a view. The various localities are pointed out in the catalogue, and the manner in which they are executed bears intrinsic evidence of the fidelity of the representation. As a work of art, it is skillfully painted; and the aerial perspective (considered with reference to the climate), and the proportion of one object to another, are very happily preserved.

180. *Richmond, from the Tooting-path, near Cholmondeley Walk.* T. C. Holland.—This queen of our suburbs is here introduced to public view, in her summer costume, by an artist whose pencil, although occasionally employed on the sublimities of nature, has been more frequently, and more happily, devoted to the imitation of her softer and blander features. In this performance, the beauties of Richmond will be instantly recognised, with feelings of pleasure, by all who have visited the spot; and will inspire all who have not visited it with a desire to do so.

41. *Vico, in the Bay of Naples; 158. A Scene on the Tiber, with Monte Mario; St. Peter's in the Distance.* W. Linton.—We bring these two classical and elevated views in juxtaposition, for the purpose of adverting to the powerful contrast which they present in colour and effect. The first is wrapped in that mysterious light which one of our greatest poets has termed "darkness visible;" on the second, the sunbeams shed their most brilliant and animating influence. Both are admirable.

The mantle of the principal room exhibits three familiar and domestic subjects, by artists distinguished for the fidelity and skill with which they depict the objects of their imitation; viz. 62, *The Wedding Gown*, R. Farrier; 63, *The Cobbler*, W. Shayer; 64, *The Confidante*, T. Clater. The last is a candle-light scene, painted with great depth and effect. The goose, undergoing the operation of plucking, with its fallen feathers, may challenge the competition of any artist, English or Flemish.

111. *Heath Scene.* R. B. Davis.—Different in kind from any of the last-mentioned works, but not less faithful in representation, this little performance comes recommended by novelty in form, character, and composition. A stricken deer has sought the shelter of a clump of trees, in which to breathe its last. The sentiment is touching; but the effect of the colouring is brilliant and pleasant.

(To be continued.)

#### NEW PUBLICATIONS.

*Picturesque Sketches in Spain; taken during the years 1832 and 1833.* By David Roberts. Hodgson and Graves.

EVERY artist, quoad artist, must lament the Reformation. As a man, he may be rejoiced at his liberation from the superstition, bigotry, and intolerance, of the Romish church; but, as a painter, he cannot reflect without regret on its magnificent and picturesque ceremonials, and on the facilities which the noble edifices, where those ceremonials were performed, afforded for the exhibition of the finest productions of the pencil and chisel. This is a feeling which the superb volume before us will greatly increase. There is no country in which all the gorgeous pageantry of the Catholic religion has been, and still is, so profusely and ostentatiously displayed as in Spain; and a large proportion of these sketches (twenty-six in number) are devoted to its illustration by Mr. Roberts; with what success, his former works render it unnecessary for us to say. The Cathedral of Seville, especially, has furnished

him with admirable subjects; of which the most grand and striking are, "The High Altar, during the celebration of Mass," and "The North Aisle, with the Procession of the Host." Nor can any thing exceed the beauty of "The Chapel of Ferdinand and Isabella, at Granada," or "The Church of San Miguel, at Xeres." Contrasted in style with these is that fine relic of Saracenic architecture, "The Chapel in the Great Mosque, at Cordova." Of the sketches unconnected with ecclesiastical matters, "The Rock of Gibraltar facing the Neutral Ground," and "The Bull Ring, at Seville," are among the most interesting. Several of these charming drawings have been transferred to stone by Mr. Roberts himself; but in others he has received the able assistance of Messrs. Allom, Boys, Cooper, Gaudi, and Haghe.

*Asking a Blessing.* Painted by A. Fraser; engraved by C. G. Lewis. Hodgson and Graves.

A PLEASING domestic subject in middle life. A father, mother, and child, sitting down to dinner; and, before they commence their meal, imploring the continued protection of that Being to whose bounty they owe it. The graceful piety, or the pious grace, of the female is especially attractive.

#### ORIGINAL POETRY.

ON THE NEW SCHOOL, ERECTED ON THE SITE OF HONEY LANE MARKET.

(By the Author of the "Epitaph on the Marquess of Anglessey's Leg.")

WHERE once thy market, Honey Lane,  
Display'd its shambles, blocks, and hooks.  
Proud learning now erects her fane,  
With scholars, masters, forms, and books.

Where slaughterling kiddies would parade,  
With aprons blue, and greasy smalls,  
Young pupils, with professors' aid,  
Now qualify themselves for stalls.

Where pussy once her prog might nose—  
Where sheeps' rights ever met the eye—  
We now seek other lights—e'en those  
Of his'try and philosophy.

Assuredly, though strange, 'tis droll,  
That readings, in a classic way,  
Where once the fish-fag dress'd the sole,  
Should be sole business of the day.

Yet all's not changed, some have declared,  
And this I candidly avow;  
Where food was formerly prepared,  
There's food for contemplation now.

And, certainly, it may be said,  
Nor think with gammon I would bore,  
Where Bacon now is daily read,  
Bacon was known, and prized of yore.

Events in mystic cycles run,  
The wise to baffle with the fool;  
The school comes where the market's done—  
A market may succeed the school.

And o'er me comes the idea strong,  
In this, or in a future reign,  
Where rumps were daily cut so long,  
They daily may be cut again.

#### BIOGRAPHY.

*The late Mr. John Davidson.*—The intrepid traveller, Mr. Davidson, was the son of Mr. Davidson, tailor, in Cork Street, who, by his great industry and perseverance, acquired a large fortune. His son, Mr. J. Davidson, was educated at the well-known establishment of Dr. Greenlaw, of Brentford, where he obtained a good classical education. In the year 1814

he was bound apprentice, for five years, as a chemist and druggist, in the firm of Messrs. Savory and Moore; and, during its early period, conducted the operations of their laboratory. Owing to this practice, and his own talents, he was, at the conclusion of his term, considered to be exceedingly clever in his profession. He afterwards entered as a partner into that eminent firm, in the year 1819; but, from his great desire to travel, and circumstances to which we formerly alluded, he quitted it in 1826; and thence, up to the time of his death, he has travelled, in common parlance, nearly all over the world. He was master of most of the continental and oriental languages, and a perfect chemist. The Emperor of Morocco will, no doubt, feel his loss, as he entered into an arrangement with that potentate to return by way of Morocco and instruct the physicians there in the art of medicine and pharmacy; in the prospect of which, he had ordered two large cases of medicine to be prepared and sent to the emperor. It was in consideration of this that the emperor gave him an escort of one hundred horsemen to see him safe across part of his dominions. The public, as well as his friends, deeply deplore the loss of this amiable young man; and none more so than the writer (from whom we have derived this information), who knew him as a boy, and also as a man, and who always experienced the most friendly feeling from him.

#### DRAMA.

THE drama is all perspective at this holiday-time. Macready, we rejoice to see announced again, after his severe illness, at Covent Garden. The Adelphi promises the *Lily of the Danube*; and, as lilies don't spin, we anticipate very slight clothing. The St. James's has another piece by Mrs. S. C. Hall, in which Mr. Goldamid, the admirable mime, appears *pro* Barnett, gone into country quarters. The Strand re-opens with Mr. Hammond and his company, and Jerrold pieces. The Olympic dramatises the *Rape of the Lock*, and Ducrow ditto *Ivanhoe*.

#### VARIETIES.

THE *London University* has had the apartments lately occupied by the Royal Academy, in Somerset House, assigned to it by government; wherein to transact the business of the University under its new charter, in granting degrees, and other matters.

*Royal Academy of Music.*—The first of the series of four concerts, for exhibiting to the public the progress and advantages of this national institution, was given at the Hanover Square Rooms, on Saturday last. We regret to say, that our expected details (owing, perhaps, to holiday and Good Friday interruption) have not reached us; but we can generally state that the performances were highly satisfactory.

Mr. Howell has, during the week, been exhibiting his beautiful *Eidouranian* at the Adelphi, with great applause.

*Lambeth Literary and Scientific Institution.*—At the last meeting, Mr. Daniel Cooper delivered a lecture here, being a continuation of the course on Cryptogamic Botany. The *Fungi*, or mushrooms, were fully considered. To illustrate the lecture, several beautiful models, executed by the late Mr. Sowerby, were exhibited; which were kindly lent by Mr. C. E. Sowerby.

*The Southern Literary Messenger*, for January 1837, which we have to acknowledge, from Richmond, U. S. (London, Miller), is a fair specimen of American periodical and polite

literature, in prose and verse; and, as such, deserves attention and encouragement from English readers. Ninety-six pages, and double columns, make a No. almost a Volume.

*Continental and British Medical Review, No. I.*—If we may judge from the increasing number of medical publications and periodicals, the science must be flourishing. The present novelty, edited by Dr. B. Riofrey, seems to us to be judiciously executed; and we conceive it will be advantageous to us to learn the opinion of intelligent foreigners relating to many of our sayings and doings.

*The Country between St. Sebastian and the French Frontier.* (London, J. Wyld.)—A map of this part of the seat of war has just appeared, from sketches by Major J. H. Humfrey, and is peculiarly acceptable at this period, when General Evans and the Carlists are fighting about the very places here mapped down. It may well be called a useful companion to the newspapers, and the news from Spain.

*Calone.*—A lithographic portrait of this new and popular singer has just appeared, from the pencil of Chalon and the stone of Lane. It is an admirable likeness of the original in the character of *Nemorino*, in *Felicité d'Amore*, which part he has made peculiarly his own. His feet are a match for those of Cinderella in the fairy tale—wondrous small.

*Pauline Duvernay*, by the same hands, is by no means so good. The likeness is very fair, but the attitude so constrained and strange, that it is not easy to tell whether it is a front or a back view of this graceful person.

*Weather-wisdom.*—Lieut. Morrison made a capital hit on the 21st and 22d; at least there was a fall of snow more like Christmas than Lady-day season. About the 25th and 26th, the prediction is "gloomy and cold; high winds, and heavy, long cirro-stratus clouds. Moist and cloudy weather, yet less cold about the 28th. The air much milder, more dry and pleasant, though windy, about the 29th. The 31st, changeable." For our author, we may fairly say, that he does not shirk the question. There is "no day before, or day after," but all most distinct and particular.

*Shakespeare's Monument.*—We are glad to learn that the design for the restoration of this monument, and the chancel of Stratford Church, is gradually receiving the patronage it so richly merits. Mr. Britton's plan for ornamenting the ceiling of the latter with the armorial shields of Warwickshire noblemen and gentlemen is an admirable idea, and would have a splendid effect. Who would not, even in this slight degree, link their name with that of the Immortal?

*Ancient Entomology.*—Mr. Crosse, in a letter addressed to the *Times*, states, in regard to the unexpected appearance of insects in his electrical experiments, that he has "given no opinion whatever as to the cause of their first production; having, as he first stated, mentioned 'facts, but not opinions.'" He adds, "without more data than we at present possess, I do not see how it is possible to form an opinion on the matter, or to say whether the electric agency is, or is not, the secondary cause or acceleration of their birth. Since my two first [first two] experiments, I have met with eight other results, in which similar insects have appeared: in the whole, ten separate formations. Five of these have been in silicious solutions, and five in other fluids; one of them, a concentrated solution of nitrate of copper. In all of these the electrical action was long continued before the insect made its appearance; but this might have been the case otherwise. In the course

of my observations, I have met with some rather curious phenomena, which shall be laid before the public when the train of experiments now in hand, and which must necessarily occupy some time, is completed." In conclusion, the writer justly thanks Mr. Faraday "for the candour and liberality he has evinced towards him."

At a meeting of the Philosophical Society, Cambridge, a paper, by Mr. Warren, of Jesus College, was read,—On the algebraical sign of the perpendicular drawn from a given point to a given straight line. Mr. C. Darwin exhibited various specimens of rocks collected by him in a voyage round the world, made in H. M. S. Beagle, Capt. Fitzroy, and occupying five years. These specimens were tubes of fused sand, produced by lightning, found near the Rio Plata; a white calcareous incrustation alternately formed and removed on the rocks of Ascension Island by a periodical change in the direction of the swell; a black incrustation formed by the spray on the tidal rocks at Ascension; a white hard calcareous rock, formed rapidly at Ascension; a recent calcareous formation indurated by the contact of lava at St. Jago, one of the Cape Verde Islands. Mr. W. W. Fisher afterwards presented an account of a case of *Spina bifida*, accompanied with some physiological and pathological researches on the accumulation of fluid in the ventricles of the brain.

#### LITERARY NOVELTIES.

*Dr. Dibdin's Bibliographical and Antiquarian Tour in Scotland.*—We are glad to see preliminary signs of this Tour in the Edinburgh journals, having heard some interesting details of it in parts, when on a Scottish tour ourselves last autumn. In public as well as private libraries (says an address from the Doctor), it was impossible to be more fortunate in attentions received and assistance granted; and if the pages of his work afford not evidence of the value of this aid—as well by the beauty of its decorations, as by the importance of its information—the author will have been labouring unto no commendable purpose.

Dr. Lassen, of Bonn, has, it is stated, completely succeeded in deciphering the inscriptions in the arrow-headed character, copied by Niebuhr and other travellers from the ruins of Persepolis, and of which he has framed an entire alphabet. The discovery is confirmed, both by the similarity of the inscriptions themselves, in style and expression, to those still extant of other nations, and by their approximation to what we possess of ancient Persian. The particulars will, we are informed, shortly appear in English.

Mr. Frederick Wagenfeld announces, in the German journals, a translation into Latin of his recently discovered MS. of *Sanchoniatho's Phœnician History*, complete in nine books; a summary of which has recently been published in Germany. We learn that an English critic means to bring in question the authenticity of the volume, on grounds totally different from the writers of Germany.

#### In the Press.

A Work upon Natural Theology, by Mr. Babbage.

#### LIST OF NEW BOOKS.

The Star-Seer, a Poem, by W. Dearden, 8vo. 7s. 6d.—The Practice of the Court of Common Pleas, at Lancaster, by W. Wareing, cr. 8vo. 15s.—The First Three Sections of Newton's Principia, with an Appendix, and the Ninth and Eleventh Sections, by J. H. Evans, M.A. 8vo. 6s.—The Hunterian Oration, by Sir B. C. Brodie, Bart. 8vo. 2s.—Letters on Phrenology, by John Stadel, M.D. 8vo. 9s.—The Married Unmarried, 3 vols. post 8vo. 12. 11s. 6d.—Rev. H. Mean .. 29.67559

Number of days of rain and snow, 17.

Quantity of rain and melted snow, in inches and decimals, 3.05625.

Winds.—0 North-East—5 East—5 South-East—1 South

—7 South-West—4 West—5 North-West—1 North.

General Observations.—This was the warmest February that has occurred during the last thirteen years, although the maximum was not so high as in the corresponding months, in 1828 and 1831; but the range was nearly thirty degrees. The mean of the barometer was higher than usual for the month; although the maximum was lower than the average. Snow fell on the night of the 26th and morning of the 27th, but did not lie long on the ground, which was only partially covered. The quantity of rain and melted snow has been exceeded only four times in the same month in the period before mentioned. On the night of the 18th, about half past ten o'clock, the heavens were illuminated by a brilliant arch, of about ten degrees in breadth, of a deep red, or vermilion colour, formed by two streams of light; the one arising in the north-east, passing over Arcturus and Ursa major, and the other originating in the south-west, leaving Orion to the southward, passing over Aldebaran and Capella, and meeting in the zenith, where the light was very faint. The western limb was the brightest, and, at intervals, shot forth rays of light approaching to a flame colour; the edges of the main stream were then fringed, and had a feathery appearance; the eastern leg of the arch was the first that began to fade, spreading wider, and becoming fainter, when that part of the sky was mottled, like that called mackerel sky, but still retaining its red tint; the stars were seen through the aurora, which had nearly disappeared by eleven o'clock, the moon all the time shining brightly and nearly at the meridian, the planet Mars almost touching her south-eastern limb, and Jupiter being but a short distance from her to the westward. The barometer stood at 29.97, and the temperature was forty degrees, a light breeze blowing from the westward.

#### TO CORRESPONDENTS.

"The Literary Gazette, which last week contradicted, in an abrupt and somewhat impertinent manner, our intelligence respecting the death of Mr. Davidson, ought to have exhibited the courtesy of confessing its error."

Times of Monday.

We can assure the *Times* that we meant nothing impertinent; and we hope it may be able to say the same, in using the above lines. Our expressions were,—  
"There is no authentic account of his death in London, and it rests on the paragraph in the *Times* newspaper."

We have too high an opinion of the "intelligence" in that journal to undervalue it upon any point; but we understood it, from a paragraph subsequent to the first, to have itself some doubt of the absolute certainty of its sad news; and, being anxious to catch hold of even a last hope for the consolation of the traveller's friends, we hastily adopted the latest accounts we could obtain, without time or mind to weigh the words minutely. In another part of our impression will be found a few particulars respecting Mr. Davidson, which the *Times* is very welcome to copy without acknowledgment, in revenge. Of which, *apropos*, no week passes in which extracts are not made from the *Literary Gazette*, by every one of the leading newspapers in London, without the slightest allusion to their source. Of this we do not complain, for many of them may be taken indirectly from the first paper which has *unconsciously* copied us; but, for ourselves, we never insert a line of matter, not original, without stating whence it was derived.

We have always intended to give a second notice of "Attila," for its fine admixture of history and romance; but the temporary influx of new works of fiction has hitherto prevented us. Some other continuations of reviews are unavoidably postponed.

## ADVERTISEMENT,

Connected with Literature and the Arts.

## BRITISH INSTITUTION,

FALL MALL.

The Gallery for the Exhibition and Sale of the Works of British Artists, is open daily, from Ten in the Morning until Five in the Evening.

Admittance, 1s.—Catalogue, 1s.

WILLIAM BARNARD, Keeper.

## SOCIETY OF BRITISH ARTISTS.

The Exhibition of the Society of British Artists, Suffolk Street, Fall Mall East, is now open to the Public, from Ten in the Morning till dusk.

Admission, 1s.

T. C. HOFLAND, Secretary.

## INSTITUTE of BRITISH ARCHITECTS, Incorporated 7th William IV. 43 King Street, Covent Garden, London.

Extract from the Minutes of the Ordinary Meeting held on Monday, 18th March, 1837:—

Resolved,—That the Medals of the Institute be awarded next Year to the Authors of the best Essays on the following Subjects:—

1. On the excellencies which distinguish the Ancient Athenian Architecture, and on the principles of art and science by which they were attained, with regard to design, proportion, light, shade, colour, construction, and adaptation to purpose, to situation, and to the materials employed.
2. On the system and principles pursued by the Gothic Architects, from the 11th to the 15th centuries inclusive, in the embellishment by colour of the architectural members and other parts of their Religious and Civil Edifices.
3. On the progress of improvement made during the last 100 years in the theory and practice of Construction, illustrated by diagrams and references to buildings.

N.B. Each Essay is to be written in a clear and distinct hand on alternate pages, and is to be distinguished by a Mark, or Motto, without any name in the title.

Resolved,—That the Soane Medalion be awarded for the best restoration of some Priory, Abbey, or similar class of Conventual Building: such as Fountains, Easby, Rivaux, or Kirkstall Abbey, York; Castle Acre Priory, Norfolk; Llanthony Abbey, Monmouthshire, &amp;c. &amp;c. to be drawn from actual measurement, distinguishing in a marked manner the parts existing, and those restored to complete the combination of the Halls, Apartments, Refectory and Offices; accompanied by a description.

N.B. The wish of the Institute is to have a complete and correct delineation of the general arrangement and composition, rather than minute parts at large of the architecture, or highly finished details. The plan is to be as large as a sheet of double elephant paper will admit; and there are to be two elevations, as also two sections through the courts, drawn to the same scale as the plan. The plan, elevations, and sections, to be tinted in Indian ink or sepia.

The competition is not confined to Members of the Institute. Further particulars and directions for Candidates may be had on application to the Secretaries by letter, post-paid.

3 St. James's Square, March 25.

TO ADVERTISERS.—Nos. IX. and III. of the London and Westminster Review, will be published on the 21st. Bills and Advertisements received by Mr. Macrone until Tuesday the 29th.

## MUSIC.

## THE CRUCIFIXION.—The Members of

the Vocal Society beg to announce that Spohr's Oratorio, "The Crucifixion," will be performed, for the first time in this country, on Monday Evening, March 27, at the Hanover Square Rooms, being the last Vocal Concert of the Season. In order to give proper effect to this sublime composition, the Band and Chorus will be considerably augmented; and the Members of the Vocal Society have great pleasure in announcing that many eminent Professors have offered their willing co-operation in its production.

Single Admissions, Half-a-Guinea each, may be had of the Members of the Vocal Society. EDW. TAYLOR, Sec. 3 Regent Square.

## ROYAL MUSICAL LIBRARY, 75 Lower

Grosvenor Street, near Bond Street. J. Willis has the honour of informing the Nobility and Gentry, that his Rooms are at present supplied with a splendid variety of Piano-fortes, Harps, Seraphines, Guitars, &amp;c. by the most improved makers, giving the Public an opportunity of contrasting the relative merits of each, and obtaining them at manufacturers' prices for immediate payment. J. W. begs particularly to call the attention of the Musical World to his extensive Musical Library, to which he is now adding 1800 volumes, containing all the Modern Works of the best Composers, English and Foreign, and to which every musical novelty of merit is added as soon as published. Terms, First Class, 3 Guineas; Second Class, 2 Guineas per annum. Catalogue, 2s. 6d.

Opera Boxes and Stalls in the best part of the house, and Pit Tickets at 5s. 6d. each.

## NEW VOCAL MUSIC.

The Coronet, a Collection of Songs. The Words by Mrs. Hemans, Moore, Croly, Balwer, Gratian, Coleridge, Shelley, &amp;c. The Music composed, and dedicated, with permission, to her Royal Highness the Princess Augusta, by Mrs. Alexander Kerr. 12s.

The Ferry, a Song, by the Author of "Queen of my Soul." The Music by the Hon. Mary Ann Jarvis. 2s.

In the press.

One Song and Two Duets (Italian), composed by the Hon. M. A. Jarvis. Thelma's Song, by the Composer of the Captive Knight.

Mrs. Willis and Daughters' Academy is now open. Days of Attendance, Tuesdays and Fridays, from Ten until Four. Terms may be had at their Residence, 75 Lower Grosvenor Street.

## SALES BY AUCTION.

SOUTHGATES' ROOMS.

## Books in Quires and Boards.

By MESSRS. SOUTHGATE and SON,

AT THEIR WEEKLY SALE-ROOMS,

25 FLEET STREET,

**PETER PARLEY'S TALES ABOUT THE SUN, MOON, AND STARS.**  
 In one very handsome volume, printed by Whittingham, embellished with 122 Cuts, price only 4s. 6d. in fancy boards.

**PETER PARLEY'S TALES about the SUN, MOON, and STARS;** also the late Comet: a new and improved edition, with great additions.  
 "It is the evening of a long tedious life. If a man were to be obliged solemnly to declare, what, without any exception, has been the most lovely thing which, on the surface of this earth, it has been his good fortune to witness, I conceive that, without hesitation, he might reply, 'The mind of a young child.'"

"We observe with what delight a child beholds the light, colours, flowers, fruit, and every new object that meets his eye; and we all know, that (before his judgment be permitted to interfere) for many years he feels, or rather suffers, a thirst which is almost insatiable."  
 "His desire, and very naturally desires, to know what the moon is? What are the stars? Where the rain, wind, and frost come from? With innocent simplicity he asks, what becomes of the light of a candle, when it is blown out? Any story, or any history, he greedily devours."

"We observe with what delight a child beholds the light, colours, flowers, fruit, and every new object that meets his eye; and we all know, that (before his judgment be permitted to interfere) for many years he feels, or rather suffers, a thirst which is almost insatiable."  
 "His desire, and very naturally desires, to know what the moon is? What are the stars? Where the rain, wind, and frost come from? With innocent simplicity he asks, what becomes of the light of a candle, when it is blown out? Any story, or any history, he greedily devours."  
 London: Printed for Thomas Tegg and Son, 78 Cheapside; and sold by all Booksellers; where also may be had, gratis, Frank Howard's Letter to Peter Parley, Esq.

In 1 thick vol. 8th edition, price 16s.  
**Every Disease in this edition has received additions, and the whole is much improved.**

**MODERN DOMESTIC MEDICINE; a Popular Treatise**, exhibiting the Symptoms, Causes, and most efficacious Treatment of Diseases; with a copious Collection of approved Prescriptions, Medical Management of Children, Doses of Medicines, &c. The whole forming a comprehensive Medical Guide for the Clergy, Families, and Invalids.  
 By T. J. GRAY, M.D. &c.

"We shall preserve it as the advice of an invaluable friend, to which we can refer in the hour of need, without any doubt of being benefited by its wisdom."—*Literary Chronicle*.  
 "It is altogether deserving of permanent popularity."—*London Weekly Review*.

"One of the very best and most useful books published in modern times."—*Monthly Olio*.  
 "The public demand for this work is a proof that its value is duly appreciated. Every disease that flesh is heir to, with its remedies, are so minutely described that mistake is scarcely possible."—*Bristol Journal*.

Published by Simpkin, Marshall, and Co., and Hatchards, London. Sold by all Booksellers.

Also, by the same Author, in 8vo. price 10s. boards,  
 2. **On the Diseases of Females; a Treatise** illustrating their Symptoms, Causes, Varieties, and Treatment. With numerous instructive Cases. Including the Diseases and Management of Pregnant and Lying-in Women. Designed as a Companion to the Author's "Modern Domestic Medicine." Containing an Appendix on the proper Principles of the Treatment of Epilepsy.  
 "It is an admirable performance, and should find a place in every family establishment."—*Bath Herald*, 3d May, 1834.  
 "A most desirable acquisition."—*Reading Mercury*, 3d June.

Illustrated with Eighteen coloured Plates, by H. Alken, and T. J. Rawlinson. Price 35s. handsomely bound.

**THE LIFE OF the late JOHN MYTTON,** Esq. of Hinton, Shropshire; formerly M.P. for Shrewsbury, High Sheriff for the Counties of Salop and Merioneth, Major of the North Shropshire Yeomanry Cavalry. With Notices of his Hunting, Shooting, Driving, Racing, Eccentric, and Extravagant Exploits.  
 The second edition, revised and enlarged.  
 By NIMROD.

"Not to adorn a tale, but to point a moral, may this extraordinary piece of biography be read—and be read with advantage, by almost every young man in the country."—*Literary Gazette*.  
 Rudolph Ackermann, 191 Regent Street.

Post 8vo. with Maps, price 10s. 6d.  
**THE WEST INDIES; the Natural and Physical History of the Windward and Leeward Colonies; with some Account of the Moral, Social, and Political Condition of their Inhabitants, immediately before and after the abolition of Negro Slavery.**

 In 2 vols. demy 8vo. with numerous Illustrations of Costume, &c. &c.  
 "Mr. Murray has visited some of the most interesting and least known parts of the Pyrenean chain; and he has described the impressions made upon him with the feeling of an artist for the beautiful and picturesque in scenery, and the talent of an able observer for circumstances and manners."—*Literary Gazette*.  
 John Macrone, St. James's Square.

**MR. COLMBINE'S NEW TRAGEDY.**  
 Dedicated, by Gracious Permission, to H. R. H. the Princess Victoria,  
**MARCUS MANLIUS, in Five Acts.**  
 By DAVID ELWIN COLMBINE.  
 Now ready.

"We were ill prepared for a play which, on the whole, may be pronounced to be equal to any tragedy that has of late been produced upon our stage. It is less poetical than the 'Ion' of Sergeant Talford, but it is more lifelike, and infinitely better adapted for representation."—*Atlas*.  
 Fancy boards, gilt, price 5s.  
 Richard Bentley, New Burlington Street.

Price One Shilling.  
**LETTERS to the EDITOR of the "MUSICAL WORLD,"** relative to the York Organ, occasioned by the Report contained in that Publication, of the Evidence before Richard Vaughan Barnewell, Esq. Arbitrator in the case of Hill against the Dean and Chapter of York.

Livy. 46-52.

Printed and Published by Valpy; and sold by all Booksellers.

## VALPY'S GREEK TESTAMENT.

Fourth edition, with Parallel References, and other Improvements, 3 vols. 8vo. 2l. 5s. boards,

## GREEK TESTAMENT,

WITH

## ENGLISH NOTES,

Critical, Philological, and Explanatory, from the most eminent Critics and Interpreters; with Parallel Passages from the Classics, and with References to Viger for Idioms, and Bos for Ellipse. To which is prefixed, a short Treatise on the Doctrine of the Greek Article, according to Bishop Middleton, Mr. Granville Sharp, &c. briefly and compendiously explained, as applicable to the criticism of the New Testament. The various readings are recorded under the Text. Greek and English indexes are added.

By the Rev. E. VALPY, B.D.

Two Plates are added, illustrative of the Travels of the Apostles, and a Map of Judea, and a Plan of the City and Temple of Jerusalem.

This Work is intended for Students in Divinity, as well as the Library.

"This Greek Testament is the most valuable of any that has yet been published with critical and philological apparatus, especially for students who wish for only one edition."—*Horne's Introduction to the Bible.*

"Valpy's Greek Testament is to be preferred to either Dr. Burton's or Dr. Bloomfield's."—*Christian Guardian.*

Also, Second Edition, 1 vol. 8vo. 1l. 1s.

## GREEK SEPTUAGINT,

## WITH THE APOCRYPHA.

Edited by VALPY, from Bos and Holmes.

This edition is handsomely printed in one volume 8vo. hotpressed. For Use in Churches as well as the Library.

"This elegantly executed volume is very correctly printed, and (which cannot but recommend it to students, in preference to the incorrect Cambridge and Amsterdam reprints of the Vatican text) its price is so reasonable, as to place it within the reach of almost every one."—*Horne's Introduction.*

This has been printed for Students attending College Chapels and Schools; as it has long been considered one of the most useful expedients for keeping up the knowledge of Greek after the Student has quitted his scholastic duties.

The Septuagint and Testament may be had in Four Volumes.

Printed and published by Valpy; and sold by all Booksellers.

In cloth boards, price 15s.  
**THE COMEDIES OF ARISTOPHANES,**  
translated into corresponding English Metres,  
By H. D. WALSH, M.A.  
Fellow of Trinity College, Cambridge.  
In 3 vols. Vol. 1.  
"Has the rare merit of adhering closely to the original, without greatly sacrificing the spirit of the latter.—*Athenæum.*  
"Literate, and yet free, in more senses than one; and the metres are admirably imitated."—*Literary Gazette.*  
London: A. H. Baily and Co. 88 Cornhill.

In 12mo. sheep, price 2s. 6d.  
**FIRST STEPS TO LATIN WRITING;** a

GERMANS, with a Glance at Poland, Hungary, and  
Switzerland, in 1820, 1825, and 1830.  
By an ENGLISHMAN, resident in Germany.  
"All who desire to have an enlightened conductor to the  
almost innumerable places and objects of high interest contained  
within the wide circuit expressed in the title, whether the tour  
is to be in person or in spirit, ought to become intimately ac-  
quainted with it."—*Monthly Review.*  
Whittaker and Co. Ave Maria Lane.

In 2 vols. post 8vo. with a Map and View of Algiers,  
price 31s. cloth,  
**ALGIERES; with Notices of the Neighbour-  
ing States of Barbary.**  
By PERCEVAL BARTON LORD, M.D. M.R.C.S.  
Of the Bombay Medical Establishment.  
"Dr. Lord's volumes, published about twenty years since, are very  
carefully compiled, and contain, in a small compass, all that is  
really important to be known relating to the geographical, statisti-  
cal, and political condition of Northern Africa."—*Athenæum*,  
March 11, 1837.  
Whittaker and Co. Ave Maria Lane.

4th edition, 12mo. price 10s. 6d. cloth, of  
**DOMESTIC DUTIES**; or, Instructions to  
 Young Married Ladies, on the Management of their  
 Households, and the Regulation of their Conduct.  
 By Mrs. WILLIAM PARKES.  
 "The volume before us is a perfect vade-mecum for the young  
 married lady, who may resort to it on all questions of household  
 economy and etiquette."—*New Monthly Magazine*.  
 London: Longman, Rees, Orme, and Co.

NEW EDITION OF KER'S ARCHÆOLOGY OF OUR  
 POPULAR PHRASES AND NURSERY RHYMES.  
 In 2 vols. post 8vo. price 12s.; or the Second Volume separately,  
 to complete Sets, price 6s.

**AN ESSAY on the ARCHÆOLOGY of**  
 our POPULAR PHRASES AND NURSERY RHYMES.  
 By JOHN BELLENDEN KER, Esq.  
 "This work is either a dream or a miracle."—*Lord Brougham*.  
 London: Published by Longman, Rees, Orme, Brown, Green,  
 and Co.; and J. Coupland, Southampton.

In 3 vols. post 8vo.  
**A T T I L A**; a Romance.  
 By G. P. R. JAMES, Esq.  
 Author of "The Gipsy," &c.  
 "In this production, which displays to great advantage all the  
 excellences of the writer, we have his research, his descriptive  
 powers, his style, his identification of character, his poetry, his  
 historical accuracy, and his actual presentation of remote times,  
 mingled with all the interest of a well-conceived and finely ex-  
 ecuted story."—*Literary Gazette*.  
 London: Longman, Rees, Orme, and Co.

Price 9s. in boards,  
**THE PRACTICAL ANATOMY and**  
 ELEMENTARY PHYSIOLOGY of the NERVOUS  
 SYSTEM. Designed for the Use of Students in the Dissecting-  
 room.  
 By F. LE GROS CLARK,  
 Demonstrator of Anatomy in St. Thomas's Hospital.

"We highly approve of the plan which is beginning to be  
 adopted by writers of systematic works on practical anatomy: we  
 mean that of combining physiological information with  
 descriptive details. The work before us is one of the kind we  
 allude to, and, regarded as a whole, is certainly one of the best  
 of its class. That part of Mr. Clark's work which is more  
 particularly his own—we mean the descriptive anatomy of the  
 nervous system—deserves an unqualified commendation, and  
 cannot fail to be of great use to the student in his dissections of  
 this most difficult part of anatomy."—*British and Foreign Medical Review*.  
 "A most useful companion in the dissecting-room. The  
 descriptive part is particularly well executed."—*Lancet*.  
 London: Longman, Rees, Orme, and Co.

**LOUDON'S ARCHITECTURAL**  
 MAGAZINE, No. XXXVII. for March, price 2s. con-  
 tains—the Three Hundred Churches of Rome—Thompson's De-  
 sign for the New Houses of Parliament, illustrated by a Ground  
 Plan and Perspective Elevation—Candidus' Note-Book—Reviews  
 of Hamilton's Letters to the Earl of Elgin; Hopper's Letter to  
 Viscount Duncannon; Pugin's Contrasts between the Edifices of  
 the 14th and 19th Centuries, and similar Buildings of the Present  
 Day, shewing the Decay of Taste, &c.—Godwin's Churches  
 of London—Robinson's Domestic Architecture. Also, Literary  
 Notices—Professional Precedents—General Notices—Foreign  
 Notices—Domestic Notices—Retrospective Criticism—Queries  
 and Answers—Institute of British Architects—Obituary of Sir  
 John Soane.  
 London: Longman, Rees, Orme, and Co.

**LOUDON'S MAGAZINE of NATURAL**  
 HISTORY. New Series.  
 Edited by EDWARD CHARLESWORTH, Esq. F.G.S.  
 No. III. for March, price 2s. contains:—The Birds of Devon-  
 shire—Two new Species of the Genus Tringa—Breeding Wood-  
 cocks in Selkirkshire—Manners of the Black and Red Grouse,  
 and Carrion Crow—Arrangements of Fossiliferous Deposits—On  
 the Inexpediency of Altering Terms in Natural History—Psycho-  
 logical Distinctions between Men and all other Animals—Of Or-  
 thopterous Insects—Boulders of Trap Rocks—Shooting Stars—  
 Meteorological Retrospect for 1836—Reviews—Literary Notices—  
 Short Communications—Queries, &c.  
 London: Longman, Rees, Orme, and Co.

With above 1100 pages of Letter-press, and 2000 Engravings,  
 from designs by upwards of Fifty different Architects, Sur-  
 veyors, Builders, Upholsters, Cabinet-Makers, Landscape  
 Gardeners, &c. &c. in 1 large vol. 8vo. new edition, 3l. in  
 boards.

**ENCYCLOPEDIA of COTTAGE,**  
 FARM, and VILLA ARCHITECTURE and FUR-  
 NITURE; including several Designs for Country Inns, Public  
 Houses, and Parochial Schools, &c. &c.

CURTIS ON DEAFNESS, &c.  
 6th edition, illustrated with Cases and Plates,  
 price 7s. 6d. boards.

**A TREATISE on the PHYSIOLOGY**  
 and DISEASES of the EAR, with the Modes of Treat-  
 ment, taken from actual Observation, in upwards of 20,000 Cases.  
 By J. H. CURTIS, Esq.  
 Aurist to his Majesty, and Surgeon to the Royal Dispensary  
 for Diseases of the Ear, &c.

"The magic words, 'sixth edition,' shew that the public ear  
 has not been shut to Mr. Curtis's illustrations of this important  
 subject."—*Literary Gazette*.

"That Mr. Curtis has the best treatise on the ear extant, is not  
 only known wherever the English language is spoken, but it ob-  
 tains a just precedence in foreign nations, through the medium  
 of multiplied translations."—*Metropolitan Magazine*.

"This is a useful book. We are pleased to see the increased  
 attention that is bestowed on this subject, and we should be glad  
 to have Mr. Curtis's book very generally circulated. The author is  
 evidently a man of extensive experience, with a good talent for  
 observation."—*North American Review*.  
 London: Longman, Rees, Orme, Brown, Green, and Longman.

**LOUDON'S ARBORETUM et FRU-**

#### REVIEW OF NEW BOOKS.

*Memoirs of a Peeress; or, the Days of Fox.*  
Edited by Lady Charlotte Bury. 3 vols. 12mo.  
London, 1837. Colburn.

THIS work purports to have been written by some late Lady Blank, *alias* Asterisks, and to be only indebted to Lady Charlotte Bury for the duties of editing. How the case may be we cannot tell. The beginning relates to the follies and vices of the fashionable world half a century ago, and possesses considerable liveliness; and the latter pages bring us to the death and burial of Charles James Fox. Many of the characters are introduced in their own names, while others are mystified, but yet not so much as not to be readily recognised. The same may be said of the incidents, which are often real, though occasionally adapted to foreign localities and persons. The early career of the Prince of Wales and his associates is the staple of the performance; and the fêtes of Carlton House, Devonshire House, Ranelagh, and other rendezvous, of the gaiety of a preceding generation, are decked out with the tinsel and flowers, which cannot hide, but only add repugnance to the contemplation of the tomb.

The heroine is a country squire's daughter, who mixes with the *élite* of London, under her aunt, a beautiful, giddy, and imprudent duchess, whose frailty is severely punished. She herself marries a poor but most accomplished man, whose miseries and death, amid duns and bailiffs, afford other tragical topics. The originals of these pictures are easily to be traced; and this circumstance throws a doubt upon the alleged authorship of the memoirs. It is, however, a question of small consequence; and we shall merely offer a few brief extracts, to shew what sort of book the public have to expect.

"We dined the following day in St. James's Square; when Lord Rawborne's carriage, which was always sent for us, followed to the door the stately equipage of Lady Lavinia Shanstone. As we watched her ascend the stairs, escorted by her two tall daughters, Clara and Lavinia, my aunt exclaimed in a peevish tone: 'This is the first time my sister has found it convenient to drive here this winter; I lay my life that Medway has arrived.' 'Is she so fond, then, of her nephew?' 'So fond, that she wants to make him her son-in-law. Those horrid girls have enormous fortunes; and Lady Lavinia is wild to have them form great matches.' 'A saint, yet so ambitious?' 'A saint, because so ambitious. What but the desire of high distinction in paradise is the origin of saintship?'"

"My sanctimonious relatives added little to the conviviality of our family party. Lady Lavinia, a woman of narrow understanding, was the widow of a man rewarded by government with a baronetcy for the same line of conduct in the East, which afterwards brought Warren Hastings into Westminster Hall. Sir Obadiah Shanstone, on his return from Bengal, thought to glaze over, in the eyes of man, the sin of his low extraction, by bribing into wedlock the daughter of an earl; and to glaze over, in the eye of Heaven, the sin of his Oriental speculations, by trying to make a conventicle of the House of Commons,

and assuming in the conventicle the dictatorial importance of a conscript-father. But Sir Obadiah was gone to his long—his very long, account, leaving to Lady Lavinia the disposal of his two tall daughters and half a million of Oriental amassings. The girls were of an age to be presented in society; but, as prayer-meetings and religious dissipation had not then been introduced into fashionable life, Lady Lavinia was perplexed in what way to reconcile her views for their aggrandisement with the forms of sanctity forced upon her adoption by her marriage. Lavinia, the eldest, was evidently a puritan at heart; but I sometimes fancied I detected a gleam in the dark eyes of my cousin Clara, indicative of the repressed gaiety of a child of perdition. In their mother's presence, however, both sisters maintained the rigid perpendicularity of the twin towers of Westminster Abbey.

Though London was then comparatively circumscribed, and the outworks of the great world were far more strongly set up against the approaches of aspiring opulence, society was less easy to collect into a focus. There existed, as in Paris, distinct societies of the court and the town; and Windsor Castle ate its roast mutton, while Carlton House fed upon devilled kidneys. Religion and politics, if less potential, were more polemic. People did not slide from a house where high church implied salvation, to one where low church was all in all; or glide from an assembly given by a Whig premier, to a ball graced by the blessed hierarchy of the Tories. There were as many divisions and subdivisions in society, as there are canals in the city of Ghent, where a thousand bridges are indispensable to enable neighbour A to live on neighbourly terms with neighbour B. Under such disadvantages, a general picture of society must be less accurate than at the present time, when all is imitation,—all echo,—all tautology;—when 'half the platform just reflects the other,' and the aristocracy of rank stands grimacing, like a posture-master on its pedestal, in order that its illegitimate brother, the aristocracy of wealth, may try to prove affinity, by aping every contortion, and out-vaulting every leap. Nevertheless, some generalities existed that serve to inscribe the epoch on my memory. Much as has been said of the demoralisation of the higher classes during the decrepitude of George IV., the demoralisation prevalent during his youth was far more remarkable. Paris, like a repentant Magdalen, affected, just then, on the death of a vicious, and the accession of a virtuous sovereign, the most prudish propriety; and, as Horace Walpole used to say of France and England, that, 'like the sea and land, one could not gain without the other being a loser,' the vices put out of countenance by Louis XVI., took refuge under the protection of the Prince of Wales. Madame du Barri retreated into the obscurity of her pavilion at Luciennes, and the emblazoned chariot of a Perdita drove triumphantly through the parish of St. James. From the days of Alcibiades, however, to those of Brummel, fine gentlemen have existed, like excrescences on the oak, the disease and not the product of the age. It is rather from the women, the matrons of the times, I would draw deductions

of its morality; and I own that, in defiance of the example of a most domestic court, the noble ladies, my contemporaries, would have little to learn from the levities of their grand-daughters. Though less graced with superficial accomplishments than the damsels of to-day, our reasoning faculties were at that time better cultivated. We performed no miraculous concertos, competed for no prizes at the Society of Arts; but we were the chosen associates of a Johnson, a Cowper, a Sheridan. We listened more,—we chattered less. But this superiority of intellectual cultivation added only a new page to the annals of gallantry. It was only the conversion of *Lais* into *Aspasias*. From Mrs. Robinson to my lovely relative, the danger was but magnified through the atmosphere of refinement surrounding the meretricious charms of the goddess of voluptuousness. In its highest circles of *haut ton*, London already emulated the witty profigacy of Paris under the sceptre of Louis XV., and the influence of a Boufflers and a Du Deffand. Of these, enough, and too much, has been consigned to us in the memoirs of their day. But, saving in the archives of Doctors' Commons, nothing remains to perpetuate the peccadilloes of our grandmothers; for England is a prude who, like the Spartan virgins, heeds not that her zone should be unbound, so it be done in silence and obscurity. Nevertheless, a few septuagenarians, like myself, are not hypocritical enough to witness, unmoved, the canonisation of our century. Like the devil's advocate-general, whose duty it is to plead against every new aspirant to the honours of the kalendar, I lift up my voice to attest that the last age was a sinner in its generation; and, unmired by maternal blindness or bitterness, have no hesitation in tracing the effeminacy and fatuity of certain lords of the creation and the realm of the present day, to the enervating and vicious habits of their progenitresses. When I arrived in London, its ways were 'pleasant, but wrong.' It was something, at least, that they were 'pleasant; for I have since found them 'wrong,' yet mightily disagreeable."

We conclude with one other morsel.

"Although a topic peculiarly unfitted to Rochester House and the prince's presence, there were few other times and places where the embarrassments of the prince were not just then discussed. From the day of obtaining his majority, he had laid the foundations of expensive buildings at Carlton House, and of debts of honour and \* \* \* innumerable. Every folly of the day grew to excess under his cultivation. He out-drove Sir John Lade—he out-diced Charles Fox. Ten thousand guineas were expended in a single year on his toilet; and, between play-debts and debts of gallantry, the turf and the tailor's-shop, it was hard to say in what quarter his royal highness's pecuniary engagements lay heaviest. But the nation, or (as the London part of the nation is called) the public, was satisfied! So long as he shared his hazard with Charles Fox, his claret with Sheridan, not a syllable was to be said. The sordid respectability of Kew, or the petty German-courtliness of Windsor, might be lampooned by Wolcot, reviled by Junius, and

burned in effigy by Wilkes's mob;—while the fine, gay, bold-faced \*\*\* of Carlton House was a thing to be applauded in play-houses, and rewarded with prodigal grants by his majesty's court of parliament. Well!—Heaven mend us!—The cardinal virtues of this virtuous kingdom of Great Britain have ever been a stiff-necked and perverse generation! Time out of mind, our sovereigns expectant have waged war against our sovereigns regnant, with a ready faction at their heels; while the mob stands as patiently as a lord in waiting, with a mantle, purple and ermine, to throw over the raggedness of the prodigal son of majesty. The exemplary 'best of royal husbands and fathers,' with his experimental farms, and Handel, and Dr. Johnson, had not a huzzza at command. The prince, who threw away on the bouquets of his footmen thrice as much as the Berkshire farmer on his turnip-fields,—whose anthems were opera airs,—whose Wyatt was Nuvoleschi,—whose West, Sherwin,—whose Johnson, Dick Sheridan;—the Prince was the universal idol!"

There is a good deal about the prince's marriage, and the Princess (afterwards Queen) Caroline, and, in short, about all the fashionables who flourished from fifty to thirty years ago; and also about the politics of the day, Westminster election, &c. &c. &c. the which we now consign to the readers who want to learn how their predecessors acted on the stage of life, mingling notoriously in its vainest pursuits, phantasma, and crimes.\*

*The West Indies: the Natural and Physical History of the Windward and Leeward Colonies, &c. &c.* By Sir Andrew Halliday, K.H., M.D., &c. Deputy Inspector of Army Hospitals. 12mo. pp. 408. London, 1837. Parker.

SIR ANDREW HALLIDAY, possessed of great medical experience, and rich in general information, was, it seems, driven to the West Indies by an enemy whom neither his experience nor his information could conquer, viz. the gout; for relief from which malady he sought a warm climate, and, while resident in it, found the remedy he anticipated. On his return home, however, his adversary again assailed him; and, in the present instance, he has endeavoured to mitigate his inflections by writing the volume before us.

Whatever the limbs or body may be, it is evident that the mind has not suffered; for the work is full of useful observation, embracing various sciences, statistics, remarks on slavery and the abolition, diseases, religion, commerce, history, natural phenomena, and popular characteristics.

Barbadoes was the first island visited by the author; where, speaking of the mortality among the troops, he observes:—

"It would be both wisdom and humanity, as well as great economy, to throw aside all the English and Irish contracts for salt beef and pork, and allow the commissariat on the spot to procure those supplies of fresh meat and vegetables which are required for the proper nourishment of the troops, and are so important as regards their health and efficiency. I state it from authentic documents, and the fullest information collected on the spot, that there is not a colony, or corner of a colony, where British troops are quartered, in the West Indies, that is not capable of supplying these troops,

\* It may be noticed, as a coincidence, that, whilst writing this review, we see the death of Mrs. Fitzherbert announced in the Brighton papers, at the great age of 43. Her part in the affairs of these times was not one of the least influence and importance.

whether few or many, with fresh beef of the best quality, and at a cheaper rate, than what the salt provisions cost the country before they are delivered out to the soldiers' messes. This of itself, one would imagine, was sufficient to cause inquiry; but when I add, that more than a third of that mortality which is so dark a feature in our colonial military service, is occasioned by that rottenness of the constitution which is produced by improper and unwholesome diet (and I do not state this upon slight or untenable grounds), it is a question that ought seriously to engage the attention of our civil, as well as our military rulers. The salted meats, I readily admit, are the best that can be procured, and are most excellent of their kind; but to the soldiers in the West Indies they are doubly pernicious. In the first place, they do not furnish a sufficient quantity of nourishment to the body, while the superabundance of the muriate of soda, as every physician knows, produces that unnatural and unhealthy state of the blood which is so characteristic of a scorbutic tendency; and, in the second place, this diet excites such a craving for liquids that no resolution nor strength of mind can overcome it. Hunger is a severe suffering, but thirst is far more distressing; and, were death in the cup, it could not be resisted. Why, then, I would ask, persist in measures, neither called for by necessity, nor recommended by economy, and which are so conducive to the irregularities of the soldier, and so fatal to his health?"

Of British Guiana we have long and particular details; but we can only copy a little bit of animal anecdote, and a curious account of medical education, as specimens.

"The little wren which I have already mentioned seems to be so alarmed and annoyed by what is here called the lazy-bird (the *Cuculus rufus*), that she seeks and avails herself, as much as possible, of the protection of man, building her nest in the most frequented rooms of the house. One actually hatched and reared her young brood under a table in the mess-room of the 25th regiment, at Eve Leary barracks—a room frequented by hundreds daily, and where noise and uproar generally prevailed for half the night; yet nothing seemed to disturb her. To hang up an empty soda-water bottle in the open veranda is considered by this bird as a great boon; as in it she finds a retreat which the lazy-bird cannot reach: yet it is a most remarkable fact, that, should the lazy-bird succeed in getting her egg placed in the little wren's nest, she not only hatches it, but is most indefatigable in procuring food for the ravenous maw of the alien monster that has destroyed her own natural offspring. Here, as in Europe, the young of the foster-mother disappear as soon as the young cuckoo is hatched. Can it be a recollection of the cruel fate of her own young, and of the additional labour she will have to undergo, that makes her thus so persevering in her endeavours to escape from the pursuit of her remorseless persecutor? I saw a lazy-bird to-day follow a wren into the drawing-room at Camp House, and was with difficulty driven out, and prevented from taking possession of the wren's nest."

The medical system is capital: passing our College of Physicians, or Surgeons' or Apothecaries' Halls, though they may be as useful and advantageous as Pe-ai-ism, is nothing to it!

"All knowledge which the natives possess of the virtues of plants has been handed down by tradition. They have no written language; yet they can cure ulcers, destroy the poison of venomous snakes, and allay the symptoms of various diseases, with perfect success. Their

doctors are a distinguished and a greatly privileged class: they are called Peijmen, pronounced Pe-ai-men; and, before the young aspirant can obtain his degree, he has to undergo a rather severe apprenticeship. It is thus described by my excellent friend, Dr. M'Turk, who was at pains to make himself master of the whole proceeding:—"The person who is desirous of learning the art, or whatever it may be called, applies, either personally or through his father, to the elders of the family of the peijman who is to teach him. The peijman hears the applicant patiently, who relates to him his history, and that of his family, and where he resides: these statements proving satisfactory, the peijman takes his pupil the first night apart from every house or dwelling, and sings and bellows over him the whole night, occasionally puffing tobacco-smoke in his face. This ceremony being over, which commences at six o'clock in the evening, and continues till six o'clock in the morning, without intermission, he is put into the peij-house (a house built and used for no other purpose), closed in at top and sides, leaving only a small aperture for a door, which, when shut, renders the inside quite dark. Here the new initiated remains for a week, seated night and day on a block of wood—no bed, hammock, or any article of furniture whatever, allowed in the house; in this condition he is attended by the peijman every night, who performs the same ceremony as at the beginning: he also visits him daily, on which occasions he gives him to drink a quantity of tobacco-water, which vomits him until he is quite exhausted. The only food that is allowed him is about an ounce of cassava-bread, and about the same quantity of dried fish, and a little water, daily, which he can seldom use from the disturbed state of his stomach. At the end of the week the peijman gives him, by way of a finale, a calabash-full of pawary, a drink made from toasted cassava-bread steeped in water, which forms a fermented intoxicating liquor: this quantity (about a gallon) he has to drink at one draught, which is sure to vomit him; he is then taken out of the peij-house, looking more like a spectre than a human being. It takes some time before the new peijman can walk about, and until his strength is restored, or that he can take his departure for his home. The peij-houses are now very rare. About twenty years ago there was a large establishment of this sort on the Abanacary Creek, in the Essequibo River, where, at stated periods, the peijmen assembled to perform their exorcisms, and examine the younger peijmen. A father cannot teach a son, nor a son a father: at least, it is not the custom."

Tobago, Trinidad, &c. are also illustrated by Sir Andrew; but we have only space to notice, that the principal feature of his book is a theory that the whole of the Caribbean Islands are the product of a vast volcanic stream, thrown off after the formation of the Andes; and the course of which, over the crust of the earth and through the sea, along the track of the hurricanes, from the equator to the Gulf of Mexico, has produced all these islands. Of the value of this opinion we cannot judge; but it is strongly supported by the able and ingenious author.

*Piso and the Praefect; or, the Ancients off their Stilts.* 3 vols. 12mo. London, 1837. Smith, Elder, and Co.

WE cannot consider this to be a very felicitous design, though there is much cleverness in its execution. If a modern writer of a different nation, with different manners, tries to take an ancient people "off their stilts," he cannot

help putting them on ground which they never trod. Thus Romans become partly Englishmen; the rest being supplied from Adam's Antiquities, or some such source of information upon customs, manners, and habits. It is true we may be told that human nature is pretty much alike in all times and climes; but it is so modified by circumstances, that we can no more suppose a beggar or a citizen of imperial Rome to resemble an Irish mendicant or alderman of London, than that our lord-mayor is like a Cherokee chief, or our Lord Chief Justice of the King's Bench like a palaver-holding African cabocero.

In the story before us, Piso, the last of the illustrious Calpurnian race, returns to Rome from Athens, where he has been for his education; and takes up his abode, in a retired family villa, with his uncle, Scribonius Mummus, a pedantic piece of a philosopher. Their entrance into the home of his ancestors will afford nearly all the illustration we think it needful to adduce of the character of the work.

"Welcome, O Piso, to the home of thy forefathers! Under this roof thou first sawest the light; and though, alas! it seemeth cracked in many places, it may yet afford thee shelter. Here, I trust, thou mayest at least dwell in peace,—perhaps in comfort. Rich, indeed, thou art not; but Cleobulus, the son of Evagoras, hath informed us that a measure is the best." Here the sage paused for a moment, and, observing that his auditor was attentive, waved his hand gracefully, and proceeded with his discourse. "These are the images of your ancestors, O youthful scion of an ancient stock! How awfully do their dark countenances frown upon us from the walls! How majestic are their features! How dignified is their aspect and appearance! Amongst these thou wilt find the most distinguished characters of ancient Rome. That venerable statue with the broken head is no other than the great Pompey; the noseless one beside him is the wealthy Crassus; and there stands Pliny, the statesman and philosopher, whose wife was thy great-grandmother. But stay," continued the speaker, as he walked across the apartment; "let us examine these inestimable relics with more attention: if my memory fail me not, I can give thee information touching them on more points than one."

"This image to the right of Numa," said he, "represents a very different sort of person; a man of whom much may be said, although his history is comparatively little known. He was, once upon a time, a great military commander. He was valiant to a fault, and possessed many other very excellent qualities besides. Unluckily, however, his temper was somewhat irregular and hasty. That is a memorable anecdote which Seneca relates concerning him. He tells us that, a soldier having returned from a foraging expedition without his comrade, he was charged with having slain him; and Piso sentenced the supposed offender to be decapitated. His head was on the block, his neck stretched out to receive the stroke of the axe; when the truant whom he was accused of having murdered returned unexpectedly to his post. The centurion, whose duty it had been to see the sentence performed, stayed the proceedings, and led back the culprit, with his companion, to the general; thus making manifest the innocence of the former, while the whole army followed them with acclamations of joy. Now, a moderate man, under such circumstances as these, would probably have pardoned the two wretches at once; but your ancestor, in a rage, got him up to the tribunal,

and forthwith condemns them both—the one for returning without his comrade, the other for lingering behind; unto which barbarous decree he adds the condemnation of the centurion, for having dared to postpone the execution of his own accord. Thus were three innocent persons put to death as a punishment for the guiltlessness of one."

"The grim-looking personage now before you," continued Scribonius Mummus, advancing a few steps with his nephew, in the course of their progress round the room, "was celebrated in his day for having attempted one of the most barbarous and savage murders on record; an attempt, however, in which he failed. He, and his accomplice, Marcus Silius, were detected with daggers in their hands, prepared for the assassination of their patron, Quintus Cassius, at that time governor of Spain, and under whom they both held inferior posts; your ancestor being the treasurer of the province, and his confederate something else. Yet, strange to say, they both escaped unpunished, notwithstanding the enormity of their offence, and the clear evidence on which it had been proved; for such was the avarice of the governor that he could not resist a bribe, even from the hands of those who had so treacherously conspired against his life. He consented to let them off for a valuable consideration, amounting to about a hundred and ten thousand sesterces between the two; and it was facetiously said at the time, that, had they been able to come down with a still more considerable sum, he would rather have permitted them to accomplish their purpose, as originally designed, than have rejected the cash."

So much for the past. The uncle and nephew mingle with the society of Rome under the Pretorian prefect, Vitanianus, and his gladiatorial wife, Laurentia Ogulnia; and their dresses, feasts, actors and theatricals, gluttony, drunkenness, intrigues, and quarrels, are all related as faithfully as the materials to which we have alluded enabled the author to compass. We cannot say that we are much interested in these exploits; and have only to conclude with a specimen of a pseudo-Roman trait of Basilides of Antioch.

"Clad in flowing robes of embroidered silk; sparkling all over with jewels of inestimable worth; his head crowned with a tiara; his neck encased with carcanets, and his arms bound with bracelets; his eyebrows tinged with black, and his cheeks dyed with vermilion: this singular personage (the most illustrious Pantomimus of the age) sailed slowly into the room. Then, approaching his noble entertainer, he salaamed in the truest oriental style, lifting up his hands till they almost touched his head, and bowing down his head till it almost brushed the ground. Meeting with a reception of corresponding affability,—for, indeed, the prefect was more than usually polite,—he proceeded to the pronunciation of an exculpatory speech in language much disfigured by provincialisms. 'E oped,' he began, 'that is ighness would pardon im for not harving hearlier; but really the eat ad been so hoppressive hall the morning, that e could not find it in is cart to urry the bearers of is litter; oo, poor devils! were halmost hexhausted and quite hout of breath before they reached the hend of their journey, is ouse being a long way hof, hat the hother side of the Haventine III.' The prefect admitted the apology as valid, though he could not help smiling at the strange phraseology in which it was couched. He had, however, often heard the language of Rome murred by the natives of Syria in the same way

before; for, whatever may be alleged by Caledonian critics on the subject, the abuse of the aspirate has not always been confined to the modern populace of Cockney-land."

*Observations on the Evidence taken before the Committee of the House of Commons on the Record Commission, in 1836, and the Report, so far as it refers to the Irish Records.* By Sir W. Betham. 8vo. pp. 28. Dublin, 1837. Curry and Co.; London, Groombridge; Boone.

THE worthy and intelligent Ulster King of Arms, having been much misrepresented in some of the evidence given before the committee, has not deemed it consistent with his high station in the literary world, and character as a conservator of Irish records, to sit silently down under these interested imputations. On the contrary, he has in this pamphlet given them such answer as a gentleman would give; and, if the truth be told, it is, in the way of fact and argument, a very complete one, both as respects himself and the state of the records in Ireland. But it is not so much our province to enter into this "very pretty quarrel," as to refer to what must possess more general interest; and, in this point of view, we think the following quotation will deserve the best consideration of the public at large:—

"If (says Sir William) the committee had properly examined into the Irish records, and sifted the business properly, much valuable information would have been elicited, and the impertinences by which their attention was drawn from the true state of things, exposed. The committees of the House of Commons are formed of twelve or fourteen gentlemen, most of whom, and often all, but slightly acquainted with the rules and laws of evidence: the consequence of which is, that nine-tenths of what is called the evidence taken before them is not entitled to that name, but consists of crude thoughts, surmises, wishes, and opinions, generally speaking of little value, often worse than useless. The witnesses are not examined on oath, nor subject to any pains or penalties for not speaking the truth. Again, they are frequently volunteers, offering their testimony in support of a friend, or offensively against any one to whom they feel an enmity. In short, most of the witnesses are partisans on one side or the other, as may be sometimes the members of the committees; and the examination is often conducted in the most offensive and ungenerous manner, evidently more with a view to inculpate than to elicit truth. Men are allowed to make statements affecting the reputation of absent individuals, without the power of contradiction or cross-examination. These are printed and distributed to the public before the accused are even aware of their conduct being called in question. Public officers are particularly obnoxious to this injustice; for, if they do their duty, they will not fail to give offence to, and incur the animosity of, those whose unjust, unreasonable, or improper requests have been refused. A committee of the House of Commons, on any subject connected with their department, affords a favourable opportunity of revenge; and, like dismissed servants, they endeavour to criminate those who were too honest to comply with their demands. The good old maxim of *ex parte alteram partem* is neglected; and the accused must remain under unjust censure, or appeal to the press for his justification. The volume of the Report, &c. of the Committee on the Record Commission is a fair specimen, in every respect, of such proceedings. It consists of about 1100 pages. How much grain is to be found in this mass of chaff, let any lawyer, who knows what evidence is, declare. Will he report that there are one hundred pages of evidence in it, if the Appendix be omitted? I doubt it. The remainder is, for the most part, mere rubbish, on which no rational proceeding ought to be based. It might be worthy of consideration, whether, in all committees before which evidence is to be taken, a barrister of a certain standing should not attend as an assessor, to correct the exuberance of testimony, and prevent the printing of such nonsensical rubbish as is annually inflicted on the public, at an enormous expense, under the false appellation of evidence. Would it not, also, be an equitable regulation, where the conduct or character of any individual be impugned, especially if he be a public officer, that he should be sent a copy of the evidence against him as soon as taken, and be summoned to attend the committee forthwith, to explain and justify himself. If he be able, and be confronted with his accusers? If this plan were adopted, the practice with time of the committee would be saved; their labours diminished; great dimensions would take place in the expense of printing; and the nauseous labour of wading through masses, perhaps, of malicious scandal, and intolerable nonsense, which those who read the Parliamentary Papers, for the sake of discovering valuable facts on any particular subject, are now condemned to endure, would be spared."

for, assuredly, there would not be so many volunteer witnesses, if their inanity or malice were to meet immediate exposure and contradiction, and consequent rebuff. The committee would very often expunge their statements, and censure their impertinence; and, in cases where there was any doubt, the charge and explanation of the accused would go forth together, which is but just. It is important to ascertain the opinions of individuals who are eminently qualified by their talents, acquirements, and attention to given subjects in which they are distinguished and eminent; and such opinions partake of the nature of evidence, and are valuable: but opinions, thoughts, surmises, or hearsays, criminating or affecting the characters of individuals, should never be allowed to disgrace the printed evidence, unless the accused has been also heard in explanation or defence. The most worthless individuals are those who attack others secretly, and it frequently occurs, that justice requires the accuser and accused to change positions; and no system affords such facility as the committees of the House of Commons, for the criminal to become an accuser, or for a worthless and incapable person to force his way into notoriety, for the purpose of attaining place and patronage."

Such criticism does not apply to any one committee of the House of Commons *alone*—there is much in it which it would be well if every committee of that house, and every member of it, took seriously to the reflection of their closets; and, if they did, there would be infinitely less private wrong and public folly than is now committed under circumstances which seem to guarantee the people of England from suffering in either way. The most inefficient and uncertain, and often unjust, tribunal in the kingdom, is a committee of the lower house; swayed by self and party interests, beyond the belief of any man out of the sphere of actual observation.

*The Clockmaker; or, the Sayings and Doings of Samuel Slick of Slickville.* 12mo. Pp. 367. London, 1837. Bentley.

THIS is a reprint of a very clever and characteristic little book (published, if we remember rightly, at Richmond, United States, and partly previously in some Nova Scotia journal\*); and is, even with its localities (less attractive to European readers), altogether a very amusing performance. The Yankee pedler of Mr. Hill is of the same genus, and those who have seen him upon the stage will have a tolerable idea of Mr. Slick. The work, we have heard, is from the hand of Mr. Haliburton; and, though he is not a clock-maker, neither is he a book-maker, in the obnoxious sense of the name. On the contrary, he has drawn the Yankee in small compass, but imitatively well; and the lesson taught the Nova-Scotians, by contrasting his activity, industry, and acuteness, with the opposite qualities in them, is one which ought not to be thrown away; nor will it, if talent and humour can point a moral.

The introductory letter is a fair specimen of the whole.

"To Mr. Howe.—Sir, I received your letter, and note its contents. I aint over half pleased, I tell you; I think I have been used scandalous, that's a fact. It warn't the part of a gentleman for to go and pump me arter that fashion, and then go right off and blart it out in print. It was a nasty, dirty, mean action, and I don't thank you nor the squire a bit for it. It will be more nor a thousand dollars out of my pocket. There's an eend to the clock trade now, and a pretty kettle of fish I've made on it, hav'nt I? I shall never hear the last on it; and what am I to say when I go back to the States? I'll take my oath I never said one-half the stuff he has set down there; and as for that long lochrumb about Mr. Everett, and the Hon. Alden Gobble, and Minister, there aint a word of truth in it from

beginnin to eend. If ever I come near hand to him agin, I'll larn him—but never mind, I say nothin. Now there's one thing I don't cleverly understand. If this here book is my 'Sayings and Doings,' how comes it yourn or the squire's either? If my thoughts and notions are my own, how can they be any other folks's? According to my idee, you have no more right to take them than you have to take my clocks without payin for 'em. A man that would be guilty of such an action is no gentleman, that's flat; and if you don't like it, you may lump it—for I don't valy him, nor you neither, nor are a blue-nose that ever stept in shoe-leather, the matter of a pin's head. I don't know as ever I felt so ugly afore since I was raised; why didn't he put his name to it, as well as mine? When an article han't the maker's name and factory on it, it shows it's a cheat, and he's ashamed to own it. If I'm to have the name, I'll have the game, or I'll know the cause why, that's a fact? Now folks say you are a considerable of a candid man, and right up and down in your dealins, and do things above board, handsum—at least so I've hearn tell. That's what I like; I love to deal with such folks. Now 'spose you make me an offer? You'll find me not very difficult to trade with, and I don't know but I might put off more than half of the books myself, tu. I'll tell you how I'd work it. I'd say,—'Here's a book they've namesaked arter me, Sam Slick, the clockmaker; but it tante mine, and I can't altogether jist say rightly whose it is. Some say it's the general's, and some say it's the bishop's, and some say it's Howe himself; but I aint availed who it is. It's a wise child that knows its own father. It wipes up the blue-noses considerable hard, and don't let off the Yankees so very easy neither; but it's generally allowed to be about the prettiest book ever writ in this country; and, although it aint altogether jist gospel what's in it, there's some pretty home truths in it, that's a fact. Whoever wrote it must be a funny feller, too, that's sartain; for there are some queer stories in it that no soul could help larfin at, that's a fact. It's about the wittiest book I ever seed'. It's nearly all sold off, but jist a few copies I've kept for my old customers. The price is jist 5s. 6d., but I'll let you have it for 6s., because you'll not get another chance to have one.' Always ax a sixpence more than the price, and then bate it, and when blue-nose hears that, he thinks he's got a bargain, and bites directly. I never see one on 'em yet that didn't fall right into the trap. Yes, make me an offer, and you and I will trade, I think. But fair play's a jewel, and I must say, I feel ryled and kinder sore. I han't been used hansum atween you two, and it don't seem to me that I had ought to be made a fool on in that book arter that fashion, for folks to laugh at, and then be sheered out of the spec. If I am, somebody had better look out for squalls, I tell you. I'm as easy as an old glove, but a glove aint an old shoe to be trod on; and I think a certain person will find that out afore he is six months older, or else I am mistakened, that's all. Hopin to hear from you soon, I remain yours to command,

"SAMUEL SLICK."

*"Pugnose's Inn, River Philip,  
Dec. 25, 1836.*

"P.S. I see in the last page it is writ, that the squire is to take another journey round the shore, and back to Halifax with me next spring. Well, I did agree with him, to drive him round the coast; but don't you mind—we'll understand each other, I guess, afore we

start. I concait he'll rise considerable airly in the mornin, afore he catches me asleep agin. I'll be wide awake for him next hitch, that's a fact. I'd a ginn a thousand dollars if he had only used Campbell's name instead of mine; for he was a most an almighty villain, and cheated a proper raft of folks, and then shipped himself off to Botany Bay, for fear folks should transport him there. You couldn't rub out Slick, and put in Campbell, could you? that's a good feller; if you would I'd make it worth your while, you may depend."

We will not enter into the main story, but pick out a few of the *dicta* put into the watch-maker's mouth, which will slightly shew the astuteness of his impersonation.

"'What a pity it is, Mr. Slick,' (for such was his name); 'what a pity it is,' said I, 'that you, who are so successful in teaching these people the value of clocks, could not also teach them the value of time!' 'I guess,' said he, 'they have got that ring to grow on their horns yet, which every four-year-old has in our country. We reckon hours and minutes to be dollars and cents. They do nothing in these parts but eat, drink, smoke, sleep, ride about, lounge at taverns, make speeches at temperance meetings, and talk about house of assembly. If a man don't hoe his corn, and he don't get a crop, he says it is all owing to the bank; and if he runs into debt, and is sued, why, he says the lawyers are a curse to the country. They are a most idle set of folks, I tell you.'

"'We can do without any article of luxury we have never had, but when once obtained, it is not in human natur to surrender it voluntarily. Of fifteen thousand sold by myself and partners in this province, twelve thousand were left in this manner, and only ten clocks were ever returned; when we called for them they invariably bought them. We trust to soft sawder to get them into the house, and to human natur, that they never come out of it.'

"Taking a small penknife from his pocket, he began to whittle a thin piece of dry wood which lay on the hearth; and, after musing some time, said, 'I guess you've never been in the States.' I replied that I had not, but that, before I returned to England, I proposed visiting that country. 'There,' said he, 'you'll see the great Daniel Webster; he's a great man, I tell you; King William, No. 4, I guess, would be no match for him as an orator; he'd talk him out of sight in half an hour. If he was in your house of commons, I reckon he'd make some of your great folks look pretty streaked; he's a true patriot and statesman, the first in our country, and a most particular cute lawyer. There was a Quaker chap too cute for him once, tho'. This Quaker, a pretty knowin' old shaver, had a cause down to Rhode Island; so he went to Daniel to hire him to go down and plead his case for him; so, says he, 'Lawyer Webster, what's your fee?' 'Why,' says Daniel, 'let me see, I have to go down south to Washington to plead the great insurance case of the Hartford Company; and I've got to be at Cincinnati, to attend the convention; and I don't see how I can go to Rhode Island without great loss and great fatigue; it would cost you, may be, more than you'd be willing to give.' Well, the Quaker looked pretty white about the gills, I tell you, when he heard this; for he could not do without him no how, and he did not like this preliminary talk of his at all: at last he made bold to ask him the worst of it, what he would take? 'Why,' says Daniel, 'I always liked the Quakers; they are a quiet, peaceable people, who never go to law if they can help it,

\* The story of Alden Gobble and Abernethy the surgeon, was copied from this source into the *Literary Gazette*, last year. No. 1026.

and it would be better for our great country if there were more such 'people in it. I never seed or heerd tell of any harm in 'em, except going the whole figure for Ginerall Jackson, and that everlastin', almighty villain, Van Buren; yes, I love the Quakers; I hope they'll go to the Webster ticket yet, and I'll go for you as low as I can any way afford; say 1000 dollars.' The Quaker well nigh fainted when he heerd this, but he was pretty deep too; so, says he, 'Lawyer, that's a great deal of money; but I have more causes there: if I give you the 1000 dollars, will you plead the other cases I shall have to give you?' 'Yes,' says Daniel, 'I will, to the best of my humble abilities.' So down they went to Rhode Island, and Daniel tried the case, and carried it for the Quaker. Well, the Quaker, he goes round to all the folks that had suits in court, and says he, 'what will you give me if I get the great Daniel to plead for you? It cost me 1000 dollars for a fee; but now he and I are pretty thick, and, as he is on the spot, I'd get him to plead cheap for you;' so he got 300 dollars from one, and 200 from another, and so on, until he got 1100 dollars; jist 100 dollars more than he gave. Daniel was in a great rage when he heerd this. 'What!' said he; 'do you think I would agree to your letting me out like a horse to hire?' 'Friend Daniel,' said the Quaker, 'dist thou not undertake to plead all such cases as I should have to give thee? If thou wilt not stand to thy agreement, neither will I stand to mine.' Daniel laughed out, ready to split his sides, at this. 'Well,' says he, 'I guess I might as well stand still, for you to put the bridle on this time, for you have fairly pinned me up in a corner of the fence, any how;' so he went good-humouredly to work, and pleaded them all."

"No; if you want to know the inns and the outs of the Yankees — I've wintered them and summered them; I know all their points, shape, make, and breed; I've tried 'em alongside of other folks, and I know where they fall short, where they mate 'em, and where they have the advantage, about as well as some who think they know a plaguy sight more. It tants them that stare the most, that see the best always, I guess. Our folks have their faults, and I know them (I warnt born blind, I reckon), but your friends, the tour writers, are a little grain too hard on us. Our old nigger wench had several dirty, ugly lookin children, and was proper cross to 'em. Mother used to say, 'Juno, its better never to wipe a child's nose at all, I guess, than to wring it off.'"

"It is in politics as in horses; when a man has a beast that's near about up to the notch, he'd better not swap him; if he does, he's een amost sure to get one not so good as his own. My rule is, I'd rather keep a critter, whose faults I do know, than change him for a beast whose faults I don't know."

"The English are the boys for tradin with; they shell out their cash like a sheaf of wheat in frosty weather — it flies all over the thrashin floor; but then they are a cross-grained, ungainly, kicken breed of cattle, as I een a most ever seed. Whoever gave them the name of John Bull, knew what he was about, I tell you; for they are bull-necked, bull-headed folks, I vow; sulky, ugly tempered, vicious critters, a pawin and a roarin the whole time, and plaguy onsafe unless well watched. They are as headstrong as mules, and as conceited as peacocks."

*Murray's Summer in the Pyrenees.*  
(Second notice.)

WE resume our pleasant task of making our readers better acquainted with these volumes; and first we select a tribute to the Spanish national character, which only causes us to lament the more its being defaced and degraded by the horrid continuance of intestine war. Our countryman has had a faithful guide, who is taking leave of him; and he tells us:—

"Before quitting me, he gave me voluntarily some information regarding the character of his countrymen. He said, 'You will, in all probability, be soon among my countrymen; if not in Spain, you may still meet with them in the mountains, and may chance to have to apply to them either for food or shelter. Do not believe what is said as to their being a savage and revengeful people; their enemies belie them. When injured, they do, indeed, seldom forget it, but they as seldom forget an act of kindness; and if, from mistake, they have committed an act of injustice, they will ever afterwards endeavour, by every means in their power, to efface it. Trust them, and you will find them worthy of your confidence; use them kindly, and they will, as I would wish to do now, follow you any where.' Since I heard Francisco repeat this little episode, I have seen something of Spanish character, and heard more; but I have never had reason to doubt the truth of what he said."

The chief industrial pursuit in the range of the Pyrenees is in smelting iron, which is performed in a rude manner; and the primitive state of the whole may be gathered from a glance at one portion, the Val d'Urdino.

"This is one of the richest and most fertile of the lesser valleys of Andorre; and the greater part of it, including the forge, belongs to one proprietor, who, consequently, is the wealthiest individual of the republic. I inquired of an Andorrian, what might be the amount of yearly income enjoyed by this great man; and the answer, which I received in French, conveyed most perfectly the benefit which a person unacquainted with the luxuries of life, supposed the possession of a large income conferred on its possessor: 'Il a quatre-vingt francs à manger chaque jour.' This would give an income of a thousand a-year, or perhaps one-fifth of the whole revenue of Andorre. I endeavoured to ascertain how this individual came to acquire such large possessions, but I could not discover any thing further than that his family had held them for a long period. Urdino is a considerable village; the inhabitants of which, having little property of their own, necessarily depend upon the 'great man' of the place for employment. The forge employs, for six months of the year, a great proportion; the remainder are engaged in cultivating the land, or tending the flocks. Urdino was the village in which the four Carlist officers had been murdered by a party of the Christians three days before I reached it. They had, however, confined themselves to the slaughter of the officers, and had done no injury to the inhabitants of the place. The forge is very much larger than the others of Andorre; and, although the machinery connected with it is but of very simple construction, still, the great advantage of capital is apparent in all its arrangements. Most of the other forges in the mountains are stopped working as soon as the weather, breaking up, prevents the mules bringing the mineral over the mountains, or the charcoal from the forests; but, at Urdino, there is always a large supply of both ore and charcoal, far beyond what is

necessary for the immediate consumption; so that, when all the forges of the country are at a stand, the forge of Urdino is giving employment to many individuals, and is profitable to its proprietor. Having examined the interior of the forge, we went into the posada of the village, to replenish our wine-skins before ascending the mountains. The price of the wine amounted to two francs and a half; and I handed the hostess a five-franc piece in payment. She had, however, no change to give me; and she went out to borrow it from her neighbours. She was some time in returning; and, upon Etienne's interrogating her concerning the cause of the delay, it appeared that it arose from the difficulty of collecting the two francs and a half in the village; and it had been only after borrowing a few sous from many different individuals that the sum was made up. From this great scarcity of money, I inferred that the 'great man' paid his labourers in 'kind.' The house in which the gentleman lived was a large, square, and ugly looking building in one of the dirty lanes of the village; and I could not help being astonished, that the owner of so many beautiful sites for a place as this valley offered, should have preferred being surrounded by the dirty hovels of the village. One cause of his living in the village might arise from the great difficulty which, in many winters, he would have experienced in reaching his forge, by reason of the snow-storms, even although he resided but a very short distance from it."

The account of Andorre itself, of which we spoke in our last No., is very interesting; and we will try to separate a few of the descriptive paragraphs.

"The republic of Andorre, situated upon the southern side of the Pyrenees, and beyond the natural frontier of France, ought, from its physical position, to belong to Spain. It is, however, considered as a neutral and independent province, although it is to a certain extent connected with both countries; to Spain by its religious — to France, by its civil government. The history of this little country presents a phenomenon well worthy the attention and study of the naturalist and the politician. It affords the almost solitary instance of a people, few in number, and, in comparison with their powerful neighbours, almost incapable of defence, having preserved, during twelve centuries, their independence and their institutions, uninjured by the many revolutions which have so frequently convulsed the two great kingdoms which surround it. The contented and unambitious minds of its inhabitants, with their seclusion from the world, and indifference to, or ignorance of, the political intrigues and commotions which have overthrown and subverted its many states, have for such a length of time secured to them, as the feudatory republic of France, more real and substantial liberty than was ever enjoyed under the purest of the Italian republics. Andorre is composed of three mountain valleys; of the basin formed by the union of those valleys, and its embouchure, which stretches towards the Spanish Urgel. Its valleys are the wildest and most picturesque in the Pyrenees, and the mountains, with their immense peaks, which inclose it, amongst the highest and most inaccessible. Its length from north to south may be six-and-thirty miles; from east to west, thirty. It is bounded on the north by Arriège; on the south, by the district of Urgel; on the west, by the valley of Paillass; and on the east, by that of Carol. It contains six communes; Andorre, the chief town, Canillo,

Enchamp, La Massane, Urdino, Saint Julien, and above thirty villages or hamlets. The government is composed of a council of twenty-four; each commune electing four members, who are chosen for life. The council elect a syndic, who convokes the assemblies, and takes the charge of public affairs. He enjoys great authority; and, when the assemblies are not sitting, he has the complete government of the community. It is to Charlemagne that Andorre owes its independence. In 790, that prince having marched against the Moors of Spain, and defeated them in the neighbouring valley of Carol, the Andorrans (following the tradition of the country, the only, but in a state like this the best, authority to rely upon), rendered themselves so useful to the French army,—supplying them with provisions, and taking care of their wounded,—that the emperor, to recompense them for their kindness, made them independent of the neighbouring princes, delivered them from the Moors, and permitted them to be governed by their own laws. After him, Louis le Debonnaire, whom the Andorrans style the Pious, having driven the Moors across the Ebro, ceded to Liebus, the bishop of Urgel, a part of the rights over Andorre which Charlemagne had reserved to himself and his successors. It was in virtue of this grant that the Bishop of Urgel acquired a right to a part of the tithes of the six parishes, and still exercises a spiritual jurisdiction over the country. This is the only manner in which it has any dependence upon Spain."

Its successive governments being described, Mr. Murray adds:—

"Andorre is altogether independent of Spain; and, as regards France, the annual payment it makes to that country is only in lieu of certain privileges which it enjoys from it; while, there being so little crime in Andorre, the appointment of the French judge has been more with a view to deter criminals of that country from taking refuge in the neutral province, than for the punishment of its natives. Andorre may, therefore, be justly considered as the oldest free republic in existence. The population is from seven to eight thousand; quite great enough for the resources of the country. The Andorrans are all of the church of Rome, and very religious. The members of their clergy are in general natives; and they, and the more wealthy of the inhabitants, receive their education at Toulouse or Barcelona. Each curé, in addition to his pastoral duties, has the charge of a school, where the poor are instructed gratuitously; but this does not give him much extra trouble, few of the peasants thinking it at all necessary to send their children to school to acquire what, in their land of shepherds and labourers, they imagine can be of little consequence to them in their future lives: this erroneous impression is the cause why few of the natives have more learning than is sufficient to enable them to read and write; and the great majority are in total ignorance of even these first principles. The Andorrans are simple and severe in their manners, and the vices and corruptions of cities have not hitherto found their way into their valleys, still, in comparison with the rest of the world, the abode of virtue and content. The inhabitants live as their forefathers lived a thousand years before them; and the little they know concerning the luxuries, the arts, and the civilisation of other countries, inspiring them rather with fear than envy. Their wealth consists in the number of sheep or cattle they possess, or the share they may have in the iron-forges, only a very few of their number being the proprietors of any ex-

tent of land beyond the little garden which surrounds their cottage. Each family acknowledges a chief, who succeeds by right of primogeniture. These chiefs, or eldest sons, choose their wives from families of equal consideration with their own, reprobating mes-alliances, and looking little to fortune; which, besides, is always very small upon both sides. The eldest sons have, even during the lives of their parents, a certain status, being considered as the representatives of their ancestors; they never leave the paternal roof until they marry; and, if they marry an heiress, they join her name to their own; and, unless married, they are not admitted to a charge of public affairs. When there are only daughters in a family, the eldest, who is an heiress, and succeeds as an eldest son would do, is always married to a cadet of another, who adopts her name, and is domiciliated in her family; and, by this arrangement, the principal Andorrian houses have continued for centuries without any change in their fortunes, *ni plus riche — ni plus pauvre*. They are married by their priests, after having had their bans, as in Scotland, proclaimed in their parish church for three successive Sundays. The poorest of the inhabitants are, in Andorre, not so badly off as in other countries: their wants are few and easily supplied, the opulent families taking care of those who are not; and they, in gratitude, honour and respect their benefactors."

Our author gives us many details of Christiano and Carlist warfare: but we have enough of these in the political journals; and it is dreadful to contemplate the scourge, wasting with rapine and massacre abodes which should be those of peace and innocence. Some of the anecdotes of Guerilla exploits are also striking and romantic, though hardly less violent and murderous. These we pass for two commercial notices, of considerable interest.

"Great complaints have been made against the French government on account of the quantities of stores which have been conveyed to the partisans of Don Carlos, through the Pyrenees; and the authorities of that country have ever been accused of conniving at the infraction of the law. There never has been cause for such complaints; and such insinuations are most unfounded. Every one who has visited the wilds of the Pyrenees must be perfectly sensible of the impossibility of completely preventing smuggling upon the frontiers of the two countries. The whole troops of France could not, supposing they were stationed along the frontier of Spain, be an adequate security. Hundreds of the paths among these mountains are known only to the natives, or to those engaged in the illegal traffic. Soldiers and douaniers may be posted in the valleys and outlets; but they cannot be quartered upon the mountains and among the precipices. They may keep a tolerable sharp look-out so long as daylight permits them to see about them; but, when night comes, and the contrabandiers are at their work, the soldiers and douaniers must return to their quarters in the valleys. They might as well search for a needle in a haystack, and with as much probability of their finding it, as endeavour to hunt the smugglers of the Pyrenees in the dark: and the utmost that the French government can, under such circumstances, and using the greatest possible vigilance, be expected to accomplish, must be merely to increase the dangers of his trade, by throwing a few additional obstacles in the way of the contrabandier; but, not diminishing its profits, the inducements to smuggle are

still the same as before, and increased difficulties can be overcome by increased exertion. Don Carlos *must* receive supplies from France; and, so long as he has money to pay for them, he will continue to do so. The additional restrictions of the French government, and the vigilance of their douaniers, may, indeed, raise the price of his necessaries, and thus occasion his resources to disappear the sooner; but, so long as he can afford to pay the contrabandiers of the Pyrenees, they will work for him, and supply his wants; nay more, if they have faith in his success, they will, and can, give him credit. There is another cause which greatly favours Don Carlos in drawing supplies from France: it is the universal discontent which prevails throughout the whole of the French frontier departments, induced by the stagnation of the commerce which they carried on with Spain. In many districts, the Spanish wool was bought in great quantities, manufactured into cloth in France, and resold in Spain. Thousands of mules, not only those bred by the peasants in the Pyrenean districts, but from Poitou and other central departments, were annually exported into Spain. These, as well as many other sources of profit to the French inhabitant, are now, by reason of the present war, drained up; but, as those individuals, thrown out of employment, cannot live on air, numbers of them are reduced to earn their bread illegally, who, previous to the disturbed state of the adjacent provinces, were honest and industrious members of the community. \* \* \*

"Government (says a well-informed French gentleman) will not allow the inhabitants, within a certain distance of the frontier, to erect machinery for commercial purposes; and, although the southern districts have complained of this great hardship, over and over again, to the Chamber of Deputies, by means of their representatives, whom they have latterly elected solely upon condition that they should exert their influence to obtain for them the removal of this grievance, they have never yet been able to succeed in their endeavours; and we are obliged to go on in our old way, when, by having justice bestowed upon us, our districts would become the most flourishing in France.' He attributed the continuance of this oppressive and impolitic law to the 'partiality of the government shewn to the northern districts: they send a greater number of deputies to the chamber; and they legislate for the south as it suits their convenience. There is no such oppressive tax upon industry on the northern frontier; on the contrary, every encouragement is held out to its inhabitants; but here, in the south, our commercial spirit and enterprise are cramped and checked by laws of the most arbitrary as well as impolitic nature. From the great advantages which we possess, by our situation enabling us to employ the most extensive machinery—so great is the water power which we could call into requisition—and our vicinity to the market where we procure the raw material, we could afford to sell our produce much cheaper than we can at present do; and we could give constant employment to a much greater number of our countrymen. And this injustice is not confined to our particular district, nor to the article which we manufacture; but the whole frontier is included in the law which prohibits the erection of machinery: and thus the commercial exertions of the inhabitants of a country some hundred leagues in length, and ten broad, are paralysed. But the people of the south of France are beginning to be sensible of the injustice that is done them by the government, and will

eventually force an acknowledgment of their rights.' This is but a solitary instance of the internal misgovernment of France, particularly as regards her commercial laws, many of which are of the greatest detriment to her interests, and must ever prevent her becoming a great commercial nation. Were the commercial laws of France revised, and placed upon the footing which, for the good of the nation, they ought to be, there could be no limits set to the prosperity which would reign throughout the interior, and which, at present, is confined to a few maritime towns and districts. And were Great Britain, at the same time—studying her true interest, in preference to harbouring a foolish and altogether unfounded feeling of jealousy against France—to act in the same spirit, as to render the advantages which both the countries would acquire from a more liberal commercial intercourse reciprocal, she would find a mart for her commodities of ten times more value to her than half her colonies and possessions. France produces some articles which Great Britain naturally cannot do, or unattended with great expense. Great Britain, on the other hand, can never fear competition with her manufactures from France; that country does not naturally possess the materials for constituting it a cheap manufacturing country, which Great Britain enjoys to an unlimited extent. It is, therefore, most ardently to be hoped, that the present good understanding which subsists between the two countries may continue; that such useful and profitable changes in the laws, which regulate their commercial intercourse, may take place as is absolutely necessary for their mutual welfare: and we may rest assured, that, when such alterations have been effected, the peace and happiness of Europe will be more securely established by that act than by all the treaties which have ever been signed: it will then be based upon the surest of all foundations—mutual interest. Whenever the feeling has grown up in France and England, that they are mutually dependent upon each other, that their heat interests render it necessary that such should be the case, all jealousy and rivalry between them must subside; friendship (interested although it may be at first) will take their place, and all the world will be benefited by it."

We conclude (the first volume only) with a notice of bone caves, and an anecdote and description.

"In one of the caverns in the rocks opposite to Uszat have been found a great quantity of human bones, mingled with those of bears and other animals; which is not, however, a very difficult circumstance to account for, as those caves have, undoubtedly, at some period or other, been inhabited as dwellings by the peasantry, in the same manner as those in the freestone rocks on the banks of the Loire, and other places, where thousands of the labouring population are at this moment residing. In a warm climate these houses in the rocks are far more comfortable than those built in the open air; they preserve a more equal temperature: in summer they are not too hot, and in winter they are much warmer. Chimneys are pierced through the rock in every direction; and it is a curious sight to see the smoke bursting as if it were through the solid rock, where the situation of the cabins would, but for that circumstance, remain undiscovered: or, in other places, to observe a long line of windows, with their sashes and glass, in the face of a high wall of rock. Sometimes, when care has not been taken in scooping out these dwellings, the roof gives way, and the families are for ever

buried in the mass which falls upon them. Some years ago a marriage party had assembled in one of these dwellings, and, with music and dancing, were spending the evening in the greatest hilarity. The happy bridegroom had gone to the door to bid a friend who was leaving the party good-bye, when the roof came down upon those who were in the interior of the dwelling, and all of them perished in the midst of their joy and mirth, the bridegroom alone escaping the untimely fate of his wife and relations. \* \* \* At Tarsaon I was exceedingly amused with a mistake committed by a gendarme, who had demanded my passport. After having examined it he returned it to me, satisfied that it was perfectly regular. 'You are from Eocesse?' said he. 'Yes,' answered I. 'And, pray, in what part of France is Eocesse situated?' inquired the officer of peace. 'In the north,' said I. 'Oh, yes! said he, 'new I recollect perfectly, well; we passed through it on our way to join the army in Flanders.' The valley of Arriège, between Tarsaon and Foix, assumes a more quiet and gentle character; mountains and sterile rocks giving place to hills whose slopes are productive in grain, and whose warmer and more sheltered nooks are clothed with vineyards. The manner in which the vines are planted and trained is peculiar. In all the corn-fields the stones, which would otherwise encumber the soil, are gathered in heaps of various forms and sizes; among these heaps of stones the vines are planted and trained over them on poles or espaliers: the effect of this arrangement is beautiful; and the corn-fields may be taken for a garden, the knots of vines for its parterres. I left the mountains to visit Foix, because I was most anxious to see a place whose ancient barons had entwined their names so gloriously in the history of their country; in early times by their power and grandeur as feudal princes, in later times as statesmen and warriors."

#### *Semilasso in Africa.*

(Conclusion.)

LEAVING Keruan, of which the accounts are the most interesting of any in these volumes, the traveller proceeded to Iruda, looking for Spetla, the ancient Suffetela; and thence through a valley with many traces of ruins: and he says:—

"At the end of an hour, the schamsch, whom we had despatched for that purpose, returned with the joyful intelligence that he had discovered a camp hidden in the corner of a valley; and thither our tribe of locusts (for such we were to the poor Bedouins) moved as fast as they could. We found only a miserable deer, where we could get nothing but milk for ourselves, and cuscous, without meat, for the suite; but a very tolerable provision of barley for the horses. For my own part, I had greatly improved in abstinence, and from Keruan to Keif, a journey of twelve days, had scarcely tasted meat; my usual food had been two hard eggs daily, but, on an average, I had drunk twenty or thirty glasses of milk, sometimes with, and sometimes without, water. I recommend the same regimen to every traveller in these regions in summer: it restores one almost to primitive innocence, like a child at its mother's breast. On the following day, we rose before the sun, and, as nobody exactly knew the way to Spetla, soon succeeded in losing ourselves in the rocky defiles, out of which it was difficult to find a practicable path for our mules, some of which stumbled. Shortly before, we came quite unexpectedly upon the ruins of a great city, partly built on prismatic hills,

similar to those before described, and which, though it lies much more northerly than is laid down in Shaw's map, was, doubtless, the ancient Clima. Many foundation-walls of various dwelling-houses, and the traces of some temples, were plainly to be discerned, as well as the defences of a citadel, of which there still remains a half-tower, and in the valley several pillars, and a long street or broad wall; it is no longer possible to distinguish which. Further off stands a kind of gate, formed by three colossal stones, not unlike the druidical remains in England and Brittany, but whose destination here was not quite evident to me. Fragments of columns and cornices lay about in abundance, but I saw no inscription. We hurried over these ruins, however, because our whole attention was directed towards Spetla, whose remains Shaw considered as the most interesting and important in all Barbary. I may remark here, once for all, that if I seldom quote any other modern writer than the often-cited Shaw, it is because few have written about them, still fewer seen them, and almost all have only servilely copied him."

The remains of Suffetela itself do not agree with Shaw's description: they are, however, of a splendid kind; and we rejoice to learn that we are likely to have a more ample and accurate account of them from Sir Grenville Temple than M. Semilasso has been enabled to give. Advance we, therefore, to the Smella of Ain Ranim, where the Bedouin governor-general lives (as reverend an old man as King Solomon, whom his son at our night's halting-place does not at all resemble), is probably the largest diar in the kingdom, as it consists of several hundred tents, which occupy the whole of a small mountain valley. The number of dogs doubles that of the tents; and one dare not go about the diar without some kind of weapon, on account of these animals, as the savage ones frequently attack a stranger in right earnest. It is, however, worthy of remark, that madness is unknown among them. In the tent where the governor has his harem, I saw three beautiful falcons, very different from ours, sitting with their hoods on: they hunt both birds and hares with them with great surety. They were moulting, so that we could not make trial of their dexterity. They are ready for the field in October. To make us amends, a very pretty little daughter of the Caïd, a child about five years old, gave us a specimen of her abilities: she was a perfect little devil, climbed like a squirrel to the top of the highest tent; then threw herself upon a horse, and rode about full tilt; next wrestled with the boys, and began to throw stones with them in such a style, that we grown-up people very soon had enough of it. In spite of her courage, however, both she and the boys ran away in the greatest terror when I looked at her through my glass; and nothing could prevail on her to remain when I brought it again to my eye. She took it for an evil eye to a certainty, when it was only a weak one. Her father was most diverted with the joke: he was the first Bedouin I ever heard talk politics, while the others know nothing of the rest of the world beyond their Smella. He was supported by a negro hamba, a freedman of the Sapatapa and Exclusives of Tunis, who was here on an embassy. The result of their observations was by no means flattering to us; for they maintained that, since the death of Napoleon, there was only one celebrated man in the world worth speaking of—Mehemed Ali of Egypt. The first ruin we met with on the following day showed traces of an amphitheatre,

quite destroyed, and the remains of temples, and some mausoleums; but they were of no interest. Perhaps this might be the ancient Sufo. Towards noon we reached a singular rocky region, where we breakfasted in a grotto, before which flowed a clear mountain stream. The rocks in this ravine have exactly the appearance of an ancient pavement under foot; and around, that of walls, constructed by human hand as regularly as if they were squared throughout. Here were seeming balconies, supported on brackets; in another place columns and pillars, none bearing the smallest appearance of vegetation. Even near the brook there was nothing of the kind to be seen, and the water purled over loose pebbles. Further on, where the brook fell into a deeper basin, we saw some women washing linen by stamping on it with their feet,—the universal method of washing here, where nearly every thing is done in a manner precisely the reverse of ours. For example, the Arabs mount their horses on the right side; write from right to left; wear the crooked sabre with the concave side in front; let the beard grow, and shave the head; sit on their own legs instead of a chair; eat their bread hot, and their meat cold; take their soup at the end of the meal, instead of the beginning; bare their feet instead of their heads on entering a room,—and many other things in like manner. If our laundresses chose to adopt the Arabian fashion, they would have a double advantage: they could wash and knit at the same time. You see I profit by my travels. We afterwards saw a man pass on horseback who had put meat under his saddle, in the manner of the Tartars, to make it tender; by which means it really becomes tender, and better flavoured, than it does by all the beating the outlets get with us, to soften their dispositions."

Thugga is another site of antiquarian interest, which is slightly touched upon.

"I knew (says the prince) that on the following day we should find the ancient Thugga; but, as Shaw, the only traveller who has mentioned it, dismisses it with a few words, I was not at all prepared to find a place which, for its environs and the interest of its antiquities, I must declare, unconditionally, to be the best worth seeing of any in the kingdom: its magnificent monuments would have attracted the observation of every traveller, even in Italy. The very first glance raised our astonishment to the highest degree; for Thugga, whose name has in so long a time undergone no further change than to Dugga, has the finest situation of any city that we had seen; it is built in the form of an amphitheatre, on rock-crowned hills, girded with a plain of varying width, on its side again inclosed by high mountains. The greater part of these mountains are overgrown with wood, and the plain is most carefully cultivated, partly laid out in corn-fields, and partly in plantations of olive, of extraordinary thickness and freshness. The hills on which Dugga itself stands are nearly covered with a forest of olives, so dark, in many places, that the sun can hardly penetrate, and from among whose bluish verdure the imposing ruins of the ancient city stand out on every height and declivity. It is to be lamented, that the modern village is built among the ruins, because it destroys the better part; but, as, fortunately, the modern houses are constructed of rough unchiselled stone, without roofs, have no windows outwards, and the doors are, for the most part, formed from the fragments lying about, it requires a practised eye to distinguish these decaying walls from

those of the ancient city. I myself thought, at the first glance, that only the old Thugga lay before me. There is scarcely any kind of building, of which an interesting specimen may not be found here; and every where in the dwelling-houses, pillars, architectural decorations, and inscriptions are to be found. One cow-shed contained in this manner a tombstone, and a superb fragment of a pillar bearing the inscription that it had been erected to the honour of the Emperor Antoninus Pius; and, a little further off, the yet perfect gate of a large palace, rearing itself high over the modern erection, led to a dark and dirty hole, the abode of the bitterest penury. Among the ruins, which have a circuit of two leagues, a large temple, with its portico almost perfect, stands conspicuous. At the back the roof had fallen in, within the last ten years, we were told; the gable was yet undecayed. This temple, decorated in the Corinthian style with great richness and elegance, has the form of a parallelogram; its length, including the portico, is about seventy feet, and its breadth, thirty. The pillars, which are all built of one piece and in admirable harmony, are thirty feet high; and, at the base, have a diameter of four feet and a half. On the field of the gable, on one side, is a colossal eagle in alto-relievo; on the other, the decoration has fallen down; the inscription of the frieze is almost entirely broken off. Shaw has given a copy of this inscription; but, like that given of Spetla, it does not at all agree with the few words that are still legible. It has an almost touching effect to find a stork's nest on the point of the gable, directly over the head of the eagle: it was a pity that the inhabitant was at its summer residence in Europe, where, perhaps, some of my readers may have seen him stalking gravely about, while we were looking at his empty house."

We conclude with a legend of this temple:—

"This temple was probably dedicated to Jupiter, as the first word of the inscription on the gable field seems to be 'Jovis'; the eagle, also, indicates such a destination. It, perhaps, owes its preservation chiefly to a phenomenon of nature, or to a superstition, that Dugga is one of the places where no scorpion can live; and none are really ever found here. The Thaleb of the Shechs related a singular fable concerning this peculiarity, as we reclined under the shade of the pillars on my carpet: we were obliged to spread it here, upon heaps of dried dung, which covered the floor of the temple, because it was the only shady place; we took, however, the precaution to lay some mats obtained from the Bedouins undermost. 'A powerful king and sorcerer,' said the Thaleb, 'lived here in ancient times, who had a most beautiful daughter. To preserve her from the bite of the scorpions, which then swarmed here, he drew a magic circle in the air around, within which no dangerous animal could live. When the beautiful princess was of a marriageable age, a neighbouring giant, who was also a powerful magician, demanded her hand, but was refused, as an ugly, deformed, and wicked man. He brooded long over schemes of vengeance, without finding a favourable opportunity of wreaking it, because the art of the good king far surpassed his own. On the approaching marriage of the fair princess with a beautiful young prince, whom the fame of her extraordinary charms had brought from a distant country, one of his evil genii instructed him in the following diabolical artifice. He changed himself into a female eagle, built a nest upon a neighbouring rock, and laid two

eggs; in each of which he inclosed a poisonous scorpion. He knew that the princess was passionately fond of eggs, which were brought to her of all kinds, as there was no surer method of earning her favour. It happened she had never tasted an eagle's egg, and rewarded the bringer with the most favourable glance of her starry eyes. The finder of this new delicacy was no other than the bridegroom himself, in whose hands the wicked magician had contrived the fatal eggs should fall. Scarcely had the prince given them to her, on the evening preceding the wedding-day, than the princess, with the eagerness of a spoiled girl, whose wishes must all be gratified at the moment, desired to enjoy her feast; but no sooner had her tender fingers touched the shell, than the sting of the poisonous reptile darted forth, and wounded the beautiful princess so severely that her life flowed forth with her rosy blood. The tender-hearted prince died a few days after in grief and despair. The inconsolable father built this temple, and caused the figure of the eagle to be represented on it, in memory of this melancholy occurrence; soon after he, also, sacrificed within its walls the treacherous giant, whom he easily caught by means of the legion of spirits that were at his command. Since that time,' concluded the Thaleb, 'the custom has prevailed with us, that no bridegroom shall see his bride before the wedding-day; and none of our girls need fear a similar destiny, because no scorpion dares come within a league round Dugga.'"

#### MISCELLANEOUS.

##### *Lockhart's Life of Scott.*

[Third notice: conclusion.]

AFTER Scott's marriage, the present volume continues the narrative of his domestic affairs, and legal and literary pursuits, to the year 1804, when the "Lay of the Last Minstrel," and "Sir Tristrem," were published. His correspondence with Heber, Ellis, Ritson, and other lovers of antiquarian research in literature, is interesting, but we find nothing in it which we can separate for extract. Some unfinished poems, and other matters, illustrate this period of his career, before he achieved the more distinguished honours of the pen: and the whole makes us look with great avidity for the next volume.

*Memoirs of the Life and Works of the late Right Hon. Sir John Sinclair, Bart.* By his Son, the Rev. John Sinclair, M.A. &c. &c. 2 vols. Edinburgh, 1837. Blackwood; London, Cadell.

THIS is a most worthy monument of filial love, to which few parents were ever better entitled than the late Sir John Sinclair. The review of such a life, too, is replete with instruction; and these volumes cannot be read without contributing eminently, and in many ways, to the improvement of the reader. There is, first, the example of how much sterling good may be done by one man, during a long life devoted to useful and beneficial objects. Then there is the light which he throws upon a number of topics of much public importance, few of them so confined to bygone times as not to be applicable to present circumstances. The integrity of purpose throughout all his inquiries; the genuine philanthropy of all his plans and projects; the direct-mindedness with which he approached, and the almost unparalleled perseverance and industry with which he pursued, every object which he considered would advance the true interests of his country, and the comfort and happiness of his fellow-creatures, point

out this record of the labours of Sir John Sinclair as a production eminently entitled to attention and respect.

*Observations on the System of Currency adopted in this Country.* By W. H. Morrison, Esq. 8vo. pp. 74. London, 1837. Capes.

THIS is a very able work, and full of valuable information; not the less valuable for being clearly and skilfully applied to establish the writer's arguments. The absurdity of rejecting our standard of value to gold coin is demonstrated; and it is equally demonstrated that, if the standard of both metals is to be (necessarily) rejected, silver alone would be infinitely superior to gold. There are also many important remarks on the subject of coinage; and, altogether, the great questions connected with the circulation of the country are discussed with much practical knowledge and soundness of judgment.

*The Chase, the Turf, and the Road.* By Nimrod. With Illustrations by Henry Alken, and a Portrait by D. Maclise, A.R.A. 8vo. pp. 301. London, 1837. Murray.

THE papers which compose this sporting volume appeared originally in the *Quarterly Review*; but are now written up to the latest period, and capably illustrated by the pencil of Alken, and a striking likeness of the author, engraved by E. Finden, after Maclise. The fund of information given on hunting, horse-racing, and travelling, is of real and actual value to almost every inhabitant of our locomotive land; and the acute remarks and amusing anecdotes, in his own peculiar way, with which the writer has diversified his work, make it one of entertainment, quite as much as of utility.

*The Poetical Works of W. Wordsworth.* Vols. V. and VI. London, 1837. Moxon.

THESE volumes most worthily complete this very neat edition: the whole is a treasure of poetry — of deep and amiable thought — of the finest sympathy with nature; all that can ennoble and exalt the human mind, nothing to pervert or debase it.

*Proofs and Illustrations of the Attributes of God, from the Facts and Laws of the Physical Universe; being the Foundation of Natural and Revealed Religion.* By John Macculloch, M.D. &c. &c. 3 vols. 8vo. London, 1837. Duncan.

THIS work was completed seven years ago, and, therefore, owes nothing, either for the original idea or for its construction, to the Bridgewater Treatises. The melancholy death of its author has added to the disadvantage of appearing after the publication of these volumes; but it is, nevertheless, so comprehensive, — we may say so universal, — and so powerfully written, that it may well take its place, in the higher literature of our country, with the foremost and most successful of these productions. The object is the same, viz. to "prove from the facts of the material world the existence of God, together with such attributes of his character as can be deduced by reasoning from those evidences." In this great attempt, the immense and profound knowledge displayed is an honour to the human mind: it shews what it is capable of performing, when cultivated; till man, indeed, for intelligence, may be declared to be but a little lower than angel. From creation, the author traces the progressive changes of the earth, and brings the mightiest views of every science to bear upon the question. Animal and vegetable structure and functions; organisation, capacities, adapta-

tion: all the phenomena of nature, in short, are examined and expounded; and, in the end, the continued action and superintendence of an omniscient and omnipotent Deity is deduced as an inevitable consequence from the matters explained and the principles laid down. As essays on these various subjects, even without the metaphysical results and religious truths with which they are inseparably connected, the statements of Dr. Macculloch are admirably instructive and full of intelligence.

*Johnsoniana; or the Supplement to Boswell. Being Anecdotes and Sayings of Dr. Johnson, &c.* 8vo. pp. 530. London, J. Murray.

DELIGHTFULLY and most interestingly illustrated with portraits, views of places, rendered celebrated as the *locals* of events intimately connected with the lives of eminent persons, facsimiles of various kinds, &c. &c. This volume is a perfect treasure of fine art and anecdotal literature. If Joe Miller has been popular, generation after generation, for *facetiae*, what ought we to expect for a publication in which Johnson flourishes as the Joe Miller of wisdom? The piquancy and the instructive character of this collection ought to recommend it to equal favour; and the superior style and beauty with which it is "got up," must make it favourite for the best libraries, while its fund of entertainment fits it for the lighter amusement of every class of readers.

*Highland Rambles, and Long Legends to shorten the Way.* By Sir T. Dick Lauder, Bart., author of the "Account of the Moray FLOODS," "The Wolfe of Badenoch," "Loch-andhu," &c. 2 vols. Edinburgh, 1837. A. and C. Black.

WITH some remarkably clever etchings by W. Dyce, Sir Thomas Lauder has here produced a very agreeable and interesting work. A Highland tour, with several friends, leads, not only to picturesque descriptions of scenery, and general observation, but to the introduction of romantic legends, and details of some of those extraordinary events which occurred to tartan chiefs and clans in days of lawless turbulence and barbarous chivalry. It is with regret that we are compelled to put such pleasant pages aside with only the tribute of praise, and without any extracts to justify our favourable opinions; but the truth is, we found any detailed example of moderate length quite impracticable, and the shortest of the "Long Legends" is far too long for our limited space. We can, therefore, only promise readers much gratification from these remarkable stories.

*The Philosophy of Living.* By Herbert Mayo, F.R.S., Senior Surgeon of the Middlesex Hospital. Pp. 319. London, 1837. J. W. Parker.

THE result of much experience and observation, this is a practical work of high value. The pages are worth guinea-fees to doctors; and there is so much excellent advice, that it is only to be hoped none of it will be thrown away.

*England under Seven Administrations.* By Albany Fonblanque. 3 vols. London, 1837. R. Bentley.

MR. FONBLANQUE is well known to the world as one of the ablest political writers of the day. His papers in the *Examiner* newspaper could not be read without stamping their author as an individual whose pen did honour to the periodical literature of his country, high as that branch of its literature has been raised by some of the principal journals, not only of the metropolis, but of the provinces. His style is eminently pointed, epigrammatic, and trenchant —

almost the *beau idéal* of political partisanship. With regard to his principles or opinions, we have nothing to say; but justice demands from us to state, that this collection of his essays and remarks on most subjects which have occupied public attention for the last ten years, prove him to be a man of very superior talent in the walk of life to which he has devoted himself.

*The Science of Botany*, by Hugo Reid. Pp. 103. (Glasgow, Reid.) — Simple, elementary, and explanatory, this is an excellent little book to test the young and uninitiated to enjoy the pleasures of botany, rising whenever they stroll into field, wood, or garden. We strongly recommend it to attention.

*Miscellaneous Papers on Scientific Subjects, written chiefly in India*, by T. Seymour Burt, Esq. &c. &c. 12mo. pp. etc. 200. (London, Allen and Co.) — Well may this collection be called *Miscellaneous*, for the papers treat of Indian antiquities and languages, spherical mirrors, mathematical instruments, the making of salt, the question of lunar atmosphere, the magnetic needle, the construction of chimneys, gunpowder, and mining, &c. &c. We have heard how dangerous too much learning may be; and, perhaps, too much science is not quite safe.

*A Practical System of Algebra*, by Nicholson and Rowbotham. The third edition, very greatly improved. Pp. 313. (London, Baldwin and Cradock.) — We should scarcely have thought of noticing a book so well known and appreciated as the *System of Algebra* of Messrs. Nicholson and Rowbotham; but our attention was called to the improvements in various departments of this edition, many of which are highly important, and none more so than the binomial theorem and imaginary quantities. In addition to these, there are many alterations; all of which may be termed improvements: so that we can again, and more than before, cordially recommend this *System* to the attention of those intrusted with the care of youth, and even to the high mathematician.

*Introduction to Phrenology*, by Dr. Macmah. (Glasgow, Symington and Co.) — A second edition, enlarged. Bravo, phrenology in hydrocephalus!

*Arithmetic Tables*, by Mr. Hart. Pp. 24. — This slight work, designed for the use of his own teaching, impresses us very favourably. Brief as it is, it goes into some useful details not always seen in more ambitious publications of the same kind; and is, consequently, a good elementary guide.

*The Elements of Botany, with Illustrations*, by Mrs. E. E. Perkins, Professor of Botanical Flower Painting. 8vo. pp. 268. (London, Hurst.) — Deservedly patronised by the Duchess of Kent, this work is at once useful and elegant. For young and for lady students of this delightful science, it is the very thing.

*Essays, Literary and Political*, by W. E. Channing. 12mo. pp. 448. (Glasgow, Hedderwick and Son; London, Simpkin, Marshall, and Co.; Edinburgh, Oliver and Boyd.) — We have had frequent occasion to speak in high terms of Dr. Channing's abilities, as some of these *Essays* have come separately before us. For their collection together, in this neat and cheap form, we are much indebted to the publishers; who have thus given us the views of one of the most popular writers in America upon a number of very interesting subjects.

*The Sunday Scholar's Annual and Juvenile Offering*, edited by the Rev. J. Burns. Pp. 192. (London, G. Wightman.) — A well-meant little collection, in prose and verse.

*Potter's Grecian Antiquities*. 12mo. pp. 811. (London, T. Tegg.) — To have this valuable work, with notes and improved indices (by Dr. James Boyd of Edinburgh), in a single duodecimo volume, is really a triumph of cheap literature; and, when we add that it is illustrated by above 150 engravings, chiefly on wood, but some on steel, we have described a book which is eminently entitled to the public patronage.

*Southey's Works of Cooper, Vol. XI.* (London, Baldwin and Cradock.) — With two beautiful classical engraved subjects after W. Harvey, by Stocks and Goodall. This volume appropriately continues the *Iliad* to the conclusion of Book XII.

*Aræteus on the Causes and Signs of Disease*. Translated from the Greek, by T. F. Reynolds. 8vo. pp. 157. (London, Pickering.) — A curious volume, which shews the folly and wisdom which prevailed in medicine and among the medical faculty of ancient times. We are better informed now-a-days; but still it is a question whether some translator in the year 2000 may not find quite as much nonsense, and no more sense, in the ablest work of our times.

*Library of Entertaining Knowledge: Secret Societies of the Middle Ages*. (London, C. Knight.) — Well digested accounts of the Assassins, Templars, Secret Tribunals, must possess much popular interest; and such are the contents of this volume. In the first of these, the compiler ought to have acknowledged Dr. Wood's excellent translation of Hammer's "Geschichte," lately published.

*A Synopsis of the Family of Nakades*, by Isaac Lea, Member of the American Philosophical Society, &c. &c. 8vo. pp. 60. (Philadelphia, Carey, Lea, and Co.; London, Miller.) — A very useful synopsis of this beautiful family. The *Unio spinosus* (Lea) is exquisitely engraved and coloured.

*The Book of Human Character*, by C. Bucke, Esq. Vol. II. Library of Anecdotes. Pp. 340. (London, Knight.) — We noticed the first volume of this miscellany with much approbation, and the second deserves quite as good a character. Mr. Bucke has read and observed a

great deal; and the fruits are here carefully gathered, and presented in a variety of pleasant and instructive forms.

*A Companion to the Ship's Medicine Chest, &c.*, by W. G. Faddy, Surgeon. Pp. 68. (London, Hightley.)—A small, but useful little treatise on the diseases of seamen and in tropical climates, so as to enable their officers or companions, in many cases, to alleviate their ailments, and, perhaps, preserve their lives.

*Second Annual Report of the Poor Law Commissioners, &c.* Pp. 658.—Contains a mass of information on the working of the new system.

*A Selection of One Thousand Latin Prescriptions, &c.*, by G. Futvey. Pp. 173.—To enable young medical students to pass their examination, and pass Apothecaries' Hall, this is a useful little book, with every form of prescription arranged according to the London Pharmacopœia.

## LITERARY AND LEARNED.

### LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

*Monday*.—Entomological, 8 P.M.; British Architects, 8 P.M.; Marylebone Literary (Mr. C. C. Clarke on Chaucer and Spenser, and the 10th), 8 P.M.; Russell Institution (Mr. Serle on the Drama, and the 10th), 8 P.M.

*Tuesday*.—Limeau, 8 P.M.; Horticultural, 8 P.M.; Civil Engineers. (Architectural Essay by T. H. Wyatt), 8 P.M.; Belgrave Literary, (Mr. Elsdell on Respiration, the conclusion on the 11th), 8 P.M.; Lambeth Literary Conversations, 8 P.M.

*Wednesday*.—Society of Arts, 7½ P.M.; Geological, 8½ P.M.; London Institution, 7 P.M.

*Thursday*.—Royal Society, 8½ P.M.; Antiquaries, 8 P.M.; Zoology, 8 P.M.; Botanical, 8½ P.M.; Islington Literary (Mr. Woodcock on Polarised Light), 8 P.M.; Western Literary (Mr. Buckingham on Palestine, and three ensuing weeks), 8½ P.M.

*Friday*.—Royal Institution, 8½ P.M. Islington Literary Meeting.

## FINE ARTS.

### PALM MALL GALLERY.

THIS pretty little gallery has been recently opened for the season, with a new arrangement of such of the pictures as remained from last year's exhibition, and with a number of clever accessions. Decidedly, the most curious and valuable of the latter is, "A View of Whitehall, taken from about the spot where Richmond Terrace now stands," by Canaletti. If the gallery contained no other work of art, it would well deserve a visit. It is a highly interesting subject of contemplation, both to the artist and to the historical antiquary. To the former it presents all the peculiar qualities of Canaletti's firm and decided pencil; its tone being similar to that of the fine picture, by the same master, in the National Gallery. "The lines," as the description in the catalogue justly states, "have so much the appearance of truth, that it seems almost a production of the camera lucida; and there is evidence of its having been a favourite work with the painter, as it was retained in his possession until his quitting England, on his return to Venice, when it was sold by him to Mr. Crewe (afterwards Lord Crewe), about the year 1762, who ultimately exchanged it with Dr. Hinchcliffe, Bishop of Peterborough, the father of the present proprietor." The antiquary will be pleased to find in it a representation of the old palace of Whitehall, long since removed: as well as of the buildings more recently taken down for the purpose of erecting the Treasury, the Privy Council, and other edifices on their site.

### THE EXHIBITION OF THE SOCIETY OF BRITISH ARTISTS. (Second notice.)

11. *On the Dutch Coast; Boats going out to a Wreck.* J. Wilson.—It is wonderful how skilful art reconciles us to scenes like these. It prepares us to say, in the words of Zange, "Horror is not unpleasant to me." We know not if Mr. Wilson be "a sailor for all weathers;" but we know that he is a painter of all weathers, and a very skilful one, too.

4. *On the Coast near Margate.* Alfred Clint.—The simplicity of form in the subject

is amply made up by the truth and ability with which the aerial perspective is painted.

217. *Evening Showers.* F. R. Lee, A.R.A.—Apparently a composition, and rather a novel feature in the artist's practice: somewhat resembling the manner of Cuyp, but without any thing like obvious imitation.

105. *The Pyrenees, from Oleron, looking towards Badens.* J. W. Allen.—The clearness of the objects in the foreground is beautifully set off by the warm glowing atmosphere, and the melting softness of the distant mountains.

196. *Sunday Morning, going to the Christening of the first Child.* P. F. Poole.—We mean no reflection on the artist, but a little more reflection in the shadows of his flesh would have given that luminous transparency so desirable to art. Mr. Poole has treated his subject with much humour. The young father and mother are evidently not a little proud of what Mrs. Norton, in one of her novels, calls "the effects of their creative ingenuity."

161. *Hungarian Ford, at Pesth, on the Danube; Pemas in the Distance.* J. C. Zeitter.—There is a grandeur in the management of this work, which gives it the air of a historical picture. The commanding figure in front, the preparation of the groups, who are about to cross, and the struggle of those who have already plunged into the torrent, fill the mind, and suggest to the imagination the idea of some bold and hazardous military enterprise.

248. *Pandy Mill, Falls of the Mochno, North Wales.* J. Stark.—The artist could hardly have found an object better calculated for the display of his well-known talents. It comprehends all the qualities which constitute the picturesque; and he has studied it with ease, and executed his work with skill.

283. *Study of an old Favourite.* C. Josi.—A brown horse, painted with such marvellous powers of deception, that the spectator is tempted to feel whether it is not a coloured alto-relievo.

280. *Sketch, for a large Picture, of the Paragistes assembled round the Funeral Pile, previous to their abandoning their native soil; preferring exile to the mercy of Ali Pacha.* J. and G. Fogg.—As a composition, we have seldom seen any thing better; as an event, it is eminently calculated to excite sympathy for the sufferers, and detestation of their oppressor.

381. *Smugglers Aroused; Scene in a Hay-loft.*—We have thought it unnecessary to add the name of the artist, for our readers will immediately guess that it can be no other than H. P. Parker. He has here reached the climax of interest and excitement, of which his so oft repeated subject is capable. Nothing can exceed the character and expression of the principal smuggler: the direction of his eye to the point of danger, the firmness with which his weapon is grasped, and his determined look, all indicate the approaching fate of him whose hand alone is seen on the topmost round of a ladder from below. A female has given the alarm; and the assailant must fall. Such are the sensations with which the mind is occupied, until we turn to admire all the appropriate and skilfully painted appendages of the scene.

385. *The Pilferer.* G. S. Reynolds.—We were attracted to this little performance by its distinguished excellence in that deceptive imitation which peculiarly belongs to subjects of still-life.

399. *A Morning Ride in Gorton Park; Portraits of Lord and Lady Suffolk, and the Hon. Miss Harbord; with Gamekeepers.* G. Clint.—We are too well aware of the difficulty of this department of art not to admire the

skill with which Mr. Clint has grouped his party. All is made subservient to the picturesque; yet, apparently, without any sacrifice of individual resemblance.

453. *The Dying Chamois Hunter.* J. H. Leigh.—In this, as in other subjects of a historical or imaginative character, Mr. Leigh displays great talent. The catastrophe of the dangerous sport is painted with a powerful pencil.

440. *Mary, widow of Louis XII. of France, receiving Charles Brandon, Ambassador from her brother, Henry VIII. of England.* V. Fisk.—Splendid in its regal character, and skilfully executed; although, perhaps, with somewhat too much of that peculiar light which pervades the works of De Hooghe.

(To be continued.)

## NEW PUBLICATIONS.

*West Indian Scenery, with Illustrations of Negro Character, the process of making Sugar, &c. From Sketches taken during a voyage to, and residence of seven years in, the Island of Trinidad.* By R. Bridgens. Jennings & Co.

ALTHOUGH with very moderate merit as performances of art, the plates in this volume contain highly amusing representations of negro character and habits, and of West India scenery, architecture, and usages; and in that respect supply, as the author justly remarks, a great deficiency in the numerous works which have hitherto issued from the press, describing the West Indies. It is gratifying, also, to observe in them a confirmation of the assertion of many writers, that the black population of our colonies are, upon the whole, a merry and a happy race.

## ORIGINAL POETRY.

### SONG OF INVISIBLE SPIRITS TO OFFA, KING OF MERCA.

SEEK thou the enchanted forest bower,  
At eve's bright sun-departing hour;  
Where, 'mid her diamond-flashing cell,  
The Adeluana loves to dwell.

Fear not to tread the hallowed shades,  
Or wander through her myrtle glades,  
Where magic flowers eternal bloom;  
And, through the midnight's deepest gloom,  
Shine like the stars of the dark-blue heaven,  
Or the sun-born splendours of the even.

Flourish her groves in fadeless green,  
Where giant plants from isles are seen,  
That lie amid the Indian sea,  
Breathing the sweets of Araby;  
And on their boughs hang fruits divine,  
Like gems, amid a rubric mine,  
Kissed by the winds, that steal their scents,  
And whisper love-like blandishments  
To every bird and every flower,  
At morn and eve's dew-freshened hour.

With varied plumes that still outglow,  
In all its dyes, the sunlit bow,  
The minstrel birds wild measures sing,  
Where fountains joyously outfling  
Their silver treasures to each flower,  
Like prodigal in beauty's bower.

And when the moon comes wandering by,  
To keep lone vigil in the sky,  
O'er the repose of that sweet home,  
Like maiden pale o'er lover's tomb;  
Its tuneful dwellers still prolong  
The music of impassioned song,  
Mid groves of oak and lofty pine,  
Mid purple riches of the vine;  
While, like the meteors of the sky,  
Which o'er you arch flash splendidly,

That wildly sweet nocturnal choir,  
With gem-bright wing and eye of fire,  
Illumes the blossom-crested shades,  
Which storm nor lightning e'er invades,  
Without the will of her who there  
Reigns sovereign queen o'er earth and air.

On sapphire couch, in her fairy bower,  
Sits the empress, girt with magic power;  
Nor dwells she there in pomp alone,  
A thousand shapes wait round her throne;  
Star-spirits, in their glory prond,  
Who ride upon the thunder-cloud;  
Who wake the winds from their peaceful sleep,  
And dash them on the howling deep;  
Who revel in those gulfs of flame  
That shake the world's eternal frame;  
And where the sounding mountains rise,  
Hurl fiery tempests o'er the skies;  
Who sport on the ocean's whirlpool waves,  
Where merchant and mariner find their graves;  
Whose voice along the western rocks,  
Is heard when the sheep-boy folds his flocks;  
Foretelling storm and shipwreck near,  
And making the seaman pale with fear;  
But heed thou not, for round thy head  
Our guardian wings shall be outspread.  
Invisible, perchance, may be  
Their magic queen, yet bow the knee;  
And incense cast upon the flame,  
And thrice pronounce her awful name  
When thou the altar-fire shall nigh,  
Which, to the gaze of mortal eye,  
Burns in the porch of her ruby cell,  
With brightness unendurable.  
Then will she to thy sight appear,  
The dreadful one, the female seer—  
And thy proud fate of glory tell  
"Which with Futurity doth dwell.  
Obey her mandates, do her will,  
And thy great destiny fulfil,  
So shall thy star ascendant smile,  
And thou reign chief o'er Britain's isle!"

J. FITZGERALD PENNIE.

Rogvald Cottage.

#### THE WIDOW AND HER CHILD.

By Maurice Harcourt, Author of "Poor Law Melodies."  
Look at the boy who gambols in the sun,  
Glad that the labours of the school are done;  
With sparkling eyes he mingles in the game,  
And, lost in "whoop," heeds not the call of fame.

Content with tops he spins away his time,  
Nor tries ambition's pinnacles to climb;  
And as to wealth, what can he wish for more?  
In marbles rich — of buttons quite a store!  
He seeks not, Titan-like, to scale the skies,  
But proudly hopes his kite aloft will rise.  
He mounts not o'er his equals' heads at will,  
Though leaping o'er their backs calls forth his skill;  
And his kind play-mates can but smile to see  
The antics of this man-epitome.

Oh, happy childhood! Life's propitious spring!

Flowers o'er thy path-way joy delights to fling,  
Thy sky is cloudless, and thy prospects bright,  
One morn of bliss, which dreads no coming night.

Too soon experience, and her train of care,  
Thought, tears of anguish, hatred, and despair,  
At time's command, disturb thy peaceful reign,  
And bring with knowledge an increase of pain.

The merry urchin, fixed upon his play,  
Heeds not how swift the minutes fleet away;  
And still inclines the village-green to roam,  
When, lo! his mother comes to fetch him home.

\* We are glad to introduce a *jeu d'esprit* from the pen of this young writer, of whose merits we spoke in our last week's Notice to Correspondents. — Ed. L.G.

What pen can picture, or what language tell,  
The deep emotions which her bosom swell,  
While gazing on her healthful, joyous child,  
On whom his dying sire in sorrow smiled?  
See, she approaches — but her looks are sad,  
As she beholds her thoughtless, blithesome lad;  
Maternal love no longer can be mute,  
And thus she chides from frolic's wild pursuit:  
"Go, wipe your nose, you dirty little brute!"

#### SKETCHES.

Alexandria, 28th Nov. 1836.

PROFESSOR VON SCHUBERT arrived here yesterday, on board a ship from Smyrna; all the Germans, and especially his Bavarian countrymen, are delighted at his arrival. He is accompanied by his wife, two young physicians, from Munich, and a young painter, from Spire. They are all in excellent health, but must perform twenty-one days' quarantine; when this is expired, and he has visited this city and the environs, M. V. Schubert intends to go to Cairo, and thence to Mount Sinai.

The travelling naturalist, M. William Schimper, returned, some time ago, with rich botanical and zoological collections, from his visit to Arabia and Upper Egypt; and, though his health is rather impaired by the fatigues he has undergone, he has, without allowing himself a little repose, prepared for a journey to Abyssinia. He left Cairo on the 1st of this month; his letters are from Suez, of the 12th, whence he was to set out on the following day for Arabia. Another German traveller, Baron Von Katt, from Prussia, has left Mocha for Abyssinia; his intention is, to penetrate through the Galla country, further into the interior of Africa, and, if possible, to reach the coast of Guinea. Should he succeed in this most hazardous adventure, which is encompassed with hardships and dangers, we may expect highly interesting discoveries, as he is by no means destitute of scientific knowledge.

Another traveller, M. Gobat, who has rendered important services in Abyssinia, lately arrived at Cairo, from a second visit to that kingdom. It is deeply to be regretted, that severe sufferings have so shaken the constitution of this worthy preacher of the Gospel, that he could not remain any longer in the country. His departure may be considered as a melancholy event for Abyssinia, where his loss is irreparable; and it is neither possible nor desirable that he should go there for a third time, his illness having been owing to the effects of the climate, and, during his second visit, nearly caused his death. Mr. Wolf accompanied him to Djedda, and afforded him the kindest aid in his sufferings. Mr. Wolf intends to go back to Abyssinia another way, more to the south of Massauva. Though, on his first journey to Mr. Gobat, he became better acquainted with the obstacles which make it impossible for a traveller to penetrate into the interior of Africa, he has not yet renounced his original intention. According to the accounts of English travellers, the cholera has now penetrated into the mountainous part of Abyssinia, and many persons fell victims to it in the summer: in general, the course of the disorder was very rapid. It had not disappeared in the autumn. It is now raging, for the second time, on the coast of Arabia, at Djedda, and even at Mecca. By repeated journeys to that country, I have found that this disorder rages on the coast of Arabia as endemically, and, perhaps, even more fatally than even in India.

#### MUSIC.

##### VOCAL SOCIETY.

ON Monday, the last night of the season, Spohr's oratorio of *The Crucifixion* was produced for the first time in this country, and performed in such a manner as to reflect the highest credit on the Society. Every musician knows that Spohr's music is no child's play, and the choruses and accompanied recitatives of this work are, if we may judge from one hearing, not among the least difficult of even his compositions. *The Crucifixion* is replete with all the beauties and peculiarities of its author. It frequently reminded us of his own former works of the same class, and there were, also, slight occasional reminiscences of Handel, Haydn, and Mozart; though nothing that, according to our ideas, amounted to plagiarism, except, perhaps, the choral fugue, "Thou alone art his refuge," the subject of which is precisely that of a movement in (we believe) Haydn's 5th mass: yet Spohr has worked it up in a manner so beautiful, and so peculiarly his own, that one cannot but pardon the theft. A *terzetto* for three female voices, very sweetly sung by Mrs. Bishop, Mrs. Seguin, and Miss Hawes, was perseveringly demanded a second time; and the vocalists were eventually obliged to comply, though the repetition disturbed the progress of the music, and was somewhat detrimental to the effect of the succeeding recitative. We cannot think the composer has been fortunate in the *libretto* of his oratorio, especially as regards the first part. The attempt at depicting all the circumstances of the trial, with the evidence of the witnesses, and the detailed opinions of the priests and pharisees, is altogether in very bad taste. It is, also, attended with the disadvantage of introducing too many solos. At the same time, we must admit that Spohr has made this very part the vehicle of some most extraordinary and beautiful music. The work requires, like all the compositions of this master, to be heard repeatedly, before all its merits can be duly appreciated: but much beauty is developed at the first hearing; and it may be pronounced, without hesitation, that *The Crucifixion* is quite worthy the reputation of the composer of *The Last Judgment*, though not, as a whole, equal to that sublime and masterly oratorio. But it is quite enough for immortality, for a man to have produced one such work as *The Last Judgment*, in the course of his life. The performers, in addition to those already named, were Messrs. Hobbs, Hawkins, Balfé, Bellamy, Bradbury, Moxley, E. Taylor, and Master Coward; and all exerted themselves in the most praiseworthy manner, though, for spirited and appropriate vocal elocution in the recitatives, it would be unjust not to particularise Mr. Hawkins. The best thanks of the musical public are due to the able translator of the oratorio, Mr. Edward Taylor, for the share he has had in bringing forward a work of so much merit. Q.

*Societa Armonica.* — The first dress concert of the season was given to a crowded auditory, at the Opera Concert-room, on Monday evening. The selection, from the most admired composers, was made with much discrimination, and every piece was executed in a very superior style. We consequently anticipate much delight from the future entertainments, both vocal and instrumental, and particularly from the latter.

*Quartet Concerts.* — The third of these entertainments took place on Thursday evening; and several fine compositions were finely given by Mr. Blagrove and his instrumental brethren.

### DRAMA.

THE theatres have all reopened with Easter novelties; and there is such a press that we shall content ourselves with a hasty glance at each, premising that there has been no failure.

*Drury Lane* has revived *Valentine and Orson* with great splendour; and it draws its quota of play-going folks. Mr. Barnett's opera alternates with Mr. Forrest.

*Covent Garden*.—A gorgeous Eastern piece, entitled *Nourhaddin and the Fair Persian*, has drawn good houses: it is an entertaining piece of the kind, and exhibits much beautiful scenery.

*St. James's*.—Mrs. S. C. Hall has turned dramatist in earnest; a serious drama from her pen, called *Mabel's Curse*, was produced on Monday, and afforded an opportunity for the display of some beautiful acting by Miss Allison, and for the reappearance of Miss P. Horton, who, notwithstanding her former well-earned popularity, is decidedly improved from her trip to Edinburgh.

The *Olympic* has added its novelty, *The Rape of the Lock*, founded on the poem of that name, to the list: it was completely successful, as it deserved to be, for the manner in which it is got up.

*Adelphi*, not at all behind its contemporaries, has two new pieces: one, of the spectacle kind, called *The King of the Danube and the Water Lily*, a pretty French importation, which displays Mrs. Honey as the *Water Lily*, and the corps de ballet as other nudes, is beautifully got up, and will long continue to flow on successfully; the other, *Ruth Tudor*, is an Adelphi piece, in which Mrs. Yates adds even to her reputation by her beautiful acting.

*Strand Theatre*.—The company of Messrs. Hammond and Jerrold, with several valuable additions, have returned to their old quarters, and commenced their season with the *Galante Showman*, a drama from a story of Jerrold's, and, we believe, from his pen, being the only novelty. *The Perils of Pippins* was the after-piece; and we were glad to hear it so cordially welcomed.

The *New Royal City Theatre*, in Norton-Falgate, commenced its campaign on Monday, with a rather indifferent company; redeemed, however, by Williams and Wilkinson, though their parts in the *Pickwick* piece did not fit them quite well. It is an elegant structure, rather larger than the Adelphi, and reflects much credit on the architect, Mr. Beazley.

*Asley's*.—Sir Walter Scott is the donor of the spectacle here, which has been highly successful in equestrianism. The conquests of *Ivanhoe* are capitally managed at the amphitheatre.

*Surrey*, and *Sadler's Wells*, and *Victoria*, and *Pavilion*, and *Garrick*, &c., have all their varieties; and, at the different parts of our mighty metropolis, add their little to the great all of amusement at Easter-time.

### VARIETIES.

*The Pleasures of Editorship*.—On Wednesday morning we received twenty-three volumes of new publications; to all which, however, together with their prede- and suc-cessors, we shall render justice as soon as possible.

*Weather-Wisdom*.—The last week has not answered the predictions very satisfactorily. The 26th was not merely gloomy and cold, but a heavy snow-storm; and from all parts of the country we have accounts of a long-continued and severe storm. The 31st was not "changeable," but a fine, though rather cold day. Now

for April: "Changeable weather at the beginning. Very frequent showers about the 3d. The new moon (5th) denotes windy weather; and Mercury in trine to Jupiter and Mars will produce very high winds about the 6th and 7th."

*British Manufacture*.—On Tuesday was entered at the Custom House, on board the *Miranda*, Captain Hopper, for Rio de Janeiro, two carriages, built for the two princes of the Brazils, by Messrs. Birch and Howard. The magnificence of these carriages may be guessed when we state, that, with the harness, they were valued by the broker at 15,000l. The export duty alone, at 10s. per cent, amounting to the sum of 75l., was paid on the entry being passed.

The *Colosseum* is now in high figure among the sights of London; and Sutton, the con-juror, is really so marvellous that we dare not describe his feats. They must be witnessed to be believed.

The *Cosmorama*, in Regent Street, is also flourishing with new subjects, of which we purpose giving a more detailed notice.

*Ants*.—Fish-oil is stated, in a French paper, to be an effectual remedy against the depredations of ants.

*Isaac Walton*.—An original portrait of this piscatory hero, by Housman, has been bequeathed to the National Gallery by his descendant, the late Rev. Dr. Hawes, of Salisbury.

*Earthquake*.—The Quebec newspapers state that a rather severe shock of an earthquake was recently experienced there.

Mr. Charles Nicholson, the celebrated flute-player, died on Monday, at the early age of 42.

*Progress of Knowledge*.—It is a new era to find that the Grand Seigneur has established a medical school at Pera, with lectures, by European teachers, to Turkish students. The ulemahs opposed this strange innovation, but finally assented to it, on an understanding, that only the bodies of Christians and Jews should be brought as subjects to the dissecting-rooms for the study of anatomy.—*Constantinople Letter*, in the *Times* of March 1.

Captain Allan, who was on his way to explore the regions of central Asia, we lament to say, died at Smyrna.—*Idem*.

*China*.—The *démouement* of the Chinese change recently brought before the public in our pages, is proceeding rapidly. Calcutta papers of November 21, state, as news from Canton, that the Chinese government had resolved to carry into effect measures by which the principle of "free trade and moderate duties" was partially recognised, and to begin with the important article of opium; and later papers contain a decree, ordering the barbarian Jardine (the great house of Jardine, Matheson, and Co.) and other merchants, to leave Canton, and only to stay a short while at Macao.

*Antiquities of Carthage*: Extract from a Letter on board the *Vanguard*.—We have been to Tunis since I last wrote to you, and I visited and took sketches of the ruins of Carthage, which are very interesting. Sir Thomas Reid, our consul there, has commenced excavating the ruins, and has been very successful hitherto, having discovered a number of beautiful Corinthian columns, supposed to have belonged to the Temple of Jupiter: the shafts are quite plain, but the capitals are beautifully worked, and as perfect as if they were just finished. He has, also, found a colossal head of Jupiter, and his big toe, and a small hand of Ceres, holding a cornucopia. His collection of coins is also, I understand, very beautiful, and must be very

valuable, as some of them are 2000 years old.—*Oxford Herald*.

### LITERARY NOVELTIES.

In the Press.

The History of England, by Thomas Keightley, Author of "The History of Greece," &c.

#### LIST OF NEW BOOKS.

Lives of Eminent Foreign Statesmen, by G. P. R. James, Vol. IV. (forming Vol. 89 of Dr. Lardner's Cabinet Cyclopaedia), fcap. 8vo. 6s.—An Elementary Introduction to Mineralogy, by W. Phillips, new edit., with additions, by R. Allan, post 8vo. 12s.—The Cambridge University Calendar for 1837, 12mo. 6s.—Erris in the Irish Highlands and the Atlantic Railway, by P. Knight, C. E., 12mo. 3s.—The Candidate for the Ministry, a Course of Lectures, by Rev. J. H. Pinder, M.A. 5s. 6d.—Proofs and Illustrations of the Attributes of God, by Dr. J. McCulloch, 3 vols. 8vo. 1l. 16s.—Reports and Documents on the Culture of Cotton Wool, Raw Silk, &c. in India, 8vo. 12s.—The Complete Correspondent, consisting of Original Letters, 12mo. 2s. 6d.—Essays, Literary and Political, by W. ### TO CORRESPONDENTS.

To the Editor of the Literary Gazette.

SIR,—As your Gazette is the medium for all kinds of useful information, I am induced to trouble you with this note, in hope I may be able to interest you in a circumstance which has recently occurred, and in the result of which I am, in common with several friends, very much disappointed. The fact is, that Messrs. Williams and Co., paper-stainers, in West Smithfield, having lately made some excavations to enlarge their underground premises, the workmen employed for this purpose came suddenly upon a long succession of stone arches, in which were several chains, and some human bones, mixed up with those of animals; the vaults, which range from opposite Messrs. W.'s house towards Long Lane, were found to terminate in a very ponderous iron door. The party in whose service the discovery was made, being, I presume, more incurious than the lover of antiquity would think praiseworthy, and having, perhaps, fears that his workmen would be exploring monkish remains instead of perfecting modern decorations,—without affording the chance of a glimpse to antiquarian curiosity, has caused the entrance to be closed with bricks; and, unless some one has sufficient influence with this reckless paper-stainer to induce him to reopen his neglected treasure, an excellent opportunity may be lost for illustrating some difficulties with relation to the history of London, and the craving of many a lover of new fragments of the old world will remain unsatisfied. Perhaps, Sir, if you will be good enough to notice this hidden discovery, public knowledge of the circumstance may induce Mr. Williams to allow inspection of his occult treasure; and you will oblige, Sir, yours, &c. J. S.

Notwithstanding all our diligence with the new publications of the last few days, we have been obliged to defer the notice of Sharon Turner's third volume of the "Sacred History of the World;" Guizot's "General History of Civilisation in Europe;" "Austria and the Austrians," and several other works. We are not gods, to "annihilate both time and space."

## ADVERTISEMENTS.

Connected with Literature and the Arts.

## BRITISH INSTITUTION,

PAUL MAIL.  
The Gallery for the Exhibition and Sale of the Works of British Artists, is open daily, from Ten in the Morning until Five in the Evening.

Admission, 1s.—Catalogue, 1s.  
WILLIAM BARNARD, Keeper.

## UNIVERSITY COLLEGE, LONDON.

The Professorship of German Language and Literature being vacant, Applications from Candidates for the Appointment will be received on or before Friday, the 4th of May.

CHARLES C. ATKINSON, Secretary.

26th March, 1837.

## KING'S COLLEGE, LONDON.

SENIOR DEPARTMENT.—The Classes in Theology, the Classics, Mathematics, English Literature, and History, under the superintendence of the Principal and Professors, the Rev. T. G. Hall, R. W. Brown, and T. Dale, will be re-opened on Tuesday next, the 4th of April.

The Classes for Private Instruction in Hebrew, the Oriental, and other Foreign Languages, will also be resumed.

JUNIOR DEPARTMENT.—The Classes in the School will be re-opened on the same day, at Nine o'clock.

March 31, 1837. H. J. ROSE, E.D. Principal.

## COFFEE.—S. PARKER having perfected

his Patent Steam-fountain Coffee Pot, confidently recommends it to the public. It produces, most economically and rapidly, over an open fire, an extract of Coffee, more aromatic in quality and delicious in flavor than can be made by any other machine. Every variety, with printed testimonials of its advantages, may be seen at No. 12 Argyl Place, Regent Street; where, also, are on sale, his Patent Indian, Argyl, and original Bismarck Lamps.

## THE MUMMY from MEMPHIS.—

GIOVANNI D'ATHANASI respectfully informs the Public that this extraordinary Mummy, and the only one of its kind ever discovered, will be Unrolled in the Great Room, at Exeter Hall, on Monday, the 10th of April, on which occasion Mr. Pettigrew has kindly consented to render his assistance. The Mummy may be seen at the house of Mr. Leigh Sotheby, where Tickets may be procured.

Reserved seats round the Mummy, 6s.; Platform, 4s.; Gallery, 2s. 6d.

## HEELEY AND SON'S SUPERIOR

STEEL PENS.

4s. 6d. in morocco.  
Printed for J. G., and F. Rivington, St. Paul's Churchyard, and  
Waterloo Place, Pall Mall.

## Girdlestone's Commentary on the Bible.

In 8vo. price 2s. the Second Part, containing Leviticus,  
Numbers, and Deuteronomy, of  
THE OLD TESTAMENT, with a Com-  
mentary, consisting of Short Lectures for the daily Use  
of Families.

By the Rev. CHARLES GIRDLESTONE, M.A.  
Vicar of Bechey, Staffordshire.

In this edition of the Bible, it has been one chief object to sup-  
ply Families with an exposition for daily reading. The scripture  
is divided into paragraphs of convenient length, and the explana-  
tory and practical matter is digested, under each portion, into  
one continuous lecture, so as to require no previous examination  
on the part of those who read it to their families. At the same  
time, it is hoped that the pains which have been taken to explain  
all obvious difficulties, and to derive from each passage its ap-  
propriate lesson, whether of doctrine or of duty, will render the  
work no less useful to those who study the Word of God in pri-  
vate.

Printed for J. G., and F. Rivington, St. Paul's Churchyard,  
and Waterloo Place, Pall Mall.

Of whom may be had,

The First Part, containing Genesis and Ex-  
odus, price 9s.; or the Two Parts in One Vol. 18s.

Also,

The New Testament, with a Commentary.  
In 2 vols. 8vo. price 11. 16s.; or in Four Parts, at 9s. each.

In 2 vols. 8vo. price One Guinea, with Seven Illustrative  
Engravings by W. Dyce, Esq.

HIGHLAND RAMBLES, and  
Long Legends to Shorten the Way.

By Sir THOMAS DICK LAUDER, Bart.  
Author of "An Account of the Morayshire Floods,"  
"Lochnagar," "Wells of Badenoch," &c.  
Adams and Charles Black, Edinburgh; Longman and Co.  
London.

## MISCELLANEOUS PAPERS

In 1 vol. post 8vo. price 8s. cloth,  
on Scientific Subjects, written chiefly in India.  
By T. SMYTHUR BURT, Esq. F.R.S. M.R.A.S. &c.

Also, edited by the same Author,  
2. Observations on the Curiosities of Nature,  
by the late William Burt, Esq. of Plymouth, Devon. Post 8vo.  
price 7s. 6d.

3. Christianity; a Poem, in Three Books,  
with copious Notes. Post 8vo. price 9s. cloth.

4. Views, chiefly illustrative of the Ancient  
and Modern Hindu and Mussalman Architecture in or near the  
Doab of India, presidency of Bengal, taken in 1829-33. Oblong,  
stitched, price 7s.  
Wm. H. Allen and Co. 7 Leadenhall Street.

## PRODUCE OF THE EAST INDIES.

In 1 vol. 8vo. with Plates, 12s. cloth,  
REPORTS and DOCUMENTS connected  
with the Proceedings of the East India Company, in re-  
gard to the Culture and Manufacture of Cotton Wool, Raw Silk,  
and Indigo, in India.  
London: Wm. H. Allen and Co. 7 Leadenhall Street.

## P O E M S.

By JOHN MOULTRIE,  
Author of "My Brother's Grave,"  
William Pichering, Publisher, Chancery Lane, London; and  
Combe and Co. Leicester and Rugby.

## HUMAN NATURE EXPLORED BY CHRISTIANITY.

Price 7s.  
A SCRIPTURAL INQUIRY into the  
Nature and Import of the Image and Likeness of God  
in Man.  
By E. W. GRINFIELD, M.A.  
London: Fellows, Ludgate Hill.

In 8vo. with Engravings, price 15s. Vol. XX. (for 1836)  
of the  
MEDICO-CHIRURGICAL TRANSACTIONS, published by the Royal Medical and Chir-  
urgical Society of London.

London: Longman, Rees, Orme, and Co.  
Of whom may be had, the previous Volumes.

## A SERIES OF PRACTICAL SERMONS;

By the Rev. C. BRADLEY,  
Vicar of Glasbury.  
Hamilton, Adams, and Co. Paternoster Row; and Hatchard  
and Son, Piccadilly.

16s. 6d.

Parochial Sermons at Glasbury. 6th edition,  
10s. 6d.

Sermons at High Wycombe. 2 vols. 10th  
edition, 21s.

## DR. HICKIE'S SCHOOL TERRENCE.

In 12mo. 9s. 6d. cloth,  
PUB. TERENTI AFRI COMEDIE  
REX, ex Editions Frid. Reinhardt. With English Ex-  
planatory Notes.

By D. B. HICKIE, LL.D.  
The edition of Terence now submitted to the classical student  
is printed uniformly, and upon the same plan as Professor An-  
thon's Horace, which has obtained the sanction of several of the  
most eminent scholars of the present day. The notes are selected  
from the most approved Commentators; and, besides containing  
much original and useful matter, the entire of Ruhnken's cele-  
brated Hicetas has been incorporated in a compressed form.  
The text is taken from the accurate edition of Reinhardt;  
and is prefixed an account of the Metres of Terence, with scales of  
the different sorts of verses adopted in these plays.  
London: Published by John R. Priestley, 47 High Holborn.

PRACTICAL ADVICE to the YOUNG  
PARISH PRIEST.

By JAMES DUKE COLERIDGE, LL.D.  
Rector of Lawthorpe, and Vicar of Leasingthorpe (Carnwall);  
and Vicar of St. Paul's Cathedral.  
Printed for J. G., and F. Rivington, St. Paul's Churchyard,  
and Waterloo Place, Pall Mall.

Of whom may be had,  
A Selection of Family Prayers, intended for  
his Parishioners. By the Rev. J. D. Coleridge. 4th edition,  
18mo. 1s. 6d. bound.

## GUIZOT'S GENERAL HISTORY OF EUROPE.

A GENERAL HISTORY OF CIVILISA-  
TION IN EUROPE, from the Fall of the Roman Em-  
pire to the French Revolution. Translated from the French of  
M. Guizot, Professor of History in the Faculty of Literature at  
Paris, and Minister of Public Instruction in France.

8vo. cloth, 12s.  
Oxford: D. A. Talboys; and No. 1 Boulevard Street, Fleet  
Street, London.  
Lately published,

The Political Antiquities of Greece, Histori-  
cally considered, from the German of C. F. Hermann. 8vo. 15s.

Heeren's Historical Treatises. 8vo. cloth, 16s.

Heeren's Manual of the History of Modern  
Europe. 5 vols. 8vo. 11. 4s.

Lewis (G. Cornwall) on the Origin and  
Progress of the Romance Languages. 8vo. 12s.

13 Great Marlborough Street, March 31.

*MR. COLBURN has just published the following NEW WORKS:—*

## HUMAN LIFE.

By the Author of "Tremaine," and "De Vere." In 3 vols. post 8vo.

## MEMOIRS OF A PEERESS;

OR, THE DAYS OF FOX.

Edited by LADY CHARLOTTE BURY. In 3 vols. post 8vo.

## AUSTRIA AND THE AUSTRIANS.

WITH SKETCHES OF THE DANUBE AND THE IMPERIAL STATES.

In 2 vols. post 8vo. with Portraits of the Emperor Ferdinand and Prince Metternich.

## LETTERS FROM THE SOUTH.

By THOMAS CAMPBELL, Esq. Author of "The Pleasures of Hope," &c.  
In 2 vols. 8vo. with 11 Plates of Scenery, Costume, &c.

## THE DIVORCED.

By the Authoress of "Flirtation." In 2 vols. post 8vo. 18s.

"This new novel is one of the most effective of Lady Bury's productions. The story is powerfully and admirably told, and it seems to us that, not only is it founded on fact, but that the characters are chiefly drawn from the life."—*John Bull*.

## COMPANION TO WALPOLE'S LETTERS TO HORACE MANN.

In 3 vols. 8vo. with numerous curious illustrative Notes (now first added), and a Portrait,

## WALPOLE'S CORRESPONDENCE WITH GEORGE MONTAGU, &c.

During a Period of 65 Years.

"Every letter in this collection is in itself a fund of amusement, and, as throwing a bright light upon the manners of the time in which they were written, invaluable. Those who have before seen this correspondence, never had an opportunity of obtaining so good an edition of it as the present; and for those who happen not to have seen it, the very best thing they can do, at the opening of the year 1837, is to buy it."—*John Bull*.

## LA PICCIOLA;

Or, Captivity Captive. In 2 vols. post 8vo. 18s.

"For this beautiful little novel, we may venture to predict a degree of popularity in the English world of letters, equal to that enjoyed by 'Paul and Virginia,' 'Elizabeth,' and one or two other favourites. It is a production for every class and for every shade of taste."—*Court Journal*.

Beautifully printed, on a new plan, in 1 very large vol. 8vo. with upwards of 1500 Engravings of Arms, &c. price 38s. bound,

## MR. BURKE'S NEW PEERAGE AND BARONETAGE For 1837.

Comprising all the recent creations, and many new and important particulars, obtained from official communications, private documents, family records, &c; forming altogether the most complete, the most convenient, and, at the same time, the cheapest work of the kind ever presented to the Public.

Now ready, Part II. price 4s. 6d. of the republication on small paper, with all the Armorial Bearings, Portraits, &c.

## MR. BURKE'S HISTORY OF THE LANDED GENTRY.

To be completed in Sixteen Monthly Parts, at 4s. 6d. each.

Comprising a Biographical and Genealogical Account of all the Eminent Families in the Kingdom, and upwards of 100,000 Individuals connected with them.

THE NEW COMIC PERIODICAL WORK, EDITED BY THEODORE HOOK, Esq.

And embellished with a Portrait of B. D'ISRAELI, Esq.

## COLBURN'S NEW MONTHLY MAGAZINE AND HUMOURIST,

### REVIEW OF NEW BOOKS.

*History of the Indian Tribes of North America, with Biographical Sketches and Anecdotes of the Principal Chiefs.* Embellished with One Hundred and Twenty Portraits from the Indian Gallery in the Department of War, at Washington. By Thomas L. M'Kenney, late of the Indian Department, Washington, and James Hall, Esq. of Cincinnati. Vol. I. No. 1, fol. London, 1837. Campbell and Co.

We rejoice, after much expectation, to see the first portion of this great and national work ready to issue from the press. Its subject is most interesting, its form and style most becoming, and its illustrations "a dainty dish to set before the king;" for his majesty, as we mentioned in the *Literary Gazette* of Feb. 4, has graciously placed his royal name at the head of the list of its patrons.

The history is divided into two parts—one giving a biographical account of famous Indian chiefs, warriors, &c.; and the other, a general view of the origin and destinies of the various tribes and nations. In the former we have, together with striking portraits of the individuals, the lives of Red Jacket, a splendid orator of the Senecas; of Kish-kallo-wa, a Shawnee chief; of Mohongo, an Osage woman (who, with her child, makes quite a Murillo picture); of Shingaba W'Ossin, a Chippewa; and of Pushmataha, a Choctaw, all more or less celebrated in the annals of the red men. Before looking at the historical narrative, which is, indeed, only begun in this No. to the extent of twenty pages, our readers may like to have a nearer glance at some traits of these individuals: thus we are told of Red Jacket:—

"Red Jacket was the foe of the white man. His nation was his god; her honour, preservation, and liberty, his religion. He hated the missionary of the cross, because he feared some secret design upon the lands, the peace, or the independence of the Senecas. He never understood Christianity. Its sublime disinterestedness exceeded his conceptions. He was a keen observer of human nature; and saw that, among white and red men, sordid interest was equally the spring of action. He, therefore, naturally enough suspected every stranger who came to his tribe of some design on their little and dearly prized dominions; and felt towards the Christian missionary as the Trojan priestess did towards the wooden horse of the Greeks. He saw, too, that the same influence which tended to reduce his wandering tribe to civilised habits, must necessarily change his whole system of policy. He wished to preserve the integrity of his tribe by keeping the Indians and white men apart, while the direct tendency of the missionary system was to blend them in one society, and to bring them under a common religion and government. While it annihilated paganism, it dissolved the nationality of the tribe. In the wilderness, far from white men, the Indians might rove in pursuit of game, and remain a distinct people; but the district of land reserved for the Senecas was not as large as the smallest county in New York, and was now surrounded by an ever-growing population, impatient to possess their lands, and restricting

their hunting grounds, by bringing the arts of husbandry up to the line of demarcation. The deer, the buffalo, and the elk, were gone. On Red Jacket's system, his people should have followed them; but he chose to remain, and yet refused to adopt those arts and institutions which alone could preserve his tribe from an early and ignominious extinction. It must also be stated, in fairness, that the missionaries are not always men fitted for their work. Many of them have been destitute of the talents and information requisite in so arduous an enterprise; some have been bigoted and over zealous, and others have wanted temper and patience. Ignorant of the aboriginal languages, and obliged to rely upon interpreters to whom religion was an occult science, they, doubtless, often conveyed very different impressions from those which they intended. 'What have you said to them?' inquired a missionary once, of the interpreter who had been expounding his sermon. 'I told them you have a message to them from the Great Spirit,' was the reply. 'I said no such thing,' cried the missionary; 'tell them I am come to speak of God, the only living and true God, and of the life that is to be hereafter.—Well, what have you said?' 'That you will tell them about Manito and the land of Spirits.' 'Worse and worse!' exclaimed the embarrassed preacher; and such is, doubtless, the history of many sermons which have been delivered to the bewildered heathen. There is another cause which has seldom failed to operate in opposition to any fair experiment in reference to the civilisation of the Indians. The frontiers are always infested by a class of adventurers, whose plans of speculation are best promoted by the ignorance of the Indian; who, therefore, steadily thwart every benevolent attempt to enlighten the savage; and who are as ingenious as they are busy, in framing insinuations to the discredit of those engaged in benevolent designs towards this unhappy race. Whatever was the policy of Red Jacket, or the reasons on which it was founded, he was the steady, skilful, and potent foe of missions in his tribe, which became divided into two factions, one of which was called the Christian, and the other the pagan, party. The Christian party, in 1827, outnumbered the pagan; and Red Jacket was formally, and by a vote of the council, displaced from the office of chief of the Senecas, which he had held ever since his triumph over Corn Plant. He was greatly affected by this decision, and made a journey to Washington to lay his griefs before his great father. His first call on arriving at Washington was on Colonel M'Kenney, who was in charge of the bureau of Indian affairs. That officer was well informed, through his agent, of all that had passed among the Senecas, and of the decision of the council, and the cause of its displacing Red Jacket. After the customary shaking of hands, Red Jacket spoke, saying, 'I have a talk for my father.' 'Tell him,' answered Colonel M'Kenney, 'I have one for him. I will make it, and will then listen to him.' Colonel M'Kenney narrated all that had passed between the two parties, taking care not to omit the minute incidents that had combined to produce the open rupture that had

taken place. He sought to convince Red Jacket that a spirit of forbearance on his part, and a yielding to the Christian party the right, which he claimed for himself, to believe as he pleased on the subject of religion, would have prevented the mortifying result of his expulsion from office and power. At the conclusion of this talk, during which Red Jacket never took his keen and searching eye off the speaker, he turned to the interpreter, saying, with his finger pointing in the direction of his people, and of his home, 'Our father has got a long eye!' He then proceeded to vindicate himself, and his cause, and to pour out upon the black coats the phials of his wrath. It was finally arranged, however, that he was to go home, and there, in a council that was directed to be convened for the purpose, express his willingness to bury the hatchet, and leave it to those who might choose to be Christians to adopt the ceremonies of that religion; whilst for himself, and those who thought like him, he claimed the privilege to follow the faith of his fathers. Whereupon, and as had been promised him at Washington, the council unanimously replaced him in the office of chief, which he held till his death, which happened soon after. It is due to him to state, that a cause, which has retarded the progress of Christianity in all lands lying adjacent to Christian nations, naturally influenced his mind. He saw many individuals in Christendom who were worse than pagans. He did not know that few of these professed to be Christians, and that a still smaller number practised the precepts of our religion; but, judging them in the mass, he saw little that was desirable in the moral character of the whites, and nothing inviting in their faith. It was with these views that Red Jacket, in council, in reply to the proposal to establish a mission among his people, said, with inimitable severity and shrewdness, 'Your talk is fair and good; but I propose this. Go, try your hand in the town of Buffalo, for one year: they need missionaries, if you can do what you say. If, in that time, you should have done them any good, and made them any better, then we will let you come among our people.' A gentleman, who saw Red Jacket in 1820, describes him as being then apparently sixty years old. He was dressed with much taste, in the Indian costume throughout, but had not a savage look. His form was erect, and not large; and his face noble. He wore a blue dress, the upper garment cut after the fashion of a hunting shirt; with blue leggins, very neat moccasins, a red jacket, and a girdle of red about his waist. His eye was fine, his forehead lofty and capacious, and his bearing calm and dignified. Previous to entering into any conversation with our informant, who had been introduced to him under the most favourable auspices, he inquired, 'What are you—a gambler (meaning a land-speculator), a sheriff, or a black coat?' Upon ascertaining that the interview was not sought for any specific object, other than that of seeing and conversing with himself, he became easy and affable, and delivered his sentiments freely on the subject which had divided his tribe, and disturbed himself, for many years. He said, 'that he had no doubt that

Christianity was good for white people, but that the red men were a different race, and required a different religion. He believed that Jesus Christ was a good man, and that the whites should all be sent to hell for killing him; but the red men, having no hand in his death, were clear of that crime. The Saviour was not sent to them, the atonement not made for them, nor the Bible given to them; and, therefore, the Christian religion was not intended for them. If the Great Spirit had intended they should be Christians, he would have made his revelation to them as well as to the whites; and, not having made it, it was clearly his will that they should continue in the faith of their fathers.' The whole life of the Seneca chief was spent in vain endeavours to preserve the independence of his tribe, and in active opposition, as well to the plans of civilisation proposed by the benevolent, as to the attempts at encroachment on the part of the mercenary. His views remained unchanged, and his mental powers unimpaired, to the last. The only weakness, incident to the degenerate condition of his tribe, into which he permitted himself to fall, was that of intoxication. Like all Indians, he loved ardent spirits; and, although his ordinary habits were temperate, he occasionally gave himself up to the dreadful temptation, and spent several days in succession in continual drinking. The circumstances attending his decease were striking, and we shall relate them in the language of one who witnessed the facts which he states. For some months previous to his death, time had made such ravages on his constitution as to render him fully sensible of his approaching dissolution. To that event he often adverted, and always in the language of philosophic calmness. He visited successively all his most intimate friends at their cabins, and conversed with them, upon the condition of the nation, in the most impressive and affecting manner. He told them that he was passing away, and his counsels would soon be heard no more. He ran over the history of his people from the most remote period to which his knowledge extended, and pointed out, as few could, the wrongs, the privations, and the loss of character, which almost of themselves constituted that history. 'I am about to leave you,' said he; 'and when I am gone, and my warnings shall be no longer heard, or regarded, the craft and avarice of the white man will prevail. Many winters have I breasted the storm, but I am an aged tree, and can stand no longer. My leaves are fallen, my branches are withered, and I am shaken by every breeze. Soon my aged trunk will be prostrate, and the foot of the exulting foe of the Indian may be placed upon it in safety; for I leave none who will be able to avenge such an indignity. Think not I mourn for myself: I go to join the spirits of my fathers, where age cannot come; but my heart fails when I think of my people, who are soon to be scattered and forgotten.' These several interviews were all concluded with detailed instructions respecting his domestic affairs, and his funeral. There had long been a mission among the Senecas, who was sustained by a party among the natives, while Red Jacket denounced 'the man in dark dress,' and deprecated the feud by which his nation was distracted. In his dying injunctions to those around him, he repeated his wishes respecting his interment. 'Bury me,' said he, 'by the side of my former wife; and let my funeral be according to the customs of our nation. Let me be dressed and equipped as my fathers were, that their spirits may rejoice in my coming.

Be sure that my grave be not made by a white man; let them not pursue me there!' He died on the 20th of January, 1830, at his residence near Buffalo. With him fell the spirit of his people. They gazed upon his fallen form, and mused upon his prophetic warnings, until their hearts grew heavy with grief. The neighbouring missionary, with a disregard for the feelings of the bereaved, and the injunctions of the dead, for which it is difficult to account, assembled his party, took possession of the body, and conveyed it to their meeting-house. The immediate friends of Red Jacket, amazed at the transaction, abandoned the preparations they were making for the funeral rites, and followed the body in silence to the place of worship, where a service was performed which, considering the opinions of the deceased, was as idle as it was indecorous. They were then told, from the sacred desk, that, if they had any thing to say, they had now an opportunity. Incredulity and scorn were pictured on the face of the Indians, and no reply was made, except by a chief called Green Blanket, who briefly remarked,—'This house was built for the white man; the friends of Red Jacket cannot be heard in it.' Notwithstanding this touching appeal, and the dying injunctions of the Seneca chief, his remains were taken to the grave prepared by the whites, and interred. Some of the Indians followed the corpse; but the more immediate friends of Red Jacket took a last view of their lifeless chief in the sanctuary of that religion which he had always opposed, and hastened from a scene which overwhelmed them with humiliation and sorrow. Thus early did the foot of the white man trample on the dust of the great chief, in accordance with his own prophetic declaration."

The countenance of the Choctaw chief is wonderfully allied to the Tartar; and affords strong physical evidence of the truth of the theory, that these Indians were, originally, branches of the great Tartar stock, and, together with many of their animals, &c., derived from the table-land of Asia.

In his fancy uniform he looks very like some Russian commander of Cossack or Mongolian breed and lineage. Of him, the author says:

"He attended a council, held in 1823, near the residence of Major Pitchlynn, a wealthy trader among the Choctaws, and at a distance of eighty miles from his own habitation. The business was closed on the 3d of July; and on the following day, the anniversary of our independence, a dinner was given by Major Pitchlynn to Colonel Ward, the agent of the government of the United States, and the principal chiefs who were present. When the guests were about to depart, it was observed that General Pushmataha had no horse; and as he was getting to be too old to prosecute so long a journey on foot, the government agent suggested to Mr. Pitchlynn the propriety of presenting him a horse. This was readily agreed to, on the condition that the chief would promise not to exchange the horse for whisky; and the old warrior, mounted upon a fine young animal, went upon his way rejoicing. It was not long before he visited the Agency on foot, and it was discovered that he had lost his horse in betting at ball-play. 'But did you not promise Mr. Pitchlynn,' said the agent, 'that you would not sell his horse?' 'I did so, in the presence of yourself and many others,' replied the chief; 'but I did not promise that I would not risk the horse on a game of ball.' It is said that, during the late war, General Pushmataha, having joined our southern army with some of his warriors, was arrested by the

commanding general for striking a soldier with his sword. When asked by the commander why he had committed this act of violence, he replied that the soldier had been rude to his wife, and that he had only given him a blow or two with the side of the sword, to teach him better manners. But, if it had been you, general, instead of a private soldier,' continued he, 'I should have used the sharp edge of my sword, in defence of my wife, who has come so far to visit a great warrior like myself.' At a time when a guard of eight or ten men was kept at the Agency, one of the soldiers, having become intoxicated, was ordered to be confined; and, as there was no guardhouse, the temporary arrest was effected by tying the offender. Pushmataha, seeing the man in this situation, inquired the cause; and, on being informed, exclaimed, 'Is that all?' and immediately unciated the unfortunate soldier, remarking, coolly,—'Many good warriors got drunk.' At a meeting of business at the Agency, at which several American gentlemen, and some of the chief men of the Choctaw nation, were present, the conversation turned upon the Indian custom of marrying a plurality of wives. Pushmataha remarked that he had two wives, and intended to have always the same number. Being asked if he did not think the practice wrong, the chief replied,—'No: is it not right that every woman should be married? and how can that be, when there are more women than men, unless some men marry more than one? When our great father, the president, caused the Indians to be counted last year, it was found that the women were most numerous; and, if one man could have but one wife, some women would have no husband.'"

"He was taken sick at Washington, and died in a strange land. When he found that his end was approaching, he called his companions around him, and desired them to raise him up, to bring his arms, and to decorate him with all his ornaments, that his death might be that of a man. He was particularly anxious that his interment should be accompanied with military honours; and when a promise was kindly given that his wishes should be fulfilled, he became cheerful, and conversed with composure until the moment when he expired without a groan. In conversation with his Indian friends shortly before his death, he said, 'I shall die, but you will return to our brethren. As you go along the paths, you will see the flowers, and hear the birds sing; but Pushmataha will see them and hear them no more. When you shall come to your home, they will ask you, Where is Pushmataha? and you will say to them, He is no more. They will hear the tidings like the sound of the fall of a mighty oak in the stillness of the woods.' The only speech made by Pushmataha, on the occasion of his visit to Washington, was the following. It was intended by him to be an opening address, which, had he lived, he would doubtless have followed by another more like himself. We took it down as he spoke it. The person addressed was the secretary of war. 'Father, I have been here some time. I have not talked—have been sick. You shall hear me talk to-day. I belong to another district. You have no doubt heard of me—I am Pushmataha. Father, when in my own country, I often looked towards this council house, and wanted to come here. I am in trouble. I will tell my distresses. I feel like a small child, not half as high as its father, who comes up to look in his father's face, hanging in the bend of his arm, to tell him his troubles. So, father, I hang in

the bend of your arm, and look in your face, and now hear me speak. Father, when I was in my own country, I heard there were men appointed to talk to us. I would not speak there; I chose to come here, and speak in this beloved house. I can boast, and say, and tell the truth, that none of my fathers, or grandfathers, nor any Choctaw, ever drew bows against the United States. They have always been friendly. We have held the hands of the United States so long, that our nails are long like birds' claws; and there is no danger of their slipping out. Father, I have come to speak. My nation has always listened to the applications of the white people. They have given of their country, till it is very small. I repeat the same about the land east of the Tombigby. I came here, when a young man, to see my father Jefferson. He told me, if ever we got in trouble, we must run and tell him. I am come. This is a friendly talk; it is like a man who meets another, and says, How do you do? Another will talk further.' The celebrated John Randolph, in a speech upon the floor of the senate, alluded thus to the forest chieftain whose brief memoirs we have attempted to sketch:—'Sir, in a late visit to the public grave-yard, my attention was arrested by the simple monument of the Choctaw chief, Pushmataha. He was, as I have been told by those who knew him, one of nature's nobility; a man who would have adorned any society. He lies quietly by the side of our statesmen and high magistrates in the region—for there is one such—where the red man and the white man are on a level. On the sides of the plain shaft that marks his place of burial, I read these words: 'Pushmataha, a Choctaw chief, lies here. This monument to his memory is erected by his brother chiefs, who were associated with him in a delegation from their nation, in the year 1824, to the government of the United States. Pushmataha was a warrior of great distinction. He was wise in council; eloquent in an extraordinary degree; and on all occasions, and under all circumstances, the white man's friend. He died in Washington, on the 24th of December, 1824, of the group, in the 60th year of his age.' Among his last words were the following: 'When I am gone, let the big guns be fired over me.'"

[To be concluded in our next.]

*The Anglo-Saxon Poems of Beowulf: the Traveller's Song, and the Battle of Finnesburh.* Edited by John M. Kemble, Esq. M.A. &c. Second Edition. 12mo. London, 1837. Pickering.

*A Translation of the Anglo-Saxon Poem of Beowulf; with a copious Glossary, Preface, and Philological Notes.* By John M. Kemble, Esq. M.A. &c. 12mo. London, 1837. Pickering.

We have lately had several occasions of expressing our satisfaction at the increasing attention which is every day paid to the language and literature of our forefathers, not only to its pure form in the days of Saxon rule, but also during the long period which followed the breaking up of the Saxon, until the establishment of our language in its present form. In this age, when we have so much reason for looking forwards, it is a gratifying and no unimportant sign to find some tendency to looking back; and we are glad, even taking it in this point of view, to meet with works of any kind that may encourage us to examine and study the past condition of our country. We must add that, in writings in the native tongue

of our island, whether Saxon or English, we must alone hope to find and to understand the true English spirit, which we believe still exists the same, only refined and polished, as it did ten centuries ago. We shall there best see the feeling which raised the institutions about which we have all so much reason to rally in the hour of danger; and we shall there meet with the political and religious sentiments of our forefathers, at different periods and under varying circumstances, most clearly developed. For example, those who would know the condition and doctrines of the Saxon church, let them go to the Saxon homilies, which are preserved in great numbers; and those who would have an accurate knowledge of the state of public feeling in the days of Wickliffe, must seek it in the vernacular poems and writings of that day, in "Piers Plowman," and a host of other works, which we could point out to them. Even the gayer works, such as the romances and the poetry in general, interest us, not only by the light they throw on the state of contemporary society, but by the beautiful flights of imagination which frequently recur in them. Solomon said wisely, that there is nothing new under the sun; and many ideas which we believe to be the growth of to-day, bear ages upon their heads.

The literature of no nation of Europe can boast of a romance which remounts to an age so remote from our days as that which witnessed the formation of the poem of Beowulf. The sole manuscript which contains it was written in the tenth century; and there are many circumstances about it which prove, beyond a doubt, that it had been composed some centuries before. It thus gives us an accurate and striking picture, drawn by one of themselves, of the private and public life of our Saxon forefathers, at a period long before we have any other testimony of it, unless it be that drawn by a foreigner and an enemy, the Roman Tacitus, at a period when they dwelt among the wilds of Germany. Its hero is ever engaged in combats with the monsters who held so prominent a place in the popular creed; its scene alternates from the festive hall to the place of slaughter; and in each the poet has abundant opportunities of giving most interesting traits of society in the Saxon heroic age. We intend to give one sample of the language of this singular poem; and, among the many sketches of manners with which it abounds, we have found it difficult to make a choice. Our extract shall be the death-scene of its hero Beowulf, the king of the Geats or Saxons, who were then situated on the shores of the Baltic. Beowulf, in his old age, is mortally wounded by the dragon which, with the aid of his faithful companion, Wiglaf, he has slain. The latter goes into the dragon's den, and brings out part of the treasures which have been long concealed there, in order to lay them before the eyes of his prince, who dies rejoicing, that, by his death, he has procured treasures for his people. His wish to be buried on the shore, that his mound may be a mark to sailors, might be paralleled from the heroic and semi-heroic ages of Grecian story. Beowulf looked on the gold, and said,—

" Ic ðara frætwa,  
fræn ealles ðanc  
wuldur-cyninge  
wordū [se] cge  
ecū dryhtne,  
þe ic her on starie;  
þas ðe [ic] mōste

## Translation.

" I give thanks in words  
to the Lord of all,  
the King of Glory,  
the eternal Lord,  
for the treasures  
which I here stare upon;  
that I might

minū leddū  
ær awylt-dæge  
Swylc ge-[str] ynan;  
nū ic mādna bord  
minne be-bōhte  
frōde forþ-lege:  
fremmað ge-nū  
leōða þearfe:  
ne mæg ic har leng  
wean;  
hātað heaðo-mære  
hlæw ge-wyroean,  
beorhtne æfter hære,  
æt brimes nosan  
se scel tō ge-myndū  
minū leddū  
heah hlifan  
on Hrones nese;  
þæt hit æn-liðend  
syððan hātan  
Bið-wulfes biorh,  
ða ðe Brentingas  
ofer flōða ge-nipu  
feorran drifað.  
Dyde him of heale,  
hring gyldenre,  
þiðden þrist-hydg  
þegne ge-sealde,  
geōngū gār-wigan,  
gold-fāhus helm,  
beaþ and byrnan,  
hēt hynne brūcan well.  
Dū eart ende-lāf  
ūsas cynnes,  
Wæg-mundinga;  
ealle wyrd for-aweoð  
mine magas  
tō metod-scafte,  
eorlas on elne;  
ic him æfter secal."  
Dæt was þā gornelan  
gingmete word,  
brocst-ge-hygdum,  
ær he beal cure,  
hāte heaðo-wylmas:  
him of hweðre ge-wāt  
sāwol sēcān  
sōð-sæstra ðōm."  
V. 5583.

for my people,  
before my day of death,  
obtain such;  
now I a horde of treasures  
have purchased prudently  
with my death;  
it will be yet of advantage  
at the need of my people:  
longer may I not here be;  
mean;  
command the famous in  
war  
to work a mound,  
bright after the funeral  
fire,  
upon the nose of the pro-  
montory,  
which shall be a memorial  
to my people,  
rise high aloft  
on Hronesness,  
that the sea-sailors  
may afterwards call it  
Beowulf's mound,  
when the Brentings  
drive afar over  
the darkness of the floods."  
The prince, bold of mind,  
did from his neck  
the golden ring,  
(he gave it to his thane,  
the young warrior,)  
his helmet coloured like  
gold,  
a ring and byrnie;  
he bade him brook them  
well.  
"Thou art the last rem-  
nant,  
of our kin,  
of the Wægmundings;  
fate hath swept away  
all my sons  
to death,  
warriors in their valour;  
I must follow them."  
That was the last word  
of the old prince,  
in the thought of his  
breast,  
before he chose the funeral  
fire,  
the hot war-waves:  
from his bosom departed  
the soul to seek  
the glory of the just.

For the study of the Anglo-Saxon language the two volumes by Mr. Kemble (the best of our Anglo-Saxon scholars) are invaluable treasures. The first volume is a reprint, with many improvements, of his former edition of the Saxon text. The second volume, which may be had separately, contains, 1. a long and curious preface; 2. a literal translation of the whole poem; 3. a complete glossary, both to Beowulf and, in some measure, to the whole mass of Anglo-Saxon poetry; and 4. an appendix of valuable and necessary philological notes. We are glad to hear that these volumes are not to be the only contributions by Mr. Kemble to the library of the Anglo-Saxon scholar: he has another work now in the press. He is making great progress with a Saxon mythology; and we understand that he is employing his leisure on a complete dictionary of the Saxon tongue, which has already made no small progress, and will be exceedingly welcome to all scholars.

*Modern India; with Illustrations of the Resources and Capabilities of Hindóstan.* By H. H. Spry, M.D. F.G.S. &c. Bengal Medical Staff. 2 vols. 12mo. London, 1837. Whittaker and Co.

PERSONAL observation, the best of all sources for a popular work of this kind, supplies the materials for this view of Modern India. Its history is not compiled from Hindú or Mahometan books, but studied on the spot; and the pictures of living manners are very complete. We do not know any publication which can afford so general and satisfactory an idea of our vast eastern empire, and none, therefore, more likely to be useful to all persons who are desirous of being well informed on the subject. To illustrate this opinion, we may almost open these volumes at any part, and transfer a few pages, as specimens, into our columns. *Et. gr.*

"The division of Chittagong, appertaining to the eastern portion of the province of Bengal, has been selected for the grand dépôt established for the purpose of taming and rearing the Company's elephants. The superintendent of the stud despatches men skilled in the pursuit, into the neighbouring blue mountains, in the direction of Ava, who hunt down and secure these valuable animals. Many, however, are born and reared at the Company's establishment. The pursuit of wild elephants in these regions has brought us acquainted with a race of cannibals scarcely to be distinguished from the monkeys with which they herd. Were not the information relative to these people so strongly authenticated as to leave no doubt upon the minds of those who desire to make inquiries upon the subject, the reader might justly refuse to credit the existence of a set of savages, scarcely worthy of the name of man. But, having gathered the following particulars concerning them from the able and enterprising officer who held a staff appointment from the government, as superintendent of the stud, I am enabled to offer them to the public as facts, which can be corroborated by the testimony of all who are connected with the elephant dépôt at Chittagong. The Kookees, as these brutal wretches are called, have, according to the account afforded me by Major Gairdner, protuberant bellies; they are low in stature, with set features, and muscular limbs. They speak a dialect peculiar to themselves, and build their villages on the boughs of the forest trees. They do not appear to have any settled abiding place, but wander in herds from one wilderness to another. When a site favourable to their purpose has been found, the whole community immediately set to work to collect bamboos and branches of trees, which are afterwards fashioned into platforms, and placed across the lofty boughs of the different trees. On this foundation, the rude grass superstructure is raised which forms the hut. When these sheds are completed, and every family provided with a habitation, the women and children are taken into their aerial abodes. The men then lop off all the branches within reach of the ground, and, having constructed for themselves a rough ladder of bamboos, they ascend the trees by means of this rude staircase, drawing it up after them to prevent the intrusion of strangers, and a necessary precaution against the encroachments of their four-footed companions of the forest. In this manner they repose, floating in the branches, and cradled by the wind, partaking more of the savage ferocity of brutes than the milder charities of man. To persons who have travelled much in India, the mere circumstance of a whole tribe of natives choosing to take up their permanent habitations

in the trees would not excite much surprise, since the watchmen who are employed in the charge of mango-groves, or other valuable fruit-cultivations, often form a sort of nest on the branches of some neighbouring trees,—a small hut, or rather shed, just sufficient to shield the body from the inclemency of the weather, being raised upon a platform resting on the boughs. The Kookees, therefore, in this particular, only differ from more civilised natives, forced by necessity upon expedients of the kind, by living constantly in trees; in other respects there is, fortunately, no similarity even to the most degraded beings of the human race. They openly boast of their feats of cannibalism, shewing, with the strongest expressions of satisfaction, the bones and residue of their fellow-creatures who have fallen a prey to their horrible appetites. So intent are they in their search after human flesh, that the superintendent was always obliged to send out the men, employed in hunting the elephants, armed with muskets, and in not fewer than parties of ten. One poor man they unfortunately caught while off his guard, and devoured him almost before his life-blood had congealed in his veins. Attempts have been made to subdue and civilise these people, and one of their head men was won over, and employed by Major Gairdner at the elephant dépôt; but he could not be induced to relinquish his old habits. In a short time he was detected in the commission of a murder, and was executed by the civil authorities of Chittagong. When the tidings of this man's fate reached the ears of his former associates, they became greatly incensed, and for a long time afterwards exerted themselves, happily in vain, to obtain possession of the person of the superintendent, who had frequently occasion to cross their path in the execution of his duty. These people, strange as it may appear, are living within 150 miles of Calcutta, the metropolis of British India and the seat of government; and yet their existence even is scarcely known by the people who are not in authority—comparatively little information from the woods and jungles of the savage portions of Bengal finding its way to the Calcutta newspapers. The existence of cannibals in India is a fact only recently established, and many were of opinion that the races were extinct; it has now, however, been proved beyond all question, that the Kookees who infest the blue mountains of Chittagong, and the Goanda, inhabiting the hill forests of Nagpore, both feed upon human flesh. There is this distinction in favour of the latter, that they partake of it only occasionally, and in compliance with a religious custom, while the Kookees delight and banquet on the horrid repast."

Of superstitions, the following are examples. "Among the endless superstitions of the natives are some observed by the farmers of this province, connected with the sugar-cane, which, from their singularity, will doubtless prove amusing. The sugar-cane and betel plant are both regarded by the Benares farmers in a sacred and superior light. The sacred appellation for the cane is Nag'bele. On the 26th October, termed by these people Deut'han, they proceed to the fields, and, having sacrificed to Nag'bele, a few canes are afterwards cut and distributed to those cormorants the Brahmins. According to the rules of established usage and custom, until these ceremonies are performed, no persuasion or inducement can prevail on any one of them to taste the cane, or to make any use whatever of it. On the 25th May, termed the Desharah, a different precaution is universally taken. At this

time the cane-planting for the year is over, and it not unfrequently happens that a few canes still remain standing; for it is usual to reserve certain portions of the canes of the preceding year in the fields, without cutting them, to serve as plants for their new cultivation. Whenever this happens the proprietor repairs to the spot, and having sacrificed to Nag'bele, as in the preceding case, he immediately sets fire to the whole, and is exceedingly careful to have this operation executed efficiently and efficaciously. The cause of this extraordinary practice proceeds from a superstitious notion of a very singular nature. They apprehend, that, should the old canes be allowed to remain in the ground beyond the 25th May, they would, in all probability, produce flowers and seed—a circumstance which it is supposed would prove one of the greatest misfortunes that could befall them. The cultivators unanimously assert, that, if the proprietor of a plantation should happen to catch a glance of a single cane in flower, the greatest calamities will not only befall him, but also his parents, children, and property; in short, that death will befall himself among his family, and not cease till he has destroyed the whole. If the servant of the proprietor happens to see the flower, and immediately pulls it from the stock, buries it in the earth, and never reveals the circumstance to his master, no evil consequences are expected to result; but should the matter reach the proprietor's ears, then the calamities before mentioned will infallibly ensue. In support of this belief, many of the oldest zameendars and cultivators recite instances falling within their own personal knowledge, wherein they have unhappily been witnesses of the evils and misfortunes which befall those ill-fated mortals, whose destiny led them to behold so untoward a sight. These superstitions are so deeply rooted in the minds of all the rural population, that they must have originated in a period of high antiquity."

A sketch of manners is curious enough, and quite new to us.

"Conformably to the state of subordination in which Hindú women are placed, it has been judged expedient to debar them the use of letters. The Hindús hold the invariable opinion, that acquired accomplishments are not necessary to the domestic habits of the female; either as contributing to her individual happiness, or in preserving that decorum of character and simplicity of manners which alone render her useful or amiable in the estimation of her family. They urge, that a knowledge of literature would divert the attention of a woman from her household cares; and, by infusing discontent into her mind, give her a disrelish for the performance of those offices which should alone afford her satisfaction, and constitute the only amusement in which she can, with propriety and a due observance of rectitude of conduct, partake. Such is the force of custom, that a Hindú lady would incur a severe reproach were it known that she could read or write. It must not be concluded from the foregoing statement, that all Asiatic ladies are kept in bondage, and have no will of their own. Notwithstanding their fondness for home, Mahomedan ladies enjoy privileges which few husbands in the free countries of the west would be disposed to concede to them. Like the stern resolves promulgated by the lady-matrons who presided over the courts of love in former times in Europe, the Asiatic ladies have their code feminine. In it their privileges are duly stated, and so satisfactorily explained as to leave no doubt of their impartiality and independence.

The book is called *Kitabi Kuslum Nanéh*, or the Book of Kuslum Nanéh. The work is, however, the production of a conclave of seven learned ladies, Kuslum Nanéh being only the chief personage. The ladies in their poem declare their purpose in the following language:—

'Here Persia's matrons, skill'd in worldly lore,  
Amend the power their mothers held of yore;  
In council deep, grave matters they debate,  
And household cares, and mysteries, too, relate;  
Proudly in solemn conclave they unfold  
By what nice conduct husbands are controll'd;  
Tell of the spells which check connubial strife,  
And the vagaries of a woman's life.  
These moral laws the sex's homage claim,  
And shed renown on Kuslum Nanéh's name.'

According to these ladies there are three classes of husbands in the world:—1. A proper man. 2. Half a man. And, 3. A hupul-hupla. A proper man at once supplies whatever necessities or indulgencies his wife may require. He never presumes to go out without his wife's permission, nor do any thing contrary to her wish. Your half man of the second class is a very poor snivelling wretch, always meddling, with but little furniture in his house, and just a sufficiency of bread and salt to maintain life—never on any occasion enjoying the least degree of comfort. The wife sits in the house and works. It is therefore *wajib* (correct) in that industrious woman to reply harshly to whatever he says; and if he beats her it is *wajib* for her to bite and scratch him, and pull his beard, and do every thing in her power to annoy him. If his severity exceeds all bounds let her petition the *kasi* and get a divorce. The third class, or hupul-hupla, has nothing—no friends. He wants to dress and live luxuriously, but is totally destitute of means. If the wife of such a man absent herself from his house, even for ten days and ten nights, he must not, on her return, ask her where she has been; and if he sees a stranger in the house, he must not ask who it is, or what he wants. Whenever he comes home, and finds the street-door shut, he must not knock, but retire, and not presume to enter till he sees it thrown open. Should he act contrary to this, the wife must immediately demand a divorce. Kuslum adds a separate remark of her own, and declares, that if such a husband should afterwards even beg to be pardoned, and allowed to resume his former habits, it would be wrong in the wife to remain a single day under his roof. On the chapter embracing the conduct of husband and wife, the learned seven declare that man to be deserving of praise who confines himself to one wife: for if he take two he is wrong, and will certainly repent of his folly. The ladies, however, are not strict in exacting a similar observance from their own sex: for Kuslum Nanéh expresses her astonishment how a woman can live all her life with one husband. Why should he, she innocently inquires, deprive her of the full enjoyment of this world's comforts? Days and years roll on and are renewed, whilst a woman continues the same melancholy inmate in the same melancholy house of her husband. She has no renewal of happiness—none. The lady piteously exclaiming—

'The seasons change, and spring  
Renews the bloom of fruit and flower;  
And birds, with fluttering wing,  
Give life again to dell and bowser.  
But what is woman's lot?  
No change her anxious heart to cheer,  
Confined to one dull spot,  
To one dull husband all the year.'

Among the duties to be inculcated on the part of the mamma, Kuslum Nanéh particularly specifies the acts of endearment as being necessary for the daughter: how to dart amorous glances with effect; how to play off coquettish airs,

blandishments, heart-ravishing smiles; and, in short, every characteristic of an accomplished beauty. This is both *wajib* and *sunnat*, necessary and expedient, according to the traditions of Mah'ummed.

Does the following belong to natural history? The scene is Lucknow.

"Amid the numerous sights which the city of Lucknow affords, none attracted my attention more strongly than the royal menagerie. To see this collection, it is necessary to have a private order from the palace, and a servant of the household usually accompanies the stranger to the keeper. I mention this place, in preference to several others equally interesting, because I do not recollect, in the numerous recent sketches given to the world of the city of Lucknow, that any account has been given of this menagerie. The building presents a spacious quadrangular pile, the façade being inwards, with a line of pillars forming a piazza. Up and down this covered way the cages and dens of the animals are constructed. Sauntering about, examining the half-starved tigers, and other ferocious beasts and ravenous birds that were here congregated together, judge my astonishment at discovering, confined in a line with these zoological specimens, a being belonging to the human race! The keeper styled him a wild man, or a *jungles ke admees*, and told a story of his having been dug out of a cave, with two others, in the depths of the Teryace forests, which lie between the city of Fyzabad, in Oude, and Nipál: that they understood no language, and, consequently, nothing could be discovered regarding them, more than they were *jungles ke admees*. The sight of this poor creature filled me with very melancholy sensations. He had been provided with a low bed-frame (I forget whether he was tied on it), in a line with the tigers, and was duly exhibited as one of the varieties of untamed animals. In height he was about five feet five inches, of a spare habit, and weak frame. His features partook of the ordinary cast of his civilised brethren, and had nothing of a ferocious aspect about them; neither had the body any superfluous or redundant hair. At the usual hour his food was brought him, with the rest of the caged animals; and, having partaken of it, like them he sank to repose. On my speaking to him, he uttered an unintelligible sound, between a screech and a yell. He seemed evidently unconscious of his degraded and melancholy condition, and certainly could not be regarded as a responsible being. I could not arrive at any accurate knowledge of his age. He had been in confinement about three years. To appearance, he seemed about 25 or 36. After a careful survey, I became impressed with the conviction that the miserable wretch was an idiot, and that the account which the keepers gave me must be considered as one of those florid amplifications for which the Orientals are so much distinguished. That creatures, however, in 'human form divine,' do exist in a state closely approaching to wildness, I have sufficiently shewn in the earlier part of this volume. The cannibals, called Kookoes, who infest the Blue Mountains, lying between Chittagong and Ava, who live in the branches of trees, and feed on human flesh and roots, can scarcely be considered other than wild and brutish animals, and afford to the philanthropist and philosopher a field for melancholy contemplation."

We shall, probably, devote another notice to the second volume; and have only to add, that the whole performance is full of entertaining and instructive reading.

*Travels in Crete.* By Robert Pashley, Esq. Fellow of Trinity College, Cambridge. 2 vols. 8vo. London, 1837. Murray.

THESE two volumes present us with an account of Mr. Pashley's wanderings in Crete during the spring and summer of 1834. Mr. Pashley has viewed the scenes through which he has passed with the eye of a scholar both in ancient and modern lore; and, while he describes the political and natural features of Crete in the present day, loses no opportunity of transporting us to the classical feast. The work opens with an able Introduction, putting the reader in possession of the history of these "minor regna," from the outbreaking of the Greek revolution to the winter of 1833. At the commencement of this period, the island was in a most disturbed and wretched state: it was under the government of a pasha, appointed by the sublime porte, who depended entirely on the janissaries. This turbulent body of men, conscious of their importance, filled the unhappy island with every species of violence, with impunity, completely terrifying the local authorities; and, under the Mahomedan sway, the Christian population were exposed to all sorts of oppression and insult. One tribe alone, the Sfakians, preserved their independence; and, when the Greek revolution broke out, the Christians, headed by this courageous people, in less than a year drove the Mohammedans into the fortified towns. In 1822, the Viceroy of Egypt despatched 7000 Albanians to the assistance of the besieged, but without success. In 1824, however, the Greeks, attacked by still stronger forces, were obliged to yield: but being again, if possible, more cruelly treated, in 1829 they again succeeded in shutting up the Mahomedans in the towns; and would, in all probability, have entirely banished them, had not the three allied powers given up the island to Mehmet Ali. This decision was equally unpopular among the Christians and Turks; the one merely changing masters, and the others losing all their former importance. The Christians, after some unsuccessful appeals to the English, submitted; 30,000, however, notwithstanding the specious promises made by the Egyptian viceroy to detain them, left their native land. Under this new government, for some time, every thing went on very smoothly; but the viceroy soon began to alienate the good-will of the inhabitants by the imposition of heavy and irregular taxes. Crete continued for many months in a disturbed state, under the wily management of Mehmet, who disappointed, by his clever pretences and contrivances, all the hopes the Cretans had formed from the interference of the foreign powers. Having succeeded in lulling, in some degree, the watchfulness of the European agents at Alexandria, he determined to strike terror into the inhabitants, by making an example of some of those who had risen and formed a species of council to preserve the liberties of the island. Ten of the so-called conspirators were, accordingly, hanged; and this was followed by about twenty other executions. Mr. Pashley says,—"Doubtless, if these measures had been anticipated, the Sfakians would have risen in open revolt, and would have been joined by all the inhabitants of both religions in the country; but the executions took place simultaneously, and without any one's having expected such a catastrophe." This was the condition of Crete when our author arrived at Khenia.

It will be impossible to follow Mr. Pashley through his track; and we must be content with extracting one or two passages, which will

give our readers some idea of the amusing and instructive manner in which the author describes the scenes he has witnessed. Here is a visit to the tomb of no less a personage than Jupiter himself.

"I found, as a guide up the mountain, a shepherd, who had become acquainted with the tomb of Zeus in tending his flock. A good hour was spent in reaching the summit; towards the northern extremity of which I observed foundations of the massive walls of a building, the length of which was about eighty feet. Within this space is an aperture in the ground, which may, perhaps, once have led into a moderate-sized cave; but, whatever may have been its former size, it is now so filled up that a man cannot stand in it, and its diameter is not above eight or ten feet. These, then, are the only remains of that object of deep religious veneration, the supposed tomb of 'the Father of gods and men,' with its celebrated inscription,

'All which devouring Time, in his so mighty waste,  
Demolishing those walls, hath utterly defaced:  
So that the earth doth feel the ruinous heaps of stones.  
That with their burdens weight now press his sacred bones.'

I now stand on the spot in which Zeus was supposed to be at rest from all celestial and terrestrial cares, and which was so celebrated during many ages. The testimony of a long series of ancient and ecclesiastical authors, proves fully and distinctly, that the tomb remained an object of curiosity to strangers, and of veneration to the Cretans, from an early period till after the age of Constantine. The legal establishment of Christianity, as the paid religion of the state, by that emperor, did but little in Greece towards extinguishing the ancient superstitions. The Christian ruler of the Roman world, in his earnest desire for the conversion of all his heathen subjects, undoubtedly held out many strong inducements to make them adopt the newly established religion: he bestowed temporal prizes on conformity, and, sometimes, used violence and persecution to attain his end. Still he professed to tolerate those who adhered to the old theology: 'let not any one molest another, but let each person follow the religion which he prefers,' were his words, although his conduct did not always correspond with them. We find that the Cretans continued to worship the old deities of their island, and to venerate the tomb of Zeus, half a century after this legal establishment of Christianity throughout the empire. It was only when the Spaniard Theodosius made himself the blind instrument of orthodox fanatics, and annexed the severest penalties to the celebration of the sacrifices and ceremonies of the old religion, that the corrupted Christianity of the fourth century prevailed. Those who wish not to see penal laws applied to religious opinions, will regret that such unholy aids should have been had recourse to, in order to accelerate the triumph of the Christian faith, which its own truth, and its comparatively tolerant establishment by Constantine, must, soon or late, have caused to spread into every part of the empire. After the Theodosian persecution of the heathens, we hear no more of the tomb of Zeus as an object of reverence to the people of his native island; but, at all events, it seems as if the pomp and glories of the old religion retained, for nearly four centuries after the Christian era, an unrelaxed hold on the convictions and affections of the Cretan people, notwithstanding the labours of Titus, and the elders whom he established among them. And it does not surprise us that Christianity should have failed to take root

suddenly and deeply in a mountainous country like Crete; the inhabitants of which, though they must have been pretty free from that vain wisdom and false philosophy which made the disputants in the school of Athens turn a deaf ear to the preaching of St. Paul, yet, being a nation of mountaineers, would naturally be like the other Pagans of whom we read, and the stubbornness of whose hearts it was every where difficult to overcome. We should, also, remember that their country was the very stronghold of heathen superstitions: the birth-place not only of the king of heaven, but of many of its other deities, so that,

*Al tempo degl' dei falai e bugiardi,*

scarcely a fountain, or stream, or glen existed in it, where ancient traditions were not preserved of the time when gods dwelt among the sons and daughters of men. A well-known couplet of Callimachus accuses the Cretans of being liars, because they asserted that the immortal Zeus had been buried in a tomb which, as the poet says, was the work of their own hands. I know not why the religious zeal of this learned writer should have taken offence at the Cretan tradition, that Zeus was buried in the land of his birth. According to other ancient legends, similar fates befel many of the gods: Hermes was interred at Hermopolis, Ares in Thrace, Aphrodite in Cyprus, and the tomb of the Theban Dionysos was long shown at Delphi. It is evident that, if Zeus was not exempted from the common lot of humanity, he could have no fitter resting-place than in his native island. And his fate was not unusual, even if we view him as the supreme ruler of heaven and earth: his father, Kronos, paid the debt of nature, and was buried at Mount Caucasos; Uranos had perished long before; and, according to the Orphic traditions, those ancient and mighty rulers of the world who preceded him, Phanes and Night, had also endured the common fate of gods and men. Still less reason shall we find for peculiar indignation at the Cretan legend, when we remember that Aeschylus ventured to make Prometheus declare, even before an Athenian audience, that Zeus would very soon be buried with disgrace from his throne, as his predecessors had been."

The following remarks on the Cretan wine are interesting.

"The growth of the vine here may, perhaps, have received a check while the Saracens were masters of the island, in the ninth and tenth centuries: but, if so, it soon recovered; and, while Crete still belonged to the Byzantine empire, its sweet wine was again celebrated. Theodore Ptochoprodromos mentions it, with that of Mysilene, as opposed to the Chian. From the period of the Venetian conquest, Italy again enjoyed Cretan wines, which were not long in finding their way into the other countries of Europe. At the moment of the great insurrection of the Venetian colonists, in 1363, as detailed in several unpublished manuscripts of St. Mark's library, wine was one of the principal exports of the island. Somewhat less than a century afterwards, Buondelmonti travelled in Crete, and wine still held the first place among the exports. About the same time, Prince Henry of Portugal sent to Crete for plants to stock the island of Madeira, where the first Portuguese colony was established in 1421. The wine of Crete is said, by Aeneas Sylvius, who also flourished in the fifteenth century, to have been in great request even in Bohemia; and a Carthusian monk, who visited the island in 1507,

on his way to the Holy Land, makes especial mention of the Cretan wine and honey. The commerce between Crete and England, during the fifteenth and sixteenth centuries, was so great, that Henry the Eighth, in 1522, appointed one Balthazari as 'the master, governor, protector, and consul, of all and singular the merchants and others, his lieges and subjects within the port, island, or country, of Crete or Candia.' The staple export of Crete was its wine; and the return obtained by it from England consisted chiefly of woollen cloths, a branch of commerce which was subsequently obtained by the French. Thevet and Belon both write in the middle of the sixteenth century, and both bear testimony to the abundance and excellence of the Cretan wines. An English traveller, in 1569, mentions the exportation of malmesey as the common trade of the island. The wood annually imported, in order to make casks to hold it, was a considerable article of commerce. Sandys, who wrote more than forty years later, after speaking of the other produce of Crete, subjoins, 'but that which principally enricheth the country is their muscadines and malmesies, wines that seldom come vnto vs vncuted, but excellent where not, as within the streights, and compared vnto nectar.

'Crete I confesse joues fortress to be,  
For nectar only is transferred from thee.'

The testimony of the English traveller is confirmed by that of a contemporary Italian bishop, who was born in Crete, and who, when he speaks of his native land as 'vini serax,' immediately adds,—

'Ignosce vini si excidit nomen mihi,  
Nectar volebam dicere, aut si quid magis  
Best liquare lauta divum prandia.'

Another testimony to the excellence of the Cretan wine is, also, afforded by a passage of Ben Jonson. In 'The General Historie of the Turkes,' by Knolles, published at London, in 1603, I find the island spoken of as 'now most famous through a great part of the world, for the good malmesey which there groweth, and is from thence in great abundance sent into many farre countries.' England is mentioned as one of these countries by the proveditor-general, Foscarini, in his report to the senate at Venice, made in 1576; and he also speaks of the excellence of the Cretan wine. Wine seems to have been produced in great quantities in the island, till it came into the possession of the Turks. Since that event, the juice of the Cretan grape is rarely met with out of the island; but all modern travellers who have tasted it are unanimous in celebrating its praises. I must quote the very words in which they are sung by Falconer:—

'Relaxed from toll the sailors range the shore,  
Where famine, war, and storm, are felt no more;  
The hour to social pleasure they resign,  
And black remembrance drown in generous wine.'

The letter-press is accompanied by a clear and useful map; and the engravings, which are plentifully scattered through the two volumes, add much to the amusement derived from the whole. To all those who take any pleasure in seeing the customs of by-gone days illustrated by similar curious observances of the present times, and delight in viewing the past, though in a somewhat altered shape, in the acts that are still passing before them, we can recommend Mr. Pashley's book, as connecting ancient and modern ages in a most agreeable and interesting degree.

*Austria and the Austrians.* 2 vols. 12mo. London, 1837. H. Colburn.

THIS appears to be a sensible and impartial work, giving a very fair view of the Austrian empire, its political position, its royal family, aristocracy, middle classes, and general population; with their institutions, manners, literature, amusements, and all matters which mark the condition of a country. Of the manner in which this is done, the following will suffice to afford a criterion. A general remark compares the German with the English and French national character. The author observes:—

“Morally speaking, I should say, that the characteristics which most prominently distinguish the three nations are, ostentation, the English; vanity, the French; and good sense, the Germans. The English, as a people, have, with their ostentation, a high sense of honour, truth, and practical generosity: but even of these, as well as in their display of the power of wealth, and what riches can purchase, to exalt ignorance, they make, too generally, an ostentatious exhibition quite offensive to, and always ridiculous in the opinion of, foreigners. The French, with their excess of vanity, have the talent of making themselves, whether they be sincere or not, agreeable; and possess, above all others, the gift of concealing or suppressing what may offend. The German is equally anxious to avoid giving offence; but in doing so he is less adroit, while he is far more anxious to observe and to know what is practically great in other countries.”

Having got to Vienna, we find sketches of the late and present emperors, from which we select a few passages.

“The downfall of Napoleon, and the superior abilities of Prince Metternich at the congress of Vienna, restored Francis to more than former power; and for the last twenty years of his life no private gentleman need have been less disturbed in his tranquillity. The able and celebrated prime minister of his empire, of whom I shall have the opportunity to speak hereafter, had all along relieved him of the labour, not the direction, of governing; but Francis was, however, not an idle man, although he appeared to be so. If Frederick the Second patronised and associated only with philosophers and military favourites, hated women, and acted with much less than bare justice to his *roturier* subjects; Francis the Second, of Austria, shuddered at the name of philosophy, and would sooner have admitted the devil into his society than Voltaire. He restored, to some extent, a few of the monasteries suppressed by Joseph II., and paid great deference, but gave little power, to the priests. He went at regular hours to hear mass, said his prayers, confessed his sins, and religiously gave the precedence to the pope's nuncio over all ambassadors. Francis was fond of the society of women, yet faithful to the marriage-bed. He loved his obedient people, and delighted to see them. He gave all classes a free audience twice a-week; he attended to their petitions without distinction of persons; and he was fond, to the extreme of vanity, and perhaps it was his only vanity, of believing himself implicitly considered by them as their father, and in believing them, especially the Austrians, as children who enjoyed his most parental affection. Certainly no monarch was ever more loved than he was by his German subjects, who daily repeat anecdotes of the goodness of *Vater Franz*. During the cholera, the emperor when walking, accompanied by an aide-de-camp, near Schönbrunn, met a hier carrying a body to the cemetery, but not followed by any one. The emperor asked

‘why the corpse was abandoned?’ ‘It is, probably, that of some poor friendless person,’ replied the aide-de-camp. ‘Well, then,’ said the emperor, ‘it is our duty to accompany it to the grave.’ So saying, the emperor took off his hat, placed his arm within that of his aide-de-camp, and both, uncovered, followed the coffin to the cemetery, where Francis himself threw the first spadeful of dust over the body. ‘This,’ say the Viennese, with a thousand others which they tell of him, ‘shew how sensible our good *Vater Kaiser Franz* was of human equality.’ When he opened that magnificent promenade near the Prater, the *au-garten*, to the public, a noble lady said to him, ‘Emperor, I can no longer walk among my equals in rank.’ ‘If I were confined to my equals in rank,’ replied Francis, ‘I must take my daily walks in the vaults of the Capucins,’ but I prefer the Prater and *au-garten*, among my people.’ The French considered Francis *comme une sorte de roi fainéant*, and the English may have also, to some extent, taken this opinion upon Gallic trust; but I have said that the late emperor was not an idle prince. No; Francis was laborious, active, and vigilant. He understood, not only all the languages, but all the dialects of his empire. He rose early, and often worked twelve hours a-day.

“To all who approached the late emperor, he spoke with what is termed *bonhomie* by the French; and to all he was equally unaffected in his demeanour. With ordinary plain sense, with ample talents for ruling a submissive nation, — fond of peace, and dreading whatever might disturb the tranquillity of the empire, or create any change in the actual state of the people, or in the existing administration, — he was evidently not gifted with that sagacity, that political wisdom, or that strong judgment, which form the first order of powerful minds. If he had, the affecting tale of Silvio Pellico would never have appeared, to prove that the humanity of Francis II. was only obliterated by his fears. If others, even the members of his own family, had in any way acquired popularity, it drove him mad: he, alone, would monopolise its possession. He loved accepted truths, which were often fallacies, and which he styled historical rights; dreaded doubts, either in respect to the established government or to the established religion. The very mention of representative governments terrified him. When he visited Milan, among others, an eminent professor was introduced to him, who was considered to have made some important discoveries in the constitution of the atmosphere. Startled by the word, Francis exclaimed, ‘*Costituzione! costituzione! ah! e quella parola che ci ha fatto tanto male!*’ ‘Constitution! constitution! that word has subjected us to many evils!’ When the deputies of Hungary were presented to him at Laybach, ‘In your pursuit after ideal constitutions,’ said the emperor, ‘*totius mundi stultitiam*.’ Francis, with all his amiable personal qualities, did not belong, as an administrator, to the character of the age. Politically speaking, he ought to have died, before his grandmother, Maria Theresa, was born. The tempest of the first French revolution laid his judgment prostrate at the moment he ascended the throne; and, from that day until the hour he signed his last superstitious will, the dreaded evils of innovation influenced all his conclusions and all his actions. The last French revolution drove

“In the vaults of the Capucins are deposited the bodies of the deceased imperial family: the hearts are placed in silver jars deposited in the church of St. Augustin, while the viscera are preserved in copper urns in the crypt of St. Stephen’s.”

him to utter despair: ‘*Alles ist vertoren! Alles ist vertoren!*’ he exclaimed, in the bitterness of his political despondency. After the reforming impulse given the empire by Joseph II., posterity may with reason curse their ancestors for submitting to the retrograding rule of a self-willed despotic emperor, in the person of a simple-mannered and benevolent man.”

Of the reigning emperor we are told, —

“The manufacturing industry of the empire seems to have engaged his attention at that period; and unless he has examined the subject on sound principles, I should fear that a predilection may have consequently been formed to maintain home fabrics at the expense of the general national wealth. The object of his labours has been the formation of a museum of national productions and manufactures: that is, the collecting and arranging specimens, first, of raw materials from the three kingdoms of nature; second, of manufacturing industry, and, third, of machines and models. Having devoted his time to this very industrious and useful, but not very difficult task, those employed have succeeded in forming the most interesting collection imaginable. Before his accession, it was supposed that his ideas of government were decidedly liberal, — that he disliked his father's prime minister too much for the latter to remain in power. The letter, written immediately after the death of Francis, by his successor (?), to Prince Metternich, at once disproved the supposition, that Ferdinand would depart willingly from the existing order of managing public affairs.”

The author's opinions of the Austrian character, generally, are very favourable: but we will close with a few further extracts; and, as he seems to be one of the bureaucracy, an *attaché* to the English embassy, we begin with Metternich.

“I have not met any one who has known Prince Metternich personally, who did not speak highly of him as a man, however much they may have differed from him in their ideas of public government. I have also found that all those who have made his acquaintance, have, in consequence, been completely deceived in their previous ideas of this celebrated personage. He has, certainly, much in his personal character that is kind, and which, under another form of government, would render him very popular. He is religiously Catholic, but tolerant in regard to every other profession of faith.”

Of Murat it is related: —

“Early in 1814, he attempted to seduce Prince Eugene Beauharnois, and proposed that he should abandon France, and unite their forces to those of the Austrian general, Bellegarde. The high-minded Eugene, disgusted at the proposal, said, ‘Never would he betray a benefactor.’ Murat, forgetting his origin and the gratitude due to Napoleon, signed, without scruple, an armistice with Austria.”

We conclude with a character not altogether different: —

“Hungary and Transylvania have, at various periods, been as famed for bandits as Spain or Italy; although their exploits have been but little known to western Europe. About twenty-five years ago, a formidable band spread terror over eastern Hungary, Transylvania, and the Banat. For a long time, every attempt to subdue them, and every plan to surprise them, failed. At length, suspicion fell upon a shepherd, who came regularly from the mountains to Lobosch, to purchase wine, in quan-

“All is lost! all is lost!”

ties too great, and of a quality too good, for the ordinary consumption of that part of the country. The shepherd was seized; and threats and promises extorted from him the confession that he purchased the wine for the robbers,—that their number was about one hundred,—that their retreat was of difficult access, in one of the largest caverns in Transylvania, and so strongly fortified at the entrance that they would be able to destroy all who approached it. The shepherd was both frightened and bribed to betray them. If the stratagem failed, and the shepherd did not return, his wife and children, who were retained by the governor of Lobosch as hostages, were to be executed. If it succeeded, the shepherd was to have a free pardon, and a pension of one hundred florins for life. He was then ordered to proceed with the wine as usual, into which opium was infused. The robbers got drunk, and slept upon it; the cavern was surprised and taken, and the whole of the bandits were hung in chains on the mountain above the cavern. The chief of the bandits who are now so formidable in Hungary is called Schubri, or Sobri. Various accounts of his birth and character have been given from time to time. It was first believed that he was of noble birth; and the heroism of his character, and his daring boldness, were the general theme of conversation at all the inns and little towns of Hungary. It was then given out that he was one of the class of wandering shepherds, who have, certainly, produced more brigands than honest men. Schubri's audacious appearance, where he is least expected, exhibits him frequently in a most daring position. He enters towns by himself; dines at *tables-d'hôte*; and, on leaving, says to the guests, 'I am off, and you will boast of having dined with Schubri!' Not long since, several noblemen dined at a *table-d'hôte* in Szarvaz, a stranger entered, sat down as a traveller at the table, amused the guests by his anecdotes and conversation, and, after dinner, bowed to the company, and said, on leaving the room, 'Gentlemen, it is Schubri whose company you have had. Adieu! till we meet again.' His band was at hand; and not long after, he entered the schloss of one of the nobles he had dined with, saying,—'I have occasion for two hundred ducats, and must have them at once, or I will instantly make your heir lord of this castle.' Not long since it was announced that the greater part of his daring band, harassed by detachments of Hungarian troops, were dispersed. This soon turned out a false report: a few of his band were surprised, and three or four taken; among them, were Nagy Janesi, said to be the most bold and dexterous, and Milfait, who has been beheaded, and who has given a curious account of the chief, Schubri. It now appears that this daring brigand is only about twenty-seven years of age, and was born at Funf-kirchen, in which town his father was an extensive tanner, and his uncle a saffron manufacturer, who had in that business realised a fortune. Schubri, when a boy, was so daring, and so often engaged in plots among his fellows, that he gave perpetual uneasiness to his parents. He involved himself in bloody squabbles with the children of the nobles, and he was, consequently, sent from home, and placed in a school at Gotha. He is said to have made extraordinary progress in his studies, first at school, and afterwards in the gymnasium of that town; while he became, at the same time, in the highest degree despotic over the students, who usually submitted to him. At Gotha, he wrote ballads and composed music; and he made his companions sing them, or join

him in the chorus. If they sung out of tune he beat them, yet they obeyed him; and he at last excited them to an insurrection, to storm at night, by torch-light, the numismatic cabinet. Pursued by the soldiers and police, he escaped by swimming the river and burrowing under the stables of the schloss of Friededstein, and then wandered through Hanover and Holstein to Lubeck, from which he passed over to Upsala, in Sweden, by concealing himself in a vessel of that country, and not appearing until they had nearly crossed the Baltic. He was reduced to extreme distress; and from his father, who had previously sent him sufficient means, he had not heard since the beginning of 1836. He was, in consequence, obliged to leave Upsala, where he had previously determined to reform his life, and apply himself closely to study. Before his departure, however, he commenced his career as a robber. It was winter; and he sallied out of town after dark, dug in the road, then deeply covered with snow, a kind of pit, covered it over with branches, and then with snow. The road, in winter, being confined to little more than a track, the first traveller fell into the pit, and was attacked and robbed by Schubri. This he repeated, for four or five nights; but being attacked in the market by the dog of a farmer whom he had robbed, he disappeared immediately from Sweden, and, after landing in Germany, travelled on to Hungary, robbing as often as opportunity enabled him. On reaching Joseph-stad, in his native country, he wrote his father, boldly avowing his robberies, which he laid entirely to the principle of necessity, and to which, he asserted, the first noble families in Europe owed their origin. He then set to work, with extraordinary management and patience, to organise a band of brigands, to whom he wished to impart a romantic, military, and even chivalrous character. Numerous young men of high or desperate spirit, and overwhelmed with debt, amidst society, soon joined Schubri. His band was also augmented by discharged non-commissioned officers, and romantic students, to an organised body of one hundred well-armed and trained men. In less than seven months, either as a body or in detachments, they have committed the most daring robberies. Schubri, in all attacks, is at their head. In June he had a most desperate engagement with a troop of hussars. He was wounded; but he fought his way with great bravery, and escaped with his men. He was lately, with three of his men, surrounded at night in a farm-yard near the Platten-See, by forty horsemen. His presence of mind and audacity saved him. He directed his companions to throw aside their arms and part of their clothes. He then, followed by them, ran with lighted lanterns to the outer entrance, and addressed the soldiers, as if he belonged to the farm-house, saying, they had better station themselves immediately at the inner gate, to prevent the robbers escaping, as they were desperate, and should be at once surprised in the house, where they were then regaling themselves. The stratagem succeeded, and Schubri and his men were off before the soldiers even approached the house, in which all the inmates were surprised asleep, quite unconscious of what had passed. A few days after, he robbed an estate belonging to the Archduke Charles, of every valuable article he could carry away. He is now said to have a completely organised troop of five hundred men, being reinforced by Bosnians, Paudaurs, and others. A comedian of Ratisbon, named Kapfen, has lately joined him; and his band,

altogether, consists, not of starving peasants or serfs, but of men degraded by vices, that have rendered them desperate. He has established among them strict discipline; employs a treasurer; pays his men regularly; has a surgeon to dress their wounds; and gives prizes to those who excel in carbine-shooting and in gymnastic feats. He has subordinate officers, and is now said to be forming a troop of cavalry. He probably dreams of becoming a mighty conqueror. Robbing the rich, and never injuring, but, when possible, to assist the poor, is the principle he promulgates. It is said that not a single murder can be traced to him, and that he once ordered one of his gang to be shot for robbing a peasant. A few days ago, a positive account of his capture reached Vienna. His appearance terrifying the country near Hermanstadt, in Transylvania, was given in another account. In fact, he is a second Rob Roy."

*The Life of Thomas Jefferson, &c. &c.* By George Tucker, Virginia. 2 vols. 8vo. London, 1837. Knight and Co.

THIS valuable contribution to the history of America is one of those standard works which our review can only notice and recommend in that light. Analysis and selection are alike impracticable within our limits; and, where politics are so essential a feature of the publication, it is not our practice to enter into opinions. Some of Jefferson's correspondence, not hitherto before the world, possesses considerable interest. There is a good portrait prefixed.

#### MISCELLANEOUS.

*A Practical Treatise on the Principal Diseases of the Lungs, &c. &c.*, by G. Hume Weatherhead, M.D., &c. &c. 8vo. pp. 184. (London, Churchill.)—In December last, there died, according to the published weekly accounts of the metropolis, of lung diseases, no fewer than eleven hundred and thirty-nine human beings, and from 50,000 to 60,000 persons throughout England fall victims every year to consumption alone; is it, then, surprising that the highest medical talent should be sedulously applied to the study of this fatal class of disorders. Among the most eminent and successful of the physicians who have turned their attention especially to the subject is Dr. Weatherhead, the author of this volume; and it is our pleasant duty to recommend it earnestly to the public attention, as containing all the latest and most important medical investigations, such as those by Laennec, Carswell, and Brettonneau, and throwing great light upon the pathology of diseases of the chest.

*Jacob Faithful, &c. &c.* (London, Saunders and Otley) — Vol. I. of an illustrated edition of Capt. Marryat's Novels, with humorous coloured plates, drawn and etched by W. Buss, and in a binding most appropriate, namely, the material impressed with a ship, in the neatest possible trim.

*The Pulpit, Vol. XXIX.* (London, Sherwood and Co.)—Another volume of this cheap and valuable collection of divinity. Many of the discourses are very eloquent; and the whole a gratifying example of pulpit oratory and piety.

*Dr. Lardner's Cabinet Cyclopædia. Biography of Eminent Statesmen, Vol. IV.* by G. P. R. James, Esq. (London, Longman and Co.)—This volume contains the biographies of Louis de Haro, Cardinal Dubois, Cardinal Alberoni, and the Duke of Ripperda, all which are written in Mr. James's excellent manner, combining research with sound judgment and acute observation.

#### ARTS AND SCIENCES.

##### LINNEAN SOCIETY.

MR. LAMBERT in the chair.—Mr. Loudon, F.L.S. sent for exhibition a specimen of the mistletoe (*Viscum album*) growing upon a branch of an oak, from a tree at Eastnor Castle. The specimen exhibited a degree of luxuriance more than usual.—Read, a further continuation of Mr. Wood's observations on the European genera of grasses.—The secretary announced that the late Alexander Collicie, Esq., surgeon to the colony of Western Australia, had bequeathed to the Society a collection of dried plants gathered by him in that colony.

## GEOLOGICAL SOCIETY.

MARCH 22d. Rev. W. Whewell, president, in the chair.—A paper, On the supposed ancient state of the North American continent, especially on the extent of an inland sea by which a great portion of its surface is conjectured to have been covered, and on the evidences of progressive drainage of the waters, by Mr. Roy, was commenced.

April 5th. Mr. Greenough, vice-president, in the chair.—The reading of Mr. Roy's paper was concluded. The author of this communication, having been employed in extensive surveys, especially in the lake districts of North America, found, on drawing out sections for professional purposes, that the country everywhere exhibited successive ridges, which encircled the lakes; and, upon comparing sections to the north of Lake Ontario with others to the south, that the ridges exactly corresponded in elevation. The highest of these ridges is 996 feet above the level of the sea, or 762 above that of Lake Ontario; and, connecting this elevation with the physical features of the great valleys of the Mississippi and the Missouri, Mr. Roy supposes that the whole of the area bounded on the west by the rocky mountains, from the table land of Mexico to the parallel of 47° of latitude,—on the north by the barrier separating the head waters of the lakes from those of the northern rivers, and extending to Cape Tourmant, below Quebec,—and on the east by the hills stretching through the United States to the Gulf of Mexico, formed one vast inland sea, occupying 960,000 square miles. Having thus given the extreme height and supposed extent of the sea, the memoir proceeded to shew by what progressive operations the author considers that the boundaries were broken through and the waters drained, till they were reduced to the detached basins forming the Canadian lakes. These details, however, cannot be understood without the aid of diagrams.—A paper, On the geology of the neighbourhood of Smyrna, by Mr. H. E. Strickland, was then read; but of which, as well as a letter from Mr. Fox, we must postpone our report.

Extracts from two letters on the earthquake in Syria in January last, addressed by Mr. Moore, his majesty's consul-general at Beyrout, to Viscount Palmerston, and communicated by J. Backhouse, Esq. and the honourable W. T. H. Fox Strangways, under secretaries of state. The first letter, dated Beyrout, January 2, 1837, announces that the earthquake was felt in that city at thirty-five minutes past four o'clock in the afternoon of the preceding day. It was accompanied by a rumbling noise, lasted about ten seconds, and appeared to proceed from the north. No buildings were thrown down in the town, but seven or eight without the walls, and one or two lives were lost. In the neighbourhood of Beyrout, the course of the river Ontilius was suspended, and mills built on its banks were deprived of water for some hours. When the stream returned, it was turbid, and of a reddish, sandy colour. During the day of the earthquake, the atmosphere was close, and charged with electricity. Fahrenheit's thermometer stood at 66°, but five minutes after the earthquake it rose to 70°. Four or five minutes after the shock, the compass was still agitated. The oldest inhabitants did not remember so severe an earthquake. The second letter was written also at Beyrout, partly on the 9th of January, and partly on the 23d. It contains detailed accounts of the damage which has been done to numerous towns and villages. At Damascus, four minarets

and several houses were thrown down; and at Acre, part of the walls and some buildings. Saffet was entirely destroyed, and nearly all the population, amounting to between 4000 and 5000, had perished. The ground near the city was rent into fearful chasms; and, up to the last accounts, shocks were felt daily. Tiberiad was also entirely overthrown, except the baths; and the lake rose and swept away many of the inhabitants. The despatch contains a list of thirty-nine villages which had been totally destroyed, and six partially; and Mr. Moore says, it had been ascertained that the earthquake was felt on a line of five hundred miles in length by ninety in breadth. It was also perceived in the island of Cyprus.

## ZOOLOGICAL SOCIETY.

THE usual monthly meeting was held on Thursday afternoon. A considerable balance in favour of the society was carried to the account for April: upwards of twenty individuals were elected, and the names of twenty-six candidates for election were read. Six thousand four hundred and ninety-six persons visited the gardens and museum in March. The table shewing the state of the society's stock at the gardens was also read: it exhibited very little alteration as compared with the publication of last month. From a long and interesting communication by George Bennett, Esq. F.L.S. on a species of *Glaucon*, we subjoin the following notes. During a voyage from England to Sydney, New South Wales, in latitude 4° 26' N., and longitude 19° 30' W., with light airs and calms prevailing at the time, a number of damaged and perfect specimens of the *Glaucon hexapterygius*, (Cuv.) were caught in the towing net. On being immediately removed from the net and placed in a glass of sea-water, they resumed their vital actions and floated about in the liquid element, exhibiting a brilliancy of colour and peculiarity of form which excited much admiration. The back of the animals, as well as the upper surface of the fins and digitated processes, and the upper portion of the head and tail, were of a vivid purple colour, varying occasionally in its intensity; the abdomen and under surface of the fins were of a beautiful pearly-white colour, appearing as if it had been enamelled; the usual length of the specimens caught, from the extremity of the head to the tail, was 1½ inches; the body of the animal is sub-cylindrical, terminating in a tail gradually becoming more slender towards the extremity, until it finally terminates in a delicate point. These little animals are very delicate and fragile in their structure, yet they fling themselves about in the water without sustaining any injury. When there is much movement of the water, in carrying the glass from one place to another, they are evidently disturbed and restless, and the fins are dropped: if, therefore, a slight motion of the water disturbs them, what can become of these delicate mollusks during tempestuous weather? can they be similar to the *ephemeris*, doomed to live merely for the space of a day and then perish in myriads? From the immense number seen only from the ship—and how many myriads extended beyond the range of vision of those around!—it conveyed to the mind some idea of the profusion of human beings inhabiting the wide expanse of ocean, and a feeling of astonishment at the inconceivable variety of forms and constructions to which animation has been imparted by creative power.

## ENTOMOLOGICAL SOCIETY.

APRIL 3. The Rev. F. W. Hope, in the

chair.—The minutes of the last meeting having been confirmed, various donations of books and insects were announced, including specimens of the *Chiasognathus Grantii*, a very splendid stag-beetle, from the island of Chiloe. Various interesting species of insects were also exhibited by Lord Prudhoe and others; amongst which was a very fine series of Patagonian *Carabi*, brought home by C. Darwin, Esq. The secretary called the attention of the meeting to the attacks of insects upon some of the pictures in the National Gallery, especially the "Sebastian del Piombo;" and he also read extracts from the Parliamentary Report upon this subject, which led to an extended discussion, in which various remedies were suggested by different members. An extract from a letter addressed to the secretary, by W. Raddon, Esq., was read, giving an account of the injury committed in a stack of wheat by the larva of a lepidopterous insect of considerable size; several of which were exhibited, as well as specimens of the *Musca pumilionis*, a small fly, which had also been very destructive to corn. Extracts were also read from a letter from Van Diemen's Land, containing observations upon the natural productions of that country, by Mr. R. H. Lewis. The following memoirs were also read:—Observations upon the natural history of a species of *Cynipide*, or gall-flies, which produces the small lens-like galls on the underside of oak-leaves, which have long perplexed naturalists, having been regarded by many as fungi; by Mr. W. Smith. Further observations upon the economy of the *Scolytus destructor*, or elm-beetle; by W. Spence, Esq. Observations on the insects and larva of insects found in the human body; by the Rev. F. W. Hope: accompanied by figures of various species, chiefly from the collection of the College of Surgeons, which had been obtained from the human body; and, also, by tables of great extent, containing nearly two hundred cases, which the author distributed into three sections, to which he gave the names of *Scoleciasis*, *Canthariasis*, and *Myiasis*. The last-mentioned paper produced much discussion, in which Messrs. Bell, Owen, Bracony, Clark, Dr. Blundell, and others, took part. Certificates in favour of the Earl of Burlington and C. F. Jephson, Esq. were read.

## BOTANICAL SOCIETY.

ON Wednesday, J. E. Gray, Esq. president, in the chair.—Some members were elected, and others proposed. A paper was read from the secretary, W. M. Chatterley, Esq., being a translation of De Candolle's Geographical Distribution of Plants, extracted from "La Bibliothèque Universelle de Genève," which led to an interesting discussion. A specimen of *Potentilla supina*, found by Dr. Bossey at Woolwich, was exhibited. The meeting then adjourned.

## LITERARY AND LEARNED.

## ROYAL ASIATIC SOCIETY.

ON Saturday last, Mr. C. W. Williams Wynn, president, in the chair.—Presents were noticed, and members admitted; after which Mr. H. Wilkinson read a paper on the causes which produced the pattern, or watering, on the celebrated sword-blades of Damascus. After alluding to the ancient renown of the Damascenes in the manufacture of swords, and the general belief that the conquest of Damascus, by Timour, in the 14th century, and consequent dispersion of the workmen, had caused the secret to be lost, Mr. Wilkinson observed, that in the

remote times when this celebrity was obtained, all eastern countries were greatly superior in arts to those of Europe, and that the excellence of the swords of Damascus had been much exaggerated from this cause; but that the estimation accorded to them was not warranted by our present experience, as swords of equal, or better quality, might be now manufactured at a twentieth of the price paid for a Damascus blade. The attempts at imitation of these swords had been almost all directed to the external appearance alone; i. e. the watering, or *jower*, which Mr. Wilkinson considered had never been successfully produced. From several years' attention to the subject, he had reason to believe that the natives of the East were either totally ignorant of the cause of the desired appearance themselves, or that they made a mystery of that which was, in fact, none. Several attempts had been made in Europe; all of which had proved failures: they had improved neither the appearance nor the quality of the blade; and, in general, had done no more than produce a certain external watering, which might deceive a person unacquainted with the real sabre. From this condemnation he excepted the process of Signor Crevelli, an Italian, which was calculated to produce blades of great beauty, and equal to any ever made at Damascus; though he trusted he should be able to prove that Signor Crevelli's process was not that of the Damascus manufacturers. Mr. Wilkinson here explained the process adopted by Crevelli, which consisted of a peculiar intermixture of iron and steel. He illustrated his explanation by pieces of lead and copper, bent into the required shapes. Another method, Mr. Wilkinson observed, had been adopted in Georgia. It consisted in twisting alternate laminae of iron and steel, and welding them together: the process was well known in Europe; but it produced a metal totally unfit to form the edge of any cutting instrument. A few of these were made by Goork, of Teflis; almost all of which were in the possession of kings. The one on the table had been made for the Emperor of Russia, by whom it had been presented to the late Shah of Persia: it was given by him to Colonel Hart, on whose death it was bought by Sir John Campbell, for 35*l*. In all swords of this sort, the damasked portion was, simply, an ornamental band, introduced near the back of the blade, being, as before observed, unfit to form a cutting edge. The real cause of the *jower*, or watering of the Damascus blades, Mr. Wilkinson conceived to be, first, the nature of the iron employed; and, secondly, the mode of converting it into steel. This is explained as being done by imperfect fusion and agglutination, and cementation with charcoal in small crucibles; the produce of which was generally a very good steel, crystallised variously, and partially mingled with minute portions of the metallic bases of the earths employed in the operation. The pattern, or *jower*, exists in the steel itself; and it would be as impossible to make a sword of this steel without obtaining the true Damascus figure, as it would be to imitate the true figure by any artificial mixture of iron and steel. Mr. Wilkinson had examined a cake of steel from Cutch, and found that it could be tempered without difficulty; and that it exhibited, when cut, the true Damascus pattern, as it did, also, when forged into a bar. It was a curious coincidence that the trade between Cutch and Damascus was formerly direct; and it was, consequently, highly probable that the Syrian workman obtained his celebrity from a mere casual

circumstance, which would not have occurred if he had obtained his steel from a part of India where the manufacture of it was conducted by a different process. It should also be remarked, that, in consequence of the small size of the cakes of steel furnished by the Indian market, three, four, or even eight cakes were required to make one sword-blade. These cakes must of necessity be drawn into bars, welded together, laminated, and doubled again and again; which process would necessarily increase the intricacy of the pattern; and even the indentations of the hammer, and clumsiness of the workman, would combine to increase its diversity. Mr. Wilkinson concluded by observing, that in these processes, all the required varieties would be obtained; and that the figure of all genuine Damascus blades was entirely the result of nature, and not of art. After the reading of the paper was concluded, Mr. Malcolmson stated, that he had that morning seen a piece of steel from Nirmal, a place in India celebrated for the manufacture of that article. The greatest part of the steel of that place went to Persia, and much was employed in making sword-blades. The process of manufacturing the steel at Nirmal, was described in a paper by the late Dr. Voysey, published in the first volume of the *Journal of the Asiatic Society of Bengal*. Mr. Wilkinson observed, that he had no doubt that other Indian manufacturers produced steel of a similar quality to that he had been describing. He also said, that he had seen at the East India House, a manuscript, he believed, of the late Mr. Moorcraft, describing a mode of bringing out the pattern on the steel without the aid of acids. It consisted in suspending the polished metal in a sort of well, about six feet deep, shaped like an inverted funnel. A quantity of warm litter was heaped up at the bottom, and the atmospheric air carefully excluded; the acrid vapour arising from the dung brought out the pattern on the steel in a few weeks, without any of the inconveniences arising from the use of acids. The thanks of the Society were voted to Mr. Wilkinson, for his interesting paper; and the meeting adjourned.

## SOCIETY OF ANTIQUARIES.

THE Earl of Aberdeen, president, in the chair. Mr. Knight (through Mr. C. R. Smith), presented a drawing of a *praeforium*, or sacrificial vase, in his possession, found, with other Roman remains, in the burial ground of Saint Pancras Church, Colchester, with a short description. Sir Frederick Madden communicated a dissertation on Perkin Warbeck, and his evanescent claim to the crown of England. He shortly gave the statements and variations of our different historians on the subject, with additional historical observations of his own, and copies of two letters, hitherto unnoticed; one from Perkin to Isabella, queen of Spain, written in 1463, and the other from the same to Bernard de la Foese, in 1496—both materially illustrative of Perkin's history. Part of this paper being read, the remainder was postponed.

## LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

*Monday*.—Royal Geographical, 9 P.M.; Belgrave Literary Conversazione.  
*Tuesday*.—Royal Medical and Chirurgical, 8½ P.M.; Civil Engineers, 8 P.M.; Zoological, 8½ P.M.; Society of Arts, 8 P.M. (Ed. Cowper, Esq. on Recent Improvements in Paper Making); Lambeth Literary, 8½ P.M. (D. Cooper, Esq. on Cryptogamic Botany).  
*Wednesday*.—Society of Arts, 7½ P.M.; Graphic, 8 P.M.; Literary Fund, Committee, 3 P.M.; Election of Secretary,

4 P.M.; Club to meet the Stewards for the Anniversary of 30 May, at 3½ P.M.; Medico-Botanical, 8 P.M.  
*Thursday*.—Royal Society, 9½ P.M.; Antiquaries, 8 P.M.; Royal Society of Literature, 4 P.M.; Royal Institution, 8½ P.M.; United Service Museum, 3 P.M. (First Lecture of the Season, Dr. Lardner on Steam Communication with India.)

## FINE ARTS.

THE EXHIBITION OF THE SOCIETY OF BRITISH ARTISTS.  
[Third Notice.]

92. *The First Lesson*. 100. *Persuasion*. Miss F. Cosbaw.—In both these compositions, and especially in the first, the fair artist has displayed a very beautiful sentiment. The designs are exceedingly tasteful; and, if there had been a little more solidity in the execution of them, they would have appeared to still greater advantage.

143. Miss Kearsley.—This lady also claims our admiration. The subject of her picture is full of pathos; and it is sweetly painted.

298. *Lodovico Waterfall*. W. Flavell.—A scene of perfect enchantment; in which, through the medium of picturesque form and richly varied colour, wood and water play their parts in a way equally attractive to the sight, and pleasing to the imagination.

363. *Repose in Egypt*. C. W. Cope.—We are glad to hear of repose any where. In the fine work before us it is beautifully shown; not only in the principal figure, but in those by which it is accompanied. It is, perhaps, scarcely possible to prevent a composition of this nature from reminding us a little too strongly of some of the old masters.

244. *The Look-out at Clovelly, North Devon*. W. Shayer.—It is a good look-out for the artist, when he can meet with a subject so well adapted to the pencil. As in other works of his, Mr. Shayer has enriched his scenery with appropriate and well-drawn groups.

234. *Will Watch, the bold Smuggler, taking Leave of his Sire*. T. Clater.—A very fine illustration of the lines quoted in the catalogue; powerfully painted; and the hour of parting naturally and well expressed. By the same artist, and executed in the same forcible and harmonious tone of colour, is 255. *Discussing the Poor Laws*; in which a cobbler and a mechanic are carrying on a fierce argument—doubtless very much to their own satisfaction.

The portraiture in the great room gives it an air of much importance. Among the most characteristic are:—133. *Portrait of the Earl of Egremont* (than whom the arts have never found a kinder patron). 21. *Portrait of John Carew, Esq.* (the celebrated sculptor). G. Clint. 42. *Portrait of a Lady*. F. Y. Hurlstone.—In simplicity, grace, and composition, worthy the pencil of Vandyke. 115. *Portrait of the Countess of Winterton*; 146. *Portrait of the Earl of Winterton*. F. Y. Hurlstone.—Admirable.—8. *The Right Hon. Lord Maitry*; 14. *Thomas Wilde, Esq. K. S.*, M. P. Mrs. C. Pearson.—This lady maintains her rank among our fair artists; and these specimens of her talents shew them to great advantage. The first is self-collected and dignified, and well adapted to the station it is to occupy (the Town Hall at Mold); the second is equally characteristic, but has more of the familiar and domestic in its appearance.—93. *Dr. Mayo*. J. Lonsdale. A fine example of this artist's firm and solid style.—179. *Portrait of Sir Peter Laurie, as Lord Mayor of London*. J. Lilliey. A faithful likeness; and executed with great breadth and vigour.

155 and 176 are two beautiful heads; the

first, *La Pignarola*, by J. P. Davis, is remarkable for its clear and transparent complexion, and for its witchery of look and expression; the second, *Flora Mac Ivor*, by J. Borden, is a well-imagined and skilfully executed representation of the lovely, spirited, and interesting heroine of Waverley.

427. *Rydal Water*, in Cumberland. J. B. Pyne.—Whether the clear sky in which the young moon appears in this beautiful view, and the distant mountains, are too blue, or true blue, we are not quite prepared to say, but we rather think that, in this respect, Mr. Pyne has taken a poetical license; which, however, we are not inclined to deny him, as it not only gives a poetical character to the subject, but sets off the figures and other objects in the foreground.

444. *Venice*. J. Holland.—The glowing colours in this fine performance likewise seem to us to indicate the resort to a poetical license; without which, indeed, many a resplendent work of art would lose much of its attractive quality.

437. *Cattle*. T. S. Cooper.—The present, like other of this able artist's productions, seems to shed light and life on the spot in which it appears.

Besides those which we have specified, there is a very fair variety of pleasing landscapes, &c.; among which will be found—198. *Mill at Ventnor, Isle of Wight*. F. Watts.—196. *Fishery—Autumnal Morning; the sun dispersing a mist*. E. Child.—194. *The Baptistry of St. Mark's, Venice*. G. B. Moore.—227. *Outhouses with Cattle, near Horley, Surrey*. J. Wilson, jun.—239. *Beach Scene, Sherringham*. A. Priest.—318. *Misty Morning, Windsor*. A. Montagne.—331. *Canal Scene; Early Morning*. J. Tennant.—352. *Folkestone, Kent*. T. Crenwick.—353. *Cattle and Figures, by the Side of a River*. J. Dearman.—357. *Fort Rouge and Calais Piers; Boats by G. Chambers*. J. B. Pyne.—406. *Cologne*. G. Bulmer.—418. *Scene on the Thames; Moonlight*. J. B. Crome, &c. &c.

(To be continued.)

#### NEW PUBLICATIONS.

*Die Schachspieler*. Zeichnung von Moritz Retzsch. Leipzig. In Commission bei Ernst Fleischer.

*The Chess-Players*. A Drawing, by Moritz Retzsch. London. Schloss.

AND who do our readers think are the players? The Devil, and Man, who has been rash enough to stake his soul on the issue! "The scene is chosen with a sort of mysterious reference to the whole idea that is to be expressed. The very architecture intimates the presence of that dark being to whose sphere belongs all that is horrible, confounding, and seductive. It is a wide vault, whose arch is formed by two lizard-shaped monsters, whose heads, half bird, half locust, as well as their short misshapen claws, adhere closely to its two pillars, down which they seem to creep. The upper surface of a sarcophagus is transformed into a chess-board; and Man, as a fair youth, sits at this table, his head, covered with the curls of early manhood, resting on his hand, and his countenance full of careful thoughts. Opposite to him, on the spectator's left-hand, is Satan, the Prince of Darkness, seated in a large chair, one of whose arms shews an open-mouthed lion, seeking whom he may devour; while, lower down, the claw of this lion, grasping a human skull, intimates his death-bringing power. A broad cloak, from which only his bony clawlike hands appear, is thrown around him; and his hair and his beard bristle wildly about. In his

cap is the long, crooked cock's feather, which ancient tradition has uniformly regarded as suspicious. The features of his countenance are noble, for he is still a fallen angel; but their expression, as becomes his fallen state, is devilish and hateful." The pieces are—on one side, his Satanic Majesty himself, Pleasure, Indolence, Anger, Pride, Falshood, Avarice, Envy, and Unbelief; on the other side, the Youth's own Soul, Religion, Hope, Truth, Peace, Humility, Innocence, and Love; all characterised by their respective symbols. The pawns on the part of Vice are Doubts, in the shape of herpies; on that of Virtue, Prayers, in the shape of angel's heads. We regret to say, that "the game stands ill for the Human Being. His adversary has already weakened the power of Prayer, by taking from him several angel's heads; Love and Innocence are lost; Humility gone; and Peace, just seized, is still held in his clawlike fingers. Pleasure, Unbelief, and Doubts, are pressing tumultuously forward against Religion, who stands there, tranquil and sublime, protecting Man; who is thus attacked in so many ways, but who, so long as he does not give up Religion, may yet hope for escape." We own that this species of allegorical composition, whether literary or graphic, is no great favourite of ours; but it would be doing Mr. Retzsch great injustice, if we were not to bear testimony to the depth of thought, and facility and vigour of execution, which are shewn in the extraordinary work under our notice.

#### Madame Malibran. Schloss.

THE smallest portrait, we presume, that was ever engraved: not too large to set in a brooch or ring; and yet distinctly retaining the character and expression of the highly gifted and lamented original.

#### ORIGINAL POETRY.

##### ODE.

On a Lachrymatory, in the Third Chamber of the interesting Etruscan Antiquities, now to be seen in Pall Mall.

Is't so? and have three thousand years,  
That yesterday of ages, fled  
Since thou, frail vase of human tears,  
Wert placed beside the warrior dead?  
Fall'n is his brow, that throne of thought;  
His bones are passed to dust — to air;  
Yet thou surviv'st, as perfect wrought,  
As if but yesterday left there!

Oh, mockery of human power,  
And vanity of human pride!  
That hero filled his little hour,  
Fought, triumphed, tyrannised, and died.  
And, then, his deeds were pictured here,  
As if in mockery, to last,  
Frail though their faintest colours were,  
Until his very dust was past.

Oh! had he deemed, of all his fame,  
Thou only should'st remain the trace,  
Thou painted vase! to mock the flame  
So long departed to its place;  
He had not toiled his life away,  
Nor, Cain-like, made mankind his foe;  
But felt, and cast his sword away,  
The vanity of all below.

Time, whilst we stand upon life's brink,  
Gives us the wisdom drawn from them:  
They paused not in the stream to think;  
Enough to struggle, rise, and stem:  
We judge their deeds, or good or ill,  
Forgetful that, in our brief day,  
We, with unreined and lawless will,  
Live on as frail and wild as they.

For, had he looked — this nameless one —

Like us, beyond the tide of years,  
The wreath of myrtle he had won,  
And scoried the laurel washed with tears.  
His spear had then become a crook,  
His sword a staff, his fame been air;  
The world to him had been a book,  
Peace, hope, and love, engraven there.

J. E. READE.

#### BIOGRAPHY.

*Obituary*.—Among distinguished characters recently lost to literature and the arts, we have to notice the death of J. Jekyll, Esq., K.C., and a benchor of the Inner Temple, who died on the 8th ultimo, at the age of eighty-five. Mr. Jekyll was one of the wisest men of his day; and his *bon-mots* often convulsed the bar, and delighted the high society into which his station and talents gave him the most ready admission. Hamlet's apostrophe to the skull of Yorick might aptly be applied to him; and we hope to see a collection of some of them preserved in a permanent form, and not left to the fast-fading colours of memory.

The famous Abbé de Pradt is another of our recent losses. He, also, had reached a good old age. His political and other writings are of great extent, and produced very considerable effects upon the Continent.

We are informed of the death of Mr. Constable, one of the most eminent of our landscape painters, and ablest writers upon the fine arts. As yet we have not heard the particulars, but only that his last illness was of very short duration.

Mr. J. Maddox, the author of "Travels in the Holy Land," has also, we learn, been numbered with the dead. He had resided some time at Tunbridge Wells, was a most agreeable and entertaining companion in social life, and is sincerely regretted by a numerous body of the friends whom his excellent qualities had made.

#### SKETCHES.

##### THE BEEFSTEAK CLUB.

"Ne siles inter amicos

Sit, qui dicta foras eliminat."

Hor. lib. 1. epist. 5. 1.

"—— That none where life grows gay,  
The sacred hour of confidence betray."—Francis.

SUCH was the motto of the Beefsteak Club, commonly called the "Sublime Society of Beefsteaks," and originated from the following circumstance. The late Richard Wilson, (better known by the familiar cognomen of "Dick,") of famous "Chedworth" memory, was an old member of the society, and, although proverbially as good-natured a fellow as ever existed, yet such were the blunders he constantly made, that he was always considered to be the Marplot of the club, as the sequel will illustrate. To those in the habit of joining that festive board, it is known, that on all other except on what are termed private days, where none but members attend, each brother is allowed to introduce a visitor. Now, this society is supposed to consist of an *omnium gatherum*, Whig, Tory, song, anecdote, and a *quantum suffi* of Blocky; but there ever was, and always had been, a strong disposition towards Whiggery: consequently, it did not very frequently happen that a Tory friend was introduced. On one of the open days, the unfortunate Dick introduced no less a personage than the high Tory "Loyalty John Reeves, patent printer of the Holy Bible," &c. &c. The moment he entered, gloom took possession

of every body, and a dull evening slowly dragged on its measured chain. In vain the chairman was badgered; in vain Billy Linley said all his good things; in vain the modest and retiring treasurer spread his blushes around: an Incubus had possession of the society, and Erebus and Nox superseded Apollo and Bacchus. Loyal John was too good a judge not easily to discover that his loss, on retiring early from the Steakers, would not break many of their hearts, and, accordingly, he did so. His departure was the signal for a general attack on the ill-fated Dick, and every thing in the shape of annoyance was instantly adopted; this he bore for some time, but, his patience being at length exhausted, he justified himself for having introduced such an unwelcome guest, by exclaiming, "Why, what have I done? 'tis true, I have brought Mr. Reeves as my visitor; but, have I not heard 'Bonaparte,' 'Jack Ketch,' and a variety of other equally amiable individuals, given as toasts in this Society?" "Yes," exclaimed old Tom Scott, then nearly ninety years of age; "true, you have heard them given as toasts, but, by Jove, no one ever introduced them personally." The lyric bard of the society, Captain Morris, instantly recommended the motto alluded to, and which was as promptly adopted.

#### DRAMA.

*Drury Lane.*—At this theatre Mrs. Wood has been produced as the attraction, and sang in the *Sonnambula*, &c. with much applause.

*Covent Garden.*—Mr. Macready, after a long illness, has reappeared in some of his principal characters, all so highly and deservedly popular that, on the evenings of his performing them, the house is literally crammed, and he is most warmly greeted by the enthusiastic admirers of his splendid delineations. Miss H. Faucit is also rising rapidly to higher eminence in the first walks of her arduous profession.

*Adelphi.*—The *Peregrinations of Pickwick*, after only one week's rehearsal, was produced with complete success (though there were dissentient voices on account of the great length) on Monday, to an overflowing house. There appears to have been many additions, alterations, &c. of the capital Pickwick Papers, and, as Mr. Yates truly observed, in a neat little speech at the fall of the curtain, "That few could be aware of the difficulty of extracting the *tit-bits*, where the whole dish was so good." This, however, has been well accomplished at the Adelphi; and, after an unsparing use of the literary pruning knife, these *Peregrinations* will be about as delightful to see as they have been to read. Mr. Yates was Mr. Pickwick; the dress, the appearance, the—in fact, he looked as though he were Seymour's spirited sketch walked forth from the engraving; and his acting was no way beneath his looks. John Reeve played *Sam Weller*, and, with only a week's preparation, was tolerably perfect for John Reeve. Buckstone's *Jingle* was one of the very best characters in which we ever saw him; and every other part was ably sustained by the Adelphi corps, including Mr. Rice, as *Jim Crow*—an introduction, we think, very injudicious. Mrs. Yates, in the episode of the *Miser Father*, was, as she always is, exquisitely natural. Mrs. Fitzwilliam, as an Irish servant girl, sang some beautiful old Irish melodies as sweetly as ever; and Mr. Dunn was a capital representation of the fat boy. No part, however, was superior to the *Doctor Slammer* of Saunders, and his metamorphosis into *Old Weller*, the father of Samiell.

*King's Theatre.*—On Saturday, Donizetti's

rather dull opera of *Belisario* was performed; and not so highly supported as to render it more than usually attractive. Inchinde is truly an old man; and, with the exception of Gian-noni, we can say nothing in favour of the vocal talent displayed on the occasion. Mediocrity was the order of the night.

*French Plays.*—These entertainments commenced very indifferently at the Lyceum, on Monday. The pieces were poor, and the best of the acting not above commonplace.

#### VARIETIES.

"*The Musical World*," after relating the death of Mr. Nicholson, states, that it is in contemplation to give a concert, for the benefit of his aged mother and orphan children, at which the Philharmonic band will unanimously assist.

*Canton: China.*—Some of the newspapers state, that the edict against the "barbarian" English merchants at Canton, noticed in our last No., is of an old date, viz. the beginning of 1835; and, consequently, previous to the extraordinary relaxations in regard to foreign trade.

*Mr. Wilkins*, the builder of the London University and the National Gallery, has been elected professor of architecture in the Royal Academy.

*Sign.*—"The Gentle Shepherd of Salisbury Plain," half-way house between Simon's Town and Cape Town, Cape of Good Hope, kept by an eccentric character called Flormer Peck, who emigrated from England some twenty or thirty years ago, the following is on the sign-post:—"Life is but a journey. Let us live well on the road," says the good shepherd.

"Multum in parvo, pro bono publico,  
Entertainment for man or beast;  
Lekker kost, as much as you please;  
Excellent beads, without any fees.  
Nec patrum fugimus, nos we are here;  
Vivamus, let us live by selling beer;  
On come à boire et à manger ici;  
Come in and try, whoever you be."

You will see that these lines are Latin, French, English, and "lekker kost" is Dutch.

*Theatrical Portraits. No. I. L. C. Nisbett.* On stone by Fussell, from a sketch by Buss. (Pigot and Co.)—A dashing likeness of this dark-haired and dark-eyed beauty, executed in a free and sparkling style. There is something about the mouth, however, not half so finely formed as in the original; but the general effect is highly pleasing and picturesque. It promises well for the series; and we look for a charming portfolio of our fair theatrical friends.

*Characteristic Sketches of the Civil War in Spain, No. II.* (London, Dickinson). Major C. V. Z. has again given us some fearful representations of the horrors which occupy so large a portion of Spain. The costume and groupings are full of character; and, though there is little of art, there is, unhappily, too much of truth in these sketches.

*M. Benjamin Delassert* (associate of the Academy) has just received, from his correspondents at Buenos Ayres, a letter of M. Bonpland, from whom no news have been received for several years: it is dated the 14th of July, 1836, from San Borgia, on the Uruguay, in the province of Rio Grande, Brazil. M. Bonpland continued his scientific labours: he accustomed himself, he says, to live in the virgin forests, and on the banks of the great rivers. He enjoyed good health, and was preparing to send his collections to Buenos Ayres, to be forwarded to the museum of natural history at Paris.

*Weather Wisdom.*—Lieut. Harrison has been tolerably correct in his anticipations

during the past week. The weather has been changeable, and unusually windy for the season, though the highest wind was on the afternoon of the 5th, when the new moon denoted "windy weather," and thus the day before the 6th and 7th, specified in the predictions to "produce very high winds" in consequence of the trine of Mercury to Jupiter and Mars. Looking forward, we find "very frequent changes, yet fair at times, about the 8th, 9th, and 10th. As the Sun aspects Herschel on the 12th, the weather grows much colder, and the middle of the month will be very bleak with sleet or snow. Unsettled."

*New Caricatures.*—H. B.'s last trio burst is thorough game. The new Patent Safety Cab, with O'Connell driving Lord John Russell, is admirable for the expression of the countenances. The next represents Lord Palmerston at Saint Sebastian, tied to a tree by the bonds of the Quadruple Treaty, and transfixed by many barbed arrows, with the quivers inscribed "Hernani," "Louis Philippe's speech," "the Vixen," &c. &c. The last (No. 477) is more elaborate and full of figures. It is called "Going to the Fair with it." Lord J. Russell, Mr. Spring Rice, and Mr. O'Connell, are acting as puppet-showmen; the first on long stilts, the second balancing a church at the end of a stick on his chin, and the third swallowing a sword marked "Repeal;" various politicians, with John Bull, are looking on and applauding or blaming. Among them the Archbishop of Canterbury, Brougham, Burdett, Hobhouse, Wellington, Peel, C. Buller, Hume, &c. are conspicuous.

#### LITERARY NOVELTIES.

The Duchess D'Abrantes has just added the 5th and 6th volumes to her *Memoirs*, which complete that work.

#### LIST OF NEW BOOKS.

Highland Rambles, and long Legends to Shorten the Way, by Sir T. D. Lauder. Part 2 vols. post 8vo. 1l. 1s. —A Treatise on Magnetism, by Sir D. Brewster, post 8vo. 6s. —An Elementary Treatise on Latin Prosody, by W. Ramsay, M.A. 12mo. —First Three Sections of Newton's Principia, with Appendix, by John Evans, 8vo. 6s. —Self-Formation, by a Fellow of a College, 2 vols. post 8vo. 16s. —Life of Thomas Jefferson, Third President of the United States, by G. ## THE ART-UNION; a Society for

the Advancement of the Fine Arts.  
At a Meeting of Gentlemen desirous of establishing a Society for the Advancement of the Fine Arts by the purchase of selected works for distribution amongst the subscribers, held at No. 18 Edwards Street, Portman Square, on Tuesday the 31st of March, 1877, Benjamin Bond Cabell, Esq. F.R.S. in the Chair, the following Resolutions were passed unanimously:—

1. That a Society be instituted for the advancement of the Fine Arts, entitled Art-Union; and that every annual Subscriber of One Guinea or upwards, be a Member thereof.
2. That the Funds of the Society shall be devoted to the purchase of Pictures in Oil, Water Colour Drawings, Sculpture, Medals, or Engravings, to be annually distributed amongst its Members.
3. That for the first year of the Society's operations, the Committee of Management shall determine the Number of Prizes, and their respective Amounts, according to the State of the Funds, at the closing of the Subscription Lists for the Year; and that each Subscriber who may obtain one such Prize at the Ballot, shall select for himself a Work of Art of equivalent Value, from some one of the following Public Exhibitions in London of the current Year: viz. the Royal Academy, the British Institution, the Society of British Artists, the Society of Painters in Water Colours, and the New Society of Painters in Water Colours.
4. That every Subscriber shall be entitled to the Opportunity of obtaining a Prize for each Guinea annually subscribed, and that the Subscription Books of the current Year shall remain open until a Day to be determined by the Committee; to be then closed for the Purpose specified in the third Resolution.
5. That the Works purchased agreeably to the third Resolution, shall be publicly exhibited, for such Time and under such Regulations as the Committee may deem fit.
6. That the Gentlemen present be a Provisional Committee, for the Purpose of carrying the Object of this Society into Effect, with power to add to their number.
7. That Edward Edwards, Esq. be requested to act as Honorary Secretary to the Committee.
8. That Benjamin Hawes, Esq. M.P. be requested to act as Treasurer pro tempore, and that the Treasurer, Secretary, and each Member of the Committee, be empowered to receive Subscriptions.
9. That the London and Westminster Bank be Bankers to the Society.
10. That the following Gentlemen be a Sub-Committee for the purpose of drawing up Rules and Regulations for the Society, founded upon the foregoing Resolutions, viz. Benjamin Bond Cabell, Esq. Edward Edwards, Esq. Benjamin Hawes, Esq. M.P. Edw. Hawkins, Esq. Henry Hayward, Esq. and Henry Thomas Hope, Esq. M.P., three of them to be a quorum.
11. That this Meeting be adjourned to Tuesday next, the 30th instant; to meet at the same place, at three o'clock, p.m.

BENJAMIN BOND CABELL, Chairman.  
Thanks having been voted to the Chairman, the Meeting adjourned accordingly.

## Committee.

Henry G. Atkinson, Esq. 18 Upper Gloucester Place, Regent's Park.  
Charles Barry, Esq. Foley Place.  
John Britton, Esq. F. 17 Burton Street, Barton Crescent.  
Benjamin Bond Cabell, Esq. F.R.S. Temple.  
N. W. Ridley Colborne, Esq. M.P. 15 Hill Street, Berkeley Square.  
Edward Edwards, Esq. 35 London Street, Fitzroy Square.  
William Evans, Esq. M.P. 16 Eaton Place, Belgrave Square.  
George Godwin, Junior, Esq. 11 Pelham Crescent, Brompton.  
Benjamin Hall, Esq. M.P. 26 St. James's Place.  
Benjamin Hawes, Junior, Esq. M.P. Lambeth.  
Edw. Hawkins, Esq. F.R.S. British Museum.  
Henry Hayward, Esq. 18 Edwards Street, Portman Square.

Thomas Mait, Esq. Fulham.  
Lewis Pocock, Esq. 2 Verulam Buildings, Gray's Inn.  
W. C. Towers, Esq. 28 Montague Square.  
George Vivian, Esq. Albemarle Street.

## Joint Treasurers.

Benjamin Hawes, Junior, Esq. M.P. Lambeth.  
Charles Palmer Dimond, Esq. 10 Henrietta Street, Cavendish Square.

## Honorary Secretary.

Edward Edwards, Esq. 35 London Street, Fitzroy Square.

## Bankers.

The London and Westminster Bank.

Subscriptions will be received by the Treasurers, by the Secretary, and by any Member of the Committee: at the London and Westminster Bank, 38 Throgmorton Street, City, and at the Branch Offices of the same, 9 Waterloo Place, Pall Mall, 155 Oxford Street, 213 High Holborn, 12 Wellington Street, Borough, and 47 High Street, Whitechapel. Prospectuses may also be obtained at the same places.

The Subscription List for the current Year will be closed on Sunday, the 30th of May next.

## TO BOOKSELLERS AND STATIONERS.

The Proprietor of a Retail Bookselling and Stationery Business, in one of the most fashionable parts of London, is desirous of disposing of it. The causes which induce this desire are not connected with the business itself, which is one of great promise, the customers being numerous, and of the highest respectability.

Full particulars will be given in reply to Letters from Principals, addressed, G. F., Messrs. Ward and Co. 27 Paternoster Row.

## ROBERTS'S SPANISH SKETCHES.

Now ready,  
Comprising Madrid, Seville, Granada, Cordova, Burgos, Xeres, Malaga, Gibraltar, Carmona, &c. &c.  
Price, imperial folio, tinted, half bound, 4s. 6s.  
London: Hodgson and Son, Printers to the King, 6 Pall Mall.

## TO LOVERS OF THE FINE ARTS.

To be disposed of by Subscriptions of One Guinea each,

## SPLENDID DRAWINGS

BY  
J. MARTIN and R. WESTALL, R.A.  
Cost £1500.

Prospectuses to be had at Chertons's Library, 76 Holles Street.

SALES BY AUCTION.  
SOUTHGATE'S ROOMS.

Money advanced upon Duplicate Portions of Booksellers' Stock, upon Libraries, and Literary Property in general.

THE Public are respectfully informed that, on the 17th and 18th of April next, a magnificent collection of ORIGINAL DRAWINGS, by BONINGTON, the property of the late Mr. L. B. a connoisseur well known for his superior judgment and excellent taste in the selection of works of art, will be offered for sale in Paris, Hotel des Commissaires Priseurs, Place de la Bourse, No. 2.

This collection is remarkable for a variety of subjects, seldom met with in the works of any single artist: historical subjects, landscapes, sea-pieces, domestic scenes, interior and exterior, &c. are to be found in this collection; of which all the drawings exhibit the peculiar talent and richness of design of this highly gifted artist.

Catalogues to be had in London of MM. Paul and Dominie Colnaghi, Pall Mall East.

## MUSIC.

## MELODISTS' CLUB. At a General

Meeting of the Club, held on the 30th of March, the Premium was awarded to Mrs. C. B. Wilson, as the writer of the song best suited for a convivial society. Silver Medals were awarded to the authors of three other songs, which had been selected out of 217 received, as best calculated for the object which the Club has in view; their names are, G. E. Inman, J. W. Burgeon, and John Gwynd. The sealed papers containing the names of the rest of the candidates will be destroyed unopened.

JOHN PARRY, Honorary Secretary.

*Girdlestone's Commentary on the Bible.*

In 8vo. price 9s. the Second Part, containing Leviticus, Numbers, and Deuteronomy, of

**THE OLD TESTAMENT, with a Commentary, consisting of Short Lectures for the daily Use of Families.**

By the Rev. CHARLES GIRDLESTONE, M.A.  
Vicar of Hedgley, Staffordshire.

In this edition of the Bible, it has been one chief object to supply Families with an exposition for daily reading. The Scripture is divided into paragraphs of convenient length, and the explanatory and practical matter is digested, under each portion, into one continuous lecture, so as to require no previous examination on the part of those who read it to their families. At the same time, it is hoped that the pains which have been taken to explain all obvious difficulties, and to derive from each passage its appropriate lesson, whether of doctrine or of duty, will render the work no less useful to those who study the Word of God in private.

Printed for J. O. and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

Of whom may be had,

**The First Part, containing Genesis and Exodus, price 9s.; or the Two Parts in One Vol. 18s.**

and G. and J. Robinson, Liverpool.

FRENCH AND ENGLISH DICTIONARY.

In 8vo. a new edition, stereotyped, price 14s. bound,

**A DICTIONARY OF THE FRENCH AND  
ENGLISH LANGUAGES,** in Two Parts; combining  
the Dictionaries of Boyer and Deletionville. With various Ad-  
ditions, Corrections, and Improvements.

By D. BOILEAU and A. PICQUOT.

\* \* \* The omission of many obsolete expressions has enabled  
the Editors of this Dictionary to introduce a considerable number  
of words which owe their origin to recent improvements in the  
Arts, and additional examples of French phraseology, which are  
of great importance in a language abounding in figurative ex-  
pressions; and the greatest care has been taken to form the most  
perfect Dictionary, either for the Library or Academy, extant.

London: Printed for Longman and Co.; J. and W. T. Clarke;  
T. Cadell; Baldwin and Co.; J. Richardson; J. G. and F. Ri-  
vington; J. M. Richardson; Harvey and Co.; E. Williams; J.  
Booth; J. Booker; R. Scholey; J. Souter; J. Bohn; T. Tegg;  
Hamilton and Co.; J. Duncan; Cowie and Co.; Whittaker and  
Co.; J. Harris; Parbury and Co.; E. Hodgson; Simpkin and  
Co.; Dulau and Co.; Black and Co.; Treutzel and Co.; Smith  
and Co.; Netherwood and Co.; W. Mason; Poole and Co.; J.  
Dowling; J. Templeman; S. Walker; Houlston; and Hold-  
sworth and Ball. Wilsons, York; Deighton, Cambridge; A.  
Black, Oliver and Co., and Stirling and Co., Edinburgh; and  
Robinsons, Liverpool.

In 12mo. the 5th edition, with considerable Additions,

price 4s. 6d. bound,

**THE SCHOOL ORATOR;** or, Exercises  
in Elocution, theoretically arranged; from which, aided  
by short Practical Rules to be committed to memory, and re-  
peated after the manner of reciting the Rules in the Latin  
Syntax, Students may learn to articulate every word with pro-  
priety; be assisted in the removal of minor impediments; be  
taught to modulate the voice and to speak with accuracy of  
inflection, from the easiest to the most difficult specimens of  
English Oratorical Composition.

By JAMES WRIGHT,

Public and Private Lecturer on English Elocution.  
Printed for Whittaker and Co.; Longman, Rees, and Co.; and  
Simpkin and Marshall.

THE FAMILY LIBRARY, Vol. LXIII.

Embellished with a Portrait and other Engravings, price 5s.

**SKETCHES OF IMPOSTURE, DECEP-  
TION, and CREDULITY;** forming Vol. LXIII. of the  
Family Library.

"The earth hath bubbles as the water has,

And these are of them."—*Shakespeare.*  
"The prejudices of credulity may, in some measure, be cured  
by learning to set a high value on truth."—*Watts.*  
London: Printed for Thomas Tegg and Son, 73 Cheapside;  
and may be procured by order of any Bookseller in the United  
Kingdom.

**PETER PARLEY'S TALES ABOUT THE SUN, MOON,  
AND STARS.**

In one very handsome volume, printed by Whittingham, embel-  
lished with 133 Cuts, price only 4s. 6d. in fancy boards,

**PETER PARLEY'S TALES ABOUT THE  
SUN, MOON, AND STARS;** also the late Comet: a new  
and improved edition, with great Additions.

"In the evening of a long toilsome life, if a man were to be  
obliged solemnly to declare, what, without any exception, has  
been the most lovely thing which, on the surface of this earth, it  
has been his good fortune to witness, I conceive that, without  
hesitation, he might reply, 'The mind of a young child.'

"We observe with what delight a child beholds light, colours,  
flowers, fruit, and every new object that meets his eye; and we  
all know, that (before his judgment be permitted to interfere) for  
many years he feels, or rather suffers, a thirst which is almost  
insatiable.

"He desires, and very naturally desires, to know what the  
moon is? What are the stars? Where the rain, wind, and frost  
come from? With innocent simplicity he asks, what becomes of  
the light of a candle, when it is blown out? Any story, or any  
history, he greedily devours."

London: Printed for Thomas Tegg and Son, 73 Cheapside;  
and sold by all Booksellers; where also may be had, gratis, Frank  
Howard's Letter to Peter Parley, Esq.

# GREAT AMERICAN NATIONAL WORK, INSCRIBED, BY PERMISSION, TO HIS MAJESTY.

The Publishers beg leave respectfully to announce to the British Public, and particularly to the Patrons of Literature and the Fine Arts, that, under the highly flattering auspices afforded by the gracious countenance of HIS MAJESTY, who, in an interview, has been pleased personally to confer his unqualified approbation upon the Work, to accept the Dedication, and to become their first Patron, together with the condescension of HER MAJESTY, who has consented to extend her patronage, and of their Royal Highnesses

THE DUCHESS OF KENT,  
THE PRINCESS VICTORIA,  
THE DUKE OF SUSSEX,  
&c. &c. &c.

Who also, in the most complimentary manner, have bestowed their Signatures, they have commenced the immediate publication of their Great American Work, entitled,

## HISTORY OF THE INDIAN TRIBES OF NORTH AMERICA, WITH BIOGRAPHICAL SKETCHES AND ANECDOTES OF THE PRINCIPAL CHIEFS, *Embellished with One Hundred and Twenty Portraits,* FROM THE INDIAN GALLERY, IN THE DEPARTMENT OF WAR, AT WASHINGTON. BY THOMAS L. M'KENNEY, LATE OF THE INDIAN DEPARTMENT, WASHINGTON, AND JAMES HALL, Esq. OF CINCINNATI.

This costly and splendid enterprise was undertaken at the suggestion of a late distinguished Secretary of the War Department of the United States, and has been liberally and especially encouraged by the United States Government. Its design is to furnish a large number of Portraits of eminent modern Native Chiefs, &c. of the various tribes, taken, under the direction of the United States, from life, in their different Costumes, richly coloured, and accompanied by accurate and authentic Biographies of the several Chieftains, Orators, and other characters introduced; and also by a general History of the Tribes, supplied by the best living authorities.

Seven years have been consumed in preparing this publication for the press, and the most lavish expense bestowed which can render it a truly great and national work, equally claiming the attention of the historian, the philosopher, and the general student. Almost every other subject has been exhausted for the amusement or instruction of the European reader: the Egyptian, amid the mists of the early creation; the Jew, with his solemn and mysterious vicissitudes; the Greek, the Roman, and the Goth, have found poets and historians, painters and sculptors, to transmit their peculiarities to succeeding generations; while the North American Indian, advancing features as wonderful, both moral and physical, as any other branch of the human family, has almost faded from the grasp of history. A few years ago, vague objects of terror to the feeble white man, they were known only as the ruthless monsters who fired his hut and massacred his wife and children. As the Colonists strengthened, their wild foes disappeared from the smiling farms and thronged cities, into the deeper recesses of the wilderness and the mountains, and became simply objects of contempt. It is only now, when Europe is transplanting herself across the ocean, that the thoughtful gaze of history begins to be fixed upon a race whose manifestations of heroic character have hitherto been permitted to resound and die away in the desert, scarcely reaching the verge of civilisation; over whose fate now hangs an interest most romantic and touching; who add the personal beauty to the moral grandeur of the classical ages; whose origin has been traced back to the fields of Egypt and the plains of Arabia; whose traditions break upon the European history like sounds from another planet; and who, their characters undrawn, their haunts unexplored, their secrets unknown, their story untold, are passing utterly away from the earth. It is the design of the present publication to rescue from their rapid transit to oblivion, and present to the contemplation of the Old World, many of these magnificent beings, the Cæsars and Ciceros, the Hector and the Helen, of the immense western prairies and forests, which even yet lie all undisturbed as in the days of primeval nature.

The following letter from General Cass, late Secretary of War, and the present minister to France from the United States, is selected from many similar testimonials.

"Gentlemen,

"Washington, 22d September, 1836.

"I do not hesitate, in conformity with your request, to state, that the engraved portraits of Indians, now publishing, and which were taken from the Gallery in the War Department, are very faithful copies of the originals. Many of these Portraits were painted here from the life, and all of them were executed at the expense of the Government. They represent with much fidelity the countenances and costume of the Indians.

"Colonel M'Kenney and Judge Hall are preparing biographical sketches of many of the principal Indians. From the literary attainments of both of these gentlemen, and from the very favourable opportunities which Colonel M'Kenney has enjoyed of becoming acquainted with Indian life and character in the western regions, I cannot doubt but that the work will be ably executed, and that it will form the most complete collection of aboriginal biography which has ever been presented to the public.

"To Messrs. Campbell and Burns.

"Very respectfully, your most obedient servant,  
(Signed)

"LEWIS CASS."

### TERMS.

The Work will be printed in Imperial Folio, and completed in Twenty Parts, each of which will contain Six coloured Portraits, with Biographies and characteristic Anecdotes, and a portion of the General History. The First Part will be issued immediately, and the remainder as rapidly as a due care to the execution will permit. The whole will appear in the richest style which the Arts of this country are capable of producing. Autographs of the Signatures of Subscribers will accompany the last Number. The price to Subscribers will be, 1*l.* 1*s.* each Part, or 3*0*s.** for the complete Work, payable as the Numbers are delivered. This condition of payment is annexed on account of the large outlay consequent upon so great an undertaking, and, it is hoped, will meet the public approbation.

CAMPBELL and BURNS.

Publication Office, No. 156 Regent Street, where the Work will be exhibited to all such as may feel an interest in it.

# THE LITERARY GAZETTE; AND Journal of Belles Lettres, Arts, Sciences, &c.

## REVIEW OF NEW BOOKS.

*The Victims of Society.* By the Countess of Blessington. 3 vols. 12mo. London, 1837. Saunders and Otley.

THE name of this novel indicates its tragic character, and the distressing evils which too widely flow from highly countenanced errors in our social system. Lady Blessington is a vivid painter, and the picture she has so strikingly wrought is as truly as it is severely moral. Even where there is no guilt, levity, imprudence, weakness, provoke their punishment; and certain it is (as is here finely shewn), that our follies are often as heavily scourged as our vices.

The work consists of letters from male and female writers, in what is called the world of fashion—the individuals who come under that denomination including persons of high rank and as high purity, the more notorious clique of exclusives, with their imitators and toadies, and the still more common rousés and demireps of a lower order, yet sufficiently exalted to make the vulgar stare. If the “Peeress,” we recently reviewed, gave us any insight into the doings of similar beings fifty years ago, the present production will receive an increased interest by its portraiture of those of our own day.

The chief contrast lies between two young and noble ladies, friends, who each marry eligibly as to family; but the one wisely, and on principles conducive to lasting happiness; the other, in too early years, upon a capricious impulse, too likely to lead to an opposite fate: and so runs the story between Lady Delaward and Lady Annandale. The latter is introduced, in London, by her husband, to doubtful, and worse than doubtful, society; and, through wicked intrigues and machinations, brought to the suspicion of infidelity and a premature grave. After this, the catastrophe which attends the really guilty is fearfully conceived; and, from crime to crime, the reader is dashed on, till poverty, murder, suicide, and the scaffold, complete the awful retribution.

It would be cruel in us to deprive the boudoir and library of any portion of the interest that belongs to the construction of the tale; which is, however, skilfully shadowed forth in an episode of the St. Amands, which closes the first volume. We shall rather endeavour to display some small specimens of the accomplished writer's talents, by selecting passages of various kinds, which neither interfere with nor exhibit the incidents or plot. Thus Lady Delaward, on the eve of marriage, states some of the grounds on which she relies for happiness.

“The probation to which Lord Delaward at first submitted with so bad a grace, is expired; and I now may become a wife, with that indispensable, and only surety for domestic peace,—a perfect reliance on the principles of a husband. That I preferred him to all others, you have known; and you know, also, that, when after his return from Italy he sought my hand, I had no means of judging of his tastes or pursuits, except by waiting a year, and seeing or hearing how he occupied his time. He has passed triumphantly through the dangerous

ordeal of a season in London, and an autumn and winter in the society of his friends, at their residences, and at Delaward Park. He has neither frequented Crockford's, nor attended every meeting at Newmarket; nor hunted at Melton; nor formed intimacies with dissolute men; nor flirted with any of the women who are more remarkable for attracting admiration than for repelling admirers. In short, he is not a young man of fashion; or, rather, a fashionable man; and, therefore, I am not afraid that he will find clubs more agreeable than home, or any other man's wife more to his taste than his own.”

An incident at the ceremony is touchingly described by her friend.

“Mary (no longer Mary Howard) preferred being married in the parish church to having the ceremony performed at home: I ventured to ask her the reason yesterday, when we were alone; and she told me, that, having been baptised, confirmed, and having received the sacrament in that church, she wished to pledge her faith at the same altar. ‘My mother, too, sleeps there,’ added Mary, with a tear trembling in her eye; ‘and this is a strong inducement to me: it is as though it sanctified still more solemnly my marriage.’

“The children of the school that Mary founded here, all attended at the church, headed by their mistress, and in their Sunday clothes, each carrying a bouquet. The clergyman who performed the ceremony is the same who baptised Mary; and he read the service most impressively. She repeated the words in a clear and firm voice, as if she wished all present to hear her; and when Lord Delaward placed the ring on her finger, she looked at the monument of her mother, as if to beseech the blessing of her whose remains are reposing beneath it. Tears were continually stealing down the cheeks of Lord Howard; his thoughts appeared to be divided between the wife he had lost, and the child he was then resigning.”

The following is a fine observation:—“A bold woman is, to me, one of the most offensive objects on earth. I have always felt disgust for such; though it has often been mitigated by recollecting in how many instances their husbands have been conducive to this fault, by their want of delicacy, or by the improper associations they have allowed them to form. But, when an unmarried woman emancipates herself from all the constraint that modesty and propriety prescribe, my disgust is unmitigated by pity. I am one of the few who maintain that modesty may survive the virtue it was meant to guard; but that virtue rarely, and only then, by chance, or calculation, outlives modesty.”

And the following is a lively and well-pointed sketch:—

“When I see, every season, the marriages that are formed, and the motives that lead to them, I turn with repugnance from the contemplation. You remember that good-natured but weak man, Lord Allingham, who was induced to propose to a girl he had met at every ball for six seasons before,—without bestowing a thought on her, except to remark that her *tournure* was *gauche*, and her feet

clumsy,—because some interested people about him assured him she admired him. He marries—discovers that he has made indeed a sad mistake; for he finds that her temper is irascible; that her manner is even more *gauche* than her *tournure*; and her mind as blank as her countenance. Poor Allingham! but he is rightly punished for his vanity. One of our acquaintances marries a woman because half the men in town admire her; and another is piqued into marrying one who has admired half the men in town, because, with a laudable ambition, he wished to rival them in her good graces. A thought beyond the gratification of the present fancy seldom enters into their heads: and, that fancy satisfied, they are left at leisure to discover the defects, moral and physical, that now are as visible to their scrutiny, as they were previously concealed. What follows? the poor woman, married through caprice, and neglected from the same motive, is mortified, if not wounded; and seeks consolation in a round of dissipation, where she soon finds some idle lounge who, by his attentions, soothes her wounded vanity, while inflicting an indelible stain on her reputation, if not on her virtue. How many such women might, in the hands of a sensible and honourable man, have become happy and estimable! instead of serving, as is but too frequently the case,

“To point a moral and adorn a tale.”

in the circles in which they move. To trace effects to causes, all because they had been selected by some silly man as an object of selfish gratification, and deserted from the same motive.

The evil communication to which Lord Annandale exposes his wife, though it cannot corrupt her purity, estranges her affections; and her condition in his house, with her love for a child by his former lady, displays equal knowledge of human nature, discrimination, and feeling. The character of Miss Montresor, with its occasionally momentary relapses into virtuous emotions, is powerfully drawn:—

“There are (she says, in one of these moods when her arts have nearly destroyed her unsuspecting victim,) moments when I feel so much pity for this lovely and interesting young creature, that I could yet be capable of sacrificing my own schemes to secure her happiness. Av, you may smile at this declaration. Delphine, knowing how I have steeled my heart against soft emotions since I became the dupe and victim of—a villain. But a woman, though she may, by circumstances, be compelled to enact the rôle of *philosophe*, never ceases to retain one of the inherent and indigenous qualities of her sex; and that is, pity. The young expend it on others, and the sentiment is called love; the old reserve it all for themselves, and it is named selfishness: the change is merely in the object; the principle is, even in the altered state, identical: consequently, I compassionate, and never blame, the egotists we so frequently meet with in society. Could we read the histories of their lives, and trace the events that led to this selfishness, with how many romances, more

touching than all those of fiction, should we become acquainted! By how many pangs, occasioned by others, have they been tried! Before closing all the portals of the heart, they endeavoured to supply the place of the expelled idols with one equally deceptive, and, perhaps, equally unworthy—self!

The same lady, in a gayer tone, thus describes the fashionable circles of London, to a Parisian dame of her own stamp:—

“By the by, *chère amie*, you would be not a little shocked, could you but witness the free and easy style of the men of fashion here. It positively amounts to insolence; yet they do not mean it. No, they only mean to be at their ease; but this precludes any well-bred woman from feeling at hers, in their society. They are at once *nonchalant* and familiar; make no ceremony of talking of the House of Commons, the political questions of the day, their hunting or shooting, or, in fact, all that peculiarly concerns themselves; rarely, if ever, introducing those topics which are generally supposed to be most agreeable to women. The Comtesse Hohenllinden told me, that here the ladies are obliged to study the tastes and pursuits of the gentlemen, in order to find favour in the eyes of those lords of the creation. Is not this a dreadful degradation to our sex? Only fancy women talking of horses, and not only talking of, but visiting them in their stables! Fancy their betting, and keeping books in which are entered not *les douces pensées des dames*, but the wagers they have made, and the odds *pour et contre*! This would not be believed in France; *mais c'est un fait, je vous jure*. Here, a lady who wishes to captivate, relies, not on her charms, but on her tact, and the weakness to which it is to be opposed. Is the man who is to be won a politician?—she reads all his speeches, an operation painful and impracticable to all save one impelled by a predominant motive: she does more,—she succeeds in remembering some portions of them, and quotes them with eulogium; when, unless he is the most ungrateful of his sex, she is rewarded by his preferring her to all things save himself and his speeches. The only chance of defeat consists in the number of competitors for his favour. If a man is devoted to hunting, the ladies who wish to please him are suddenly struck with admiration for that amusement. ‘They dote on horses,’ they delight in driving to the cover-side; they pat the necks of the ‘beautiful animals,’ and praise the red coats of their masters. Nay, examples have been known of their donning scarlet habits, and risking their necks, to attract some coveted Nimrod. If a man be fond of theatricals, then each lady who aspires to win him is dying to act too. She discovers that the amateur far excels the best actor on the stage. His tragic acting is so affecting (affected, she means); and, having persuaded him that he is the only Romeo alive, she hopes to be selected as his Juliet. Military men are courted, by the female aspirants flocking to reviews, and doting on martial music. Yachters are vanquished by delicate women, who tremble at the bare idea of a storm, and turn pale at a high wave, declaring, that ‘they are nowhere so happy as at sea;’ that ‘a yacht is infinitely preferable to a house, and a sailor’s life the most agreeable thing in the world, except that of being his wife.’ It is thus that ladies in England administer to the weaknesses of the ‘sterner sex,’ and subjugate them (*apropos* of the word subjugate, a man said, two days ago, that subjugate and conjugate were synonymous); while you, in *la belle* France, exact that deferential homage which is

woman’s due, and to which she cannot resign her claims, without being guilty of a want of respect towards her whole sex. I attribute the *mauvaise manière* of the Englishmen of fashion to the want of dignity of the women. The long war took so many men away, that, owing to their scarcity, they became more in demand, and the claimants were so numerous, that the claimed grew saucy. This, I imagine, first led to the unnatural system of the men being courted instead of courting; a practice to which they have now become so used, that I know not how it is ever to be eradicated. A French *grisette* would expect—ay, and exact, too—more attention than a London fine lady dreams of meeting from the men of her circle.”

Here are other pictures of fashion.

“To propitiate this more than eastern tyrant, his subjects form new friendships with persons they cannot esteem; and break through old ones with persons they loved. Even the ties of blood are violated at his mandate; for what daughter or son could exhibit affection towards the authors of their being, if they happened to be voted without the pale of fashion? The most reprehensible and undisguised bad conduct is tolerated, if the practiser is *à la mode*; the most disagreeable persons, *fétés*, and the most stupid, *recherchés*, if once the seal of fashion be placed on their passports. Fashion reigns omnipotent in London. Its stamp can give currency to the basest metal, and buoyancy to the heaviest dullness. Men of bad reputation, and women without any, can, by the power of fashion, be kept afloat in the society, it patronises; and persons of high birth and station, with unsullied names, may be rejected, if this chameleon deity looks coldly on them. The favourites of fashion are, indeed, a motley crew. Beauty, virtue, wit, or goodness, are rarely numbered among them; but, *en revanche*, the vicious, the dull, the frivolous, and the impudent, abound. Lady So-and-so is cited, in the clubs and coteries, as furnishing as much cause of complaint to her admirers, individually, as to her husband. Her acquaintances in general, and her friends in particular, do not attempt to deny the justice of the accusation; but Lady So-and-so is a fashionable woman, and, consequently, is received *pariout*. Lord So-and-so, or Mr. So-and-so, is said to have ruined many men, and more women; he is suspected of a dexterity at play, and skill in calculation, that would not disgrace the most adroit professors of slight-of-hand; but Lord So-and-so, or Mr. So-and-so, is a man of fashion, and, as such, has the *entrée* wherever fashion is worshipped.

“The exclusive circle is at war with genius and talent, though their vanity often induces them to draw to their dull routs and proxy dinners, those who are considered to possess either of these attributes in an eminent degree. They think ‘it looks well’ (another favourite phrase) to see among the aristocratic names that are every day announced in the newspapers, as having partaken of their ostentatious hospitalities, those that form the aristocracy of genius; for they imagine themselves modern Mæcenases, who patronise poets and philosophers, from the association with whom they expect to derive distinction. For gentle dullness they have a peculiar predilection—from sympathy, I suppose; a fellow-feeling being said to make men wondrous kind. A few of the houses with the most pretensions to literary taste have their tame poets and *petits littérateurs*, who run about as docile, and more parasitical, than lap-dogs; and, like them, are equally well-fed, ay, and certainly equally

spoiled. The dull *plaisanteries*, thrice-told anecdotes, and *résumés* of the scandal of each week, served up *réchauffés* by these pigmies of literature, are received most graciously by their patrons, who agree in opinion with the French writer,—

‘Nul n’aura de l’esprit.  
Hors nous et nos amis.’”

We conclude with one other quotation, in which there is far too much of truth.

“The unmarried men in London are remarkable for a degree of selfishness, indulged even to an oblivion of all else, and for a prudent forethought, even in their affections, not so much the result of wisdom, as the dictate of this all-engrossing egotism. Venus herself, without a fortune, could hardly tempt them to wear any other fetters than those of her caress; while a very Gorgon, with a large domain, would soon find them eager candidates for the hymeneal chains. They regard every young beauty with distrust and alarm, as having designs on their freedom; or as being likely, by their fascinations, to tempt them into a rash marriage, which they consider as the premature grave of their selfish enjoyments. They look on dowdless wedlock as on death, a misfortune to be encountered, perhaps, at some remote period, when age and infirmity prevent the pursuit of pleasures, or satiety has palled them. With the distant prospect of settling down at last with some fair young being, who is to be the soother of his irritability, and the nurse of his infirmities, the man of pleasure systematically and ruthlessly pursues a round of heartless dissipation; until his health broken, and his spirits jaded, he selects his victim, and, in the uncongenial union (which, like the atrocious cruelty of Mezentius, chains the living to the dead), seeks the reward of his selfishness. The men forming the upper class generally marry for what they term love, which is nothing more than an evanescent caprice, an *envie* to possess some object not otherwise to be obtained. They are so little in the habit of denying themselves any thing they conceive necessary to their pleasure, that one of their race makes little more difficulty of marrying the girl that has struck his fancy, than he does of buying some celebrated horse, for which he has to pay an extravagant price, and probably gets tired of one as soon as the other. During the first brief months—say, three or four—of his union, he considers and treats his young wife, not as the dear friend and companion of his life, the future mother of his children, but as an object of passion; to be idolised while the passion continues, and to be left in loveless solitude—cast, like a faded flower, away—the moment satiety is experienced. She has been indulged to folly, doted on to infatuation, for three months; and then, spoiled by flattery, and corrupted by unwise uxoriousness, she sees herself first neglected, and ultimately abandoned, to bear, as best she may, this humiliating, this torturing change. If she loves her husband, jealousy, with all its venomous pangs, assails her young breast. She knows how ardently, how madly, he can adore, compares his present undisguised coldness with the fervour of the happy past, and concludes (not in general without cause), that another object has usurped her place in his heart. Love, pride, and jealousy, are now in arms; and how strong must be the virtue, and how steadfast the principles, that enable her to resist the temptations offered by vanity and vengeance! Reproaches or tears await the inconstant at home; his selfishness makes him loathe both, and he seeks abroad a *dédamagement* for the *ennui* they produce.

The result generally is, that his wife either breaks her heart or her marriage-vows, or sinks into that humiliating and humiliated being, an unloved and unpitied hypochondriac; who details her wrongs and maladies, in a whining tone, to the vegetating dowagers and spinsters who have no better occupation than to listen to the tedious catalogue."

Such are varieties in high life drawn by no common pen; and, uninitiated as a poor critic must of necessity be, we must commit them and the volumes to which they belong to the taste and judgment of our readers. All we dare say is, that the whole has struck and interested us very forcibly; and we think the work well calculated to sustain, if not to enhance, Lady Blessington's literary fame. We have but one quarrel with her ladyship—the profuse introduction of French phraseology. Surely, though this may be the practice of, and consequently excusable in, the speech or writing of persons who have resided much on the Continent; it is a deformity and out of place in the home-bred, who ought to be able to express English ideas in the copious language of England. Some of her ladyship's characters would naturally introduce such jargon; but others ought not, for they have had no occasion to acquire so bad a habit.

*General History of Civilisation in Europe, from the Fall of the Roman Empire to the French Revolution.* Translated from the French of M. Guizot. 8vo. pp. 432. Oxford and London, 1837. Talboys.

A SUBJECT more interesting than the one selected by M. Guizot to form the theme of this series of lectures, can hardly be imagined. To trace the progress of the human mind from the epoch when, slowly emerging from the rudest barbarism, we begin to trace vestiges of those institutions and social systems, then in their infancy, many of which have now passed away, and others are becoming obsolete, must form a topic sufficient to arrest the attention of every one. It must be a source of the highest moral gratification to discover by what progressive steps we have arrived at our present high standard of civilisation, and to speculate upon what still higher grade our posterity may be destined to achieve. Is it not possible that there may be a constant revolution of events, that the human race is formed to rise only to a certain height in civilisation; and, having attained the meridian, are we to decline again, and to set once more in the darkness of barbarism? History seems to warrant it. Etruria, at a very early period, was highly civilised. Its powers became enervated—it fell. Barbarism succeeded. Rome afterwards arose gradually, spreading its wide influence through every land, from ocean to ocean. It flourished for a time, then drooped and withered; and once again barbarism and anarchy reigned, in the long night of the middle ages. Again Europe awoke, and is now fast advancing in the career of civilisation; but may there not still be a coming darkness to close our historical day? We will not, however, pursue this speculation any further, but turn our attention to M. Guizot. He commences by defining what is to be understood by the word civilisation.

"It has been the custom for some time past, and very properly, to talk of the necessity of confining history to facts: nothing can be more just. But it would be almost absurd to suppose that there are no facts but such as are material and visible; there are moral, hidden facts, which are no less real than battles, wars, and the public acts of govern-

ment. Besides these individual facts, each of which has its proper name, there are others of a general nature, without a name, of which it is impossible to say that they happened in such a year, or on such a day, and which it is impossible to confine within any precise limits, but which are yet just as much facts as the battles and public acts of which we have spoken. That very portion, indeed, which we are accustomed to hear called the philosophy of history—which consists in shewing the relation of events with each other—the chain which connects them—the causes and effects of events—this is history just as much as the description of battles, and all the other exterior events which it recounts. Facts of this kind are, undoubtedly, more difficult to unravel; the historian is more liable to deceive himself respecting them; it requires more skill to place them distinctly before the reader: but this difficulty does not alter their nature; they still continue not a whit the less, for all this, to form an essential part of history. Civilisation is just one of these kind of facts: it is so general in its nature that it can scarcely be seized; so complicated that it can scarcely be unravelled; so hidden as scarcely to be discernible. The difficulty of describing it, of recounting its history, is apparent and acknowledged; but its existence, its worthiness to be described and to be recounted is not less certain and manifest. Then, respecting civilisation, what a number of problems remain to be solved! It may be asked—it is even now disputed,—whether civilisation be a good or an evil? One party decries it as teeming with mischief to man, while another lauds it as the means by which he will attain his highest dignity and excellence. Again, it is asked whether this fact is universal—whether there is a general civilisation of the whole human race—a course for humanity to run—a destiny for it to accomplish; whether nations have not transmitted from age to age something to their successors which is never lost, but which grows and continues as a common stock, and will thus be carried on to the end of all things? For my part, I feel assured that human nature has such a destiny; that a general civilisation pervades the human race; that at every epoch it augments; and that there, consequently, is a universal history of civilisation to be written. Nor have I any hesitation in asserting that this history is the most noble, the most interesting of any, and that it comprehends every other. Is it not, indeed, clear that civilisation is the great fact in which all others merge, in which they all end, in which they are all condensed, in which all others find their importance? Take all the facts of which the history of a nation is composed, all the facts which we are accustomed to consider as the elements of its existence—take its institutions, its commerce, its industry, its wars, the various details of its government; and, if you would form some idea of them as the whole, if you would see their various bearings on each other, if you would appreciate their value, if you would pass a judgment upon them, what is it you desire to know? Why, what they have done to forward the progress of civilisation—what part they have acted in this great drama—what influence they have exercised in aiding its advance. It is not only by this that we form a general opinion of these facts, but it is by this standard that we try them, that we estimate their true

value. These are, as it were, the rivers of whom we ask how much water they have carried to the ocean? Civilisation is, as it were, the grand emporium of a people, in which all its wealth, all the elements of its life, all the powers of its existence, are stored up. It is so true that we judge of minor facts accordingly as they affect this greater one, that even some, which are naturally detested and hated, which prove a heavy calamity to the nation upon which they fall—say, for instance, despotism, anarchy, and so forth—even these are partly forgiven, their evil nature is partly overlooked, if they have aided in any considerable degree the march of civilisation. Wherever the progress of this principle is visible, together with the facts which have urged it forward, we are tempted to forget the price it has cost—we overlook the dearth of the purchase. Again—there are certain facts which, properly speaking, cannot be called social—individual facts which rather concern the human intellect than public life: such are religious doctrines, philosophical opinions, literature, the sciences, and arts. All these seem to offer themselves to individual man for his improvement, instruction, or amusement; and to be directed rather to his intellectual amelioration and pleasure, than to his social condition. Yet, still, how often do these facts come before us—how often are we compelled to consider them as influencing civilisation? In all times, in all countries, it has been the boast of religion that it has civilised the people among whom it has dwelt. Literature, the arts and sciences, have put in their claim for a share of this glory: and mankind has been ready to laud and honour them whenever it has felt that this praise was fairly their due. In the same manner, facts the most important—facts of themselves, and independently of their exterior consequences, the most sublime in their nature—have increased in importance, have reached a higher degree of sublimity by their connexion with civilisation. Such is the worth of this great principle, that it gives a value to all it touches. Not only so, but there are even cases in which the facts of which we have spoken—in which philosophy, literature, the sciences, and the arts, are especially judged, and condemned or applauded according to their influence upon civilisation."

Again:—

"Two elements, then, seem to be comprised in the great fact which we call civilisation; two circumstances are necessary to its existence; it lives upon two conditions, it reveals itself by two symptoms: the progress of society, the progress of individuals; the amelioration of the social system, and the expansion of the mind and faculties of man. Wherever the exterior condition of man becomes enlarged, quickened, and improved; wherever the intellectual nature of man distinguishes itself by its energy, brilliancy, and its grandeur; wherever these two signs concur, and they often do so, notwithstanding the gravest imperfections in the social system, there man proclaims and applauds civilisation."

This is sufficiently clear: our author then proceeds to develop these ideas:—

"Of the two developments of which we have just now spoken, and which together constitute civilisation,—of the developement of society on one part, and of the expansion of human intelligence on the other,—which is the end? which are the means? Is it for the improvement of the social condition, for the amelioration of his existence upon the earth,

that man fully develops himself, his mind, his faculties, his sentiments, his ideas, his whole being? Or, is the amelioration of the social condition, the progress of society,—is, indeed, society itself merely the theatre, the occasion, the motive and excitement for the development of the individual? In a word, is society formed for the individual, or the individual for society? Upon the reply to this question depends our knowledge of whether the destiny of man is purely social, whether society exhausts and absorbs the entire man, or whether he bears within him something foreign, something superior to his existence in this world? One of the greatest philosophers and most distinguished men of the present age, whose words become indelibly engraved upon whatever spot they fall, has resolved this question; he has resolved it, at least, according to his own conviction. The following are his words:—‘Human societies are born, live, and die, upon the earth; there they accomplish their destinies. But they contain not the whole man. After his engagement to society there still remains in him the more noble part of his nature; those high faculties by which he elevates himself to God, to a future life, and to the unknown blessings of an invisible world. We, individuals, each with a separate and distinct existence, with an identical person—we, truly beings endowed with immortality—we have a higher destiny than that of states.’ I shall add nothing on this subject; it is not my province to handle it: it is enough for me to have placed it before you. It haunts us again at the close of the history of civilisation.—Where the history of civilisation ends, when there is no more to be said of the present life, man invincibly demands if all is over—if that be the end of all things? This, then, is the last problem, and the grandest, to which the history of civilisation can lead us. It is sufficient that I have marked its place, and its sublime character. From the foregoing remarks, it becomes evident that the history of civilisation may be considered from two different points of view—may be drawn from two different sources. The historian may take up his abode during the time prescribed, say a series of centuries, in the human soul, or with some particular nation. He may study, describe, relate all the circumstances, all the transformations, all the revolutions, which may have taken place in the intellectual man; and when he had done this he would have a history of the civilisation among the people, or during the period which he had chosen. He might proceed differently: instead of entering into the interior of man, he might take his stand in the external world. He might take his station in the midst of the great theatre of life: instead of describing the change of ideas, of the sentiments of the individual being, he might describe his exterior circumstances, the events, the revolutions of his social condition. These two portions, these two histories of civilisation, are strictly connected with each other; they are the counterpart, the reflected image of one another. They may, however, be separated. Perhaps it is necessary, at least at the beginning, in order to be exposed in detail and with clearness, that they should be. For my part, I have no intention, upon the present occasion, to enter upon the history of civilisation in the human mind; the history of the exterior events of the visible and social world is that to which I shall call your attention. It would give me pleasure to be able to display before you the phenomenon of civilisation in the way I understand it, in all its

bearings, in its widest extent—to place before you all the vast questions to which it gives rise. But, for the present, I must restrain my wishes; I must confine myself to a narrower field: it is only the history of the social state that I shall attempt to narrate.”

Here we shall for the present conclude, promising our readers again to return to this admirable work, and to present them some specimens of the opinions of M. Guizot on the great leading events which have characterised and contributed to the present progress of civilisation, such as Christianity and the Reformation, Feudalism, the Crusades, &c.

*First Impressions and Studies from Nature in Hindostan; embracing an Outline of the Voyage to Calcutta, and Five Years' Residence in Bengal and the Doab, from 1831 to 1836.* By Thomas Bacon, Lieutenant of the Bengal Horse Artillery. 2 vols. 8vo. London, 1837. Allen and Co.

HAVING in this and a preceding *Gazette* gone over the publication of Dr. Spry, we will limit our remarks upon these volumes to observing, that they are even more desultory and excursive. The author having skirred the country far and wide, visited the Himalaya and Hurdwar, &c. &c. &c., gives us a scampering and anecdotal narrative of what he saw and heard. He often introduces conversations and stories to illustrate characters and events; and his work is embellished with a number of views of striking scenery, &c. in India. Of its general tenour the two following examples will furnish our readers with a notion; and we need only add, that the whole is light and entertaining:—

“Here the entrance of the visitors cut short the exposition of their powers. The usual salutations and introductions passed, and the hungry travellers acquitted themselves bravely upon our viands. ‘This is excellent claret,’ said Templeton; ‘almost as good as that I import myself; and this *chutni* is nearly equal to my father’s. By-the-by, Garlic, you are a bit of an epicure, and know the history of these things; are you aware that my father, who entered the service in 1762, was the original inventor of *chutni*? It’s a fact, upon my honour.’ ‘But, my dear fellow, surely you’re mistaken,’ returned Garlic. ‘Why, Abul Fazil mentions, in 1573, that the Emperor Akbur being indisposed, did very greatly alarm his physicians and aggravate his disease, by partaking inordinately of *chutni*; and then follows a long description of the sauce, a list of the ingredients of which it was composed, and a voluminous recipe for its concoction.’ ‘Oh! yes, yes; that’s all very true; I’m perfectly aware of the circumstance you refer to, my dear Garlic; but it has been ascertained that it is not at all the same kind of thing. The objection was started by one of my father’s friends, and so he wrote a pamphlet to demonstrate the difference which marked the two inventions; in fact, he called his sauce by the name of *chutni*, after Abul Fazil’s. Now, my dear fellow, do let me set you right; the two condiments have not the least resemblance: why, Abul Fazil’s is an intoxicating compound. I made some last year, and a monkey of mine got hold of the bottle, and made himself as drunk as a fiddler upon it.’ ‘Ay, ay, Pemberton,’ said Bridges; ‘but that’s no proof that it’s intoxicating, monkeys get drunk upon any thing almost. I gave your Jocko some coffee the other day, and it so inebriated the little rascal that he went staggering about the compound, and insulting all the ducks and hens, till a

general rise took place among the champions of the farm-yard, and he was ejected neck-and-crop from their society.’ ‘Ah! master Jocko is a character,’ replied Templeton; ‘his sagacity and cunning are beyond all credence; his knowing is not confined to the mere vulgar instinct of the brute creation. I have had him many years, and am fully persuaded that he has more than a smattering of many useful sciences. The circumstances under which I took him prisoner from his native wilds displayed most evidently an intuitive knowledge of the medicinal virtues of herbs, and of the art of preparing and applying them. I must give you an account of his capture; it’s really an interesting story, and worth recording. I have often thought of sending a statement of the facts to the Asiatic Society:—Some years since I was marching through Rajmahal, and in the evening having nothing better to do, I wandered out with my gun over my shoulder, and in a mango *tōp* I wantonly shot at an impertinent little monkey, who was making faces at me from the bough of a tree. Although he was plainly damaged he did not fall, but skulked off pretty briskly, and I thought no more of him. Well, gentlemen, it so happened that the next morning I walked through the same *tōp*, and, observing some thing red up one of the trees, I called immediately for my gun, expecting to make a rare and valuable addition to my collection of natural history, which was then by far the finest in India.’ ‘*Nota bene*,’ said Garlic aside; ‘Templeton never in his life collected any thing but thumping improbabilities and overdrawn embellishments. The present *rara avis* (I have been favoured with fifty varieties of it) is a fair specimen of his museum.’ ‘I couldn’t exactly make out what sort of an animal it was,’ continued Templeton, after eyeing the bye-play rather suspiciously, ‘but I shot at it, and down came the grinning young sinner that I had shot at the day before, plump on the ground before me; the very same monkey, gentlemen; and, lo and behold! strange as it may appear, it’s a truth, he had a piece of red *kurwar* (coarse cloth) tied over his rump. Ah! you may smile; but upon my veracity, gentlemen, it’s no more than the fact; and, stay a minute, that’s not all: curiosity induced me to untie the young rascal’s cloth, and, by the prophet! there was a *nime* poultice applied to the small-shot wound. Ay! gentlemen, on the word of a soldier, just as good a *nime* poultice as ever was made by human hands. I even picked out some of the shot, in order that there should be no mistake about it, and truly it was all correct, No. 6, the very shot that I had been shooting with the day before, and No. 4, with which I had just brought him down.’ ‘Well, that’s an uncommon good story, Templeton,’ said Bridges; ‘but might not the monkey have belonged to some native, who had perchance learnt the art of making a *nime* poultice?’ ‘Out of the question, my dear fellow; utterly impossible; deuce a house or hut was there within twelve miles of the place. No, there’s no way of misunderstanding the thing; I am ready, as Juvenal says, *vitam impendere vero*, to stake my life upon the truth of it; that monkey plucked the *nime* leaves, and boiled the poultice himself: there’s not a doubt of it.’

“An officer, Major Blundel, of H. M. 11th Dragoons, was returning home upon his *ghoort* from the house of a brother officer; and, as he rode leisurely along the road, having observed a snake upon the bank, he gave orders to his *sáes*, who walked behind him, to destroy it. The man was unable to find the reptile; and

the major, with the intention of assisting in the search, turned his pony round, but injudiciously, with its head towards the bank, instead of facing the precipice. The road was very narrow; but there would have been no difficulty in turning, had the latter mode been observed. As it was, the pony, unmindful of the danger which lay behind him, made rather too wide an evolution; and his hind feet slipped over the brink of the precipice, which overhung a yawning abyss, at least seven hundred feet in perpendicular height. His imminent peril for a moment paralysed the old gentleman; but the pony, with immediate sense of its danger, made the most strenuous efforts to regain its footing, clinging with wonderful tenacity by his fore-legs, and catching at the roots and vegetation with his teeth to save himself; and in this he might, perchance, have succeeded, had not the major made an attempt to dismount, thereby throwing the pony off his balance. Down, down, they went—a long shrill scream rending the air before them, as they dashed headlong through it, in their fearful career. Down, down, the awful gulf, full seven hundred feet without obstruction, were they hurled; and then their further course was broken, though not stayed, by jutting crags and splintered stumps of trees; onward they rolled, tumbling from point to point, followed in their downward flight by detached fragments of rocks and loose stones, upset from the mountain side, until, at last, they reached the torrent-bed, at the bottom of the wild descent, and here their mangled bodies lay jammed in the narrow channel.

"One of my servants, a Mussulman, had a slave-girl, whom he had purchased for the sum of twenty-four rupees, about 2*l*. Her history, as far as she was herself acquainted with it, is a very romantic one; and the reader will, perhaps, excuse my giving a slight sketch of it, which may be condensed in very few pages. The name of the girl was Rahmea; she was handsome, not more than seventeen or eighteen years of age, a native of Almora; her parents were not Ghoorikas, as might thence be naturally inferred, but settlers from some large town upon the banks of the Chináb, in the district of Kishitáwar; the girl herself was ignorant of the name of the town. Her mother had been exceedingly beautiful; and, though poor by birth, had been exalted to great honour and dignity, as the wife, or favourite concubine, of a petty rajha, who, by virtue of his comparative wealth, was looked upon as the principal man of the town; but he was a dissipated, debauched character, according to his wife's account, and she, therefore, thought it no sin to decamp from his bed and board, and furnish herself with a more sober, though less consequential, lord and master; and, being in fear of vengeance from him, upon whom she had turned her back, she quitted the neighbourhood and fled with her new spouse to Almora. Here they continued to live in peace and happiness for several years, having a bond of unity in the existence of a little daughter, who was considered the beauty of the place. When the daughter had arrived at the age of ten years, she was one day playing, with others of her acquaintance, in the neighbourhood of the temples, when she was accosted by an old man, in the guise of a *fakhr*, who asked her many questions about her father and mother, their names and history; the child, unhesitatingly, gave the religious man all the information in her possession, and further told him that her father lay at home sick of an ague, which no medicine would cure. Upon this, the holy professor tendered his services

and was gladly conducted by the little girl to the habitation of her parents, who, unsuspecting of evil, thankfully received the advice and remedies which he proffered them. The drugs having been administered, the symptoms of the patient grew more and more alarming; but the loving pair were comforted by the *fakhr*'s assurances, that all would be well, and that a very few hours would suffice to free the sufferer from his malady. In company with the beautiful matron,—who, contrary to the general rule among eastern women, was still fascinating, even though she had been ten years a mother, and twice a wife,—the disinterested old priest sat and watched the sick man, giving him from time to time fresh draughts to quench his thirst; until, at last, as midnight approached, the patient declared his conviction that life was fast ebbing, and would no longer credit the assurances of his physician. The old stranger was still arguing the point with him, when suddenly the poor man's features became dreadfully convulsed, and, after lingering about an hour in the most exquisite torment, he expired, affirming with his last breath that the *fakhr* had poisoned him. 'Even so,' said the disguised rajha, for it was he, the lady's former lord: 'even so; I have poisoned you: would that your pangs had been doubly, ay, tenfold more excruciating! And now, Luchmi,' said he, turning to his *quondam* love, 'what better fate do you expect from your injured master? Your nose is my first demand, and your matchless daughter is the next;' and then, at his command, the hut was immediately filled with armed men. The beautiful Luchmi was gagged, and bound; and her ruthless captor, with his own hand, severed her nose from her face: she was then placed on horseback, under the charge of one of the rajha's followers, and was conveyed away, the daughter knew not whither; certainly with no very happy purpose, for nothing of love or tenderness was seen in the tyrant's bearing. There can be little doubt that, if suffered to live, she must have been confined for life, her only lot protracted misery; but there is better reason to believe that the ruffian would have destroyed her, when the heat of his reproaches and abuse had in a measure evaporated. As for the poor child, Rahmea, she was carried to the rajha's zenána, and continued for a few months an unwilling concubine of the murderer of her father; but, having made more than a few attempts at self-destruction, she was ultimately cast adrift upon the wide world, with no fortune but her native comeliness. This gave her value in the eyes of one of the rajha's dependants, who obtained permission to take her into his house; and business soon after carrying him to Delhi, he disposed of her to my servant, Secundur Kahn, for the trifle above mentioned, being wearied of the poor girl's unbending indifference. At the time that Secundur Kahn related this tale to me, the girl had become greatly attached to her master, having been with him about six years, and being the mother of three fine children. I expressed a wish to see her, and my servant instantly complied. She was quite as handsome as he had described her; but I could elicit from her no intelligible replies to my inquiries, touching her history, or that of her mother. This, apparently, did not arise from shyness or stupidity, but from a disinclination to converse upon the subject with a stranger, and, therefore, I forebore to probe her further. I must be excused for anticipating the regularity of my narrative, for the purpose of mentioning that the pair are now living in comparative affluence: Secundur Kahn having succeeded to a

small patrimony in the neighbourhood of Lucknow, only a few months previously to my quitting India."

*Evenings with Prince Cambacérès, Second Consul, Arch-Chancellor of the Empire, Duke of Parma, &c. &c. &c.* By Baron Langen. 2 vols. 8vo. Vol. I. London, 1837. Colburn.

THIS is one of those gossiping French memoirs, of which the reader does not exactly know how much to believe and how much to discredit. Having cursorily run over it, we shall merely make an extract or two by way of sample, and enable our friends so far to form their own judgment. The following is told, among other stories of Bonaparte, and put into the mouth of David the renowned painter:

"Subsequently, he was proclaimed emperor. The first time he saw me, after this change, he beckoned me to approach him. I obeyed. 'Have you any designs ready?' inquired he. I understood his hint, and, bowing, replied, 'It is not designs that are wanting; but where is the ceremony to be fixed, and in what costume?' 'We will speak of this matter another time.' Would any one have imagined that, after this conversation, I should not have been appointed to execute the programme of the coronation? Yet I was passed over, and the commission was given to Isabey. The details were all collected from the past, it is true; but they bore no trace of the glory of the Roman empire. The emperor himself directed a great share of his attention to the regulation of the costumes and decorations. He arranged the escutcheon of the empire. Here Count Fabre de l'Aude observed that, in his post of procureur-general of the *Conseil du sceau des titres*, he had had the opportunity of becoming acquainted with some particulars not generally known, which he would relate to us. 'At first,' continued the count, 'the first consul was recommended to assume the title and functions of a king.' 'That will not do,' he replied; 'royalty was destroyed on the scaffold of Louis XVI., and it would be requisite to exhume it from the ruins in which it lies buried. The title of emperor would be the thing that would enable me to leap over an interval of ten centuries. Then I should be, not the successor of Henry IV. nor of Philip Augustus, but of Charlemagne, and thus linked with the Roman empire. This would entitle me to the supremacy over other crowned heads, and to the protectorate of Germany. With the title of emperor, I might style myself supreme ruler of Italy. I should neither violate nor cause to be violated any oath; and every one would be satisfied.' Napoleon addressed these words to Count Regnault, who laughed, and said,—'I assure you I should not be very deeply vexed, if you should oblige me to commit perjury in such a case. We have taken so many oaths, that it would be no easy matter to find out which is the right one. If you wish for the imperial title, be it so: its novelty will please, and the nation will readily adopt it. The nation dislikes only the committee of public safety and the directors. But, before you can take your rank among the sovereigns of Europe, you must have a coat of arms. Will you adopt your father's escutcheon, which is azure, a gold rake in pale, with three fleur-de-lis, two in chief, one in point?' 'My dear count,' replied Napoleon, 'you are quite mistaken. Where did you learn that that was the Bonaparte escutcheon? Whoever told you so had not consulted the registers of the military school where my brothers and I were educated.'

archives of St. Cyr, where my sister Eliza was brought up. If they had, they would have known that our shield is gules with two bars of gold, accompanied in chief sinister and in point dexter by a star of gold. The shield supported by two Gothic letters B and P, and surmounted by a count's coronet. Madame Permon, likewise made me a present of the arms of her family, the Comenit. But I shall not take the one or the other. It is my wish to be in all things amalgamated with France: she is my adopted mother, and we will both bear the same shield.' 'Then,' resumed Regnault, 'you would make choice of the old Gallic cock; and he may hold in his claws a tri-coloured standard?' 'The cock,' said Napoleon, 'in spite of his good qualities, is not a sufficiently dignified representative of a great nation. We must have an animal more imposing, more emblematic of power: an elephant, for example, or a lion couchant on the map of France, with one paw thrust forward to the boundary of the Rhine, and the device, *Gare à qui ma cherokee*.' 'Ma foi!' exclaimed Regnault, 'but why should we determine limits, which the lion may shew himself inclined to overstep.' Napoleon approved of this hint, and began to think of something else. Regnault suggested the fleur-de-lis. The mere utterance of the word produced an effect almost electrical. 'Never!' exclaimed Napoleon; 'these ensigns of a proscribed family shall never again be seen among us. I am not the son of Louis XVI. I commence a new dynasty, or, rather, I found an empire. Let us not revive old recollections, but adhere to our young institutions. My dynasty will not be that of Hugues Capet, — it will be my own, and will commence with myself. Names and things are the same: your fleurs-de-lis and white flags belong to the Bourbons; I will, therefore, retain the three colours with which they were driven away. We must recognise, by the difference of form and colour, the banner round which we are to rally, should the conflict commence again. You seem not to be aware of the influence of recollections on mankind: unfurl a white flag, embroidered with fleur-de-lis, and one half of France will regard as inevitable the return of Louis XVIII., an event which no one now dreams of. I am emperor! I succeed Charlemagne and the Cæsars, and I must have their emblems. The empire and myself will, therefore, adopt an eagle with spread wings, adorned with a thunder-bolt. The eagle shall be of gold, on a field — what colour is considered noblest? — gules, I think. Well, then, on a field of gules. But, stay, — the Parisians might think that too red. It would furnish a subject for jests; and it would be said that my eagle, instead of hovering in the air, was swimming in blood.' 'Would you have the mantle embroidered with eagles?' 'No, that would have a bad effect. I would have gold stars, or, rather, gold bees. The latter would be a national emblem, for bees were found in the tomb of Chilperic. That insect is the symbol of industry. The stars will be for me, and the bees for the people. These, and the gold eagle, with the thunder-bolt in his claws, on a field of azure, picturing the heaven to which he is soaring: these are more than sufficient. Then, for my livery, I shall have green. I will not have blue, lest that should revive the memory of the Bourbons. The tri-coloured flag will lead us to victory; and the French of the next generation will have nothing in common with their forefathers. The lily will be irrevocably abolished. Our national colours and emblems will all refer to me;

and to our descendants I shall be the founder of all things.'"

Another party gives the following as an instance of Napoleon's independence of female influence:

"On another occasion of a similar kind, I saw the emperor in a most violent rage. A lieutenant-colonel had sent him a letter, soliciting promotion, and adding that, should he obtain it, he had two daughters, who would be too happy to throw themselves at the feet of their good emperor, and thank him for the benefit conferred on their father. The good emperor was furiously indignant, and he said to me, — 'I don't know what withholds me from having this infamous letter inserted in the order of the day of the writer's regiment.' He made some inquiries respecting this officer, and he learned that he had been a *septembriseur*, and a friend of Robespierre and Fleuriot; and that, moreover, he had attained the age which would qualify him for retirement. The emperor, therefore, immediately granted him his retiring pension. He extended his generosity to the two daughters, who were amiable young females, and totally unconscious of the infamous project entertained by their father. The emperor settled a small pension on each of them, on condition of their leaving Paris, and retiring to their native city. This fact reflects the highest credit on Napoleon. His estimable qualities are not sufficiently known. The sovereigns of Europe were bent on his destruction, but they will live to deplore his downfall. With him fell the key-stone of the monarchical arch. The present race of kings have not power to stem the revolutionary torrent, which, sooner or later, will certainly sweep them from the face of the earth."

We shall only add, as our criticism, the Italian saying, "*Se non e vero e ben trovato*."

#### *History of the Indian Tribes of North America.* [No. I. Second notice: conclusion.]

REVERTING from the personal biographies to the general history, we now take leave to make the following interesting quotation: —

"Every one must recollect the wonderful accounts which have been given of the hieroglyphical pictures of the Mexicans; and these have been often referred to as evidence of the advances made by those people in knowledge and civilisation. In Dr. Robertson's "*History of America*," accurate representations are given of those paintings; and they resemble, in every particular, the rude drawings made by the Sioux, and other Western Indians, upon the fleshy side of their buffalo skins. The exact resemblance cannot be mistaken, as every one may satisfy himself, who will compare the reduced facsimiles given by Dr. Robertson, with those which accompany Dr. James's "*Account of Colonel Long's Travels to the Rocky Mountains*." In the region extending from the Atlantic Ocean to the Rocky Mountains, and from the great lakes to the Gulf of Mexico, there were numerous tribes wandering over the country, and dividing it among them by very indefinite boundaries, and an imperfect possession. It is impossible to form an enumeration of these tribes as they existed at the era of the discovery. We have ourselves collected not less than two hundred and seventy-two names of different tribes, which are found in the early narratives and histories; and, how many more would have been disclosed by further research, we presume not to say. Upon what principle these appellations were originally given, it is impossible to ascertain. They far exceed any actual divisions among the Indians,

either social or political, which could have existed; and it would be vain to inquire to what tribes or bands many of them were given. Then, as now, the Indians were doubtless separated into many communities, occupying different regions, and with interests which were, or were supposed to be, various and sometimes adverse. Whether they all descended from a common stock, is a question not easily answered. Even at this day, our information concerning the Indian languages is very imperfect. The principles which regulate them are but partially known; and much more severe investigations into their construction will be necessary before we are enabled to ascertain all the points of resemblance which they bear to one another, and all the anomalies they exhibit when compared with the more methodised and finished tongues of the Old World. Many of the Indian languages are evidently cognate dialects; but, in attempting to ascend to their common origin, we soon become involved in uncertainty. The great division of the French writers was into the Huron, or Wyandot, the Algonquin, and the Sioux stocks. These comprehended almost all the tribes known to them, and they yet comprehend much the larger portion of the tribes known to us. But, besides these, the present state of our information upon the subject leads to the conclusion that there are three primitive languages spoken by the southern tribes. Of these, the Choctaws and Chickasaws form one; the Creek, or Muskogee, another; and the Cherokee, a third. West of the Mississippi, the primitive dialects appear to be the Minnataree, the Pawnee, the Chayenne, the Blackfeet, and the Padouche, making eleven original stocks between the Gulf of St. Lawrence, and the Rocky Mountains. But it is by no means certain that all these great families are radically different one from another. Further investigations may exhibit resemblances not yet discovered, and reduce to cognate dialects, languages now supposed to be radically dissimilar. This great diversity of speech among a race of men presenting, in other respects, features almost identical, is a subject of curious and interesting speculation. Every one who has surveyed the Indians must have been struck with the general resemblance they bear to each other. In all those physical characteristics which divide them from the other great branches of the human family, they form one people. The facial angle is the same, and so is the colour, general stature, form of the face, appearance and colour of the eyes, and the common impression which is made, by the whole, upon the spectator. These facts indicate a common origin. But we find among a people occupying the same general region, and with similar habits and modes of life, and unbroken communication, eleven languages; among which no verbal resemblance has been discovered. And yet, as far as we are acquainted with them, one common principle of construction pervades the whole. Whence this unity of form and diversity of expression? Are they to be traced to the facility with which the words of unwritten languages are changed, and to the tenacity with which we adhere to the process by which our ideas are formed and disclosed? If so, these languages have descended from a common origin, and the tribes must have separated from one another at periods more or less remote, as their dialects approach or recede from each other. But this conjecture does not accord with the local relations and established intercourse between many of the tribes. Some of those speaking languages radically different

live, and have lived for ages, in juxtaposition, and the most confidential relations have been established among them. This is particularly the case with the Winnebagoes, speaking a dialect of the Sioux stock, and the Menomines, speaking a dialect of the Algonquin stock; and such is also the case with the Hurons, or Wyandots, and the Ottawas. And it is well known that the Shawanese, whose language is similar to that spoken by the Kickapoo, and other northern tribes, emigrated from the south, and were, when they became first known to the Europeans, planted among the creeks upon the streams flowing through Florida. The patronymic appellations used by the various tribes, indicate a connexion very different from that which we should be led to deduce from a comparison of their dialects. We cannot trace these claims of affinity to any known source; but, like many usages which have survived the causes that gave birth to them, they were doubtless founded upon established relations existing at the time. The Wyandots claim to be the uncle of all the other tribes; and the Delawares to be the grandfather. But the Delawares acknowledge themselves to be the nephew of the Wyandots; and these two tribes speak languages which have not the most remote resemblance. Whether we shall ever be able to settle these questions is doubtful. At any rate we can only hope to do it by observation, and by a rigid abstinence from idle speculations, until our collection of facts shall be greatly enlarged.

"Some of the Indian traditions refer to an eastern, and some to a western origin, but most of the tribes trace their descent to the soil they inhabit, and believe their ancestors emerged from the earth. Nothing can be more uncertain, and more unworthy, we will not say of credit, but of consideration, than their earlier traditions; and, probably, there is not a single fact in all their history, supported by satisfactory evidence, which occurred half a century previously to the establishment of the Europeans. It is well known that important incidents are communicated, and their remembrance preserved, by belts of wampum, formed of strings of beads, originally made of white clay, in a rude manner, by themselves, but now manufactured for them from shells. These beads were variously coloured, and so arranged as to bear a distant resemblance to the objects intended to be delineated. The belts were particularly devoted to the preservation of speeches, the proceedings of councils, and the formation of treaties. One of the principal counsellors was the *custos rotulorum*; and it was his duty to repeat, from time to time, the speeches and narratives connected with these belts; to impress them fully upon his memory, and to transmit them to his successor. At a certain season every year they were taken from their places of deposit, and exposed to the whole tribe, while the history of each was publicly recited. It is obvious, that by the principles of association, these belts would enable those whose duty it was, to preserve with more certainty and facility the traditionary narratives; and they were memorials of the events themselves, like the sacred relics which the Jews were directed to deposit in the ark of the covenant. How far the intercourse between the various tribes extended, cannot be known. There is reason to believe that the victorious Iroquois carried their arms to Mexico. It has been stated by Mr. Stickney, an intelligent observer, well acquainted with the Indians (having been formerly Indian agent at Fort Wayne), that he once saw a very ancient belt among the

Wyandots, which they told him had come from a large Indian nation in the south-west. At the time of its reception, as ever since, the Wyandots were the leading tribe in this quarter of the continent. Placed at the head of the great Indian commonwealth by circumstances which even their tradition does not record, they held the great council fire, and possessed the right of convening the various tribes around it whenever any important occurrence required general deliberation. This belt had been specially transmitted to them, and from the attendant circumstances, and accompanying narrative, Mr. Stickney had no doubt but it was sent by the Mexican emperor at the period of the invasion of that country by Cortez. The speech stated, in substance, that a new and strange animal had appeared upon the coast, describing him like the fabled centaurs of antiquity, as part man and part quadruped; and adding, that he commanded the thunder and lightning. The object seemed to be to put the Indians on their guard against this terrible monster, wherever he might appear. Could a collection of these ancient belts be now made, and the accompanying narratives recorded, it would afford curious and interesting materials, reflecting, no doubt, much light upon the former situation and history of the Indians. But it is vain to expect such a discovery. In the mutations and migrations of the various tribes, misfortunes have pressed so heavily upon them, that they have been unable to preserve their people or their country, much less the memorials of their former power. These have perished in the general wreck of their fortunes—lost, as have been the sites of their council fires, and the graves of their fathers."

It is painful to trace the extinction of this race of human beings. Powerful tribes are almost annihilated; and a few generations will, perhaps, only know them from having mixed their blood with families of their white conquerors, unless, indeed, they could realise a grand plan of union and settlement in some yet unpeopled division of the vast new continent which was once nearly all their own. But this seems to be too chimerical; though we have seen it hinted at as possible.

Of the Wyandots, about seven hundred remain. "The ingenuity of vengeance has, perhaps, never devised a more horrible punishment than that provided among this tribe for murder. The corpse of the murdered man was placed upon a scaffold, and the murderer extended upon his back, and tied below. He was here left, with barely food enough to support life, until the remains of the murdered subject above him became a mass of putridity, falling upon him; and then all food was withheld, when he perished thus miserably. There were no traces of a similar punishment among any other tribe."

Of the Iroquois, their tremendous enemies, we hear—"Of this once powerful confederacy, about six thousand individuals now remain. The larger portion of them live upon a reservation near Buffalo, in the state of New York, a few are found in Pennsylvania, and some in Ohio, at Green Bay, and in Canada."

But these tastes will serve to shew the nature of this fine publication, which reminds us of the better days of books; and we have only to add, that the prefixed war-dance of the Sauks and Foxes, with their victim for sacrifice, the accuracy of all the portraits, and the character and costume of the whole, render the work infinitely more novel and valuable than we could possibly have anticipated.

### Dr. Spry's Modern India.

[Second and concluding notice.]

ANOTHER Indian work having appeared, and being unwilling to load our page with more than its due proportion on one subject at a time, we are induced to dismiss these pleasant volumes with somewhat of more convenient brevity than we might otherwise have done. Dr. Spry's account of the Thugs, their capture and execution, adds curious particulars to the history of that atrocious brotherhood in the *Edinburgh Review*; and both writings afford a remarkable instance of the little attention paid to India by the mother country, and the extraordinary slowness with which the strangest news from the East finds its way to Europe. So long ago as 1830, 31, 32, the abominations of this murderous conspiracy were discovered, hundreds of the perpetrators of systematic assassination seized, and no fewer than a hundred and forty-six of them hanged at Jubbulpore and Saugor, and yet not a word was heard on the subject in England till a few weeks ago! Dr. Spry says,—

"Sentence of death was pronounced in a very impressive manner, by Captain Sleeman, on different parties of Thugs, executed during my residence in Saugor. The criminals, drawn up in a semicircle round the bench on which the judge was seated, were surrounded by a strong guard of musketeers and dismounted cavalry. The warrants were placed before them, and each name, as called out by the court, was repeated by the Sheristhadar. At the conclusion of this ceremony, Captain Sleeman addressed them in the Hindostanee language, in a few sentences, which may be rendered thus:—'You have all been convicted in the crime of blood; the order from the Calcutta Council therefore is, that, at to-morrow's dawn, you are all to be hung. If any of you desire to make any further communication, you may now speak.' As a literal translation can only convey a very imperfect idea of the force of the expression employed, I shall make no apology for subjoining the original Hindustanee. '*Khoon men sabit hooa, Calcutta ke council se hookum hys kul bura fujur ke wugt toom phanase pawaga, Jo Tomara jee men kooch khinah hys so koho.*' Few answered; those who did reply, merely requested, as a dying favour, that their bodies, on being taken down, might be burnt. One hardened villain, however, as he was turning round to leave the court, disturbed the solemnity of the scene by muttering,—'Ah, you have got it all your own way now, but let me find you in Paradise, and then I will be revenged!' The night was passed by these men in displays of coarse and disgusting levity. Trusting in the assurance that, dying in the cause of their calling, Bhowanee would provide for them in Paradise, they evinced neither penitence nor remorse. Stiffing their alarm with boisterous revelling, they hoped to establish in the minds of their comrades, who could hear them through the wall, a reputation for courage, by means which at once proved their insincerity and belied their fortitude. Imagine such men on the last night of their existence on earth, not penitent for their individual errors, nor impressed with a sense of the public mischiefs to which they had contributed, not even rendered serious by the dismal ordeal which in a few hours was to usher them into an unknown world; but singing—singing in the condemned cell, and repeating their unhallowed carols while jolting along in the carts that conveyed them to their gibbets! When morning came, numerous hackeries drew up to the goal-door, taking five men in each. They looked dreadfully haggard.

As one cart was laden after the other, it was driven away, surrounded by sepoys with fixed bayonets and loaded muskets. The place appointed for the executions was on the north side of the town of Saugor, about a mile and a half from the gaol. '*Rookut, Doctor Sahib.*' '*Salam, Doctor Sahib,*' were the salutations which I received, as I rode by the wretched tumbrils which were jolting them to execution. The gibbets were temporary erections, forming three sides of a square. The upright posts which supported the cross-beams were firmly fixed in stone-masonry five feet in height. From either side of these walls foot-boards were placed, on which the unhappy criminals were to land on reaching the top of the ladder. The cross-beams were each provided with ten running halters equidistant from one another. As each hackery load of malefactors arrived, it was taken to the foot of the respective ladders, and as one by one got out he mounted to the platform or foot-board. Their irons were not removed. All this time the air was pierced with the hoarse and hollow shoutings of these wretched men. Each man, as he reached to the top of the ladder, stepped out on the platform, and walked at once to a halter. Without loss of time, he tried its strength by weighing his whole body on it. Every one having by this means proved the strength of his rope by his own hands (for none of them were handcuffed), introduced his head into the noose, drew the knot firmly home immediately behind the right ear, and, amid terrific cheers, jumped off the board and launched himself into eternity! Thus, in the moment of death, we see a scrupulous attention paid to the preservation of caste. To wait to be hung by the hands of a chumar, was a thought too revolting for endurance. The name would be disgraced for ever; and, therefore, rather than submit to its degradation, every man hung himself!"

A less wicked, but hardly less mischievous class of natives are described in the following notice on the subject of witchcraft.

"The greater part of the cross accidents in life which befall the people are supposed to be caused by the secret machinations of some enemy who has had recourse to this black art for the purpose of circumventing them. If they lose a wife or child by premature death, when their corn is blighted, or a mirrian breaks out among their cattle, none of these calamities are attributed to a natural cause, but are all ascribed to preternatural devices, employed by some secret enemy. Diseases, particularly such as are of long continuance, are attributed to the same cause; and, if these occurrences should happen during any quarrel or law-suit, the whole is attributed to the opponent, who is considered to have accomplished it by magical devices. For the first twelve months a Hindú mother carefully secludes her child, lest the evil eye should fall on it. These mischievous magicians are very much dreaded and hated, and never fail to be punished when it is believed that by their spells they have been instrumental in promoting any calamity. Taking further advantage of the credulity of their countrymen, these vagabonds give out that, in the utterance of their mantras, the utmost nicety is required; since in the correctness of their pronunciation depends the pleasure of their god or demon: while any imperfection or defect that occurs, infallibly brings on the head of the utterer all the mischief he was essaying to procure for others. The punishment assigned to them, generally, is, to draw their two front teeth, as their loss will for ever afterwards render them incapable

of correct utterance. As an instance of the hold which these men sometimes obtain over the minds of their countrymen, the following anecdote, which fell within my own knowledge, will serve to shew. A highly respectable Hindú landholder at Saugor, named Baboo Bight, refused one of these men a plot of ground for a garden. Of the motive for the denial of this request I am ignorant, nor is it a matter of any importance. It is sufficient to state, that the fellow received a refusal. Undismayed, he renewed the application, which was again rejected. He became more importunate than ever, and a third time solicited the grant, but met with no better success. He vowed, in consequence, to conjure the life of the landholder away within a year, and made the Baboo acquainted with his intention. From this moment he commenced the diabolical undertaking; but the Baboo, being in good health at the time, took no notice of the threat. The fellow established himself on a plain close to the military cantonments of Saugor, on the confines of Baboo Bight's land. Every evening the incantations would be resumed, and the fire be seen blazing about the mystical earthen pot. Days and weeks passed on with, apparently, no effect. At length, it was given out that Baboo Bight was ill. His sleep had deserted him, his appetite was gone, and he became restless and feverish. He affected to treat the threatened machinations with contempt; but it would not do: they were evidently uppermost in his mind, and making a deep impression. Six months or more had elapsed, and the fellow continued unremitting in his acts of conjuration. Baboo Bight's health was gone; a low destructive fever had insinuated itself into his system, and it was evident that he was fast approaching the grave. The fellow, more vigorously than ever, stirred his fire and invoked his deity; till, at last, the poor man died. Thus, by the operation of fear, in less than twelve months, a mind active and strong became disturbed and anxious, then diseased, till, at last, by the influence of this wretch's slow but sure mystical incantations, life was juggled away, and lost."

We conclude with the notice of another horrid caste.

"In the wild unreclaimed jungles in the eastern part of the Jubbulpore division, stretching along to the far-famed hill of Omercutuc, into the Nagpore districts of Bustar and Chutteesghur, these people are no other than savages, and wander about when and where inclination prompts. They recognise a chief; and many extensive tracts of country are still held by Goand Rajahs. The Rajah of Bustar, in the Nagpore kingdom, is a Goand. These people are cannibals, and, like the Kookees of the Blue Mountains of Chittagong, of whom an account has been given in the early part of this work, they sacrifice and eat their fellow-creatures! The fact of their doing so is so well attested, that there can be no doubt, I think, of its correctness. Captain Crawford, of the Bengal artillery, held for many years the sole jurisdiction of the Chutteesghur division of the Nagpore kingdom, and had ample opportunity of verifying the circumstance, and he has distinctly assured me of his thorough conviction of its reality. He says, 'A caste of Goands reside in the hills near Bellaspore (Nagpore kingdom). The caste is called Bhen-darwar, perhaps from their eating monkeys. In January, 1828, Mr. Wilder, the British resident at the Court of Nagpore, over which he held the entire political control, came to Chutteesghur, on which occasion the Rajah of

Bustar went to pay his respects to him. This man had previously vowed to Devi, that, if he should obtain a favourable meeting with the resident, he would offer up twenty men. The wished-for interview proved auspicious, and he returned back to his own country satisfied. In September of the same year (1828), he fulfilled his vow, and sacrificed twenty of his fellow-creatures: they were principally labourers employed on his own fields, a few only being travellers from Hyderabad and Chanda. When an offering of a certain number of human victims is to be performed, the unhappy wretches are congregated together, and kept without food for three days. On the fourth and last of their existence on earth, they are shaved all over, then bathed and rubbed with oil, after which they are led out to the image of Devi, whom they are made to worship. After this performance has been gone through they are conducted to a neem-tree, close by which there is a hole, and on the edge of this they are sacrificed. The Goand Poorjare takes the knife out of the temple of Devi, and cuts off their heads. The inhabitants and priests of the temple immediately take up the bodies and bury them. For three days afterwards the door of the temple is shut, and no worship performed in it during that period. In the reign of the father of the present rajah, only one man was sacrificed during a period of three years, but now many are offered up."

Our author's informant further states, "that four men are murdered, one at each corner of the rajah's car, whenever he mounts it on a state occasion. At the same time with these human victims, goats and buffaloes are also sacrificed. He adds, that they are particularly fond of killing men of the Jungum caste; esteeming the smallest portion of their bones and flesh to be very efficacious in improving their crops, when buried in the fields; and that the gouteas (heads of villages), whenever they can find a safe opportunity, seize and sacrifice human victims for this purpose. These details, he assures me, he received from the people of the country, who warned him to fly. This testimony alone, from a gentleman so well qualified to give information as Captain Crawford, is sufficient to establish the fact of these people offering up the lives of their fellow-creatures in sacrifice to their goddess. And having once satisfied our minds on that point, we can readily give credence to the following horrible details of their cannibalism, by Lieutenant Prendergast. This gentleman says, that he learned, 'after much trouble, that there was a tribe of Goands, who resided in the hills of Omercutuc, and the S. E. in the Gondwarra country, who held very little intercourse with the villages; and never went into them, except to barter or purchase provisions. This race live in detached parties, and have seldom more than eight or ten huts in one place. They are cannibals in the real sense of the word, but never eat the flesh of any person not belonging to their own family or tribe. Nor do they do this except on particular occasions. It is the custom of this singular people to cut the throat of any person of their family who is attacked by severe illness, and who they think has no chance of recovering; when they collect the whole of their relations and particular friends, and feast upon the body. In like manner, when a person arrives at a great age, and becomes feeble and weak, the khilalkhor (butcher) operates upon him, when the different members of the family assemble for the same purpose as above stated. In other respects this is a simple race of people. Nor do they consider cutting

the throats of their sick relations, or aged parents, any sin; but, on the contrary, an act acceptable to Kalee, a mercy to their relations, and a blessing to their whole race.' \* \* \*

"On questioning a Goand about killing and eating the sick and aged of his tribe, he did not deny it; but said, 'it was an ancient custom of theirs.' I asked him, if he would eat the flesh of people not belonging to his tribe, when, with visible marks of anger and disgust, he replied, 'No; I never eat of any person not belonging to my own tribe.'"

What a world it is for the philosophic eye to range over, and the philanthropic mind to contemplate! Alas, for the perfectibility of human nature! half the earth is yet covered with barbarism and the bloodiest of cruelties and crimes; and the other half is only civilised into a cooler, but equally hard-hearted, system of hypocrisy, oppression, and guilt.

#### ARTS AND SCIENCES.

##### GEOLOGICAL SOCIETY.

[Papers, &c. postponed from our last report.]

APRIL 5th. Mr. Greenough, V. P., in the chair. The vicinity of Smyrna consists of limestone and greenish slates containing hippurites, lacustrine limestones and marls, and trachytic rocks. The hippurite limestone and schist form considerable tracts both to the north and south of the bay of Smyrna, constituting Mount Sipylus, Mount Tartali, and Mount Corax. In some localities it consists of gray limestone, more or less associated with black and greenish schists, but in others it is composed almost solely of the latter. The lacustrine deposits constitute an extensive table-land, ranging south from Smyrna, and to the north of the bay, the southern base of Mount Sipylus. Mr. Strickland is of opinion, that they were accumulated in a basin, bounded principally by the hills of hippurite limestone. The table-land is composed chiefly of white or yellowish limestone, sometimes resembling chalk, at others, the compact, secondary limestone of the Ionian islands, and contains nodules and layers of black flint with quartz resinite. White and greenish marls are interstratified with the limestone and extensive beds of gravel, especially towards the margin of the basin. The beds are generally horizontal; but in some places, when near the trachyte, they are inclined. The shells found by the author belonged entirely to fresh-water genera, but, in the deposit at the foot of Mount Sipylus, he discovered a rich store of vegetable remains, in the highest state of preservation, and consisting of leaves of about twelve species, which belonged to the genera *Laurus*, *Nerium*, *Olea*, *Salix*, *Quercus*, and *Tamaris*.—*Trachyte*. This volcanic rock Mr. Strickland ascertained to be more recent than the lacustrine deposits, because, in the plain of Pedikeui, it overlies the fresh-water limestone, and because no pebbles of it occur in the alternating beds of gravel. The trachyte is principally porphyritic and homogeneous; but it sometimes contains numerous angular blocks and fragments of black porphyritic trachyte, much harder than the general body of the rock; and, near the ford of the Meles, it contains a mass of quartzose conglomerate. In some localities the trachyte splits into slabs from a foot to an inch thick; and the cross fracture exhibits stripes of various colours parallel to the planes of cleavage. These layers are occasionally accumulated to the thickness of 100 feet, and are traceable, laterally, for as many yards. The paper concluded with some general observations on the changes produced in the features of the coun-

try by the eruption of the trachyte, and the drainage of the lake in which the lacustrine formations were deposited.—A letter from Mr. R. W. Fox, of Falmouth, to Sir Charles Lemon, Bart. was afterwards read. The object of this letter was to prove, that, though the non-mechanical deposits in mineral veins may be due, in part, to infiltration from the enclosing rocks, yet that they might have been derived, in almost indefinite quantities, from currents of heated water ascending from the deeply seated portions of the original fissures. Water in this condition, Mr. Fox says, would be highly capable of holding in solution earthy or metallic substances, and, in ascending, would gradually cool and deposit against the sides of the fissures its mineral contents. He is of opinion, that the formation of mineral veins cannot be due to simple chemical affinity only, because the accumulation of the metallic masses is not found, in Cornwall at least, to depend on the nature of the containing rock, the ore of a given metal being sometimes found in granite or in elvan, and not in killas; and sometimes in the latter, and not in either of the former. On the contrary, he considers, that the remarkable concentration of ores in some rocks in preference to others, may have resulted from their relative positions; but that electricity has been the most active and powerful agent in determining the distribution of the contents of veins.

##### NUMISMATIC SOCIETY.

MARCH 16. The president, Dr. Lee, in the chair.—The communications read at this meeting were as follow:—1. A letter from Mr. John Williams, accompanying a specimen of the currency of the gold coast of Africa, called a *manille*—a ring in the form of a bracelet, and usually manufactured in Europe, the present specimen being one of a large quantity cast in iron at Birmingham some years ago. This gentleman has been engaged by the council to give two lectures on the Greek and Roman coinage at the Society's meetings of 20th April, and 25th May.—2. A letter from Sir Henry Ellis to the president, on the farthings and half-crowns issued in the time of the Commonwealth. The writer proves, from a newspaper of that period ("Several Proceedings of State Affairs," April 20-27, 1654), in the British Museum, that among the patterns for farthings given by Ruding (in vol. iii. plate 31, of his "Annals of the Coinage of Britain,"), as having never been put into circulation, there is one, No. 12, which was certainly issued, the inscription and device being described at length. Sir Henry also quotes another paper ("The Public Intelligencer," Oct. 22-29, 1655), which contains an advertisement to caution the public on the subject of false half-crowns coined by one Abraham Stapley, with the date 1655, "there being none of that date in his highness's mint coined to this day, the 26th Oct." The writer supposes that none were coined subsequently to that date in the year 1655, from the invariable absence of such in the numerous cabinets he has examined.—3. A letter to the president, from Mr. Cullimore, with reference to Mr. Akerman's communication at the previous meeting on the subject of Mr. Hogg's notice on the Barberini Inscriptions (see our report, *Literary Gazette*, March 11). Mr. Cullimore considers that Mr. Hogg was justified in rejecting the restoration by De Gozze, of the tribunitian and imperial dates, from whatever authority he has replaced them, though he has undoubtedly overlooked the evidence of medallion

history in assigning the prænomen of *imperator* to Claudius. The remaining consular date fixes the inscription to A.D. 51, when Claudius was the 5th time consul, and Caractacus was sent prisoner to Rome by Ostorius; whereas the coins from which De Gozze restored the wanting indices, refer to the personal British triumph of Claudius in the year A.D. 44, and have no consular date, being, doubtless, struck in the interval between the 3rd and 4th consulships of Claudius, A.D. 43 and 47. It follows that the date of this record in the 5th consulship, chronologically separates it from coins previously issued, and at a period when Claudius did not hold the office of consul; so that a second triumph is here most probably commemorated, as Mr. Hogg has, in a great measure, proved.—4. A communication, by Mr. Akerman, "On the coinage of the ancient Britons." This paper develops the results of an inquiry which the author originated in the second number of the "Numismatic Journal." He shews that the ancient Britons possessed a coinage at the period of, and long anterior to, the Roman invasion, contrary to the assertion of Caesar, and the opinion of most numismatic authorities. This is evident from the monetary remains found in England, and nowhere else, which have been too generally referred to the Gaulish series, from which they totally differ in the characters of art and impress. Although not datable, these coins determine themselves to be of an earlier and ruder age than those of Cunobellinus, the father of Caractacus. Mr. Akerman admits, however, that the ring or bracelet money, mentioned by Caesar, was probably employed to make up the deficiency of the coined currency. Engraved specimens of these rings were given. From various evidence, they seem to have been used from as early as the times of Abraham, for a general medium of commerce, as well as for ornament. The writer next alluded to what is considered by M. de Sauley to be the ancient wheel money of the Gauls, in times previously to a regular coinage; but which, Mr. Akerman thinks, should rather be viewed in the light of amulets, or charms, the cross in the circle having been held as a mystic symbol from remote antiquity, and long before the coming of the Messiah. The wheel is, moreover, found stamped on the coins of the Gauls, Britons, and other nations. Engravings of numerous unedited early British coins accompanied this essay, together with descriptive catalogues, in which the mistakes of Ruding, and other writers, were pointed out and rectified.—5. Some remarks on the coins of the Ptolemies, by Samuel Sharpe, Esq. This essay commences by remarking on the fact, that no coins have been discovered among the Egyptian ruins of times previous to the Greek sovereigns; and on the improbability that any such existed, notwithstanding the proverbial wealth of Egyptian Thebes. Authorities are quoted to shew that the exchange of the precious metals was effected by weight, as evinced by the account of the tributes paid to Ramesses the Great, which was, according to Tacitus, preserved in inscriptions, which the Theban priests translated by order of Germanicus. The hieroglyphic character for money is ascertained to be a leopard, in the form of the Greek diphthong (the manilla of other nations), though no other light has been thrown upon the subject by hieroglyphical researches. Under the Ptolemies, a regular series of coins has been found, as is the case in all countries within reach of the Grecian arts and customs. The author next proceeds to exemplify the

respect for the ancient Egyptian customs, from which the Ptolemies never unnecessarily departed, apparent in their coinage. The hieroglyphic symbol of the eagle or hawk, may here be interpreted by the Greek title, *Σαυγ*,—saviour or avenger,—that bird being the emblem of the god Horus, called in the inscriptions, "the avenger of his father." So, the lotus, the hieroglyphic symbol of Lower Egypt, which was inhabited by Greeks in the times of the *Lagidae*, represents the word "Greek," as proved by this interpretation, assigned to it on the trilingual pillar of Rosetta. The respect paid to women by the Egyptians, appears in the custom of placing the heads of the king and queen together on the obverse, by the joint dedication of king and queen, under the hieroglyphic title of "brother gods," their apotheosis during life, &c. The *Λ*, or *Α*, on these coins, being the first letter of the word *λῦσις*, *the year*, is followed by the numeral for the year of the reigning prince, which was the invariable method of dating under the native kings of Egypt. The year here used, Mr. Sharpe concludes must have been either the lunar, Macedonian, or the sidereal, and not the movable year of the ancient Egyptians, which would not have answered the Greeks for civil purposes. The essay concludes with a table, in which the weight of the Græco-Egyptian drachm is determined at 107 grains, from coins in the collection of the Earl of Pembroke, of from a quarter of a drachm to four drachms each.

## GEOGRAPHICAL SOCIETY.

MR. MURCHISON, vice-president, in the chair.—A letter from Hobart Town, dated 21st Oct. last, was read. It communicated the interesting fact, that Major Mitchell, the surveyor-general of New South Wales, had completed his tour from Sydney to Bass's Straits, making what is termed his sea-fall at the point he intended,—namely, Portland Bay, to the westward of Port Phillip. He describes the country through which he passed as superior to any he had before seen in Australia. The district is further described to be eligible for every purpose of pasturage and agriculture. A noble river (besides others), near Cape Howe, is mentioned; within the heads of which is a capital harbour, superior to the river Derwent, but with the disadvantage of a bareness: there were 15 feet at low water. The country is stated as abounding with cedar.—There was also read a paper on the provinces of Oman, on the east coast of Arabia, by Lieut. Wellsted, of the Indian Navy. The spirited author of this valuable communication is the first European traveller who has penetrated into this country, whose people remain wholly unknown to us. Lieut. Wellsted was chosen, by the government at Bombay, to make the journey; by that government he was supplied with proper instruments for scientific observations; as well as with letters to the Imām of Muskat, who, in return, gave the author letters to the chiefs of the districts through which he passed. Mr. Wellsted reached Muskat on the 21st November, 1835. The population of this place is about 60,000; its imports may be estimated at 3½ millions of dollars. He then proceeded to Sur, 80 miles to the south-east, where he was well treated, and provided with 14 camels: he then journeyed 20 miles in a south-west direction; and thence over a flat country to a Bedouin Camp, in latitude 22° 3' N., where Captain Thompson, with his detachment, in 1820, suffered so much, and which led to the despatching of Sir Lionel Smith against the tribe in the following year, when they were destroyed. Those

of the tribe who still remained treated identically. Wellsted kindly, observing, "We have fought; you have made us every compensation for those who fell, and we should now be friends." Proceeding into Arabia, the author was struck with astonishment at the fertility and beauty of the country, abounding with luxuriant groves of almond, citron, and orange trees. All the principal towns, villages, and oases, visited by our traveller, are fixed in the map of the country constructed by him from actual observation; and there is no place of importance in Oman, the geographical site of which has not been correctly determined. Although, from untoward circumstances, the author was prevented reaching Derayah, yet, in adding a description of a province equal in extent to Syria, to the scanty knowledge we formerly possessed of Arabia, he trusts it will be apparent, that the several months he remained there were neither passed in inactivity nor idleness. The paper was accompanied by the map referred to.—Lord Milton and three other candidates were elected members.

## ROYAL INSTITUTION.

APRIL 7.—Mr. Dent, on the manufacture and construction of clocks and chronometers. The lecturer exhibited a table, showing the difference, in principle and construction, between a clock and a chronometer. He shewed that it was on the elastic properties of the balance-spring that correct performance mainly depended; that the balance-spring was affected by two causes when exposed to variable temperature: by heat it was lengthened, which caused the chronometer to go slower; and its elasticity was also decreased, tending to make the chronometer further lose on its rate of going; but the amount of loss arising from this latter cause is three times in amount that which arises from direct expansion of the metal of which the balance-spring is composed. Mr. Dent made an experiment, to shew the effect of heat on the elasticity of metal, by counting the continuous sound of a bell, which, in the temperature of the room, lasted fourteen seconds; but when heated to boiling-water point, the sound was audible for four seconds only; and he stated, if the heat were continued, it would lose its sound altogether, and would return progressively to its former duration of fourteen seconds as it reassumed the temperature of the room. Escapements, he said, were of two kinds: the "escapement of contact," and "detached escapements." The escapements of contact are those where the motive force is always in contact with the verge (or axis) of the balance-wheel; consequently, no part of the oscillation of the balance-wheel is performed independently of the motive force. The detached escapements are those which, after having received the impulse, perform the remainder of the oscillation of the balance-wheel, free and solely under the influence of the balance-spring; for example, if a balance-wheel vibrates in a semi-arc of 200 degrees, and the escapement occupies 40 degrees, then there will be 160 degrees of free vibration. Mr. Dent gave an account how far the manufacture of steel into balance-springs increased the price of one ounce of iron: he took the value of one ounce of iron at one farthing, which, when converted into steel of the best quality, was worth 4½d.; that the ounce, when drawn into balance-spring wire, would produce about 950 yards, and be worth 13½d. If made into balance-springs, hardened and tempered, and producing 7650, at 2s. 6d. each for labour, amounts to

956l. 6s., being the effect of labour on the farthing's worth of iron.

## ST. JAMES'S ORNITHOLOGICAL SOCIETY.

WE learn, with much pleasure, that a plan for the extension of the objects of the "St. James's Ornithological Society," which at present are confined to the aquatic tribe, is about to be brought forward at a general meeting of the members. As epicures, we trust that the *utile* may be found to go hand-in-hand with the *dulce*. What donation may some modern Lucullus—some "Epicuri de grege" alderman present to a society which may enable him to set on the table some worthy *confrère* to the turkey or the pheasant!

## LITERARY AND LEARNED.

## UNIVERSITY INTELLIGENCE.

OXFORD, 5th April.—In a convocation, the degree of Doctor in Divinity, by diploma, was conferred upon the Lord Bishop of Salisbury elect.

The following gentlemen were admitted to the degree of Master of Arts:—Hon. W. H. Dawney, Christ Church; Rev. R. Jackson, Pembroke College, Grand Compounders; Rev. G. Slade, St. Edmund Hall; T. Lloyd, Christ Church; W. Bowring, Queen's College; W. G. Ward, Fellow of Balliol College; C. Daman, Fellow of Oriel College.

## ROYAL SOCIETY.

MR. BAILY in the chair.—The conclusion of a paper by Professor Daniells, being Observations on voltaic combinations, was read. Without the diagrams and tables which accompanied this elaborate communication, we can convey but an inadequate idea of the author's remarks and experiments on the wonderful and widely diffused phenomena of which he treats. In our notice of Mr. Lubbock's paper on the tides, alluding to the money granted by the British Association, our reporter ought to have stated that the sum was liberally given for reducing tide observations, not for making them; the error arose from the omission of a character in the notes taken of the paper.

## SOCIETY OF ANTIQUARIES.

THE Earl of Aberdeen in the chair.—Mr. Duke exhibited five crucibles, found in the porch of St. Thomas's Church, Salisbury. Mr. Hunter exhibited a deed of conveyance of a house in Canterbury, curious, as being dated in the first year of the reign of *Jane*, Queen of England, &c. A further portion of Sir Frederick Madden's dissertation on the history of Perkin Warbeck was read, and the remainder postponed.

## LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

*Monday*.—Statistical, 8 P.M.; British Architects, 8 P.M.; Marylebone, 8½ P.M. (Mr. W. Newton on Woollen Manufacture, with Models, &c.) Russell Institution, 8 P.M. (Mr. T. Phillips on Vocal Music, and two following Mondays, assisted by the Misses Brandon, and illustrating Sacred, Dramatic, and Miscellaneous Music.)  
*Tuesday*.—Linnean, 8 P.M.; Horticultural, 3 P.M.; Civil Engineers, 8 P.M.; Lambeth Literary, 8½ P.M. (Mr. Serle on the Drama.) Belgrave Literary, 8 P.M. (Mr. Cowper on the Printing Machine.) United Service Museum, 3 P.M. (Dr. Ritchie on Experimental Philosophy.)  
*Wednesday*.—Society of Arts, 7½ P.M.; Geological, 8½ P.M.  
*Thursday*.—Royal, 8½ P.M.; Antiquaries, 8 P.M.; Botanical, 8½ P.M.  
*Friday*.—Royal Institution, 8½ P.M.; United Service Museum, 3 P.M. (Dr. Lardner on Steam Communication with India.)

## FINE ARTS.

## NEW SOCIETY OF PAINTERS IN WATER-COLOURS, EXETER HALL.

WE have been favoured with a view of the approaching Exhibition of this Society: although but a hasty and imperfect one, it warrants us in saying, that the exertions of the

various members have been, at least, equal to those of any former year. Among the most distinguished contributions (of which we shall give a more detailed description in our next Number) are, Mr. John Martin's "Demonsthenes on the Sea-shore;" Mr. Kearney's "Martin Luther cited by the Council at Augsburg;" Mr. Duncan's "Oyster-boats;" Mr. Warren's "Straight Street, in Damascus;" Mr. Haghe's "Scene at Rouen;" Mr. Howse's "Architectural subject at Rouen;" Mr. Weigall's "Fighting Cocks;" Mr. Campion's "View of Windsor;" Mr. Fahey's "View in Scotland;" Miss Fanny Corboux's "Scene from the Spectator;" Mr. Green's "Hawking;" Mr. Wehnert's Astrologer;" &c. &c.

#### THE EXHIBITION OF THE SOCIETY OF BRITISH ARTISTS.

[Fourth and concluding notice.]

IN the Sculpture Room there are some very clever pictures; among which,

568. *The Balcony*, J. L. Colley, is distinguished as a novelty, not only in subject, but, with respect to the artist, whose name (as well as we remember) has not before met our eye, although the qualities of his performance must be the result of much previous practice. The group is composed of the gay and the grave, and is executed in a pure, yet brilliant, style of art.

495. *Collegian at his Studies*. W. Kidd. — The shafts of pictorial satire have been directed, time out of mind, against the substitution of field sports for college exercises. The young under-graduate, from the care with which he is examining his Joe Mantons, is evidently desirous to rival the subject of

463. *Portrait of — Scoles, the celebrated Shot*. T. Lewis; of which portrait it is but fair to say, that it possesses much character; and that imagination might easily find in it an expression, connected with the views and aims of the original.

486. *Meditation*. E. M. Eddis. — Independently of the expression, the colouring and execution of this performance entitle it to our entire approval.

481. *Interior of St. Laurent, Rouen*. T. H. Pitt. — Picturesque in character. Time and art have combined in giving effect and interest to the scene.

508. *The Flight interrupted, from Milton*. J. and G. Fogg. — A sublime conception of the exalted subject.

Some of the most striking varieties in the landscape department of this room, are, 510. *Brook Scene, with Cattle*. J. Dearman. — 502. *Wood Scene*. J. Stark. — 521. *Moon Rising*. J. B. Crone. — 529. *View near Lyndhurst*. Miss C. Naemyth. — 580. *Banditti passing a Ravine*. J. M. Ince. — 555. *Off the Flemish Coast*; and 563. *On the Midway*. J. Wilson.

We presume it to have been unavoidable in the present instance; but sculpture and painting do not mix well in a public exhibition. In private collections, and under peculiar arrangement, the case is different. Among the pieces of sculpture in this room, are some of great taste and beauty of form; viz. 594. *Pastoral Apollo*. E. G. Papworth. — 618. *A Nymph*. J. Ternouth. — 619. *A Mother bending over her Sleeping Infant*. J. Thripp. — 613. *Psyche*. E. G. Papworth. — 616. *Model of a Fountain*. E. W. Wyen. — Nor, though familiar in subject, must we omit to notice, 593. *The Invalid*. E. Cotterill; which, like Gainsborough's "Old Horse," is a sad representation of what is daily passing in the wear and tear of omnibus cattle. — The Heads and Busts by R. C. Lucas, S.

Clint, J. Ternouth, &c. are highly creditable to those by whom they have been produced. To these, 631. *Chariot Race*. E. H. Corbould; 605. *Painting—a Basso Relievo*. F. Mace; and 615. *Portrait of a celebrated Scottish Greyhound*. P. Park; add a pleasing variety.

The arrangement of works in the Water-colour Room seems to have been one of more haste than speed. Though between the high and the low there is much good art, great injustice has been done both to the former and to the latter. The low, however, may be got at by stooping; and some are well worth the trouble; as 806. *An Interior*. G. Sintzenich; the elaborate finish of which can hardly be conceived, except by those who are acquainted with the artist's former productions. — 634. *Interior of a Stable*. C. Josi, is also a performance on which the eye would have been delighted to dwell. — 685. *Primroses*. Mrs. M. Harrison; and several others of similar excellence, are in the same predicament. The qualities of those on high (some of them portraits of a miniature size) nothing but an opera-glass can bring into view. But our business is with works which can be seen; and of those, 700. *Street Scene on a Wet Night*. J. Martin, is one of the most extraordinary productions even of that extraordinary artist's pencil. Though small, it has all the effect of a panorama; and the light from the shop-windows is perfectly deceptive. — The landscape department is well filled up with scenes "foreign and domestic." Of the latter, 650. *Village of Barnes—Evening after a Shower*. G. F. Phillips; 649. *Folkestone*. T. Wood; 687. *Clewer Point, near Windsor*. J. W. Allen; 815. *Scene at Northfleet—Twilight*. J. M. Ince: of the former, 704. *Bisnone Market-Place, near Lugano*. G. Baruard; 720. *Mill, near Cologne*. D. Fowler; 821. *Nesso, Lake Como*. W. L. Walter; are among the most striking. — 839. *Gauchos going after Cattle on the Pampas (Monte Video)*; one has ridden his horse to death—a common occurrence. H. Martens. No doubt, among barbarians a common occurrence. Would that civilised England, with her steeples, chasing gentry, were innocent of the cruelty! Mr. Martens has also a very spirited performance — 893. *The Grenadier Company of the 42d Highlanders, charged by French cavalry, at the Battle of Orthes*. — 902. *A Gentleman reading*. Miss S. Satchell. A very clever study. — 879. *Portrait*. H. Corbould. The care and labour bestowed both on the figure and on the accessories might entitle this work to be called "The Portrait." — 743. *Portrait of John Audubon, Esq.* 803. *Portrait of Victor G. Audubon, Esq.* F. Cruikshank. Powerful in character, spirit, and execution. Mr. Holmes has also some light but characteristic portraits; of which, 694. *The Right Hon. Lady Delamere*, is a clever example. — 744. *Pleasant Thoughts*. Mrs. Gent. "A penny for your thoughts;" but if we may judge from the appearance of the lady, they are much more valuable. — 834. *Morning Amusements*. Mrs. Briane. Although hardly to be seen, is evidently full of taste and elegance. Alas! for the lottery of exhibitions! many no doubt equally clever performances by this fair artist (the daughter of the celebrated Paye), are placed in so exalted a situation, that even their numbers are not distinguishable. — 811. *Sketch of a Lady*. F. Rochard. A tasteful production; and something more than a sketch. — Miniatures, Flowers, and Still Life, add their usual attractions to this room. Among the first, those by C. Baxter, J. Bradley, Mrs. Manning, P. Fischer, and H. Collen, are distinguished: of Flowers there is a very fair

show from the pencils of Mrs. Harrison, Miss H. B. Rosenberg, W. Spry, &c.: of the last-named department of art, 660. *Wild Fowl*, affords an exquisite specimen; and 838. *Sleeping Bloodhound*. Miss Jessica Landseer (*Still-life certainly*), does that lady great credit.

#### GRAPHIC SOCIETY.

THE fourth meeting of this Society took place on Wednesday last, at the Thatched House. The members and visitors were gratified by seeing many beautiful works of art, though they were not so numerous as we have sometimes seen displayed in these agreeable soirées. There was a striking engraving by Cousins, of Edwin Landseer's "Bolton Abbey,"—one of the finest works ever produced in mezzotinto—and a spirited study of horses' heads by the same painter. Folios of sketches in Spain, by J. F. Lewis, and a folio of drawing, principally for his "Sketches at home and abroad," by Mr. Harding. A mounted set of David Roberts's lithographed Spanish sketches. Several folios of miscellaneous drawings furnished by members and visitors, and many beautiful sketches in oil and in water-colours, studies, and engravings.

#### NEW PUBLICATIONS.

*Giulia Grisi, in Norma*; on stone, after A. E. Chalon, R.A. By R. J. Lane, A.R.A. Mitchell.

A VERY fine resemblance of this popular *prima donna*, as she is uttering the words, "Io nei volumi arcani leggo del ciel." Mr. Chalon has happily caught the true spirit of both attitude and countenance; and Mr. Lane has lithographed the figure in his sweetest style.

*Dresden Gallery*. Leipzig, Wunder; London, Schloss.

THE third and fourth Numbers of this extensive publication are lying before us. They consist of large and ably drawn lithographic plates, from the works of Wouvermann, Ruissdæl, Metz, Titian, Dosso Dossi, Netscher, and Giacomo Palma. Although in some respects, undoubtedly, they are not equal to engravings on copper, they have a freedom of execution denied to the latter; and convey, at a price within the means of the humblest lover of art, a very adequate notion of the celebrated originals.

#### SKETCHES.

##### UNROLLING A MEMPHIS MUMMY.

ON Monday, Mr. Pettigrew unrolled the Mummy from Memphis, belonging to M. Athanasi, in the Great Room at Exeter Hall, which was, however, too large, and not well adapted to the purpose; as the spectators were not only too far distant, but all around the space inclosed for the operation: and thus many of them were precluded from having a good view of Mr. Pettigrew's skilful process. From the case, and numerous inscriptions on the wrappings, the corpse was pronounced to be an eminent priest of Phra, chief of the spirits, prophet, &c. &c. The linen was in narrower strips than we have ever seen before; and there were various peculiarities which rendered this specimen interesting. All down the front of the body, longitudinally, were laid pieces of linen, covered with figures and inscriptions; some of the former altogether new. These were delicately executed in lines. On the head was a species of helmet-mitre, much gilt; and below, a human face was rudely traced on the bandages above the original countenance. After some travel, Mr. Pettigrew came to a complete asphaltic

envelope, of extreme hardness and tenacity, into which the body had been plunged; and which resisted hammers, knives, and chisels. By much perseverance it was partially removed; and about the neck scarabei, cornelians, and other stones, were found. The toe-nails were gilt, the legs separately bandaged, and the arms crossed over the breast; the whole indicative of the Greco-Egyptian period. The mummy was, therefore, about 2200 or 2300 years old. Finding it impossible to make greater way in removing the obstacles interposed by the preparation, it was announced that the task would be carefully completed elsewhere, and the results submitted to the view of the public. We should guess that there were five or six hundred persons present.

## MUSIC.

## OPERA CONCERT ROOM.

THE second Societa Armonica concert for the season was held here on Monday evening: it was fully attended. "The Power of Sound" (Spohr) was the opening symphony; and rather long. We must do this orchestra justice in saying, we never heard music more correctly and ably performed than this symphony; and, indeed, all intrusted to them during the evening. A *aestet*, by Neukomm, was also, finely played. Some sweet vocal music much enlivened the evening's amusement. Mrs. Bishop was in excellent voice, and sung an aria, "Come, Summer! come," composed by her husband, delightfully. Perhaps the strong sympathy of a freezing audience in the midst of April, aided in procuring her a cordial encore. Rubini was, as usual, rich in sweet sounds, and was encored most heartily in a beautiful cantata (Beethoven). Madame Giannoni's pure, mellow voice, was one of the greatest attractions of the evening; her "Dove sono" was truly beautiful.

## NEW PUBLICATIONS.

*Crescentini, Paer, and Pellegrini's celebrated Solfeggi, or Exercises for the Voice: forming a complete System of Practice for the Student in Singing: arranged with an Accompaniment for the Piano-forte, &c.* By J. B. Duruset. THIS is a most judicious selection of solfeggi from the best masters, and cannot be too highly recommended to those who wish to attain perfection in singing. The accompaniments are most appropriate, and render the studies so pleasing, that the tediousness usually existing in all exercises for the voice is wholly done away with, and the road to improvement rendered alluring. We trust to see them in general use; and are sure that every student and lover of music will owe a lasting debt to Mr. Duruset, for his judgment in the choice of these exercises, and his taste and skill in their arrangement with his own charming accompaniments.

## DRAMA.

*King's Theatre.*—Signori Lablache, Rubini, and Tamburini, and Madame Grisi, made their welcome appearance on Saturday last, in Bellini's beautiful opera, *I Puritani*, which, we need hardly say, was sweetly sung, or that the singers were cheered and encored as of old, and as they so well deserved to be. Mdlle. Duvernay's benefit, on Thursday, was, we are glad to say, a bumper; and this exquisite *dansette* was as enchanting as ever: we are sorry we are to lose her so soon. Her *cachouca* is peculiarly her own; and her acting, as well as dancing, in the *Brigand of Terracina*, is of the highest order.

*St. James's Theatre.*—On Tuesday, Mr. Burnet, from Edinburgh, made his first appearance in London, as *Squire Norton*, in the *Village Coquettes*: he possesses a voice of considerable sweetness, and has a good deal of taste, but was evidently afraid to do his best; consequently, his singing appeared tame and monotonous. An encore, however, brought forth some sparks, and, we think, for ballad singing, he will be a decided acquisition to this company: he has much feeling, but wants practice. On Wednesday, Mr. Ellason held his usual dramatic entertainment, which lasted from seven o'clock till one in the morning. Surely, this is too much. Some heavy instrumental music might well have been spared, particularly a piece performed by four bands, placed on the stage, intended to be an echo. Mrs. Bishop and Miss Clara Novello sang some sweet ballads; and MM. Ellason and Bousillon played a duet of the violin and contra bass, exquisitely. "A health to the king," and "Scots wha hae," were given twice, in his very best style, by Braham; and one act of the *Village Coquettes* dismissed the remaining auditors to their homes at "past one o'clock, and a frosty morning!"

## VARIETIES.

*The King*, we are informed, intends to preside in person, at the opening of the New National Gallery, on the 28th.

*Vice Versa.*—"Well, sir," said one person to another, to whom he had, in a matter of business, made a very absurd offer, "do you entertain my proposition?" "No, sir," replied the other; "but your proposition entertains me."

*Weather Wisdom.*—Lieutenant Morrison (whom we hurriedly wrote Harrison last week) has been most accurate in his predictions, as copied into our last *Gazette*. Truly, the sun aspecting Herschel *has made it* [?] exceedingly bleak, snowy, and disagreeable! For the next, we are told, "high winds, dashing rain, hail, or snow, about the 15th and 16th. Very cold. Change on the morning of the 17th. Full moon on the 20th shews high winds, and turbulent, cloudy, unsettled weather. 21st, Raw, cloudy, and unpleasant." This is a close-dated prediction.

*The Influenza.*—"Pray, mamma," said a little girl of five years old, "why do people die?" "Because, my dear, it is God Almighty's pleasure," answered mamma, in that self-complacent tone, which indicates a consciousness of perfect propriety and wisdom. During an evening of the next week, somebody was observing, that ten persons had died in the neighbourhood, that morning, of the influenza. "God Almighty has been taking his pleasure to-day, mamma," exclaimed the child.

The following little effusion was written by Captain Morris, somewhere about 1786, at the express command of a late illustrious individual, who was in the habit of singing it to an amiable lady, also deceased.

TUNE.—"There's a difference between a beggar and a queen."

"There's a difference, in fact, betwixt a promise and an act,  
And I'll tell you the reason why;  
An act can't betray though I own a promise may,  
Yet I hope neither you nor I.

## Chorus.

Let thy cares and thy fears go hang, go hang,  
Let thy doubts and thy sorrows drown;  
Give but my bosom love enough,  
And my heart is all thine own, dear girl,  
And my heart is all thine own.  
Though sometimes I rove, like a bee in a grove,  
And my flights were a little too wild;  
Yet I fix, from this hour, on that sweet fancy flower  
That blooms on your cheek when you smile.  
Let thy cares and thy fears, &c.

This world I approve as the region of love,  
And I care not one fig for't besides;  
The spoils of the whole,—the most dear to my soul,  
Are those which the gods do provide.  
Let thy cares and thy fears, &c.

The following epigrammatic note from General Chichester to General Evans, is amusing and characteristic:—

"Dear E., What do you next propose be done,—  
Take Fontarabie?—  
"No, dear C., I-run."

## LITERARY NOVELTIES.

The *Foreign Quarterly Review* for April, No. XXXVII. among other literary announcements, has the following:—"Notwithstanding the exposure of the suspicious circumstances attending the pretended discovery of the history of Sanchoniatho, which appeared to stamp the transaction with the character of imposture, we perceive from an announcement by Schünemann, of Bremen, that the work will speedily be published by him with the title of 'Sanchuniathonis Historiarum Phœnicie libros novem, Græce veros a Philone Byblion, editit, Latineque versione donavit, Friederich Wagenfeld.'

"The number of the journals published in Austria amounts to seventy-two, twenty-one of which are furnished by Vienna. The Lombardo-Venetian kingdom issues thirty-four; Milan alone, twenty-five; Venice, six; and Verona, four."

"We are assured, that the Russian 'Conversations-Lexikon,' which has advanced to the sixth volume, is rich in contributions on the history, geography, statistics, and industry of Russia, on the social relations of its various tribes, and in biographical accounts of its distinguished statesmen. The work employs at this moment all the eminent Russian literati, who have become contributors to it; so that there is a momentary stagnation in all branches of Russian literature, in which considerable activity till lately prevailed."

## In the Press.

Jeannette Isabelle, a novel.—Another Tale of the Sea, by the Author of "Cavendish," called Gentleman Jack, and reported to be the actual life and adventures of a Post Captain in the Navy.

## LIST OF NEW BOOKS.

The British Atlas, comprising Separate Maps of every County in England, by J. and C. Walker, imperial 4to, 3s. 3d.; large paper, 4l. 4s.—Novels of Nature, by Mrs. Chadwick, 12mo. 7s. 6d.—Shaw's Medical Remembrancer, 32mo. 2s. 6d.—Scenes from the Life of Edward Lascelles, gent., 2 vols. 12mo. 12s.—A Six Days' Tour through the Isle of Man, 12mo. 3s.—Cooling's Domestic Gardening Assistant, 12mo. 1s.—Corboux's Pearls of the East, or Gems from Lalla Rookh, imperial 4to, 1l. 11s. 6d.—Evenings with Prince Cambracères, by Baron Langon, 2 vols. 8vo. 1l. 8s.—The Victims of Society, by the Countess of Blessington, 3 vols. post 8vo. 1l. 11s. 6d.—Christ a Christian's Life, by Rev. ## MODERN INDIA,

WITH

## ILLUSTRATIONS OF THE RESOURCES AND CAPABILITIES OF HINDOSTAN.

By HENRY H. SPRY, Esq. M.D.

Of the Bengal Medical Staff.

"Useful and interesting."—*Globe*."We do not know any publication that can afford so general and satisfactory an idea of our eastern empire."—*Literary Gazette*."These are two interesting volumes, containing much useful information."—*Observer*."Two highly entertaining volumes."—*Sunday Times*."Modern India" may be recommended to all readers, for it will either instruct or entertain."—*Sportator*.

Whittaker and Co. Ave Maria Lane.

In 8 vols. 8vo. 30s. boards,  
**PROOFS AND ILLUSTRATIONS** of the  
 ATTRIBUTES of GOD, from the Facts and Laws of  
 the Physical Universe, being the Foundation of Natural and Re-  
 vealed Religion.

By JOHN MACCULLOCH, M.D. F.R.S. F.L.S. F.G.S. &c.  
 "The invisible things of Him from the creation of the world  
 are clearly seen, being understood by the things that are made,  
 even His eternal power and Godhead."—*Romans*, i. 20.

"The gifted author's name and eminence have long been well  
 known in connexion with natural science; but it now appears  
 that all his devotion to that and other departments of human  
 knowledge has been made subservient to this his last and ablest  
 work, which we confidently predict will hand down his celebrity  
 to the latest times."—*Monthly Review*, April 1837.

"From creation, the author traces the progressive changes of  
 the earth, and brings enlightened views of every science to bear  
 upon the question."—*Literary Gazette*, April 1, 1837.

James Duncan, 37 Paternoster Row.

In 8vo. price 15s. with Engravings, a 2d edition of  
**PRINCIPLES OF MATHEMATICAL,**  
**PHYSICAL, AND POLITICAL GEOGRAPHY.**

By M. MALTE BRUN.

Improved by the Addition of the most recent Information,  
 derived from various sources.  
 A. and C. Black, Edinburgh; Longman and Co. London.

Just published and imported,  
**A PORTRAIT** (size,  $\frac{1}{4}$  of an inch by  $\frac{1}{4}$ )  
 admirable as a Curiosity, and a real Memorial of the  
 much lamented late MADAME MALIBRAN.  
 The peculiar style, extreme minuteness as a work of art, and ac-  
 curacy of the Portrait of this celebrated Artist (originally en-  
 graved for the English Bijou Almanack), has induced the Pub-  
 lisher to have a limited number of impressions taken on extra  
 plate paper.

Price, plain.....1s.  
 India paper.....1s. 6d.  
 Beautifully coloured.....2s.  
 "A more beautiful or fairy-like production was never seen."—*Brighton Gazette*.

"It would set in a ring."—*Weekly Free Press*.  
 "And yet distinctly retaining the character and expression of  
 the highly gifted and lamented original."—*Literary Gazette*.  
 "A tiny gem for a scrap-book."—*Mirror*.

London: A. Nothess, 41 Great Russell Street, opposite the  
 British Museum; and to be had of all Book and Printersellers.

Where still may be had, copies of

The English Bijou Almanack.

Also,

 viz. Outlines to Part the Second of Goethe's Faust. Eleven  
 Plates, with German and English letterpress. Price 4s. 6d.

The Chess Players, explained according to  
 Hints from Himself (Retzsch), in German, French, and English.  
 By B. V. Minitz. Royal 4to. price 5s. 6d.

Part IV. of the Royal Dresden Gallery,  
 price 1l. 10s. each to Subscribers.  
 Nos. 1. to XI. price 3s. each, to be continued every Friday, or in  
 Monthly Parts, 1s. each.

Allgemeine Bibliographie für das Jahr 1837;  
 or, Universal Bibliography for the Year 1837. (To be continued  
 Annually).

This is a publication of great interest, and particularly claims  
 the attention of the Bookkeepers, and Public Libraries, Antiqua-  
 rians, &c. &c.

Just ready, and may be obtained gratis,  
 A Select List of Works, in German and  
 English Literature and the Fine Arts, recently published and  
 imported, by A. Schless, 40 Great Russell Street, opposite the  
 British Museum.

In 2 vols. 8vo. price 30s. cloth, lettered, with Illustrations from  
 Drawings by the Author,

**FIRST IMPRESSIONS AND STUDIES**  
 from NATURE, in HINDOSTAN, embracing an Out-  
 line of the Voyage to Calcutta, and Five Years' Residence in Ben-  
 gal and the Deah, from 1831 to 1836.

By THOMAS BACON,

Lieutenant of the Bengal Horse Artillery.

"Pluris est oculis testis unus quam auribus decem."—*Plautus*.  
 London: Wm. H. Allen and Co. 7 Leadenhall Street.

Price 3s. bound in roan, with a clasp, the 4th edition of  
**SPECULUM GREGIS; or, Parochial**  
 Minister's Assistant.

By a COUNTRY CURATE.

"He understands but little of the nature and obligations of the  
 priestly office, who thinks he has discharged it by performing the  
 public appointments."—*Bishop Burnet*.  
 "The readiest way of finding access to a man's heart 'is to go  
 into his house.'"—*Chalmers's Christian and Civic Economy*.  
 Printed for J. G., and F. Rivington, St. Paul's Churchyard,  
 and Waterloo Place, Pall Mall.

In 8vo. price 10s. 6d. boards,

**LECTURES ON THE PROPHETICAL**  
**OFFICE OF THE CHURCH,** as inconsistent with Roman-  
 ism and Popular Protestantism.

By JOHN HENRY NEWMAN, B.D.

Fellow of Oriel College, and Vicar of St. Mary the Virgin's,  
 Oxford.

 and Waterloo Place, Pall Mall; and J. H. Parker,  
 Oxford.

NATURE OF THE EVIDENCES.

In 12mo. 3s. boards,

**THE NATURE OF THE PROOF** of the  
**CHRISTIAN RELIGION;** with a Statement of the  
 particular Evidence for it.

"The design of this work is to exhibit the nature of the proof  
 by which the divine authority of Christianity is established: it  
 possesses very considerable merit, displaying great logical ac-  
 curacy, an honourable spirit of candour, and a sincere anxiety to  
 satisfy all reasonable doubts."—*Athenaeum*.

London: Printed for J. G., and F. Rivington, St. Paul's Churchyard,  
 and Waterloo Place; sold, also, by J. Hatchard and  
 Son, Piccadilly.

3d edition, price 3s.

### REVIEW OF NEW BOOKS.

*Rory O'More: a Romance.* By Sam. Lover, Esq., author of "Legends and Stories of Ireland," &c. 3 vols. 12mo. London. Bentley. "Give a dog an ill name, and hang it," quoth the proverb; but, with regard to a novel, though often worse used than a dog, we may say the very reverse—give it a good name, and hang it, if at all well supported, if it does not help it to succeed. In troth, a good name for a book is a very good thing; and we deem Mr. Lover lucky in having adopted that of his popular song as the patronymic of a work of fiction, like the present—destined, or we are much mistaken, to be equally, and it could hardly be more, popular. A rose, by any other name, would smell as sweet; but the benefit of the name is, that it leads us to smell the flower: then, to be sure, if it were a daffodil, we would cast it down with contempt; but, if a real, genuine queen of the garden, we would rejoice in appreciating its delicious and refreshing odours.

But what has all this to do with Rory O'More? Simply, that the author's lively ballad, so called, is a universal favourite; and that there is nothing in the production before us to lessen the favour attached to the title. Rory admired in verse, will be *More* admired in prose: the lively national lyric having only paved the way for the greater undertaking—the truly Irish, national, and characteristic story.

This is the first flight of Mr. Lover to such an extent; none of his preceding tales having occupied more than portions of a single volume;\* and the difference of effort is very considerable; for, though much and original talent was requisite to frame the delightfully humorous effusions to which we have referred, still more must be exercised in the conception, construction, and execution of a design which was not only to sustain his preceding fame, but to place him in the front rank among the foremost writers of the country in this branch of literature. In his pictures of Irish manners and Irish life there is no exaggeration, no straining after effect. Though the incidents are often striking and startling, they are, nevertheless, natural and probable. The miseries of the rebellion of 1792 are, indeed, painted with the feelings of an Irishman, but they are not disfigured by the daubings of a partisan. Events grow out of the state of society which are sufficiently strange for the pen of the novelist, and sufferings sufficiently severe for the sorrow of the patriot; yet there is such an appearance of truth over the whole, and the characters are so vividly drawn, that, while you wonder at the scenes presented, you never entertain a doubt of their reality.

Of some of these features we shall now endeavour to convey an idea, though it must of

necessity be a very imperfect one. The volumes open with a description of the cottage of the O'Mores, and nothing can be more graphic.

"In a retired district of the South of Ireland, near some wild hills and a romantic river, a small by-road led to a quiet spot, where, at the end of a little lane, or boreen, which was sheltered by some hazel hedges, stood a cottage, which in England would have been considered a poor habitation, but in Ireland was absolutely comfortable, when contrasted with the wretched hovels that most of her peasantry are doomed to dwell in. The walls were only built of mud; but then the doorway and such windows as the cabin had were formed of cut stone, as was the chimney, which last convenience is of rare occurrence in Irish cabins, a hole in the roof generally serving instead. The windows were not glazed, it is true; but we must not expect too much gentility on this point: and, though the light may not be let in as much as it is the intention of such openings to do, yet, if the wind be kept out, the Irish peasant may be thankful. A piece of board—or, as Pat says, a wooden pane of glass—may occupy one square, while its neighbour may be brown paper, ornamented inside, perhaps, with a ballad, setting forth how

'A sailor courted a farmer's daughter  
That lived conveyant to the Isle of Man;'

or, may be, with a print of Saint Patrick banishing the *serpents*; or the Virgin Mary in flaming colours, that one might take for

'The king's daughter a come to town,  
With a red petticoat and a green gown.'

But, though the windows were not glazed, and there was not a boarded floor in the house, yet it was a snug cottage. Its earthen floors were clean and dry; its thatched roof was sound; the dresser in the principal room was well furnished with delft; there were two or three chairs and a good many three-legged stools; a spinning-wheel, that sure sign of peace and good conduct; more than one iron pot; more than one bed, and one of those four-posted, with printed calico curtains of a most resplendent pattern. There was a looking-glass, too, in the best bed-room, with only one corner broken off and only three cracks in the middle; and that further damage might not be done to this most valuable piece of furniture—most valuable, I say, for there was a pretty girl in the house who wanted it every Sunday morning to see that her bonnet was put on becomingly before she went to chapel; that no further damage might be done, I say, this inimitable looking-glass was imbedded in the wall, with a frame-work of mortar round it, tastefully ornamented with cross-bars, done by the adventurous hand of Rory O'More himself, who had a genius for handling a trowel. This came to him by inheritance, for his father had been a mason; which accounts for the cut-stone doorway, windows, and chimney of the cottage, that Rory's father had built for himself. But when I say Rory had a genius for handling a trowel, I do not mean to say he followed the trade of his father; he did not: it was a gift of nature which Rory left quite unencumbered by any trammels of art; for, as for line and rule, these were beneath Rory's consideration.

This the setting of the glass proved, for there was no attempt at either the perpendicular, the horizontal, or the plane; and from the last being wanting, the various portions of the glass presented different angles, so that it reflected a very distorted image of every object, and your face, if you would believe the glass, was as crooked as a ram's horn, which I take to be the best of all comparisons for crookedness. Mary O'More, however, though as innocent a girl as any in the country, did not believe that her face was very crooked: it was poor Rory who principally suffered, for he was continually giving himself most uncharitable gashes in shaving, which Rory attributed to the razor, when, in fact, it was the glass was in fault; for when he fancied he was going to smooth his upper lip, the chances were, that he was making an assault on his nose, or cutting a slice off his chin. But this glass has taken up a great deal too much time, which, after all, is not uncommon: when people get before a glass, they are very likely to linger there longer than they ought. But I need not go on describing any more about the cottage: nobody wants an inventory of its furniture; and I am neither an auctioneer nor a bailiff's keeper. I have said Rory's father was a mason. Now his mother was a widow—*argal* (as the gravedigger hath it); his father was dead. Poor O'More, after laying stones all his life, at last had a stone laid over him; and Rory, with filial piety, carved a crucifix upon it, surmounted by the letters I. H. S., and underneath this inscription:—'Pray for the soul of Rory O'More; Requiescat in pace.' This inscription was Rory's first effort in sepulchral sculpture, and, from his inexperience in the art, it presented a ludicrous appearance; for, from the importance Rory attached to his father's soul—or, as he had it, *soul*—he wished to make the word particularly conspicuous; but, in doing this, he cut the letters so large that he did not leave himself room to finish the word, and it became divided; the word *requiescat* became also divided: the inscription, therefore, stood as follows:—

\* *Id est*, in the "Tales and Legends of Ireland," which appeared some five years ago; and, in vol. 2d of the same, which was published about two years since, both having run through several editions. And *apropos* of these volumes, we ought to warn readers against a not very creditable *rose*, by which another volume, viz. "Popular Tales and Legends of Ireland, with Illustrations by S. Lover," has been made to pass off as written by Mr. Lover: whereas he only executed the etchings for it; and, in truth, its literature would rather tarnish than reflect credit on his name.—Ed. L. G.

You were thus called on to pray for the Sow in one corner, while the Cat was conspicuous in the other.

"Besides, Rory was (we are told) not a little proud of his name. He was taught to believe there was good blood in his veins, and that he was descended from the O'Mores of Leinster. Then, an old schoolmaster in the district, whose pupil Rory had been, was constantly recounting to him the glorious deeds of his progenitors—or, as he called them, his 'owld anshint anshithers in the owld anshint times,' and how he should never disgrace himself by doing a dirty turn; 'not that I ever seen the laaste sign iv it in you, *ma bouchal*—but there's no know-in'. And sure the devil's busy wid us sometimes, and dales in timtashins, and lays snares for us, all as one as you'd snare a hare or ketch sparrows in a thrap; and who can tell the minit that he might be layin' salt on your tail unbeknownst to you, if you worin't smart?—and therefore be always mindful of your anshithers, that wor of the highest blood in Ireland, and in one of the highest places in it too, Dunamaise—I mane the rook of Dunamaise, and no less. And there is where Rory O'More, king of Leinster, lived in glory time out o' mind; and the Lords of the Pale dern't touch him—and pale enough he made them often, I go bail: and there he was—like an eagle on his rock, and the dirty English afeard o' their lives to go within miles iv him, and he shut up in his castle as stout as a ram.' In such rhodomontade used Phelim O'Flanagan to flourish away, and delight the ears of Rory and Mary, and the widow no less. Phelim was a great character: he wore a scratch wig that had been built somewhere about the year One, and from its appearance might justify the notion, that Phelim's wig-box was a dripping-pan. He had a pair of spectacles, which held their place upon his nose by taking a strong grip of it, producing thereby a snuffling pronunciation, increased by his taking of snuff: indeed, so closely was his proboscis embraced by this primitive pair of spectacles, that he could not have his pinch of snuff without taking them off, as they completely blockaded the passage. They were always stuck low down on his nose, so that he could see over them when he wished it, and this he did for all distant objects; while for reading he was obliged to throw his head back to bring his eyes to bear through the glasses; and this, forcing the rear of his wig downwards on the collar of his coat, shoved it forward on his forehead, and stripped the back of his pate: in the former case, his eyes were as round as an owl's; and in the other, closed nearly into the expression of disdain, or at least of great consequence. His coat was of gray frieze, and his nether garment of buckskin, equalling the polish of his wig, and surpassing that of his shoes, which indeed were not polished, except on Sunday, or such occasion as the priest of the parish was expected to pay his school a visit—and then the polish was produced by the brogues being greased, so that the resemblance to the wig was more perfect. Stockings he had, after a sort; that is to say, he had woollen cases for his legs, but there were not any feet to them; they were stuffed into the shoe to make believe, and the deceit was tolerably well executed in front, where Phelim had them under his eye; but, like Achilles, he was vulnerable in the heel—indeed, worse off than that renowned hero, for he had only one heel unprotected, while poor Phelim had both. On Monday, Tuesday, and Wednesday, Phelim had a shirt—you saw he had; but towards

the latter end of the week, from the closely buttoned coat, and the ambushade of a spotted handkerchief round his neck, there was ground for suspicion that the shirt was under the process of washing, that it might be ready for service on Sunday; when, at mass, Phelim's shirt was always at its freshest. There was a paramount reason, to be sure, why Phelim sported a clean shirt in chapel on Sunday: he officiated as clerk during the service—or, as it would be said amongst the peasantry, he 'sarved mass'; and in such a post of honour personal decency is indispensable."

The schoolmaster figures with much drollery throughout the narrative; but a yet more conspicuous person is a certain Mr. De Lacy (the hero) with whom Rory encounters on a coach journeying from Dublin. He is on a secret mission from the French Directory, and, being seized with small-pox, becomes an inmate of the cottage we have just described. We select a previous part of their conversation, as a sample of the dialogue:—

"The traveller laughed outright at the absurdity of Rory's expectation, that well-fitting boots for all persons were to be made by intuition. 'Faith, I thought it would plaze you,' said Rory. 'Don't you think I sarved him right?' 'You astonished him, I dare say.' 'I'll engage I did. Wanting to humbug me that way, taking me for a nash'ral bekase I come from the country!' 'Oh, I'm not sure of that,' said the traveller. 'It is their usual practice to take measure of their customers.' 'Is it, thin?' 'It really is.' 'See that, now!' said Rory, with an air of triumph. 'You would think that they wor cleverer in the town than in the country; and they ought to be so, by all accounts;—but in the regard of what I towld you, you see, we're before them intirely.' 'How so?' said the traveller. 'Arrah! bekase they never throuble people in the country at all with takin' their measure; but you jist go to a fair, and bring your fut along with you, and somebody else dh rives a cartful o' brogues into the place, and there you sarve yourself; and so the man gets his money and you get your shoes, and every one's plazed. Now, isn't that better than sitch botches as thin in Dublin, that must have the measure, and keep you waitin'? while in the country there's no delay in life, but it's jist down with your money and off with your brogues!' 'On with your brogues, you mean?' said the traveller. 'No, indeed, now!' said Rory, 'you're out there. Sure we wouldn't be so wasteful as to put on a bran new pair o' brogues to go lickin' the road home?—no, in throth; we keep them for the next dance we're goin' to, or maybe to go to chapel of a Sunday.' 'And if you don't put them on, how can you tell they fit you?' 'Oh, they're all alike!' 'But what would you do, when you wanted to go to your dance, if you found your brogues were too small?' 'Oh, that niver happens. They're all fine aisy shoes.' 'Well, but if they prove too easy?' 'That's aisy cured,' said Rory; 'stuff a thrifle o' hay into them, like the Mullingar heifers.' 'Mullingar heifers!' said the traveller, rather surprised by the oddity of the expression. 'Yes, sir,' said Rory, 'did you niver hear of the Mullingar heifers?' 'Never.' 'Why, you see, sir, the women in Westmeath, they say, is thick in the legs, God help them, the craythurs! and so there's a saying again thin, 'You're beef to the heels, like a Mullingar heifer.' 'Oh! I perceive.' 'Yes, sir, and it's all on account of what I towld you about the hay.' 'How?' said the traveller. 'Why, there's an owld joke you may take a

turn out of, if you like, when you see a girl that's thick in the fetlock—you call afther her and say, 'Young woman!' She turns round, and then says you, 'I beg your pardon, ma'am, but I think you're used to wear hay in your shoes.' Thin, if she's innocent, she'll ask, 'Why?'—and thin you'll say, 'Bekase the calves has run down your legs to get at it.' 'I see,' said the stranger, 'that is, if she's innocent.' 'Yis, sir—simple I mane; but that seldom happens, for they're commonly up to you, and 'cute enough.' 'Now, in case she's not innocent, as you say?' said the traveller. 'Faith! maybe it's a sharp answer you'll get thin, or none. It's as like as not she may say, 'Thank'ee, young man, my calf doesn't like hay, and so you're welkum to it yourself.'"

Old Mrs. O'More's desire to treat the small-pox affords another fair example.

"When Rory returned with his mother, she asked the stranger (for so we shall yet continue to call him) how he felt. He told in what manner he was suffering, and she replied by proposing to him to take a glass of whisky. The very name of the thing produced nausea to the sick man, who refused the offer with a shudder. 'See how you thrimble, sir!' said she. 'Indeed, if you b'lieve me, a good big dhrop o' whisky is the best thing you could take.' 'Don't mention it, I beg of you: I fear it is the small-pox I have caught.' 'Plaze God, I hope not!' said the widow: 'but if it is, not a finer thing in the world than a dhrop o' whisky to dhrive it out from your heart.' Thus she continued to urge the taking of ardent spirits, which, to this hour, in the commencement of every sickness amongst the Irish peasantry, is considered the one thing needful, and for the reason the widow assigned in this case, namely, to 'dhrive it out from the heart.' The heart is by them considered the vulnerable point in sickness as well as in love; so much so, indeed, that, no matter what disease they labour under, it is always called an 'impression on the heart.' So well understood does this seem to be amongst them, that even the part affected is not necessary to be named, and the word 'heart' is omitted altogether; and, if you ask, 'What's the matter with such a one?' the answer is sure to be, 'He's got an impression.' 'Mrs. O'More, said the stranger, 'I am certain it is the small-pox; and, while I may yet be moved, pray let me be conveyed to the neighbouring town, to the inn, and let not your house be visited with the disease and the contagion.' 'Oh, God forbid that I'd do the like, sir, and turn the sick stranger outside my doors when it's meet he wanted the caring for—and in an inn, too! Oh, what would become of you at all in sitch a place, where I wouldn't have a sick dog, much less a gentleman, behowldin' to! Make yourself aisy, sir; and if it's as bad as you think, we'll take care o' you, niver fear.' 'I don't fear,' said the stranger, affected by the widow's kindness; 'but it is not right that you should have this horrid disease under your roof, and all for a stranger.' 'Keep your mind aisy, dear, do,' said the widow: 'sure we're all poor craythers, God help us! and if we did not help one another in our want and throuble, it's the dark and blake world it would be! and what would we be Christhans for at all, if we hadn't charity in our hearts? I beg your pardon, sir, for sayin' charity to a gentleman; but sure it's not charity I mane at all, only tinderness and compassion. And, as for the sickness being under our roof, my childer, God be praised! is over the small-pox—iv it be it—and had it light—as well as myself: so make your mind

aisy, dear, and thrive it out from your heart with the whisky. Well, well! don't shake your poor head that way; I won't ax you to take it till you like it yourself: but whin there is an impression, there's nothin' like thrivin' it out. So I'll lave you, sir, for a while, and see if you can sleep; and I'll come in again by and by; and if you want any thing in the mane time, you can jist thump on the flure with the chair; I have put it convaynient to your hand: and the sooner you can bring yourself to take the sper'ts, the better. Well, well! I'll say no more—only it's the finest thing in the world, with a clove o' garlic, for worms or fayer, to throw out the venom.' And so, muttering praises on her favourite panacea, she left the room."

It is impossible for us to enter into the various ramifications of the conspiracies which now occupy the canvass; the appearances and transformations of De Welakein, the master of a French smuggler off the coast; and the adventures which precede the mysterious removal of several of the actors from the stage. As we cannot, therefore, shew how United Irishmen agree and disagree in these respects, we shall give a brief extract to shew generally why they fight.

"Sure, we always do challenge each other to play a match of ball or hurling, and thin, in the course of play, one man gives a false ball, or another cuts it, and thin there's a dispute about it; or in hurlin', the same way, in the hate of the game, may be the fellow before you is jist goin' to have the ball all to himself, and you afther him, hot foot, what can you do but give him a thrip? and away he goes head over heels, and if he's not disabled, there's a chance he loses his timper, and comes to thrip you—when, may be he is not so necessitated to thrip you as you wor to thrip him, and that doesn't stand to rayson in your opinion, and may be you can't help givin' him a clip o' the burl, and down he goes; and thin, may be, one o' his barony sees that, and doesn't think it raysonable, and slaps at you—and so on it goes like fire amon; flax, and the play turns into a fight in no time; and, indeed, in the long-run we find 'tis the best way of arguin' the point; for there might be some fractious sperits would dispute about the fairness o' this play, or the fairness o' that play, and that it was an accedent settled the game; but when it comes to rale fightin', there can be no words about it: for, you see, when you thrive every mother's son o' them before you, and fairly leather them out o' the field, there can be no mistake about it."

The love adventures of our hero in Paris form a amusing episode; and his and Rory's return to Ireland after the rebellion has been quelled, brings on the *dénouement* through several appalling circumstances. Poor Rory's trial for murder, and the horrible fate of the tinker who, with Regan, the brother of Rory's sweetheart, occupy important situations throughout the novel; the extraordinary verdict of an Irish jury, and a multitude of other affairs, complete the interest of the third volume—an interest which is rather augmented than impaired by the comic relief occasionally thrown in to lighten it. Thus, when Rory is assured that De Lacy will see justice done him, we read:—

"God bless him!" said Rory, "he was always good and kind to me; and tell him, if you please, sir, that I'm sinnible of all he's done for me, and even if I should die, I won't forget it all the same." "It would puzzle you to remember it after you die, O'More. But,

banish such melancholy thoughts, my man,—don't think of dying." "Faith, I hear it's a bad chance with any poor fellow who comes here of late, since the bad times. I hear they come in at the door, and go out at the window with a balkinny that has a very unsafu bottom to it; and for fear they should hurt themselves in tumblin' through it, they tie a bit of athring to thian, to brake the fall." The lawyer could not suppress a smile at this ludicrous description of the fatal drop which Rory looked forward to as his new means of exit; but, in a gentle and soothing tone, desired him to be of good cheer, and not to let his heart fail him."

The trial reminds us (though with a "difference") of that of Kishogue:—

"Larry Finnegan again attempted to descend from the table, but was interrupted by the counsel for the prosecution; and the look of despair which the countenance of mine host of the 'Black Bull' assumed was almost ludicrous. 'Is it more you want o' me?' said he. *Counsel.* A few questions. Sit down. Larry scratched his head, and squeezed his hat harder than he had done before, and resumed his seat in bitterness of spirit; but his answers having latterly all gone smooth, he felt rather more self-possessed than he had done under his previous examination by the prosecuting counsel, and his native shrewdness was less under the control of the novel situation in which he was placed. The bullying barrister, as soon as the witness was seated, began, in a thundering tone, thus:—*Counsel.* Now, my fine fellow, you say that it was for the particular purpose of asking for his crow-bar that the prisoner went to your house? *Witness.* I do.—*Counsel.* By virtue of your oath? *Witness.* By the varth o' my oath.—*Counsel* (slapping the table fiercely with his hand). Now, sir, how do you know he came for that purpose? Answer me that, sir. *Witness.* 'Faith, thin, I'll tell you. When he came into the place that morning, it was the first thing he ax'd for; and by the same token, the way I remimber it is, that when he ax'd for the crow-bar he hint me, some one stan'in' by ax'd what I could want with a crow-bar; and Rory O'More with that said, it wasn't me at all, but the mistriss wanted it (Mrs. Finnegan, I mane). 'And what would Mrs. Finnegan want wid it?' says the man. 'Why,' says Rory, 'she makes the punch so athrong, that she bent the spoons athrin' to stir it, and so she borrowed the crow-bar to mix the punch.' A laugh followed this answer, and even Rory could not help smiling at his own joke thus retailed; but his mother, and Mary, and Kathleen, looked round the court, and turned their pale faces in wonder on those who could laugh while the life of him they adored was at stake; and the sound of mirth at such a moment fell more gratingly on their ears than the fierce manner of the bullying prosecutor. But the witness was encouraged; for he saw his examiner annoyed, and he took a hint from the result, and lay in wait for another opportunity of turning the laugh against his tormentor. He was not long in getting such an opening; and the more he was examined in hope of shaking his testimony, the less the prosecutor gained by it. At length the counsel received a whisper from Sweeney, that the fellow was drunk. 'He has his wits most d—nably about him, for all that,' said the lawyer. 'He has been drinking all the morning—I can prove it,' said Sweeney; 'and you may upset his testimony, if you like, on that score.' 'I'll have a touch at him, then,' said the lawyer. When the jury perceived the same witness still kept on the table, and a re-examination for the prosecution en-

tered upon, they became wearied, and indeed no wonder; for the silk-gowned gentleman became excessively dull, and, had he possessed any tact, must have perceived from the demeanour of the jury that his present course of proceeding was ill-timed. Yet he continued; and, in violation of all custom, sought to invalidate the testimony of the man he himself had called as a witness: but Larry's cross-examination having favoured the prisoner, the crown counsel became incensed, and abandoned all ceremony and discretion, which at length was noticed by the bench. 'I beg your pardon, my lord, but I am anxious to sift this witness.' 'By gor!' said Finnegan, 'if you wor to sift me from this till to-morrow, the devil a grain more you'll get out o' me!—and indeed you've been gettin' nothin' but chaff for the last half hour.' The answer had so much of truth in it, that the counsel became doubly annoyed at the suppressed laugh he heard around him; and then he determined to bring up his heavy artillery, and knock Larry to atoms. *Counsel.* Now, sir, I've just a question or two that you'll answer by virtue of your oath. *The Bench.* Really, Mr. ——. *Counsel.* I beg your lordship's pardon—but it is absolutely important. Now, by virtue of your oath, haven't you been drinking this morning? *Witness.* To be sure I have.—*Counsel.* How much did you drink? *Witness.* 'Faith, I don't know; I never trouble myself keepin' 'count, barrin' I'm sarvin' the customers at home.—*Counsel.* You took a glass of whiskey before breakfast, of course? *Witness.* And glad to get it!—*Counsel.* And another after?—*Witness.* Av course—when it was to be had.—*Counsel.* When you came into the town, you went to a public-house, I hear, and were drinking there, too, before you came into court?—*Witness.* Oh, jist a thrille among some frinds.—*Counsel.* What do you call a trifle?—*Witness.* Four pots a' porther and a quart o' sper'ts.—*Counsel.* Good God! Gentlemen of the jury, listen to this:—a gallon of porter and a quart of whiskey!—*Witness.* Oh, but that was betune six iv uz!—*Counsel.* Then, sir, by your own account, you're drunk at this moment.—*Witness.* Not a bit.—*Counsel.* On your oath—remember your oath, sir—do you think, after drinking all you yourself have owned to, you are in a state to give evidence in a court of justice?—*Witness.* 'Faith, I think a few glasses only helps to brighten a man!—and, betune ourselves, Counsellor ———, I think you'd be a grate dale the better of a glass yourself this munit.' The laugh which this rejoinder produced finished 'the counsellor,' and he sat down without roaring, as usual, at the witness, 'Go down, sir.' But Larry kept his seat until the laugh was over; and, not receiving the ordinary mandate to retire, he looked at the discomfited barrister with the most provoking affectation of humility, and said, 'Do you want me any more, sir?' This renewed the laugh, and Finnegan retired from the table under the shadow of his laurels."

We cannot conclude without giving two specimens of the lyrical compositions which enrich these volumes—the one charmingly poetical, and the other fanciful and lively; and neither unworthy of the charming songs of the author, now sung in every corner where music is heard.

"The Land of Dreams.

There is a land where Fancy's twining  
Her flowers around life's fading tree,—  
Where light is ever softly shining,  
Like sunset o'er a tranquil sea.  
'Tis there thou dwelt'st in beauty's brightness,  
More fair than aught on earth e'er seems;  
'Tis there my heart feels most of lightness,—  
There, in the lovely land of dreams!

'Tis there in groves I often meet thee,  
And wander through the sylvan shade.  
While I in gentlest accents greet thee,  
My own, my sweet, my constant maid!  
There, by some fountain fair reposing,  
Where all around so tranquil seems:  
We wait the golden evening's closing.—  
There, in the lovely land of dreams!  
But when the touch of earthly waking  
Hath broken slumber's sweetest spell,  
Those fabled joys of Fancy's making,  
Are in my heart remember'd well!  
The day, in all its sunshine splendour,  
Less fair to me than midnight seems,  
When violons shed a light more tender  
Around the lovely land of dreams!"

*"The Wind and the Weathercock."*

The summer wind lightly was playing  
Round the battlement high of the tow'r,  
Where a vane, like a lady, was staying.—  
A lady vane perch'd in her bow'r.  
To peep round the corner the wind would try:  
But vane, you know, never look in the wind's eye;  
And so she kept turning slyly away:—  
Thus they kept playing all through the day.  
The summer wind said, 'She's coquetting;  
But each belle has her points to be found:  
Before evening, I'll venture on betting,  
She will not then go, but come round.'  
So he tried from the east, and he tried from the west,  
And the north and the south, to try which was best;  
But still she kept turning slyly away:—  
Thus they kept playing all through the day.  
At evening, her hard heart to soften,  
He said, 'You're a flint I am sure:  
But if vainly you're changing so often,  
No lover you'll ever secure.'  
'Sweet sir,' said the vane, 'It is you who begin,  
When you change so often, in me 'tis no sin.  
If you cease to flutter, and steadily sigh,  
And only be constant—I'm sure so will I.'

One feature more requires to be noticed, a new one in this species of publication; namely, fifteen very clever and characteristic etchings, with which the pencil of the artist has illustrated the pen of the author. They are extremely clever and full of character.

*Early English Poetry.* Edited by Thomas Wright, B.A. Printed in the Black Letter, with Prefaces and Notes.—1. *The Turnament of Tottenham and the Feast*.—2. *The Nutbrowne Maid*.—3. *The Tale of the Basyn, and that of the Frere and the Boy*.—4. *Songs and Carols*.—4 vols. square 16mo. London, 1837. Pickering.

If there be a Roxburghe Club in the pleasant land of Faëry, and a Whittingham Press dedicated to the black-letter revellings of the antiquaries of Elf Land, the elegant little volumes whose titles we have just transcribed must surely have emanated from their joint labours. But a truce to jesting: these little Roxburghe, as we have heard them very aptly designated, contain some of the choicest specimens of early English poetry, which are none the less valuable for being of a popular character. The two ballads which form the first part are very early specimens of humour and burlesque, and filled with that jovial spirit which has gained for our father-land its well-known name of "Merry England." The old proverb couples a fray and a feast; and, in these two poems, they follow one another very naturally. The commendations which Prior and the Bishop of Dromore have bestowed upon the "Nutbrowne Maid," render all praise on our part quite unnecessary: we cannot, however, refrain from expressing our satisfaction at having so nice a reprint of it in its earliest form. The "Tale of the Basyn" and "The Frere and the Boy" are two early tales of magic, printed from MSS. preserved in the public library at Cambridge; and right laughable ones they are withal. They have both been long popular in England, and figure, also, in the traditional literature of Germany and Scandinavia. The story of the "Jew in the Bush," in Edgar Taylor's delightful collection of "Ger-

man Popular Stories," exhibits one of the most recent forms in which one of these wide-spread stories has appeared. The songs and carols from a manuscript in the Sloane Library are by no means the least interesting division of this agreeable series. They are very varied in their character, ranging from the pious carol to the homely ditty which the ploughman sung at his work or his ale. Several of the former are extremely pretty, and characteristic of the tone of popular religion in those days. We subjoin a couple of the other songs to which we have alluded. The first contains a caution to all young men matrimonially disposed, which in spirit coincides with the canonical injunction against marrying one's grandmother.

"Yung men, I warne yu every one,  
Olde wyvys tak ye none,  
For I myself have one at home:  
I dare not speke when she says 'peace.'

When I come fro the plow at none,  
In a riven dish my mete is done,  
I dare not asken our dame a sponse:  
I dare not, &c.

If I aske our dame bred  
She takith a staf, and brekith myn hed,  
And makith me run under the led:  
I dare not, &c.

If I aske our dame fleysh,  
She brekith myne hed with a dysch,  
Boy, thou art not worth a rysh;  
I dare not, &c.

If I aske our dame chese,  
Boy, she sayth, al at ese,  
Thou art not worth half a pece:  
I dare not speke when she sayth 'peace.'

We earnestly recommend the foregoing to all Benedicts in prospect. Should they, however, neglect its friendly caution, they may have to seek solace in the wine-pot, to which this collection affords the following most appropriate accompaniment, which is a curious and very early specimen of the Bacchanalian lyrics of the olden time:—

"Omnes gentes plaudite:  
I saw many byrddes setyn on a tre:  
They tokyn they fleyght and flew away,  
With, ego dixi, have good day.  
Many whyte feders hath the pye:  
I may no more syngen, my lypes are so drye.  
Many whyte feders hath the swan:  
The more that I drynke the lesse good I can.  
Lay stykkes on the fyre, wel may yt bren;  
Gyve us ones to drynke, er we go henn."

Great as is the value which these choice reliques of the ancient poetry of England possess in our eyes, this collection is rendered doubly acceptable to us by the introduction, and glossarial and explanatory notes, with which the editor has accompanied them. The poems themselves are either first editions, or printed, for the first time, from earlier and better manuscripts than have hitherto been used: while the editor's philological knowledge has rendered his share of the work not only exceedingly valuable, in illustration of the poems he has here collected, but, also, in regard to the state of the language generally, and the social manners of the age in which they were composed. The notes to the "Feast of Tottenham" display a view of the culinary art in those days, which Kitchener would have rejoiced at.

We cannot close this notice without speaking in the highest terms of the manner in which these books are got up. The woodcuts, which are facsimiles from very ancient drawings, bearing an amusing analogy to the subjects referred to, are perfect gems.

*The Star of Seville, a Drama: in Five Acts.*  
By Mrs. Butler (late Miss Kemble). Pp. 146.  
London, 1837. Saunders and Otley.

INSPIRED by reading our elder dramatists, this is a clever production; imitative, but displaying considerable talent and force. The plot is deeply tragical, yet the greater portion

of the dialogue is of a comic nature, and maintained by idle ruffling gentlemen; a most conceited ass, named Hyacinth; two prating girls, Florilla and Isabel; servants, and other inferior characters. The pathetic and the ludicrous are jumbled together without much discrimination, and the jar upon the mind is frequently unpleasant. We cannot step on the instant from the scene of murder and despair to the revel of a tavern, or the pranks of sportive young ladies: the strings are out of tune, and the whole instrument jangles sadly with the ill-timed jesting. Thus, Act V., after the most afflicting scene in the tragedy, begins—

"Isabel. Ha! ha! ha! ha! I prythee give me leave, there shall no play—ha! ha! no acted play—shew better—ha! ha! ha!"

Florilla. Now now, but, cos—come, cos—come, Isabel; stint laughing, and let's to work.

Is. Pry heaven I did not on't!—ha! ha! ha! Is. Beshrew thee, then! what, wench, hast lost thy wits?—marry, cos, cos! Hang thee, vexatious minx! thou putt'st me past my patience.

Is. I have not put thee far; ha! ha! is't not a jest? is not a jest a thing to laugh at?

Fls. Yes, but not this jest—lo you now, Isabel, we lose the time, he will be here, and nothing ready. My father will be coming, or Vasco, or — and we shall lose the very prime of our sport, for thy laughing.

Is. Nay, that were a bad joke at best. Where be these diamonds?

Fls. Here, in this casket: I prythee put them in my hair for me—quick.

Is. Meantime, do thou tell me, what for thou hast indicted this same amorous clothes'peg?

Fls. Marry, first in the street, as thou saw'st his outward man did hit my fancy's humour, as shewing him very fit—

Is. For a very mad jest—where shall I place this band?

Fls. So, o'er the brow: 'twas so my mother wore it: they were her wedding diamonds, rest her soul!

Is. Amen!—and second, how? good preacher, finish thy points, though they were fifty.

Fls. Why, I have since learned, that this same many-coloured fly is the veriest braggadocio that ever flinched from a chaste woman's frown: fetch me yon mirror.

Is. Angels defend us! and where heard'st thou this?

Fls. Pedrillo late last night was with them at the Anchor, where, as thou know'st, they drank the sun to his bed, and well nigh out of it again; among the guests was this same resistless wooer, who, as he saith, did utter such incredible tales of his amorous exploits, and did in such wise misprize and set at naught us luckless women, holding the conquests that he made by handfuls as cheap as handfuls of dust, that Pedrillo swears he must have lov'd more ladies than would people all the seraglios of the East.

Is. Is he rich? he sure must be; for he hath no charm else to tempt the veriest wanton—he must be very rich.

Fls. Tut, dost thou believe all this; credit me, cos, if there be knowers of such a sort as this fellow would pass himself for, there be also fools that have enough iniquity in them to wish for a villainous renown which they have not the daring to achieve, and who think by boasting and big words to make good their claim to an infamous repute which they have not the boldness to merit in very deed—and such an one, or I am much deceived, is this. Among many others did he tell the tale of this same Segovian lady, to whom he said he was by contract bound. This is the fair forsaken thou must enact, and it shall go hard if between us we do not shew this same all-conquering sinner the mettle of our Seville ladies.

Is. Art thou not horribly afraid of being alone with one so badly reputed?

Fls. Affraid! I'll tell thee, Isabel, it is our weakness makes these boasters strong. Credit me, did we but know and feel our footing firm, making a high and resolute mind in us standstead of outward and mere bodily vigour, there's not the boldest braggart of them all but should strike colour to the veriest maid that ever bore our sex's blushing standard on her cheek. But for this mannikin—did'st look in his face?

Is. I looked for his face; but indeed he was so monstrously bearded that he may have one or no for aught mine eyes can vouch.

Fls. Faugh! a beard becomes a man as well as the want of it becomes a woman; but to see such a villainous bush of hair on the skin of what hath the minging gait and leaping syllables of a pampered wanton, begets a very disgusting indignation in me. But come, Isabel, unbend thy hair, I prythee, so, upon thy shoulders—now put me on a look like the forsaken Dido—could'st thou not weep me a tear or two?

Is. I'll use all endeavour.

Fls. Now spread thine arms abroad thus: weep, rant, rave, be disconsolate; remember he hath deserted thee, and thou hast followed hither to claim him."

We cannot say that we like the humour of this sort of thing by itself; but being misplaced, as we have noticed, it becomes still less relishable. We would also remark upon the want of feminine delicacy which its language

evinces; and, indeed, there are certain points in the *Star of Seville* which it rather surprises us a female hand should have written. It is a pity that some judicious friend of Mrs. Butler did not overlook the manuscript, and prevent her from publishing, in the vivacity of her mind, and without remembering that what was consistent with the manners of the age in Shirley, or Beaumont and Fletcher, is not tolerated from any quarter in our more refined time, the unfit allusion put into the mouth of Valentine (page 83), and nearly all the conversation between Hyacinth and Sancho (pages 99, 100), which is not quite proper for the decorous muse. But we are glad to dismiss the topic, and forget it in the following curious bit of composition:—

"We were as like two brothers, my Estrella,  
More like than many that do call one woman mam."

Having now discharged the disagreeable part of our critical duty, we shall proceed to quote a few examples of passages which demand our praise: thus, the description of the heroine:—

"A young maiden's heart  
Is a rich soil, wherein lie many germs  
Hid by the cunning hand of nature there  
To put forth blossoms in their fittest season;  
And though the love of home first breaks the soil,  
With its embracing tendrils clasping it,  
Other affections, strong and warm, will grow,  
While that one fades, as summer's flush of bloom  
Succeeds the gentle budding of the spring.  
Maid must be wives, and mothers, to fulfil  
Th' entire and holiest end of woman's being."

The dialogue between the lovers on the eve preceding their marriage is also very natural and touching.

"Carlos. There's nothing half so fair, or half so holy;  
There's nothing half so wise, or half so lovely;  
Nothing so wholly good and excellent,  
As thou, my dear one! Thou art the very breath  
That in me breathes; the blood within my veins,—  
Heart of my heart, and spirit of my spirit;  
My nearest and dearest life, my essential self!  
Estrella. Pray leave protesting, sir, unless you wish  
To burn my blushes out; I shan't have one  
To help me look becomingly to-morrow,  
An' you waste them all to-day."

Carl. To-morrow! Estrella,  
Tell me, tell me, dost thou love me  
As I love thee?

Est. No, by this living light!  
Not as thou lov'st me; not in the self-same way.  
For that's a question I could ne'er have asked thee.

Carl. Why not?

Est. Why not? Because—here comes my brother."

The following is of a yet higher quality:—

"Est. Oh, nature knows no other coin for joy  
Or grief, but melts them both alike in tears.  
I have a thousand stifling feelings press  
My heart to bursting; joy to the height of pain  
Comes like a flood upon my every sense;  
Thy voice runs through my frame like the soft touch  
Of summer wind; thy trembling harp-strings playing,  
Thy gentle words and looks that, though I love,  
I dare not meet, make my soul faint within me.  
Oh! Carlos, there is pain in this deep pleasure,  
And e'en our joys taste of earth's bitter root;  
Besides, there is a thought that, hand in hand  
With the sweet promise of our marriage, comes  
Like shadow upon sunlight—I must go  
From my dear home—the home of all my life,  
Where I have lived, oh! such a happy time!  
Aurora's tears are not more like each other  
Than the bright ever-blessed maiden hours  
That the sun of time has, one by one, dried up."

And again:—

"Est. 'Tis a strange life; and in my hand I hold  
Its strangest riddle: a throbbing, restless joy  
Beats in my heart, and flutters there like fear;  
My little day of life comes back o'er me:  
My past existence, Heaven has made it sweet,  
Unmixed with any taint of bitterness;  
And the bright future, like a sunny land  
Descried afar, stretches like paradise  
In rosy bowers and golden fields before me.  
Farewell, my home! farewell, my pleasant chamber,  
Where time and I have still been gay companions;  
Farewell, my virgin couch, which I shall press  
No more with slumbers light, and smiling dreams,  
That were not brighter than reality.  
Night spreads her raven wings, and nears the earth:  
My blood's on fire! Oh, for a breath of air  
From the cool gardens underneath the balcony!  
Once more I'll listen to the rustling boughs,  
Beneath whose leafy screens I've 'scaped the sun  
Of eighteen summers; and, for the last time,

Mark how the moon-beams pierce the crystal folds  
Of yonder fount. Sleep hangs upon them all;

The trees do rock, the waters flow in sleep,  
The sleepy stars wink in their sapphire beds,  
The air breathes gently, heaving in its sleep,  
And the round world spins sleepily on its axis.  
I'll to my couch; mine eyes reflect no more  
This earth's fair picture:—'tis night, 'twill soon be  
morrow.

Now then to dream of him, till he returns.  
Fare thee well, sweetheart!—Good night, Carlos,—  
husband!"

With this we conclude, and will not mar the interest of the piece either by further quotations, or by entering upon the story. As a whole, we presume the writers of the country whence it is imported would apply the term "talented" to it; it reaches no higher standard.

*History of the Afghans; translated from the Persian of Neamat Ulluh. Part II.* By Bernhard Dorn, Ph. D. &c. &c. 4to. pp. 131. London, 1837. Printed for the Oriental Translation Fund. Valpy.

AFTER a lapse of five years, Dr. Dorn has, at length, presented us with the conclusion of this very curious work. It consists of memoirs of the Afghan saints, and the genealogies of the various ruling families. The style is very amusing, more particularly the inflated oriental epithets, such as "that principal pole of the globe of sanctity!" that "crocodile in the sea of unity!" that "falcon of the religion of the saints!" that "hero on the field of retirement!" &c. We must give our readers some specimens of the wonders worked by these crocodiles and falcons.

"When the Khuja was one day reciting the praises of the Almighty, his heart fell out of his mouth. Upon this, he ordered his servants to wrap it up, broken and burnt as it was, in white linen, and preserve it till his death, to put it with him into his grave; which request his attendants faithfully executed."

This must be a great comfort to other heartless persons.

"That investigator of truth, and revealer of mysteries; that flower of the just, and essence of the pious, Sheikh Mati Khalil, was a strict ascetic. They constituted him the head of twelve Sarbanni clans; and the Afghans flocked in numbers to him, to become his pupils. When the rumour of his miracles had spread over the whole world, Sheikh Kutahr Kasi came to try them; and proudly asked him, 'Do you style yourself the head of twelve clans?' To which he answered, 'Yes.' While they were one day seated on the banks of a river, Sheikh Hassan said, 'The ocean consists of water; and this river, on the banks of which we sit, consists of water, too: dive down, and fetch up pearls.' To this, Sheikh Mati replied, 'O Hassan! the diver gathers pearls in the ocean; but a saint should dive under ground, and pick up pearls from thence.' Sheikh Hassan Kasi saying, 'In the name of God!' Sheikh Mati ordered his youngest son, Hassan, to dive under ground, and, filling both his hands with pearls from the Almighty's subterranean treasury, to bring them up. The ground, where he was standing, opened; and young Hassan dived down, and reappeared with his hands full of pearls, which he laid before Sheikh Hassan Kasi. Upon that, he desired to dive down himself, to procure pearls; but when he got down as far as his knees, Sheikh Mati struck his hand upon the ground, and exclaimed, 'Do not allow Hassan Kasi to dive!'—in consequence of which, the latter could only with the greatest difficulty extricate his knee from the ground. He then seized the

foot of Sheikh Mati Khalil, and said, 'I am now fully convinced of thy greatness.' But God knows best the truth of this.

"That chief saint (Ghouth) of his time, Shah Bakhtiar, who resided in the village of Haykhaneh, was a revealer of mysteries, a distinguished saint, and continually pining for the Deity. When he retired to perform the forty days' fasts, he used to take with him forty cloves. Almost all the Hadjis, that came to pay him their homage, addressed him with the words, 'O sheikh! when did you return from holy Mecca? for we have there, also, offered you our respects.' One day, his servants, perceiving his clothes to be wet, inquired the reason of it. He answered, 'The ship of one of our friends being wrecked, I went to its assistance.' Some time after, that very friend arrived, and related to him that, his ship being sunk at a certain place, he had vowed it to the sheikh; in consequence of which, God Almighty saved it from destruction. When the fame of the sheikh, and of his high qualities, spread abroad, the sheikhs of that place, out of envy, despatched robbers to assassinate him. The latter, accordingly, entered his bed-room; but, beholding all the limbs of the sheikh fallen asunder, and the head separated from the body, they were struck with terror. They then gave information of this to the envious; and from that day, the superior dignity of the saint was acknowledged, and the envious themselves became his pupils. But God knows best the truth of this.

"That pole-star of the saints, and evidence of the devotees; that chosen of the Deity, and wave in the ocean of eternity, Sheikh Ali Sarvar Lodi Shahu Khail, was one of the distinguished individuals amongst this tribe. He lived in the village called Gahrur, belonging to Mooltan. He was very devout; his prayers were always fulfilled, and his sight was blissful. The people of the contiguous districts ranged themselves in the series of his disciples. During thirty years, he never lay down, nor indulged in sleep. One day, while sitting in the mosque, a barber came in to shave him, but immediately lost the use of his eyes. Now, every person that Sheikh Najm Uddeen cast his sight upon obtained the gift of revelation. He, therefore, smiled, and said that this was very easy. When the barber finished his work, he felt himself in a wonderful state, and discoursed on the revelation of mysteries. He laid down his avocation, and devoted himself to an ascetic life; and people used to have recourse to him for the relief of their wants. Several pieces of timber having been carried to the sheikh, to repair his house, ten thieves, during the night, stole some of the pieces, put them upon their heads, and went away. On their arrival at home, they attempted to take their burdens off their heads, which, however, in spite of all their efforts, they could not effect. Being frightened in the extreme, they carried the timber back to the place where they had stolen it. In the morning they came to the sheikh, and confessed their guilt. His noble descendants at present are the resource of high and low, and his progeny and tribes are well settled."

The notes exhibit very great erudition, and are highly valuable.

*The Works of Richard Beniley, D.D.* Collected and edited by the Rev. Alexander Dyce. 8vo. Vols. I. and II. London, 1837. Macpherson.

WE are glad to see, at last, the works of the father of (and also the best of) our critics published collectively; and we are surprised that

it has not been done long ago. Every thing that Bentley wrote is excellent in its kind. No man was ever so acute and judicious in his criticisms, so convincing and logical in his arguments, with such extensive and profound learning, as the writer of the "Dissertation on the Epistles of Phalaris."

The famous controversy on the authenticity of these Epistles, which may truly be looked upon as one of the most remarkable events of the close of the seventeenth century, and which (as we learn from his letter to Evelyn) the antiquarian Gale "abominated" at the time, but which left in this Dissertation so valuable a legacy to posterity, arose, as is well known, from one of the most paltry squabbles that can happen among men of letters. So often do small things produce, unexpectedly, great results! From Christ's Church, Oxford, under the name of Boyle, issued an edition of the "Pseudo-Phalaris," with a personal attack upon the great critic: it was answered in a slight, but skilful essay, appended to another person's book: this called forth the united strength of Christ Church, in the shape of an "Examination;" and was followed by the immortal "Dissertation," of which Mr. Dyce has rightly observed that, "in the just arrangement of the matter, in the logical precision of the arguments, and in the readiness and skill with which the most extensive and refined erudition is brought to bear upon the points contested, it is, perhaps, unrivalled by any single work. Enriched with incidental disquisitions on many different topics of classical learning, it will ever be prized by the student as a storehouse of important information. It is animated by a vein of genuine humour; and its diction is always airy, though sometimes coarse and sometimes pedantic."

The two first volumes of Bentley's works contain the "Dissertation on Phalaris;" the other Dissertations, which formed the Appendix to Wotton's "Essay on Ancient and Modern Learning;" and the celebrated "Epistola ad Millium," which was originally appended to the Oxford edition of John Malelas. The whole will, it is expected, extend to about six volumes, in octavo. The second volume is nearly ready, and will contain Bentley's theological writings; among which are the sermons, and the admired answer to the infidel Collins. We have carefully looked through these two volumes, and can safely say, that Mr. Dyce is a good scholar and a careful editor. Bentley could not have fallen into better hands.

*M. A. Plauti Menæchmi, cum Notis ac Glossario, ad Textum præcipue Bothei.* Edidit Jacobus Hildyard, A.M. Coll. Chr. Soc. 8vo. Cambridge, 1837. University Press.

WE take the occasion presented by the foregoing article, to glance at the work of a critic, and a good critic too, of the present day. There is no writer who has been so much neglected in the ordinary course of classical education, and who, at the same time, deserves so much to be generally studied, as Plautus; and it is with unfeigned joy that we see, at last, a prospect of having his several comedies laid successively before our rising scholars in a more tangible form. Mr. Hildyard, who is well known by the distinguished manner in which he has passed through the university, has taken for his model in arrangement the well-known editions of the Tragedies of Æschylus, by the present Bishop of London. His notes are, where necessary, critical; but they are more generally explanatory and glossarial, which are still more requisite in a writer like Plautus.

Another play, we believe, is in an advanced state. Mr. Hildyard is a scholar of whom the university may be proud.

While we praise the editor of this book, we must not forget the syndics of the University Press, by whose liberality it has been printed. In these days of change, the universities, like all our old institutions, must be attacked; but we trust the storm is passing by, and that they, at least, will survive its fury uninjured. There are those who are hungry for the spoil; but, we believe, to counterbalance their efforts, there is too great a weight of those who understand, and have participated in, the advantages of these noble institutions, to allow of their being touched. The only persons who can be hostile to them must be either those who are ignorant of their system and its working, or those who have passed through them unworthily. They are kind mothers to their children: from the moment a person enters the university, if he shews himself worthy of support, he will never want a powerful patron, who will hold him up in the world without any of the humiliating circumstances which are too often attendant on other patronage. A scholar, who is a member of the university, is truly a privileged man; and his privileges, if he know how to use them, are such as no other person nor body can confer.

#### MISCELLANEOUS.

*The Pirate of the Gulf; or, Lafite.* 2 vols. London, 1837. Newman and Co.

THIS is not a very original idea, but the story is well told, and the interest well kept up; so that the whole is certainly very superior to the common run of novels. The "Pirate" will, therefore, be acceptable to readers of that class of works, and a profitable book for the circulating libraries. The narrative is too continuous to admit of extract.

*Major Richardson's Movements of the British Legion in Spain, &c.* 2d edition. (London, Simpkin and Marshall.)—This second edition is rendered more valuable and interesting by the strictures which are added on the war from May 1836 to the late disastrous events at Hernani. The author loudly condemns the conduct of General Evans in the conduct of his last operations, points out his military errors, charges him with courting the Spaniards at the expense of his countrymen, and accuses him with most unjustifiable severity and cruelty towards the latter. We have no doubt but these and other allegations will form part of Sir Henry Hardinge's exposition which stands for immediate discussion in the House of Commons. [This notice was written for last week, but not inserted for want of room. Our anticipation has been largely fulfilled by the debates.]

*Novels of Nature*, by Mrs. Chadwick. Pp. 312. (London, Longman and Co.; Bristol, Davey.)—Two tales of moral tendency.

*The Poor Churchman's Quarterly Magazine*, edited by the Rev. T. K. Arnold, M.A. Vol. I. (London, Rivingtons.)—A cheap and useful collection of creeds, tracts, extracts, &c. which may be perused with advantage by either poor churchmen or dissenters, if the latter may not be included in the epithet *poor churchmen*!

*An Essay concerning the Nature of Man*, by John Dayman. Pp. 159. (London, Longman and Co.)—The author contends and quotes Scripture largely in support of his argument, that the immateriality of the soul is nowhere maintained as a Scriptural doctrine.

*Arithmetic Illustrated by Woodcuts*. Invented and arranged by Arthur Parsey. 12mo. pp. 44. (London, Longman and Co.)—We agree with Mr. Parsey, that "the accordance of figures with forms, arranged according to the popular rules of arithmetic, which is here presented, will assist the apprehension of youth of both sexes." Children are incapable of abstract reasoning; and any attempt to make them comprehend it, puzzles, not enlightens them.

*The Young Dullest; or, the Affair of Honour.* Pp. 108. (London, Simpkin and Marshall; Darton and Harvey; Hailes.)—A tale said to be founded on fact, and possessing interest enough to excite the attention of juvenile readers.

*Woodland Gleanings*, by the Editor of "Sentiments of Flowers." With numerous illustrations. Pp. 183. (London, Tilt; Edinburgh, Menzies.)—This is a sweet, pretty volume, full of agreeable miscellaneous literature and pleasing anecdotes. It describes all our forest-trees, and has an engraving of each; mingling together history, fancy, poetry, and botany, in a manner at once highly picturesque and instructive. The prints are almost as numerous as the leaves on trees, and very tastefully executed. We would say, that altogether it is peculiarly a

production for the lady portion of creation, and the youthful lover of the country.

*Remarks on the Four Gospels*, by W. H. Furness. Pp. 309. (London, Fox.)—Mr. Furness entertains rather singular notions on the subject of Christ's miracles: and also takes a peculiar view of the personal character of the Saviour, and of the facts recorded of his life. His volume, therefore, is one which would lead to much variety of opinion and controversy; and, consequently, is one of which all we shall say is, that, however men may differ from the writer, it is hardly possible to doubt that his purpose in seeking the truth is honest, and his faith of a finely natural and feeling order.

#### ARTS AND SCIENCES.

##### EGYPTIAN ANTIQUITIES.

[Pyramids: Sphinx: latest Discoveries.]

WE have been favoured with the following account of the discoveries of Captain Caviglia, from a gentleman long resident in Egypt, and who is capable of appreciating their importance; and, with a view of obtaining the most authentic information upon the subject, he has applied to Captain Caviglia himself, and submitted it to his inspection previous to sending it. We give the document, translated from the French, in the original form in which we have received it.

"Captain Caviglia is well known by the researches he made, in 1817, in the interior of the Great Pyramid, by the discovery of the temple between the paws of the Sphinx, and by his laborious exertions in the examination of other monuments. In the year 1820, he recommenced his researches in the Great Pyramid. He had been anxious to ascertain the nature and use of the small apertures at the two sides, the north and south, of what is called the king's chamber, and had put up a number of sticks, fastened together in the form of a long rod, to the length of 120 feet; but this had no further result than the persuasion, that other chambers existed in the pyramid. Unprovided with implements capable of cutting the granite with which the interior of the chamber is lined, there was no possibility of enlarging these apertures, which are only about a foot in diameter; he therefore determined on cutting a passage through the limestone blocks behind the granite, and thus reaching the north-west one, which evidently passed in that direction. An opening of 15 feet in length having been made, the channel leading from the aperture in the chamber was discovered, and it was found to run towards the west, ascending at an angle of 27°; but after continuing his examination of it by the same means as before resorted to, nothing further could be ascertained respecting its communication with another chamber, or its probable direction beyond that point. Something, it was hoped, might be determined by making another lateral opening, behind the granite, on the opposite side; and Captain Caviglia commenced this arduous undertaking from above, at the south-eastern corner of Davison's chamber, which lies immediately over that of the king, and succeeded in cutting through the masonry, to the distance of 20 feet. With the limited means at his disposal, he was, however, obliged to abandon the attempt after so much labour; and the use of those channels, and their extent, still remain unknown. In the same year, Captain Caviglia recommenced his researches around the Sphinx. In 1817 he had laid open the north and east sides of that colossal monument, and in 1820 he uncovered the western portion, and found it to be seated on a pedestal, surrounded by a fosse, cut in the rock, which he imagined to be intended as a channel for water derived from the canal, whose existence he inferred from the bridge in the middle of the causeway, to the south of the

trees, in the hollow ground, some distance in front of the third pyramid."

Here we must be allowed to make a few remarks on the supposed canal, noticed by the writer, and by Captain Caviglia. The idea is partly derived from the account of Herodotus, and partly from the appearance of the bridge at the causeway; but, as the level of the Nile was formerly considerably lower than at present, and is still far below that of the plain and hill of the pyramids, it is evident that the water could only be raised to that height by artificial means, and could not be brought by any canal communicating with the river; the bridge in the causeway was merely intended as an opening, to enable persons travelling along the edge of the desert to pass the causeway, which would otherwise have interrupted the road that way; and the ponderous masonry covering it forms a necessary part of the causeway, over which the stones were taken to build the third pyramid. The northern causeway had a similar opening for the same purpose; and the purport of these openings, and the position of the surrounding objects, may be readily perceived in the plan of the pyramids attached to Mr. Wilkinson's "Survey of Thebes."

"While Captain Caviglia was making these researches, he discovered the remains of numerous buildings, houses and tombs, with a capacious cistern, hewn in the rock, about five miles to the north-west of the Great Pyramid, near the village of Kerdassah. There were no traces of hieroglyphics, or of other inscriptions, which would lead to any discovery relating to the town which once stood there; but, supposing that other ruins might be discovered in the vicinity, these researches were continued, and an inclined road, of considerable breadth, and solidly constructed, was observed to lead to the summit of a hill, a short way up the valley. He was delighted and surprised by finding that it led to a platform, which was partly occupied by a stone pyramid, about 300 feet square, surrounded by other smaller pyramids of granite; and the upper portion having fallen, or been purposely removed, the chamber, or hollow space of the interior of the pyramid, was exposed to view. It was cut in the rock, and an inclined passage led down to it from without, on the north side. Few tiers of stone remained of the upper part; but it was remarked, that the granite was much injured by time, and sometimes completely decomposed: and Captain Caviglia concluded, from this, and from the general appearance of the ruin, that it must have been of a date anterior to the erection of the pyramids of Gezeh, where the granite remains in a very perfect state of preservation; though no mention is made of it, nor of the town near which it stood, by any ancient writer. These researches were continued till the year 1821, when Captain Caviglia went to the Memphis, with a view of examining the site and ruins of the ancient city. He had the good fortune there to discover the beautiful colossus of Sesostris (Remeses the Great), which has been so much spoken of in Europe, and which is supposed to be one of those said, by Diodorus, to have been erected at Memphis by that monarch."

This statue has lately been offered to the British Museum, as a cadeau from Mr. Sloane, our vice-consul in Egypt, on condition of its being removed within a certain time,—we believe two or three years; and it is hoped that the government will not grudge the expense of bringing to England so fine a monument of

art. We confess, we shall not be surprised if the time is suffered to elapse before measures are taken for its removal; and then we may, perhaps, purchase at a high price, from another possessor, what is now offered as a present.

"The researches of Captain Caviglia in the Great Pyramid were again resumed in 1836; and the examination of the second pyramid was not neglected. He there discovered a third passage, communicating by a pit with the other two explored by Belzoni, at the point where those two unite on their way to the central chamber; which, it is hoped, will lead to satisfactory results respecting the distribution of the interior. He then decided on opening the mouth of the lower passage, which had been explored to within a certain distance, and was found closed with large stones; and on excavating the pyramid from without, he found that the rock had been covered with a coating of red stucco, to the distance of forty-three feet from the base; and a stone being discovered bearing the same kind of stucco, it was conjectured that the whole of the pyramid had been covered with red stucco to the same height of forty-three feet. The endeavours of several persons to open the third pyramid have been hitherto fruitless, and many points have been fixed upon as likely to lead to a disclosure of the passage; but Capt. Caviglia is of opinion that there is more probability of success if an opening is carried through the open space on the north face, than by looking for an entrance at the base. In the meantime, the examination of the Great Pyramid has been continued, and an opening being commenced above the entrance to Davison's chamber, the roof of which is supposed to form the base of an upper apartment. Capt. Caviglia hopes shortly to succeed in forcing a passage above the masonry of its flat roof. The excavations in the vicinity of the Sphinx have, also, been continued; and he has found, at the distance of 300 feet from it, in the W.N.W. direction, a large tomb, surrounded by a fosse, eighteen feet in length, and six in breadth, and hewn in the rock to the depth of more than sixty feet, to which the excavations have already extended; and this promises the most curious and important results."

Unfortunately, these researches have been suspended for the present, probably for want of funds; but this the writer fails to inform us. We trust, however, that such interesting discoveries will not be abandoned when on the eve of giving a satisfactory reward to the labour bestowed upon them; and we may still hope to see the secrets of those monuments unveiled, and the date, as well as the object of their erection, satisfactorily ascertained.

#### NUMISMATIC SOCIETY.

At the last meeting on Thursday, the following letter (transmitted by the writer to us for insertion) was read from Mr. Hogg to the president:—

Sir,—I take the liberty of writing a few lines to you in reply to a letter from Mr. Akerman, one of the secretaries to the Numismatic Society, addressed to you, and just published in the *Numismatic Journal*, No. IV. for April 1837, at page 272: from which I must infer that the writer intended to hold me up to numismatists, as an example of one "all but ignorant of the existence of such an important adjunct" (as medals) "to the annals of the historian." It is with the view of correcting this, as well as other erroneous statements, that I have been induced to trespass on your attention, and on that of the Numismatic Society. First,

Mr. Akerman has "ventured, most unadvisedly," to assert that "Mr. (John) Hogg commenced by stating that, although the præ-nomen IMP. is omitted, the inscription belongs to Claudius I." Now, if Mr. Akerman had been contented to have waited for a few weeks, until my paper had been published in the "Transactions of the Royal Society of Literature," he would then have seen that what I have really said is very different from what I am made to state in his letter, and which he has evidently copied from a somewhat incorrect abstract of my Essay. What, indeed, I have written is as follows:—"TI. CLAVDIO.—the commencement here omits IMP., the præ-nomen or title of emperor, which I have not noticed in any of the inscriptions to Claudius Cæsar, collected by the accurate epigraphologist, Gruter; and Suetonius expressly tells us, that he refused that title: 'Prænomini imperatoris abstinuit.' (In *Vit. Claud.* c. 12.) This affords a proof in identifying to what Claudius the marble must be referred; and a still further and more satisfactory proof, that it belonged to Claudius, the fifth Roman emperor." &c. &c. Secondly, If Mr. Akerman had likewise waited to peruse my paper, and the many notes contained in it, he would have discovered that I have made use of several authentic coins and medals of Claudius, in order to illustrate and to confirm certain facts comprised in the history of that period on which I was then engaged: and those I introduced by way of collateral evidence; for, of course, I felt that, in a subject of epigraphy, my primary or direct evidence ought to be that of well-authenticated inscriptions. Thirdly, "as regards the inscription itself," I am quite sure that the date, supplied on whatever authority by the Roman antiquary, Ganges de Gozze, is incorrect; and I flatter myself that, if Mr. Akerman had studied my essay, as well as the works to which I have referred in it, he would have arrived at the same conclusion. The mere tyro in the history of our own country, who has only looked over the plates in any of the later editions of Camden's "Britannia," or the woodcuts of the "History" of John Speed, must be familiar with those coins of Claudius having a triumphal arch, with the epigraph DE BRITANNIS, and which are engraven in those books: but the titular formula in their legends runs thus: TRIB. POT. VIII. COS. IV. IMP. XVI., and not TRIB. POT. IX. COS. V. IMP. XVI. These coins were not struck either on the occasion of Claudius's first triumph, on his return from Britain A.D. 44, or on that of his second triumph over the British king, Caractacus, which took place in A.D. 51: but, as I have conjectured (in one of the notes to my paper), they were expressly minted in commemoration of that emperor's having enlarged the Pomerium, or boundaries of the city of Rome, which he most probably did in consequence of his having extended the limits of the Roman empire by his conquests in Britain—"Auctis Populi Romani finibus"—as the inscription that was erected upon that occasion distinctly informs us. (See Gruter, Vol. I. p. 196, No. IV. Ex. edit. Græv. Amst. 1707; and to which conquests the arch and DE BRITANNIS would seem clearly to refer. This important event occurred, according to Tacitus (*Annal.* xii. c. 23), about the latter part of the year in which C. Pompeius and Q. Veranius were consuls; i.e. in A.U.C. 802, or A.D. 49, when Claudius held the tribunitian power for the ninth, the consulship for the fourth, and had assumed to himself the imperial cognomen for the sixteenth time. I have

proved in my essay, that the TRIB. POT. IX. and COS. V., cannot stand together in the same titular form; and I am sure Mr. Akerman would think so too, if he were carefully to examine, *inter alios*, the following authentic books:—the “Fasti Rom. Cons.” of Onuphrius; “Pavinius” of Jansonius ab Almeloveen; Gruter’s “Inscrip. Antiq.”; Mediolanensis “Imp. Rom. Numis.”; Vaillant’s “Numis. Imp. Rom.” &c. Again; in no work of authority on epigraphy, or on numismatology, have I ever found the titular formula TRIB. POT. IX. COS. V. IMP. XVI.; and should it be noticed on any coin of Claudius, I should be inclined to pronounce it as apurious; for, I need not mention to any one conversant in these matters, the well-known trick practised by foreign venders of medals, of altering the letters and numerals on their legends. And should I be shewn an engraving of such a medal, or a copy of an inscription to Claudius with that formula, I should have little hesitation in saying, that the engraver, or copier, had inadvertently placed COS. V. for COS. IV., by having merely omitted an I before the number V. Lastly; I cannot but consider it somewhat unaccountable that the editor of the *Numismatic Journal* should have published his own letter to you, and should not have also published the “Observations by Mr. Cullimore, which were read” (March 16, 1837), and in which the writer expressed an opinion that Mr. (John) Hogg was *not* in error in his conjecture as to the date of the inscription in the palace Barberini.”—See *Numismatic Journal*, No. 4, p. 274. I will now only hope the same degree of publicity will be given to this letter, as has been given to that of Mr. Akerman, at page 272 of the *Numismatic Journal*; and think, in justice to myself, that it should be favoured with a place in the next number of that work. Let me add that, when my paper shall have appeared in the forthcoming part of the “Transactions of the Royal Society of Literature,” nothing will give me greater pleasure and satisfaction than to receive fair and candid criticisms upon any passages in that imperfect essay, whereby I may be enabled to correct all those errors which may really exist, either from Mr. Akerman, or from any other learned person. I have the honour to remain, &c.,

JOHN HOGG.

12 King’s Bench Walk, Temple.

## GEOLOGICAL SOCIETY.

WEDNESDAY. Rev. W. Whewell, president, in the chair.—A paper was read by Mr. Owen on the cranium of the *Torodon*, a new extinct gigantic animal, referable by its dentition to the *Rodentia*, but with affinities to *Pachydermata* and herbivorous *Cetacea*. This cranium forms part of the series of fossils collected by Mr. Darwin in South America. It was found in the Sarandis, a small tributary of the Rio Negro, about 120 miles N.W. from Monte Video; and had been imbedded in the whitish, argillaceous earth which forms the banks of that rivulet. The subsoil of the whole of the surrounding country is granitic; and Mr. Darwin considers the argillaceous covering to be an estuary deposit, accumulated by the river now called the Plata, and at a period when the land was at a lower level, with reference to the ocean, than it is at present. The dimensions of this interesting fossil, the extreme length of the skull being two feet four inches, and the

extreme breadth one foot four inches, amply attest that the species to which it belonged attained a magnitude, comparable only with some of the gigantic pachyderms or the extinct megatherium. From the structure of the molar teeth and their continuous mode of growth, Mr. Owen shewed that the toxodon is referable to the *Rodentia*: but that it differs from the existing animals of that order in the number and relative position of the incisors, and in the number and direction of the curvature of the molars. The *Torodon* again deviates from the true *Rodentia*, and resembles the wombat in the form of the articular cavity of the lower jaw. It differs from the *Rodentia*, and resembles the *Pachydermata* in the relative position of the glenoid cavities and zygomatic arches, and in many minor details. In the aspect of the plane of the occipital region of the skull; in the form and position of the occipital condyles; in the transverse extent of the frontal region of the skull; in the aspect of the plane of the bony aperture of the nostrils; and in the thickness and texture of the osseous parieties of the skull, the toxodon differs from both the *Rodentia* and *Pachydermata*, and manifests an affinity to the cetaceous order. From these instances of aberrant characters in the *Torodon*, considered as a gigantic rodent, and which were described in admirable detail, Mr. Owen pointed out that, although the teeth, from their correspondence with many other important parts of the animal structure, and from the facility of observing them, are highly important and useful zoological characters, yet that they are not, in all cases, sufficient alone to determine the order to which a mammifer belongs; and that, upon due consideration, it will appear, that dental characters must yield the precedence to those afforded by the modification of the organs of progressive motion. It may, therefore, be inferred that those orders in the present received systems of mammalogy, which are founded on characters afforded by the teeth alone, are less natural and less important groups than those which are based on modification of the locomotive extremities, and, *a fortiori*, on those which combine such distinctive characters with equally characteristic peculiarities of dentition. At present there is no evidence to determine what was the nature of the extremities of the *Torodon*; but Mr. Owen is of opinion that, although it cannot be positively affirmed the genus may not be referable to the *Muticata* of Linnæus, yet, from the development of the nasal cavity and the frontal sinus, it is extremely improbable the habits of the species were so strictly aquatic as the entire absence of hinder extremities would occasion. In conclusion, he pointed out the interesting fact, that the recent animal most analogous to the *Torodon*, combining the characters of a pachyderm and a rodent, and from its aquatic habits called the water-hog or *hydrocharis*, exists only in South America—the same region in which this gigantic fossil, possessing similar aberrant peculiarities, has been discovered.

## BOTANICAL SOCIETY.

APRIL 20th. J. E. Gray, Esq. F.R.S. president, in the chair.—A paper was read from the secretary, W. M. Chatterley, Esq. being a continuation of the translation of M. Alphonse de Candolle’s “Geographical distribution of Plants used for Food,” extracted from “La Bibliothèque Universelle de Genève.” The paper treated of the following *Gramineæ*, the barley, oat, rye, and wheat; the limits of the cultivation of which to the north were pointed out. A paper was also read from Mr. Thomas Han-

cock, on the varieties of *Lamium maculatum*. The meeting then adjourned until May 4th.

## LITERARY AND LEARNED.

## UNIVERSITY INTELLIGENCE.

OXFORD, 13th April.—The following degrees were conferred:—  
*Masters of Arts*.—A. E. Somerset, E. Fitz Roy Talbot, Students of Christ Church; J. P. Hugo, Fellow, A. C. Yard, Exeter College; Rev. W. H. Carwithen, Worcester College.  
*Bachelors of Arts*.—Rev. H. G. Eland, Magdalen Hall; H. D. D. Sparling, Pembroke College; T. J. Brown, Fellow of New College.

## ROYAL SOCIETY.

THE Earl of Burlington in the chair.—A portion of an exceedingly interesting paper, being observations taken on the western coast of America, by the late David Douglas, drawn up by Major Sabine, and communicated by Lord Glenelg, was read. After glancing at the humble pursuits of Mr. Douglas’s early life, the paper proceeds to notice his introduction to the scientific circles of the metropolis, by the late Joseph Sabine, Esq.; and the success of his mission under the auspices of the Horticultural Society, and of Sir George Murray, and Mr. Hay of the Colonial Office. Of Mr. Douglas’s success as a botanical collector, it is unnecessary here to say a word; every flower-garden in the empire bears testimony to his skill and indomitable perseverance. Though Mr. Douglas’s scholastic attainments were scanty—not extending further in arithmetical than to the first four rules—yet with a vigour of mind equal to his great strength of body, he applied himself to study, and to the use of various instruments, to enable him to make observations when at sea and abroad. By studying 18 hours a-day for three months prior to his leaving England, he made himself master of his instruments; and on board ship, during the outward voyage, his days, to use his own phrase, were as moments, so engaged was he in study. The paper then notices his arrival at his destination, the loss of his books, papers, &c. by the dashing to pieces of the canoe in which he attempted to pass the rapids; and the present portion of it concludes with a list of upwards of a dozen volumes of observations of various kinds, made by Mr. Douglas at the Sandwich Islands, California, the Rocky Mountains, &c. The next portion will be devoted to the Observations themselves, and no doubt will touch upon the catastrophe by which our lamented countryman lost his life.

## SOCIETY OF ANTIQUARIES.

THE Earl of Aberdeen in the chair.—The reading of Sir Frederic Madden’s historical essay on Perkin Warbeck was concluded. Much new information on the subject has been elicited in this account, but, from its length, and being read in three detached portions, we regret our inability to give any analysis of it.

## ROYAL ASIATIC SOCIETY.

ON Saturday, Sir A. Johnston, V.P. in the chair.—Among the donations was the skull of Muchala, a Thug chief, executed at Sanger, Central India, in 1832; presented by Dr. Spry. A paper on the saltiness of the Red Sea, was read to the meeting, by J. G. Malcolmson, Esq., detailing the particulars of some experiments performed by that gentleman, while returning from India, in the year 1836, and which he had been led to make by the report of the officers of the Hugh Lindsay steamer, that, in consequence of the greater saltiness of the sea in that part of the voyage, they had been obliged to blow off the steam more frequently

\* I remark that the first paper in No. 4 of that journal was read before the Numismatic Society on the same day with those observations.

there than elsewhere; and, by the discrepancies in the results of the analyses of Mr. Prinsep and Dr. Ure, which Mr. Prinsep supposed might be accounted for by the water, on which the various trials had been made, having been taken from different parts of the Red Sea. Mr. Malcolmson's object was to discover how far this was the case; and, although prevented by illness from performing all that he wished to do, he found, in fact, that the water of the neighbourhood of Mocha differed, in specific gravity, very little from that analysed by Mr. Prinsep, while the specific gravity of that taken up at Cosseir, corresponded with the result obtained by Dr. Ure. Mr. Malcolmson concluded by shewing that the increased quantity of salt, shewn by the increased specific gravity, would have a considerable influence on the rapidity of deposit in the boilers, and would be the occasion of some delay in the voyage. A short note, by Baron Hammer and Purgstall, was read, in which the learned orientalist alludes to four Turkish biographies of Mohammed, printed within these sixteen years in Persia and Egypt, containing a mass of facts unknown to the European biographers of the prophet. One of these works records the first translation of the Scriptures, from the Hebrew into the Arabic tongue, to have been made by the cousin of Khadija, Mohammed's first wife. The original Turkish says, "Gospels;" but the baron concludes, that the mention of the Hebrew tongue is decisive that the Bible was meant, and that this is confirmed by the more intimate acquaintance shewn by Mohammed with the Bible than with the New Testament. The reading of some curious details of the doctrines and customs of the Buddhist priests of Siam, by Captain James Low, was commenced. The chairman announced, that the fourteenth anniversary meeting of the Society would take place on the 6th of May.

#### LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

*Monday*.—Antiquaries, 2 P.M. (Anniversary); Geographical, 9 P.M.; Belgrave Literary, 8 P.M. and the ensuing Monday (Mr. E. Cowper on Carving and Sculpture).  
*Tuesday*.—Royal Medical and Chirurgical, 8½ P.M.; Civil Engineers, 8 P.M.; Zoological, 8½ P.M.; United Service Museum, 3 P.M. (Dr. Ritchie on Statics and Mechanics); Lambeth Literary, 8½ P.M. (Mr. Morton on the Composition of the Atmosphere).  
*Wednesday*.—Society of Arts, 7½ P.M.; Medico-Botanical, 8 P.M.  
*Thursday*.—Royal Society of Literature, 4 P.M. (Anniversary); Royal Society, 8½ P.M.; United Service Museum, 3 P.M. (Captain Norton on Rifle Shells).  
*Friday*.—London Institution, 7 P.M. (Anniversary); Royal Institution, 8½ P.M.  
*Saturday*.—Zoological, 1 P.M. (Anniversary).

#### FINE ARTS.

##### NEW WATER-COLOUR SOCIETY. (Second notice.)

138. *Luther's Conference with Cardinal Cajetan, at Augsburg, A.D. 1520.* W. H. Kearney. — Every thing connected with the great Reformer must create an interest in the free and intelligent mind. Highly deserving of pictorial, as it has been of historical record, the artist has entered upon his task with every requisite quality for its happy execution. In its arrangement, expression, colouring, effect, and execution, it exhibits Mr. Kearney's talents to great advantage.

149. *Demosthenes haranguing the Waves.* 124. *Kilmenny.* J. Martin. — In these performances, Mr. Martin has presented us with two masterly examples; the one of the sublime, the other of the beautiful. In the former, the figure of Demosthenes is an adjunct, rather than a principal; but the tumultuous ocean, the profound depth, broken by gleamy splen-

dour, may be considered as typical of the unrivalled qualities of his eloquence.

167. *A Street in Damascus.* From a sketch taken on the spot by Captain H. Byam Martin, R.N. Henry Warren. — Those have travelled to good purpose who, like Captain Martin, bring home sketches of such interesting localities; and those have studied the art to good purpose who, like Mr. Warren, can thus embody them. The artist has very judiciously given a detailed description of the subject, and of the characters connected with it, in the catalogue; and we have only to express our admiration of the skill which he has displayed in working up his costly materials. 77. *Tempe*, by the same artist, shews the versatility of his genius, and the extent of his powers.

95. *Fresh Breeze; Boats Dredging for Oysters in Whitstable Bay.* E. Duncan. — Frequently as this class of subjects have met our eye in different exhibitions, we have seen none which, in effect and detail, have surpassed the present performance. The varied arrangement of the vessels, their action, and the motion of the water, together with the harmonious tone of colour, and the spirited execution, place the artist high in the rank of marine art; to which, however, the pathos manifested by him in 254, *The Widow*, shews that he is not exclusively confined.

70. *Cour St. Amand, at Rouen.* L. Haghe. — As we observed of the last-mentioned work, numerous as pictures of this class are in our several exhibitions, we have seen none of more picturesque character, or of more masterly handling.

232. *Interior of a Virtuoso's Library.* T. Kearnan. — Rich in materials, the artist has not only arranged them with skill and taste, but has invested them with an effect, and a harmony of colouring, equally attractive.

225. *Stand at Ease; 226. Attention; 227. Make Ready; 228. Present; 229. Fire; 230. Victory.* C. H. Weigall. — This gallinaceous parody on military manoeuvres is carried on with the most farcical originality, and without a touch of caricature. The pugnacious heroes of the barn-door are drawn and coloured to the life; and the whole series is very amusing.

187. *Catching the Expression.* F. Rochard. — One of the most fascinating countenances that can be imagined. If a faithful resemblance (of which it bears the stamp), the fair possessor of it must catch hearts as well as expression.

131. *From the Spectator.* F. Corbux. — Taste and talent are the characteristics of this performance. We congratulate Miss Corbux on her success, both in the present production, and in 282, *A Roman Peasant with Flowers*; and the clearness of the shadows in the flesh of which has never been surpassed.

259. "Wait your Turn." Miss L. Corbux. — A village girl sharing her meal with a favourite dog; no uncommon occurrence in rural companionship. This is also treated with great simplicity and beauty.

253. *The Fortune Teller.* E. H. Wehnert. — The concomitant accessories, as well as the interior of a fortune-teller's apartment, are of themselves sufficient to furnish materials for a picture. These, as well as the principals, have been ably executed by the artist; but the mellow tone of colouring under which they are seen will, perhaps, equally recommend the performance.

The exhibition is rich in topographical scenes. Among them we particularly noticed,—184. *Waterloo Bridge, from Hungerford Stairs.* T. Maizey.—52. *A View of London, taken from one of the Towers of Westminster Abbey.* T.

Kearnan.—178. *Sittingbourne Church, Kent.* J. Fahey.—194. *A Timber Yard on the Thames, near Lambeth.* G. S. Shepherd.—71. *The Grampians, from Strathspey*; and 76. *Falls of the River Dulnain, Morayshire.* Douglas Morison.—To these we may add, of miscellaneous subjects,—202. *Returning from Hawking.* B. R. Green.—108. *The Forsaken.* W. N. Hardwick. 110. *A Foraging Party Surprised.* R. Farrier.—240. *A Troubadour Serenading his Mistress.* L. Hicks.—186. "We two has paidelt in the burn." H. Warren.—134. *Weeds*; 140. *Flower Piece*; 239. *Fruit.* Mrs. Harrison, &c. &c.

We have thus given what, we hope, is a fair, although it is a brief, notice of this exhibition; and we repeat that we think it an advance on the former exhibitions of the same society.

#### NEW PUBLICATIONS.

*The Right Hon. the Earl of Egremont.* Painted by G. Clint; engraved by T. Lupton. Mason, Brighton.—The fine whole-length portrait of that excellent nobleman, the Earl of Egremont, from which this very clever print has been engraved, was recently noticed by us, as one of the ornaments of the present exhibition of the Society of British Artists in Suffolk Street. It was "presented by the inhabitants to the town-hall of Brighton, as a mark of their esteem for his distinguished worth; and in testimony of the high estimation they entertain of his munificent support of the public institutions of that town, and of his services as Lord Lieutenant of the county of Sussex."

*Restoration of the Roman Forum.* Engraved in line, by W. R. Smith, from an original drawing, taken at Rome in the year 1832, by S. J. Walker, Architect, Nottingham. London, Williams.

THE genius and acquisitions of Cuvier enabled him, from the examination of a single bone of the vertebral column, confidently to declare the class to which the animal had belonged, to delineate its form, and to describe its nature. Mr. Walker appears to possess similar powers with reference to the noble art of which he is a professor. The shattered and comparatively scanty remains of the celebrated edifices on which his skill has been employed, have afforded him the means of representing them as they may be supposed to have stood in their pristine magnificence. This is a print which must be highly interesting, not only to the artist and the antiquary, but to all whose classical associations are still vigorous and delightful.

*The Birth Day.* Painted by Miss Fanny Corbux; engraved by W. Carlos. F. G. Moon. STRONGLY stamped with the feminine taste and elegance of all Miss Corbux's performances.

*Heath's Shakespeare Gallery. Parts V. to IX.* Tilt.

FIFTEEN clever little female half-lengths; some of them remarkable for their beauty and expression. They are from designs by Meadows, Jenkins, Bostock, Parris, Herbert, Leslie, R.A. Chalon, R.A. Corbould, and Stephanoff.

*Hide and Seek.* Painted by J. B. Herbert; engraved by Mrs. W. H. Simmons. F. G. Moon.

How delightful is every thing that reminds us of the sports of our youth; and of those sports which were more joyous than that which gives a title to this pretty little print? The arch ex-

pression of the countenance of the young hider, and the manner in which she draws up her person, so as to make herself as little visible as possible, are admirable. We have before had occasion to remark on Mrs. Simmons's talents of a mezzotinto engraver. With the exception, perhaps, of a slight tendency to hardness, this is a fine specimen of them.

*Finden's Ports and Harbours of Great Britain.*  
Parts IV., V., and VI. Tilt.

WE have already expressed our admiration of this able and national work. The most striking views in these three Parts are "Sunderland," "Whitby," "Flamborough Head," and "Portsmouth."

*Rome, and its surrounding Scenery.* Engraved by W. B. Cooke, &c. No. VI. Tilt.

THIS classical little publication proceeds with the spirit which has distinguished it from its commencement. The views in the present Number are "The Church of St. Agnes," "The Chigi Palace," and "The Temple of Tivoli."

*Retzsch's Outlines to Shakspeare. Romeo and Juliet.* 1836.

THE finest of the series that we have seen. Nothing can exceed the beauty, tenderness, and elegance, with which some of the scenes are embodied. The farewell of the youthful bride and bridegroom, on the morning after their marriage, is especially exquisite.

**ORIGINAL POETRY.**

THE MAID OF SARAGOSSA.

(Suggested by Wilkie's celebrated Picture.)

THERE were murmurs through the night,  
As of multitudes in prayer;  
There were tears of wild affright,  
And the wailing of despair:  
For Invasion's gory hand  
Scatter'd havoc o'er the land.

The startled morn arose  
To the trumpet's fierce acclaim,  
To the ringing steel of foes,  
And the battle-bolts of flame;  
Whilst the Gallic wolves of war  
Round were howling, and afar.

The matron armed her son,  
And pointed to the walls:  
"See, the carnage hath begun,  
'Tis thy bleeding country calls!  
Better, son, the patriot's tomb,  
Than a slave's ignoble doom."

The gray-haired father took  
His time-worn brand and shield;  
The pale monk closed his book,  
The peasant lost his field;  
And daughters, e'en a scar had grieved,  
Now deeds of dauntless heart achieved.

Right onward dash'd the foe,  
O'er the red and reeking ground,  
'Till the giant gates below  
Burst with an earthquake sound;  
And the rocking walls yawned deep,  
'Neath the cannon's shattering sweep.

Yet ne'er with tyrant warred  
A firmer, bolder band:  
Again the gates were barred —  
Again the walls were manned;  
Again, as with prophetic sight,  
The hallowed cross advanced the fight.\*

\* Padre Consolacion, an Augustine friar, exhibited remarkable ability in the defence, as an engineer; and, crucifix in hand, marked the point on which the gun should be brought to bear.

But heavier woes befel

The still unvanquish'd brave,  
'Mid sounds that seem'd the knell  
Of Freedom's hopeless grave:  
A hurricane, a blazing shower,  
Swept shiver'd rampart, rock, and tower!

The ammunition-caves,  
Exploding, rent the ground,  
And scatter'd dwellings, like the waves  
Of endless ruin, round:  
And they no foeman might outbrave  
Then fled, their children, wives, to save!

In that appalling hour,  
When Fate with Gaul combined  
To quell the freeman's power,  
To crush the valiant mind —  
When e'en the last defence had died, [tide?  
Who braved the storm? who stemm'd the

No steel-girt knight of fame,  
No chief of high emprise;  
A maiden's soul enshrined the flame  
Which lit Hope's darkening skies:  
A maiden's valour dealt the blow,  
And stepp'd 'tween conquest and the foe —

Stood on that fatal brink,  
Defying pain and death!  
And could Napoleon's legions shrink  
Before a woman's breath?  
Could Gaul's proud eagle, from its height,  
Stoop to a mean, disastrous flight?

Yes: that fair arm withstood  
The chivalry of France,  
And pour'd destruction, like a flood,  
On quailing helm and lance:  
Leonidas in maiden's stole,  
A woman's breast with Curtius' soul!

Heroic heart and true!  
Thy deeds shall find a voice  
To bid usurping tyrants rue,  
And freedom's sons rejoice:  
The loved of Time, the prized of Fame,  
Spain's noblest boast, and Gallia's shame!  
17th April. C. SWAIN.

**SKETCHES OF SOCIETY**

STATISTICS OF CRIME.

*The Convict Greenacre.*

[We place the following notice under our head of Sketches of Society, as it affords a remarkable illustration of circumstances often noticed in the statistics of crime—namely, that the most horrible offences are frequently prompted by preceding examples dwelling on the mind till a species of monomania ensues; and, in other cases, that instances of extraordinary guilt seem to be fearfully copied by the inhuman perpetrators of similar atrocities.]

AT the late trial of the above criminal at the Old Bailey, the counsel for the prosecution made an allusion to the case of Gaidelle, who was executed on the 4th of April, 1761, at the end of Pantion Street, in the Haymarket, for the murder of Mrs. King, at whose house he lodged, in Leicester Fields; and, from the similarity of the circumstances, as well as line of defence set up by Greenacre, one might almost be led to suppose that the latter was fully acquainted with Gaidelle's case. The narrative runs thus:—Theodore Gaidelle was a native of Geneva, and bred a limner and painter in enamel. He quitted Paris at the age of forty, where he left a wife and a child, and came to London about ten months before the murder was committed, and lodged at the house of the deceased. If we take his account of this horrid transaction, he represents that, having asked her for the payment of a picture which he had painted for her, she fell into a passion and struck him; upon which he pushed her, and one of her feet being entangled in the floorcloth, she fell, and hit the side of her head

against the headstead, which stunned her: that, fearing she might recover and accuse him, he, that instant, conceived the thought of murder; and, pulling out a penknife, stabbed her in the neck, which same put an end to her existence; that he then concealed her body beneath the bed-clothes, and the next morning cut off her head, legs, and arms; and, what is scarcely credible (although from his own relation), having some knowledge of anatomy, he sat down coolly to dissect them; and afterwards, at different times, threw them into the fire, having taken the precaution to use green wood as fuel to prevent the smell from discovering him. Some colour is given to the introductory part of this story by the fact which appeared on the trial, "that the deceased, Mrs. King, made a point that her picture should be very handsome; and teased Gaidelle so much about it, as to induce him, in spleen, to give her features a very different and unfavourable character, and that she shewed her resentment by much satirical and provoking language. The maid-servant having been sent out for some snuff, no person was in the house but Gaidelle and Mrs. King, who, it appears, on his entering the room, renewed her insults, and struck him on the breast: this produced the fatal event that followed." After her fall, he says, on the trial, that he attempted several times to assist her, which she refused; and, fearing that she would die, and he be condemned as the murderer, although, as he says, innocent, he determined on concealing the body, as before related. It appears he discharged the maid servant, and was several days in the house, coolly pursuing his horrid purpose of cutting up and concealing the body. The discovery was accidentally made by a person in the neighbourhood, who was called in to clean the house; and, attempting to draw water from the cistern, found the pipes stopped by part of the deceased's clothes, which were thrown in by the murderer, in order to conceal them. At the time of his apprehensions he appeared penitent, and to the last declared his innocence.

**DRAMA.**

*King's Theatre.*—This week has given us the opera of *La Cenerentola*, for the purpose of introducing the much-famed Albertazzi to an English audience; and her success has been decided. Her voice is one of the most beautiful we ever heard, and of extraordinary compass; her high notes are full and clear, and she not only touches, but dwells upon them with perfect ease—a great rarity in a contralto voice. To us her high and middle tones are by far the most agreeable and natural: her low notes seem rather to be the acquired part of her voice; and, consequently, less perfect than the others. Still there is so little solo music in her part of this opera, that we are only judging of her low tones from a few bars. In the concerted pieces, with such artists as Lablache, Tamburini, and Ivanoff, of course the whole is harmony, and no one voice heard above the other. Madame Albertazzi was several times warmly encored; and, at the end of the opera, was called for and greeted with noise enough to make her head ache. She possesses a grace in person, with a sweet smile, and bright eyes: her manner, and, indeed, her singing and acting, are subdued and gentle, rather than brilliant; probably this will wear off as she feels more certain of the favour she so well merits. Lablache and Tamburini were, as usual, perfect in their parts. Ivanoff sang sweetly, but he is very cold and stiff; and his voice not strong

enough for so large a theatre. One word of the subordinate parts in the opera. Madame Castelli has for many years filled such parts as fell to her share in *Cenerentola*, with credit to herself. It is scarcely fair to include her in the condemnation we have seen bestowed on the *subs*. Surely, some person might be found to take the place of Mademoiselle N. N., who not only does not sing a note, but whose appearance is perfectly ludicrous. We heard a reply as to who she was, given in the pit—"Sir, she is N. N., nothing to nobody!"

**Covent Garden.**—On Tuesday, a Mr. Hyde, from Bristol, essayed the character of *Shylock*, and was well received. His performance was full of inequalities, and, in many instances did not evince a sound reading or conception of the part. As his execution, however, might be impaired by the tremor of a first appearance, we shall not pronounce definitely till we see him again. The *Modern Orpheus*, a slight entertainment, sustained by the talents of some of the performers, has been repeated several times; and on Thursday, a piece called *Brian Boromhe*, from the pen of Mr. Sheridan Knowles, was produced. With a few brilliant and poetical passages, to which Miss Faucit did ample justice, and one or two other speeches, the whole is a complete theatrical melo-drama, which might have been the first, but ought not to have been the last, of the productions of so highly esteemed an author. A series of warlike and romantic adventures, between Danish invaders and Irish patriots, constitutes the plot or rather plots: and the matter ends as it should, with a battle royal and prodigious slaughter. There was great applause, in which the brogue was heard more distinctly than usual.

**The Strand Theatre.**—This little theatre continues to fill and (if we may judge by peals of laughter) to amuse. *The Bill Sticker* and *The Galante Showman* are two rich pieces of low humour, or rather low fun. Hammond and H. Hall, Miss Daly, and Mrs. Stirling, are all excellent. The two latter, in a battle of tongues, are almost too natural,—it is the perfection of shrewism. We have much pleasure in adding, although low and comic, we did not hear one offensive word through the whole of these pieces.

#### VARIETIES.

**New Houses of Parliament.**—We rejoice to see that Mr. Barry's plans and estimates for building the new Houses of Parliament have been adopted by the Lords. We may now look for a national structure which shall not be a national reproach. In the parliamentary estimate we rejoice to see an indefinite item, "For fitting up the King's Tower, proposed as the general depository of the Public Records." Only let this be sufficiently and satisfactorily done, and we may hope to see these national treasures, in every quarter, rescued from existing waste and danger, and classed, catalogued, and secured for the public service.

**Weather Wisdom.**—Our oracle, during the past week, has not been so correct. On the 17th there was, certainly, a "change," and an agreeable one; and the 21st was not only raw, cloudy, and unpleasant, but exceedingly wet; but on the 20th the full moon did not shew high winds nor turbulent, unsettled weather. For the next, "The aspects of Mercury denote a continuation of high winds [there are none at present to continue], and about the 24th violent thunderstorms. The 25th and 26th bear the same character—rain and thunder, and high winds. The 27th and 28th, cold and frosty."

**The Eclipse of the moon on Thursday night**

was very visible to the eye in London. It was whimsical enough, that in a moonlight scene at Covent Garden Theatre, between 9 and 10 o'clock, a little hobbling cloud disengaged itself from its companions, and made a lunar eclipse of its own, by dancing in front of that luminary, to the great amusement of the spectators.

**Pompeii.**—The *Piedmontese Gazette* states that, in one of the recent excavations at Pompeii, a caldron of clear and pure water, standing over a fire at the time of the destruction of the city, has been discovered.

**Mr. John Field**, the celebrated pianist, and pupil of Clementi, is stated, in the continental papers, to have died at Moscow (where, and at Petersburg, he had been long settled) in January last. He was fifty-seven years of age.

**South London Horticultural Society.**—The first of this year's exhibition of flowers, under the auspices of this Society, at the Horns Tavern, Kennington, on Thursday, was much more abundant and various than we could have anticipated from the extreme backwardness of the season. Some of the auriculas were very fine; camellias of charming form and colour; one or two heaths; superb and wax-like blossoms; and there were also azaleas, hyacinths, heartsease, primroses, polyanthus, &c., besides several rare plants of much interest and beauty. The vegetable world was more scarce in specimens—a few new potatoes, French beans, and sea-caul, gracing the middle table, as companions to some fine black grapes, early strawberries, and other common fruits. A few of the prizes will enable our readers to fancy what the room contained.

For the best Pair of Auriculas (by Nurserymen), large Silver Medal, Mr. Dickson, Acre Lane; for the best daisy (by Gentlemen's Gardeners or Amateurs), large Silver Medal, Mr. Lidgard, Hammersmith; for the best Polyanthus, middle Silver Medal, Mr. Harding, Sydenham; for the best Collection of fifty Heartsease (by Nurserymen), middle Silver Medal, Mr. Mountjoy, Ealing; for the best Four Orchideous Plants, large Silver Medal, Mr. Lidgard; for the best Collection of Bulbous Roots, not to exceed twelve pots, middle Silver Medal, Mr. Barnard, Brixton; for the best Collection of Miscellaneous Plants, thirty-six pots (by Nurserymen), large Silver Medal, Miss Chandler, Wandsworth; for the best Specimen Camellia, large Silver Medal, G. A. Lake, Esq. (a charming specimen).

**Meteorology (from a Correspondent.)**—It is mentioned by Mr. W. H. White, in "London's Magazine," that, according to the most authentic accounts received, the remarkable hurricane of November 1836 "commenced on the 23d, on the shores of North America, off St. Lawrence. A ship from Poole fell in with it on the 26th, in lat. 47° N., long. 32° 30' W. It continued its progress across the Atlantic, and reached the Land's End about 7½ A.M.; Plymouth, 8½ A.M.; Exeter, 9½ A.M.; Weymouth, 10 A.M.; Poole, 10½ A.M.; Farnham, 12 noon; London, 1½ P.M.; Suffolk coast, 2½ P.M.; and Hamburg, 6 P.M. Thus the storm travelled at the rate of about fifty miles per hour; but the circular motion of the wind had a velocity of from 120 to 150 miles per hour." How, on Lieutenant Morrison's theory, is this circumstance of the commencement of the gale six days before the conjunction of the moon with Mars and Jupiter, to be accounted for? This very storm is one he has brought forward (see *Literary Gazette*, No. 1050) as a striking instance in proof of the fulfilment of his predictions, "having occurred on the very day of this aspect of the moon to those two planets." Is it that this small sea-girt island is the only spot in the globe placed under planetary influence? If so, Great Britain may, indeed, without arrogance, exclaim, "Of what vast consequence am I!"

**Edinburgh Literary Matters.**—We learn from Edinburgh, that an active canvass is going on in the society of writers to the signet, or

attorneys as we call them, for the situation of principal keeper of their magnificent library, in consequence of Mr. Napier having received a lucrative appointment in the Court of Session. The candidates already in the field are, Mr. David Laing, secretary to the Bannatyne Club; Mr. Cochran, Mr. W. F. Skene, and Mr. Robert Pitcairn. Some members of the society are of opinion that the office should be given to none but one of their own profession: we trust, however, that the field will not be limited in this way, nor the prosperity of a national institution hazarded by such a selfish resolution; which, at the same time, would compromise the independence of the body. Be this as it may, we are sure that any body whatever would do credit to itself by the election of one so eminently qualified as is our friend, the secretary to the Bannatyne Club.

**Natural History.**—The following curious statements rest on the authority of a Lausanne journal. During the last fortnight great numbers of sick and dead birds, particularly those of the thrush species, have been found in the fields of Soleure. An inflammation of the spleen is the cause, and the disease is attributed to the same acid exhalations from the earth which are said to produce the *grippe*. All the sparrows and finches, it is added, have deserted the infected districts; and, in several other parts of Switzerland, domesticated animals have been attacked in a similar way.

**Changes.**—The Grand Seigneur has granted the Holy Sepulchre, at Jerusalem, to the Greek priests, with permission to build a church over that sacred spot.

**Steam Communication with India.**—The Bombay committee, having a surplus fund from the subscription for carrying this plan into effect, seems disposed, by the last accounts, to apply it, during 18 months, partly to the expense of overland packets between Bussorah and Beyrout, and partly to keeping up a similar intercourse *via* the Red Sea, by steamers, when practicable, and, when otherwise, by sailing vessels.

**St. James's Ornithological Society.**—In our advertising columns will be found a sketch of the plan on which this new association is likely to be conducted; in directing public attention to which, we beg to offer a few words on behalf of an Institution which, in our opinion, may be made to contribute essentially to purposes of general utility. The gratuitous exhibition of rare and beautiful birds in the Park, would alone recommend the design to the favour of the million-inhabitants of the metropolis. Sources of innocent and natural pleasure to be enjoyed by every class of the population can never be too widely and sedulously cultivated; especially near so vast a city as London. Even as ornamental appendages they deserve warm support; but, encouragement still more cordial, when we consider that they are useful as well as agreeable, and instructive as well as graceful. The domestication of many foreign birds would add greatly to the varieties of food, to the charms of song, to the harmless entertainment of feathered pet animals. The improvement of poultry and game is an obvious result; and might not a well-arranged ornithological museum and library (both *desiderata*) augment the scientific value of the Institution? It seems, however, to be in excellent hands; and we trust these brief hints will be excused.

**Application of Steam.**—An ingenious boy, aged 16, named Tristram, and residing at Ballymoney, near Belfast, has lately, among other clever applications of steam, contrived an apparatus by which to churn butter.

*Ancient Remains.*—A number of human bones, mixed with those of some gigantic animal, were lately found in Kingsbury Gravel Pits, near St. Alban's. So great a sensation

was caused by the event, that several persons were seriously hurt in endeavouring to obtain a sight of them. They are now collected and preserved at Kingsbury.

GENERAL METEOROLOGICAL ACCOUNT FOR THE YEAR 1836.

Thermometer, 1836.—Highest, 85°, July 5; lowest, 21°, Dec. 23.

Barometer, 1836.—Highest, 30.38, Jan. 2; lowest, 28.54, March 28.

Rain, 1836.—33.865 inches.

The mode of keeping the above Registers is as follows:—

At Edmonton, the warmth of the day is observed by means of a thermometer exposed to the north, in the shade, standing about four feet above the surface of the ground. The extreme cold of the night is ascertained by a self-registering thermometer in a similar situation. The daily range of the barometer is known from observations made at intervals of four hours each, from 8 A.M. till 8 P.M. The weather and the direction of the wind are the result of the most frequent observations. The rain is measured every morning at 8 o'clock.

At Wycombe, the thermometer and barometer are registered at 8 A.M., at 3 and 10 P.M. The extreme cold is ascertained by a self-registering thermometer. The wind is the result of the most frequent observations.

At Cheltenham, the temperature is ascertained by a self-registering thermometer, suspended about five feet from the ground, in a north-east aspect, and the observation made daily at 8 A.M. The winds and barometer are registered at 8 A.M. and 8 P.M.

Edmonton.

### LITERARY NOVELTIES.

We have much pleasure in mentioning, as a forthcoming publication, a volume by the Right Hon. Sir R. Wilmot Horton, Bart. Governor of Ceylon, under the title of *Letters of the Dead*; to which Notes and an Appendix will be added by the Editor. Among the correspondents we find the names of Lord Grenville, Mr. Huskisson, Bishop Heber, Mr. Malthus, Mr. Simond of Geneva, and other eminently distinguished persons.

In the Press.

Gleanings, Historical and Literary, consisting of upwards of Seven Hundred choice Selections from Ancient and Modern standard authors, &c.—The Second Volume of the History of the Presbyterian Church in Ireland, by the Rev. J. Seaton Reid, D.D.—Observations on the Preservation of Health, in Infancy, Youth, Manhood, and Age, by John Harrison Curtis, Esq.

### LIST OF NEW BOOKS.

Arithmetic, illustrated by woodcuts, by Arthur Parsey, 12mo. 2s. 6d.—Early Recollections relating to Samuel T. Coleridge, by Joseph Cotti, 2 vols. cr. 8vo. 11s. 1s.; ditto, proof plates, 11s.—A Practical Treatise on Cultivations of Grape Vine, by Clement Hoare, 8vo. 2d. edit. 7s. 6d.—The Works of John Hunter, by J. T. Palmer, Vol. II. 8vo. 17s. 6d.—The Principles of real Property, according to the text of Black

# ADVERTISEMENTS, Connected with Literature and the Arts.

## BRITISH INSTITUTION,

PAID MAIL.  
The Gallery for the Exhibition and Sale of the Works of British Artists, is open daily, from Ten in the Morning until Five in the Evening.

Admission, 1s.—Catalogue, 1s.  
WILLIAM BARNARD, Keeper.

## ST. JAMES'S ORNITHOLOGICAL

SOCIETY.—A General Meeting of this Society will be held at the Thatched House Tavern, Saint James's Street, on Wednesday next, the 26th instant, at Three o'clock precisely, to receive the Report of the Provisional Committee, which was appointed to prepare and submit to the Society a Scheme and Regulations for its future guidance.

## HEADS of the PLAN which the PROVI-

SIONAL COMMITTEE of the ST. JAMES'S ORNITHOLOGICAL SOCIETY recommend the Members to adopt.

Title.—The Ornithological Society of London.  
Management.—A Council, with the usual Officers.  
Honorary Members.—Limited to Five. Eminent Scientific Ornithologists, or Liberal Patrons of the Society. Elected by the Council.

Ordinary Members.—Elected by Ballot. Gentlemen will subscribe, annually, Two Guinea; Ladies, One Guinea. Entrance Fee for Gentlemen, Two Guinea; for Ladies, One Guinea. Members of the St. James's Ornithological Society will have the option of being Original Members of the Ornithological Society of London at the annual Subscription of One Guinea.  
Foreign Members.—Elected by Ballot. Eminent Foreign Ornithologists.

Foreign Correspondents.—Elected by the Council. Residents abroad, desirous of assisting the Society, exempt from all pecuniary Contributions.

The objects of the Society are to be obtained by  
The Exhibition of Living Birds;  
The Propagation and Dispersion of the Domesticated Races;  
A Museum;

Library;  
Periodical Meetings;  
Ornithological Lectures;

The Publication of Ornithological Works—Scientific and Practical;  
Prize Shows.

Living Specimens.—The Racial Genera, and their Types, will be particularly attended to, as being most beautiful and attractive, pre-eminently domestic, and practically useful.

The Hardy Birds will be gratuitously Exhibited in the Parks; those for which Buildings are required will be seen by the Public on payment of a small admission Fee.

The Duplicates.—Birds and Eggs will be distributed among the Members.

The Museum.—The Specimens will be accurately Named, according to the Natural System; and so arranged as to convey to the Student, through the eye alone, a general and accurate knowledge of the Anatomy and Analogies of Birds; and to exhibit examples of the different organisations which are known to accompany different habits and modes of life. The Museum will include stuffed Birds, Bird Skins, Skeletons and parts of Birds, Nests, and Eggs; and will be open, without restriction, to Scientific Persons and Artists.

Library.—The Library will contain, ultimately, every Ornithological Work of merit: British and Foreign Ornithological Periodicals will be taken in, and circulated among such of the Members as subscribe an additional Half Guinea for this advantage.

Periodical Meetings, or Conversations, will be held for the Exhibition of living and dead Specimens, Drawings, Books, Nests, &c.—for reading Ornithological Papers, and for oral Observations.

Lectures.—Competent Ornithologists will be invited to deliver Lectures.

Publications.—The Society will publish, or patronise the publication of, a general Ornithological Work at an accessible price; the proceedings will be published concisely and cheaply; and the Society will collect and publish all the information they can obtain as to the best modes of rearing Foreign Birds adapted for the Park, the Preserve, the Poultry Yard, and the Aviary.

Prizes.—A Prize of the value of 15s. or 30s. will be given annually for the best Paper on Systematic Ornithology, in elucidation of the power, wisdom, and goodness of God. Another of the value of 10s. each, will be given for the best Paper on the value of 5s. for the best Method of Keeping Alive in this Country such Foreign Birds as will not Breed.

Application will be made to Government for a Locality for the Society's Museum, Library, and Housed Collections: if the application be successful, the Museum will be freely open to the Public three days a week.

The ordinary Funds, arising from Subscriptions and Entrance Fees, will, in the first instance, be applied solely to the construction of Aviaries, and the purchase, rearing, and breeding of Birds; and an extraordinary Fund will be raised by the creation of 100 Shares of 50s. each, 75s. to be paid, if desired, in two half-yearly instalments, which will be applied exclusively to the purchase of Books, Specimens, and Cabinets, to lay a broad and solid foundation for a worthy Museum and Library. The property thus acquired will be vested in the Shareholders; and will, unless specially conveyed by Donation, form part of the general Property, until the Funds shall be sufficient to pay off the Shareholders.

The Duplicates will, at first, be distributed among the Shareholders only, and, in addition to the ordinary privileges of personal admission to the Museum, Library, and Meetings, they will be entitled to give a certain number of free admissions daily to Strangers.

## THE COMMITTEE of the BIRMING-

HAM and EDGBASTON PROPRIETARY DAY SCHOOL are desirous of engaging a HEAD MASTER, to enter upon his duties at the termination of the next Christmas Vacation. The Salary will be not less than 400l. per annum, without the privilege of taking charge of the School, and to take charge of the higher Classes in English and Mathematics, and as the general superintendent of the School, high classical attainments will be required.

Applicants are requested to Address their Testimonials, &c. &c. (free of expense) on or before the 20th of May, to Mr. J. C. Barlow, the Honorary Secretary, Bennett's Hill, Birmingham, from whom the Rules of the Institution, and any further information, may be obtained.

## INCORPORATED LITERARY FUND

SOCIETY.—The Members and Friends of the Literary Fund Society are respectfully informed that the Forty-Eighth Anniversary of this Institution will be celebrated in Freemasons' Hall, on Wednesday, May 3, when His Grace the Duke of Somerset, the President of the Society, will take the Chair.

Stewards.

### REVIEW OF NEW BOOKS.

*Athens: its Rise and Fall; with Views of the Arts, Literature, and Social Life of the Athenian People.* 2 vols. 8vo. London, 1837. Saunders and Otley.

MR. BULWER stands too high in the literature of his country and age, not to be exposed to all those assaults which have ever attended living genius. His works of fiction are read and admired in every language of Europe, and are spread, like Scott's, over the face of the civilised world. His poetical imaginings have stirred the bosoms of the gentle lovers of nature of every class, and in every clime. His classic creations have extorted the praises of the learned, while they excited the best sympathies of unschooled humanity. His general views of society and national manners have been received with attention by the philosophical and observant:—and he is yet in the spring-tide of early manhood. It might be thought that such an individual would reap nothing from his contemporaries but gratitude and admiration; and so he does from the vast mass. But such is the weakness of our nature—such the melancholy operation of personal and party feelings, that we have often, and but lately too, seen this man attempted to be held up to ridicule, and vituperated as a shallow, misled pretender. He, however, needs no defence from us for the past. In spite of envy and malice he holds his own proud station; and what a few of his own time may deny him, will be liberally granted by a juster posterity.

In the present publication he comes before us as a historian; and well does he sustain the grand effort. Years of labour have not been mispent in research and consideration; and the style is worthy of the best name in this elevated department of our national literature. More we will not say now. Our opinion must, as yet, of necessity, be hasty and general: with sufficient opportunity to afford the reflexion such a publication demands, we shall hereafter endeavour to discharge our critical duty.

The work (of which two other volumes are promised to complete the design) is dedicated, with due acknowledgments, to Mr. Fynes Clinton, the author of the "*Fasti Hellenici*." Mr. Bulwer, differing from the course of Mr. Thirlwall, looks more to the subjects of literature than wars; brings down his narrative to the period of the supreme administration of Pericles, and ends with an analysis of the tragedies of Sophocles. The great object is to explain the rise and fall of Athens; and the author commences with an antiquarian examination into the origin of the Greeks. Without pausing on this, we shall beg to exemplify the skill and mastery of mind displayed throughout, by a fine sketch of a portion of the mythology.

"The mythology of the early Greeks may, perhaps, be derived from the following principal sources:—First, the worship of natural objects; and of divinities, so formed, the most unequivocally national will obviously be those most associated with their mode of life, and the influences of their climate. When the savage first entrusts the seed to the bosom of the earth

—when, through a strange and unaccountable process, he beholds what he buried in one season spring forth the harvest of the next—the earth itself, the mysterious garner, the benign, but sometimes the capricious reproducer of the treasures committed to its charge, becomes the object of the wonder, the hope, and the fear, which are the natural origin of adoration and prayer. Again, when he discovers the influence of the heaven upon the growth of his labour—when, taught by experience, he acknowledges its power to blast, or to mellow—then, by the same process of ideas, the heaven also assumes the character of divinity, and becomes a new agent, whose wrath is to be propitiated, whose favour is to be won. What common sense thus suggests to us, our researches confirm, and we find, accordingly, that the earth and the heaven are the earliest deities of the agricultural Pelasgi. As the Nile to the fields of the Egyptian, earth and heaven to the culture of the Greek. The effects of the sun upon human labour and human enjoyment are so sensible to the simplest understanding, that we cannot wonder to find that glorious luminary among the most popular deities of ancient nations. Why search through the East to account for its worship in Greece? More easy to suppose that the inhabitants of a land, whom the sun so especially favoured, saw and blest it for it was good, than, amidst innumerable contradictions and extravagant assumptions, to decide upon that remoter shore whence was transplanted a deity whose effects were so benignant, whose worship so natural, to the Greeks. And in the more plain belief we are also borne out by the more sound inductions of learning. For it is noticeable that neither the moon nor the stars—favourite divinities with those who enjoyed the serene nights, or inhabited the broad plains of the East—were (though probably admitted among the Pelagic deities) honoured with that intense and reverent worship which attended them in Asia and in Egypt. To the Pelasgi, not yet arrived at the intellectual stage of philosophical contemplation, the most sensible objects of influence would be the most earnestly adored. What the stars were to the East, their own beautiful Aurora, awakening them to the delight of their genial and temperate climate, was to the early Greeks. Of deities, thus created from external objects, some will rise out (if I may use the expression) of natural accident, and local circumstance. An earthquake will connect a deity with the earth, an inundation with the river or the sea. The Grecian soil bears the marks of maritime revolution; many of the tribes were settled along the coast, and, perhaps, had already adventured their rafts upon the main. A deity of the sea (without any necessary revelation from Africa) is, therefore, among the earliest of the Grecian gods. The attributes of each deity will be formed from the pursuits and occupations of the worshippers—sanguinary with the warlike—gentle with the peaceful. The pastoral Pelasgi of Arcadia honoured the pastoral Pan for ages before he was received by their Pelagic brotherhood of Attica; and the agricultural Demeter or Ceres will be recognised among many

tribes of the agricultural Pelasgi, which no Egyptian is reputed, even by tradition,\* to have visited. The origin of prayer is in the sense of dependence, and in the instinct of self-preservation, or self-interest. The first objects of prayer to the infant man will be those on which, by his localities, he believes himself to be most dependent for whatever blessings his mode of life inclines him the most to covet, or from which may come whatever peril his instinct will teach him the most to deprecate and fear. It is this obvious truth which destroys all the erudite systems that would refer the different creeds of the heathen to some single origin. Till the earth be the same in each region—till the same circumstances surround every tribe—different impressions, in nations yet unconverted and uncivilised, must produce different deities. Nature suggests a God, and man invests him with attributes. Nature and man, the same as a whole, vary in details; the one does not every where suggest the same notions—the other cannot every where imagine the same attributes. As with other tribes so with the Pelasgi, or primitive Greeks: their early gods were the creatures of their own early impressions. As one source of religion was in external objects, so another is to be found in internal sensations and emotions. The passions are so powerful in their effects upon individuals and nations, that we can be little surprised to find those effects attributed to the instigation and influence of a supernatural being. Love is individualized and personified in nearly all mythologies; and love, therefore, ranks among the earliest of the Grecian gods. Fear, or terror, whose influence is often so strange, sudden, and unaccountable—seizing even the bravest—spreading through numbers with all the speed of an electric sympathy—and deciding in a moment the destiny of an army or the ruin of a tribe—is another of those passions, easily supposed the *affatus* of some preternatural power, and easily, therefore, susceptible of personification. And the pride of men, more especially if habitually courageous and warlike, will gladly yield to the credulities which shelter a degrading and unwonted infirmity beneath the agency of a superior being. Terror, therefore, received a shape and found an altar probably as early at least as the heroic age. According to Plutarch, Theseus sacrificed to terror previous to his battle with the Amazons;—an idle tale, it is true, but proving, perhaps, the antiquity of a tradition. As society advanced from barbarism, arose more intellectual creations; as cities were built, and as, in the constant flux and reflux of martial tribes, cities were overthrown, the elements of the social state grew into personification, to which influence was attributed, and reverence paid. Thus were fixed into divinity and shape, order, peace, justice, and the stern and gloomy orcos,† witness of the oath, avenger of the perjury. This, the second source of religion, though more subtle and refined in its creations, had still its origin in the same human causes as the first, viz. anticipation of good and apprehension of

\* "The connexion of Ceres with Isis was a subsequent innovation."

† Orco was the personification of an oath, or the sanction of an oath.

evil. Of deities so created, many, however, were the inventions of poets (poetic metaphor is a fruitful mother of mythological fable); many, also, were the graceful refinements of a subsequent age. But some (and nearly all those I have enumerated) may be traced to the earliest period to which such researches can ascend. It is obvious that the eldest would be connected with the passions—the more modern with the intellect. It seems to me apparent, that almost simultaneously with deities of these two classes would arise the greater and more influential class of personal divinities which gradually expand into the heroic dynasty of Olympus. The associations which one tribe, or one generation, united with the heaven, the earth, or the sun, another might obviously connect, or confuse, with a spirit or genius inhabiting or influencing the element or physical object which excited their anxiety or awe; and, this creation effected, so what one tribe or generation might ascribe to the single personification of a passion, a faculty, or a moral and social principle, another would just as naturally refer to a personal and more complex deity:—that which in one instance would form the very nature of a superior being, in the other would form only an attribute—swell the power and amplify the character of a Jupiter, a Mars, a Venus, or a Pan. It is in the nature of man, that personal divinities, once created and adored, should present more vivid and forcible images to his fancy than abstract personifications of physical objects and moral impressions. Thus, deities of this class would gradually rise into pre-eminence and popularity above those more vague and incorporeal; and (though I guard myself from absolutely solving in this manner the enigmas of ancient theogonies) the family of Jupiter could scarcely fail to possess themselves of the shadowy thrones of the ancestral earth and the primeval heaven. A third source of the Grecian, as of all mythologies, was in the worship of men who had actually existed, or been supposed to exist; for, in this respect, errors might creep into the calendar of heroes, as they did into the calendar of saints (the hero-worship of the moderns), which has canonised many names to which it is impossible to find the owners. This was probably the latest, but perhaps, in after times, the most influential and popular, addition to the aboriginal faith. The worship of dead men once established, it was natural to a people so habituated to incorporate and familiarise religious impressions, to imagine that even their primary gods, first formed from natural impressions (and, still more, those deities they had borrowed from stranger creeds), should have walked the earth. And thus, amongst the multitude in the philosophical ages, even the loftiest of the Olympian dwellers were vaguely supposed to have known humanity;—their immortality but the apotheosis of the benefactor or the hero.

“To sum up, the above remarks conduce to these principal conclusions: First, that the Grecian mythology cannot be moulded into any of the capricious and fantastic systems of erudite ingenuity. As a whole, no mythology can be considered more strikingly original, not only because its foundations appear indigenous, and based upon the character and impressions of the people—not only because at no one period, from the earliest even to the latest date, whatever occasional resemblances may exist, can any identity be established between its most popular and essential creations, and those of any other faith; but because, even all that it borrowed it rapidly remodelled and naturalised, growing yet more individual from its very

complexity, yet more original from the plagiarisms which it embraced. Secondly, that it differed in many details in the different states: but under the development of a general intercourse, assisted by a common language, the plastic and tolerant genius of the people harmonised all discords—until (catholic in its fundamental principles) her religion united the whole of Greece in indissoluble bonds of faith and poetry—of daily customs and venerable traditions. Thirdly, that the influence of other creeds, though by no means unimportant in amplifying the character, and adding to the list, of the primitive deities, appears far more evident in the ceremonies and usages, than the personal creations, of the faith. We may be reasonably sceptical as to what Herodotus heard of the origin of rites or gods from Egyptian priests; but there is no reason to disbelieve the testimony of his experience, when he asserts that the forms and solemnities of one worship closely resemble those of another;—the imitation of a foreign ceremony is perfectly compatible with the aboriginal invention of a national God. For the rest, I think it might be (and by many scholars appears to me to have been), abundantly shewn, that the Phœnician influences upon the early mythology of the Greeks were far greater than the Egyptian, though by degrees, and long after the heroic age, the latter became more eagerly adopted, and more superficially apparent.”

The effects of their religion on the Greek character are also finely explained; and, coming to the Heroic Ages, Mr. B. says beautifully:—

“As one who has been journeying through the dark begins at length to perceive the night breaking away in mist and shadow, so that the forms of things, yet uncertain and undefined, assume an exaggerated and gigantic outline, half lost amidst the clouds,—so now, through the obscurity of fable, we descry the dim and mighty outline of the Heroic Age.”

“Much of the national spirit of every people, even in its most civilised epochs, is to be traced to the influence of that age which may be called the Heroic. The wild adventurers of the early Greece tended to humanise even in their excesses. It is true that there are many instances of their sternness, ferocity, and revenge; they were insatiable from the consciousness of surpassing strength; often cruel from that contempt of life common to the warlike. But the darker side of their character is far less commonly presented to us than the brighter—they seem to have been alive to generous emotions, more readily than any other race so warlike in an age so rude: their affections were fervid as their hatreds; their friendships more remarkable than their feuds. Even their ferocity was not, as with the Scandinavian heroes, a virtue and a boast—their public opinion honoured the compassion and the clement. Thus Hercules is said first to have introduced the custom of surrendering to the enemy the corpses of their slain; and mildness, justice, and courtesy, are no less his attributes than invincible strength and undaunted courage. Traversing various lands, these Paladins of an elder chivalry acquired an experience of different governments and customs, which assisted, on their return, to polish and refine the admiring tribes which their achievements had adorned. Like the knights of a northern myth, their duty was to punish the oppressor, and redress the wronged; and they thus fixed, in the wild elements of unsettled opinion, a recognised standard of generosity and of justice. Their deeds became the theme of the poets, who sought to embellish their virtues, and ex-

tenuate their offences. Thus, certain models, not indeed wholly pure or excellent, but bright with many of those qualities which ennoble a national character, were set before the emulation of the aspiring and the young; and the traditional fame of a Hercules or a Theseus assisted to inspire the souls of those who, ages afterwards, broke the Mede at Marathon, and arrested the Persian might in the Pass of Thermopylæ. For, as the spirit of a poet has its influence on the destiny and character of nations, so Time himself hath his own poetry, preceding and calling forth the poetry of the human genius, and breathing inspirations, imaginative and imperishable, from the great deeds and gigantic images of an ancestral and traditional age.”

Grecian geography is next generally discussed; and we have, in particular, some stirring sketches of Sparta:—

“In their domestic life, the Spartans, like the rest of the Greeks, had but little pleasure in the society of their wives. At first the young husband only visited his bride by stealth—to be seen in company with her was a disgrace. But the women enjoyed a much greater freedom and received a higher respect in Sparta than elsewhere; the soft Asiatic distinctions in dignity between the respective sexes did not reach the hardy mountaineers of Lacedæmon: the wife was the mother of men! Brought up in robust habits, accustomed to athletic exercises, her person exposed in public processions and dances—which, but for the custom that made decorous even indecency itself, would have been, indeed, licentious—the Spartan maiden, strong, hardy, and half a partaker in the ceremonies of public life, shared the habits, aided the emulation, imbibed the patriotism, of her future consort. And, by her sympathy with his habits and pursuits, she obtained an influence and ascendancy over him which were unknown in the rest of Greece. Dignified on public occasions, the Spartan matron was deemed, however, a virago in private life; and she who had no sorrow for a slaughtered son had very little deference for a living husband. Her obedience to her spouse appears to have been the most cheerfully rendered upon those delicate emergencies when the service of the state required her submission to the embraces of another!”

The governments of Greece are described and contrasted with much of sound reasoning, We offer two short specimens:—

“Now appeared the class of demagogues. The people had been accustomed to change. They had been led against monarchy, and found they had only resigned the one master to obtain the many. A demagogue arose, sometimes one of their own order, more often a dissatisfied, ambitious, or impoverished noble; for they who have wasted their patrimony, as the Stagyrite shrewdly observes, are great promoters of innovation. Party ran high, the state became divided, passions were aroused,

“Aristotle, who is exceedingly severe on the Spartan ladies, says, very shrewdly, that the men were trained to submission to a civil by a military system, while the women were left untamed. A Spartan hero was thus made to be hempecked. Yet, with all the alleged severity of the Dorian morals, these sturdy matrons rather discarded the graces than avoided the frailties of their softer contemporaries. Plato and Aristotle give very unfavourable testimonials of their chastity. Plutarch, the blind panegyrist of Sparta, observes, with amusing composure, that the Spartan husbands were permitted to lend their wives to each other; and Polybius (in a fragment of the 13th book) informs us that it was an old-fashioned and common custom in Sparta for three or four brothers to share one wife. The poor husbands!—no doubt the lady was a match for them all! So much for those gentle creatures whom that grave German professor, M. Müller, holds up to our admiration and despair.”

and the popular leader became the popular idol. His life was, probably, often in danger from the resentment of the nobles, and it was always easy to assert that it was so endangered. He obtained a guard to protect him, conciliated the soldiers, seized the citadel, and rose at once from the head of the populace to the ruler of the state. Such was the common history of the tyrants of Greece.

"We should remove some very important prejudices from our minds, if we could once subscribe to a fact, plain in itself, but which the contests of modern party have utterly obscured—that, in the mere forms of their government, the Greek republics cannot fairly be pressed into the service of those who, in existing times, would attest the evils, or proclaim the benefits, of constitutions purely democratic. In the first place, they were not democracies, even in their most democratic shape: the vast majority of the working classes were the enslaved population; and, therefore, to increase the popular tendencies of the republic was, in fact, only to increase the liberties of the few. We may fairly doubt whether the worst evils of the ancient republics, in the separation of ranks, and the war between rich and poor, were not the necessary results of slavery. We may doubt, with equal probability, whether much of the lofty spirit, and the universal passion for public affairs, whence emanated the enterprise, the competition, the patriotism, and the glory of the ancient cities, could have existed without a subordinate race to carry on the drudgeries of daily life. It is clear, also, that much of the intellectual greatness of the several states arose from the exceeding smallness of their territories, the concentration of internal power, and the perpetual emulation with neighbouring and kindred states, nearly equal in civilisation; it is clear, too, that much of the vicious parts of their character, and yet much of their more brilliant, arose from the absence of the press. Their intellectual state was that of men *talked to*, not *written to*. Their imagination was perpetually called forth—their deliberative reason rarely;—they were the fitting audience for an orator, whose art is effective in proportion to the impulse and the passion of those he addresses. Nor must it be forgotten, that the representative system, which is the proper conductor of the democratic action, if not wholly unknown to the Greeks, and if unconsciously practised in the Spartan ephorality, was, at least, never existent in the more democratic states; and assemblies of the whole people are compatible only with those small nations of which the city is the country. Thus, it would be impossible for us to propose the abstract constitution of any ancient state as a warning or an example to modern countries which possess territories large in extent—which subsist without a slave population—which substitute representative councils for popular assemblies—and which direct the intellectual tastes and political habits of a people, not by oratory and conversation, but through the more calm and dispassionate medium of the press. This principle settled, it may, perhaps, be generally conceded, that, on comparing the democracies of Greece with all other contemporary forms of government, we find them the most favourable to mental cultivation; not more exposed than others to internal revolutions—usually, in fact, more durable; more mild and civilised in their laws; and that the worst tyranny of the Demus, whether at home or abroad, never equalled that of an oligarchy or a single ruler. That in which the ancient republics are properly models to us, consists, not in the form, but

the spirit of their legislation. They teach us that patriotism is most promoted by bringing all classes into public and constant intercourse; that intellect is most luxuriant wherever the competition is widest and most unfettered; and that legislators can create no rewards, and invent no penalties, equal to those which are silently engendered by society itself, while it maintains, elaborated into a system, the desire of glory and the dread of shame."

Early literature is the theme which closes Book I.; concluding which, Mr. B. proceeds from dissertation into history. He contends for the personality of Homer, as an Asiatic Greek; but we must come to an end for the present, which we do with a cheering comparison:—

"If we examine the ways of an infant, we shall cease to wonder at those of an infant civilisation. Long before we can engage the curiosity of the child in the history of England; long before we can induce him to listen with pleasure to our stories even of Poltairs and Cressy; and (a fortiori) long before he can be taught an interest in Magna Charta and the Bill of Rights,—he will of his own accord question us of the phenomena of Nature; inquire how he himself came into the world; delight to learn something of the God we tell him to adore; and find in the rainbow and the thunder, in the meteor and the star, a thousand subjects of eager curiosity and reverent wonder. The *why* perpetually torments him: every child is born a philosopher!—the child is the analogy of a people yet in childhood."\*

*Lockhart's Life of Sir Walter Scott, Vol. II.*  
1837. Edinburgh, Cadell; London, Murray;  
Whittaker and Co.

THE continuation of this delightful literary treasure shews that, intense as was the interest excited, it was far from being exhausted in the first volume; and, on the contrary, is maintained with almost equal spirit, and certainly introducing persons and discussions of more universal concern. It is true that the personal particulars of the infancy and first steps in literature of such a man as Scott, must ever possess attractions of the highest class; but it is not less certain that the tracing of his after progression must involve a multitude of circumstances of perhaps greater importance, though unattended by the individualities which are the more immediate charms of biography.

This volume commences with an account of the removal of Scott to his now famed residence of Ashestiel, on the pastoral banks of the Tweed; and proceeds to detail the formation of his partnership as a printer with James Ballantyne, the publication of the "*Lay of the Last Minstrel*," his appointment as a clerk of session, the writing and publishing of "*Marmion*," the editing of Dryden, and other matters, to which we shall turn in future *Gazettes*. At present we follow

\* "To this solution of the question, Why literature should generally commence with attempts at philosophy, may be added another.—When written first breaks upon oral communication, the reading public must necessarily be extremely confined. In many early nations, that reading public would be composed of the caste of priests; in this case philosophy would be cramped by superstition. In Greece, there being no caste of priests, philosophy embraced these studious minds addicted to a species of inquiry which rejected the poetical form, as well as the poetical spirit. It may be observed, that the more limited the reading public, the more abstruse are, generally, prose compositions; as readers increase, literature goes back to the fashion of oral communication: for, if the reciter addressed the multitude in the earlier age, so the writer addresses a multitude in the later; literature, therefore, commences with poetical fiction, and usually terminates with prose fiction. It was so in the ancient world—it will be so with England and France. The harvest of novels is, I fear, a sign of the approaching exhaustion of the soil."

the order of dates; and as one of the affairs which produced very material effects throughout his whole career, commence with Scott's embarking in the printing business.

"Mr. Ballantyne, in his Memorandum, says, that very shortly after the publication of the '*Lay*,' he found himself obliged to apply to Mr. Scott for an advance of money; his own capital being inadequate for the business which had been accumulated on his press, in consequence of the reputation it had acquired for beauty and correctness of execution. Already, as we have seen, Ballantyne had received 'a liberal loan;' and now," says he, "being compelled, maugre all delicacy, to renew my application, he candidly answered that he was not quite sure that it would be prudent for him to comply; but, in order to evince his entire confidence in me, he was willing to make a suitable advance to be admitted as a third-sharer of my business." In truth, Scott now embarked in Ballantyne's concern almost the whole of the capital at his disposal, namely, the 5000*l.* which he had received for *Rosebank*, and which he had, a few months before, designed to invest in the purchase of *Broadmeadows*. *Dis aliter visum*. I have, many pages back, hinted my suspicion that he had formed some distant notion of such an alliance, as early as the date of Ballantyne's projected removal from Kelso to Edinburgh; and his Introduction to the '*Lay*,' in 1830, appears to leave little doubt that the hope of ultimately succeeding at the bar had waxed very faint, before the third volume of the '*Minstrelsy*' was brought out in 1803. When that hope ultimately vanished altogether, perhaps he himself would not have found it easy to tell. The most important of men's opinions, views, and projects, are sometimes taken up in so very gradual a manner, and after so many pauses of hesitation and of inward retraction, that they themselves are at a loss to trace in retrospect all the stages through which their minds have passed.

"The forming of this commercial connexion was one of the most important steps in Scott's life. He continued bound by it during twenty years, and its influence on his literary exertions and his worldly fortunes was productive of much good and not a little evil. Its effects were, in truth, so mixed and balanced during the vicissitudes of a long and vigorous career, that I at this moment doubt whether it ought, on the whole, to be considered with more of satisfaction or of regret. With what zeal he proceeded in advancing the views of the new copartnership, his correspondence bears ample evidence. The brilliant and captivating genius, now acknowledged universally, was soon discovered by the leading booksellers of the time to be united with such abundance of matured information in many departments, and, above all, with such indefatigable habits, as to mark him out for the most valuable workman they could engage for the furtherance of their schemes. He had, long before this, cast a shrewd and penetrating eye over the field of literary enterprise, and developed in his own mind the outlines of many extensive plans, which wanted nothing but the command of a sufficient body of able subalterns to be carried into execution with splendid success. Such of these as he grappled with in his own person were, with rare exceptions, carried to a triumphant conclusion; but the alliance with Ballantyne soon infected him with the proverbial rashness of mere mercantile adventure; while, at the same time, his generous feelings for other men of letters, and his characteristic propensity to over-rate their talents, combined

to hurry him and his friends into a multitude of arrangements, the results of which were often extremely embarrassing, and ultimately, in the aggregate, all but disastrous. It is an old saying, that wherever there is a secret there must be something wrong; and dearly did he pay the penalty for the mystery in which he had chosen to involve this transaction. It was his rule from the beginning, that whatever he wrote or edited must be printed at that press; and, had he catered for it only as author and sole editor, all had been well: but, had the booksellers known his direct pecuniary interest in keeping up and extending the occupation of those types, they would have taken into account his lively imagination and sanguine temperament, as well as his taste and judgment, and considered, far more deliberately than they too often did, his multifarious recommendations of new literary schemes, coupled though these were with some dim understanding that, if the Ballantyne press were employed, his own literary skill would be at his friend's disposal for the general superintendence of the undertaking. On the other hand, Scott's suggestions were, in many cases—perhaps in the majority of them—conveyed through Ballantyne, whose habitual deference to his opinion induced him to advocate them with enthusiastic zeal; and the printer, who had thus pledged his personal authority for the merits of the proposed scheme, must have felt himself committed to the bookseller, and could hardly refuse with decency to take a certain share of the pecuniary risk, by allowing the time and method of his own payment to be regulated according to the employer's convenience. Hence, by degrees, was woven a web of entanglement, from which neither Ballantyne nor his adviser had any means of escape; except only in that indomitable spirit, the mainspring of personal industry altogether unparalleled, to which, thus set in motion, the world owes its most gigantic monument of literary genius."

In truth, this secret copartnery, looked at even candidly in its real light, must be considered to have involved Scott in a system of reserve, and almost of duplicity, not quite consistent with open dealing and direct high-mindedness. Publishers, and other parties with whom he had connexions, were not aware of his private interests, and, consequently, treated with him at a disadvantage; and, indeed, he was occasionally compelled, by the necessity of circumstances, to act in a manner more like a tradesman than an author of the highest public eminence. Thus, while, in a letter to Miss Seward (1807), he characterises publishers and booksellers, &c. in a way (no matter how correct) not very complimentary to that class, he, in another to Southey, touches him with a little piece of recommendation to his own concern, which would have been quite in keeping with the character given to "*the Trade*." He says,—

"I think Southey does himself injustice in supposing the *Edinburgh Review*, or any other, could have sunk '*Madoc*,' even for a time. But the size and price of the work, joined to the frivolity of an age which must be treated as nurses humour children, are sufficient reasons why a poem, on so chaste a model, should not have taken immediately. We know the similar fate of Milton's immortal work, in the witty age of Charles II., at a time when poetry was much more fashionable than at present. As to the division of the profits, I only think that Southey does not understand the gentlemen of *the trade*, emphatically so called, as well as I do. Without any greater degree of four-

berie than they conceive the long practice of their brethren has rendered matter of prescriptive right, they contrive to clip the author's proportion of profits down to a mere trifle. It is the tale of the fox that went a-hunting with the lion, upon condition of equal division of the spoil; and yet I do not quite blame the booksellers, when I consider the very singular nature of their *mystery*. A butcher generally understands something of black cattle, and woe betide the jockey who should presume to exercise his profession without a competent knowledge of horse-flesh. But who ever heard of a bookseller pretending to understand the commodity in which he dealt? They are the only tradesmen in the world who professedly, and by choice, deal in what is called 'a pig in a poke.' When you consider the abominable trash which, by their sheer ignorance, is published every year, you will readily excuse them for the indemnification which they must necessarily obtain at the expense of authors of some value. In fact, though the account between an individual bookseller and such a man as Southey may be iniquitous enough, yet I apprehend that upon the whole the account between *the trade* and the authors of Britain at large is pretty fairly balanced; and what these gentlemen gain at the expense of one class of writers, is lavished, in many cases, in bringing forward other works of little value. I do not know but this, upon the whole, is favourable to the cause of literature. A bookseller publishes twenty books, in hopes of hitting upon one good speculation, as a person buys a parcel of shares in a lottery, in hopes of gaining a prize. Thus the road is open to all; and, if the successful candidate is a little fleeced, in order to form petty prizes to console the losing adventurers, still the cause of literature is benefited, since none is excluded from the privilege of competition."

*Per contra* :—

"I am very glad the '*Morte Arthur*' is in your hands; it has been long a favourite of mine, and I intended to have made it a handsome book, in the shape of a small antique-looking quarto, with wooden vignettes of costume. I wish you would not degrade him into a squat 12mo; but admit the temptation you will probably feel to put it into the same shape with '*Palmerin and Amadis*.' If on this, or any occasion, you can cast a job in the way of my friend Ballantyne, I should consider it as a particular personal favour, and the convenience would be pretty near the same to you, as all your proofs must come by post at any rate. If I can assist you about this matter, command my services."

Far be it from us to utter a word against the admirable press of our late esteemed friend, James Ballantyne. A more upright and honourable man never breathed, and Scotland is deeply indebted to him for his improvement in the valuable art of printing (as Scott was for very much of sound, friendly, and critical advice); but we advert to the subject to shew the singular and awkward position in which it placed a man, otherwise so lofty an enemy to any thing which bore the semblance of disingenuousness or jobbery. Hear how his biographer, in the same vein, speaks of a very worthy, industrious, and estimable man, Alex. Chalmers :—

"Scott opened forthwith his gigantic scheme of the British Poets to Constable, who entered into it with eagerness. They found presently that Messrs. Cadell and Davies, and some of the other London publishers, had a similar plan on foot, and, after an unsuccessful nego-

tiation with Mackintosh, were now actually treating with Campbell for the Biographical prefaces. Scott proposed that the Edinburgh and London houses should join in the adventure, and that the editorial task should be shared between himself and his brother poet. To this both Messrs. Cadell and Mr. Campbell warmly assented; but the design ultimately fell to the ground in consequence of the booksellers refusing to admit certain works which both Scott and Campbell insisted upon. \* \* \*

"The body of booksellers meanwhile combined in what they still called a *general edition* of the English Poets, under the superintendence of one of their own Grub-street vassals, Mr. Alexander Chalmers."

But we leave this subject to advance to more agreeable themes. The following, relating to the autumn of 1805, at Ashestiel, and, after the first edition of the "*Lay*" had gone off with great rapidity, indicating its future celebrity and success, is an interesting literary and personal *morceau*.

"Mr. Skene soon discovered an important change which had recently been made in his friend's distribution of his time. Previously it had been his custom, whenever professional business or social engagements occupied the middle part of his day, to seize some hours for study after he was supposed to have retired to bed. His physician suggested that this was very likely to aggravate his nervous headache, the only malady he was subject to in the prime of his manhood; and, contemplating with steady eye a course not only of unremitting but of increasing industry, he resolved to reverse his plan, and carried his purpose into execution with unflinching energy. In short, he had now adopted the habits in which, with very slender variation, he ever after persevered when in the country. He rose by five o'clock, lit his own fire when the season required one, and shaved and dressed with great deliberation; for he was a very martinet as to all but the mere coxcombries of the toilet, not abhorring effeminate dandyism itself so cordially as the slightest approach to personal slovenliness, or even those '*bed-gown-and-slipper tricks*,' as he called them, in which literary men are so apt to indulge. Arrayed in his shooting-jacket, or whatever dress he meant to use till dinner-time, he was seated at his desk by six o'clock, all his papers arranged before him in the most accurate order, and his books of reference marshalled around him on the floor, while at least one favourite dog lay watching his eye just beyond the line of circumvallation. Thus, by the time the family assembled for breakfast, between nine and ten, he had done enough (in his own language) 'to break the neck of the day's work.' After breakfast, a couple of hours more were given to his solitary tasks, and by noon he was, as he used to say, '*his own man*.' When the weather was bad he would labour incessantly all the morning; but the general rule was, to be out and on horseback by one o'clock at the latest; while, if any more distant excursion had been proposed over night, he was ready to start on it by ten: his occasional rainy days of unintermitted study forming, as he said, a fund in his favour, out of which he was entitled to draw for accommodation whenever the sun shone with special brightness. It was another rule that every letter he received should be answered that same day. Nothing else could have enabled him to keep abreast with the flood of communications that in the sequel put his good-nature to the severest test: but already the demands on him in this way also were numerous; and he

included attention to them among the necessary business which must be despatched before he had a right to close his writing-box, or, as he phrased it, 'to say, "Out, damned spot!" and be a gentleman.' In turning over his enormous mass of correspondence, I have always invariably found some indication that, when a letter had remained more than a day or two unanswered, it had been so because he found occasion for inquiry, or deliberate consideration. I ought not to omit that, in those days, Scott was far too zealous a dragon not to take a principal share in the stable duty. Before beginning his desk-work in the morning, he uniformly visited his favourite steed; and neither Captain nor Lieutenant, nor the Lieutenant's successor, Brown Adam (so called after one of the heroes of the 'Minstrelsy'), liked to be fed except by him. The latter charger was, indeed, altogether intractable in other hands, though in his the most submissive of faithful allies. The moment he was bridled and saddled, it was the custom to open the stable-door as a signal that his master expected him; when he immediately trotted to the side of the leaping-on stone, of which Scott, from his lameness, found it convenient to make use, and stood there, silent and motionless as a rock, until he was fairly in his seat, after which he displayed his joy by neighing triumphantly through a brilliant succession of curvettings. Brown Adam never suffered himself to be backed but by his master. He broke, I believe, one groom's arm, and another's leg, in the rash attempt to tamper with his dignity. Camp was, at this time, the constant parlour dog. He was very handsome, very intelligent, and naturally very fierce, but gentle as a lamb among the children. As for the more locomotive Douglas and Percy, he kept one window of his study open, whatever might be the state of the weather, that they might leap out and in as the fancy moved them. He always talked to Camp as if he understood what was said; and the animal, certainly, did understand not a little of it: in particular, it seemed as if he perfectly comprehended on all occasions that his master considered him as a sensible and steady friend—the greyhounds as volatile young creatures, whose freaks must be borne with."

In a letter of Scott's to G. Ellis, about this time, we find a free opinion of one of Moore's juvenile performances, curiously enough engrossed on a defence of the indecencies of Dryden. "In making (says the writer) an edition of a man of genius's works for libraries and collections—and such I conceive a complete edition of Dryden to be—I must give my author as I find him, and will not tear out the page, even to get rid of the blot, little as I like it. Are not the pages of Swift, and even of Pope, larded with indecency, and often of the most disgusting kind; and do we not see them upon all shelves and dressing-tables, and all boudoirs? Is not Prior the most indecent of tale-tellers, not even excepting La Fontaine, and how often do we see his works in female hands? In fact, it is not passages of ludicrous indelicacy that corrupt the manners of a people—it is the sonnets which a prurient genius like Master Little sings *virginibus puerisque*—it is the sentimental slang, half lewd, half methodistic, that debauches the understanding, inflames the sleeping passions, and prepares the reader to give way as soon as a tempter appears."

Mr. Ellis's argument on the same question seems to be far more sound. He writes in return,—"I will not disturb you by contesting

any part of your ingenious apology for your intended *complete* edition of Dryden, whose genius I venerate as much you do, and whose negligences, as he was not rich enough to doom them to oblivion in his own life-time, it is, perhaps, incumbent on his editor to transmit to the latest posterity. Most certainly, I am not so squeamish as to quarrel with him for his immodesty on any moral pretence. Licentiousness in writing, when accompanied by wit, as in the case of Prior, La Fontaine, &c. is never likely to excite any *passion*, because every passion is serious; and the grave epistle of Eloisa is more likely to do moral mischief, and convey infection to love-sick damsels, than five hundred stories of Hans Carvel and Paulo Purgante. But whatever is, in point of expression, vulgar—whatever disgusts the taste—whatever might have been written by any fool, and is therefore unworthy of Dryden—whatever might have been suppressed, without exciting a moment's regret in the mind of any of his admirers,—ought, in my opinion, to be suppressed by any editor who should be disposed to make an appeal to the public taste upon the subject; because a man who was, perhaps, the best poet and best prose writer in the language—but it is foolish to say so much, after promising to say nothing."

And here, for the nonce, we conclude; only noticing an "observable" fact in a letter-writer of such boundless fertility as Scott, viz. that from London, February 1806, in writing to Lord Dalkeith (see pages 94, 95), he repeats every thing he had himself received from Mr. Ellis in a letter from Bath four days before (see pages 89, 90, 91). This is one of the perils of publishing correspondence: that which originally passed for our own is seen to be but a *risfamento* of what we have derived from others.

#### TEN POEMS.—Batch the Seventh.

1. *Flowers of Ebor.* By Thomas Crossley. Pp. 198. (London, Longman & Co.: Leyland, Halifax.)—To deny that this little volume possesses several poems of considerable merit, would be an untruth; and to pass over its many faults, without pointing out a few, would be an act of injustice even to its author. Whether it be sheer neglect, or a want of taste, that has caused Mr. Crossley to finish several of his stanzas so abruptly, and in so slovenly a way, we cannot tell; but certain we are, that he who wrote the second and third Sonnets to "A Moorland Cottage," might with but little labour have greatly improved such stanzas as the following, which, without going into the book in search of faults, we take from the first poems.

"Sent down to cheer man's thorny way,

Exalt him, and refine."

"To tears of joy instead."

"That spot on Eden is to thee,

In after years I woen."

To us, such jumping and inharmonious terminations as these, are as unpleasant as riding in a carriage along a road where masses of rough unsightly granite are placed at sundry distances, merely for the convenience of treating us with regular shaking fits. As to the "I woen," stuck there merely to fill up the line, we exclaim, "Oh, lame and impotent conclusion!" And yet, in spite of this apparent severity on our part, there are Flowers by the Ebor, well worth culling, bud, blossom, and bell, blowing in the full fragrance of beauty, and giving pleasure both to eye and mind. Pity that he who possesses so sweet a garden, should allow dock, and dandelion, and nettle, to deface its lovely beds. We await patiently for another spring, for 'tis a long winter.

2. *Poems. Original and Translated.* By Charles Percy Wyatt. B. A. Pp. 212. (London, Fraser.)—This volume contains several really beautiful sonnets, with a sprinkling of ballads, written after the ancient models, and some of them in nowise deficient of wild incident, and original adventure; and terminating in just such a pleasing and romantic manner, as would keep a novel-reading Miss awake a whole winter's night, and cause her to handle her fiddle-shaped tea-spoon, the next morning, after the most approved fashion in which Amazons handle their daggers. There is, however, nothing great in this work—no mighty thoughts,

"Piled high like cloud on cloud;"

no stanzas that sink into the heart, and send out the blood like rushing rivers, leaving a murmuring music on the lips, syllables we cannot but utter. Neither is there any thing so provokingly bad as to call down severe

censure. Several of the Translations are well and ably given; nor can we resist quoting a portion of one from Matthiesson, entitled "Laura at her Devotions."

"How she kneels! devotion deep and tender!  
(Such to innocence by Raphael given)—  
Clothed already in the immortal splendour  
That beams around th' inhabitants of heaven.  
Oh! she feels in motion soft and light,  
Feels with joy th' Almighty presence now;  
Views already yonder palm-clad height,  
Where the crown of glory waits her brow.  
Thus, her gentle bosom filled with feeling  
Pure as angel's confidence and love:  
Oh! to see this sainted suppliant kneeling,  
Is a glance into your world above."

What a beautiful picture these last two lines represent!

3. *The Bridal of Naworth.* Pp. 111. (London, Simpkin, Marshall, & Co.)—This poem displays much power, both descriptive, imaginative, and murderous. Bloody-bones stalks through the pages with perfect ease, now using his dagger by way of amusement, or severing a limb just to keep his weapon from rusting, or pausing to make a short soliloquy over his "hatchet of horror," before it again encounter hearts, heads, and every variety of *edge-ware*. Such a poem may suit a few of the true lovers of the blood-red cross; but to us, who delight in "knights of the sky-blue flame or magical flagellates," it has but few charms: we have lost our vulture-relish, there is but little that is wolfish remaining in our eyes; if we let out blood, it is that of the grape; if we murder millions, they are miles; and we have even up our white-sheeted ghosts for white-bait. However much this volume abounds in the terrible, there is no denying that it possesses many merits, many passages that would lose nothing when read beside the picturesque pages of Scott, many scenes that are powerfully and vividly drawn, and many, many faults, which only long study and a better acquaintance with greater bards will enable the writer to remedy. There is much that we like, more that we abhor, and here and there passages that made us exclaim, "this author has the soul of a poet."

4. *Saint Cross, and other Poems.* Pp. 234. Winchester, printed for the Author. (London, Hamilton & Adams.)—This little volume is arranged in a few and rather pleasing manner, and presents pictures of the olden times, processions, and scenes only preserved in history or tradition, that are again brought before us in tolerable smooth verse, but devoid of those master-touches so necessary to the filling up of the canvases. There are several passages which, without sacrificing our critical judgment, we might venture to praise; but, on the other hand, there are so many naked patches on the picture, which genius would have filled with something pleasing, that we cannot say much in its praise. What is done is done passably, but tamely; there are no eagle-soarings above the silver-floating clouds, nor any descents of the sky-lark, that but alights to bury its speckled bosom amid the flowers; it is pretty, but not great, and pleasing to the smallest degree of pleasure.

5. *Ethelbert, an Epic Poem.* By Baker Peter Smith. Pp. 88.—This poem describes the conversion of the ancient Britons and Anglo-Saxons to Christianity, through the preaching of Saint Augustine. There are occasional passages that interest the reader, especially those in which the author dwells upon old customs, or attempts the description of a group, with arms and costume. Upon the whole, we would much rather have seen this subject in prose: it would have gained more readers, and the writer would have found more freedom for such a work; for, to us, his ideas appear at times too much cramped by the metre. It is, however, upon the whole well done, and displays considerable learning.

6. *Ernangarde: a Tale of the Twelfth Century; and other Poems.* By Eliza Heywood. Pp. 140. (Cheltenham, Williams; London, Longman and Co.)—It is two hours by the clock, since we last laid down our pen; it seems but that number of minutes, yet there has old Time perfumed his wings while flapping them over the flowery pages of Eliza Heywood's Poems. Miss Landon yet sends forth her voice of loveliest music; Caroline Bowles, also, showers her golden murmur from the sweetest of harp-strings; Mary Howitt yet opens her thin, eloquent lips, and breathes the melody of a thousand birds; and many others, whose names linger in our memory, like singing rivers, are still full-voiced; and last, but not least, we must introduce Eliza Heywood to her musical sisters, as one worthy of being numbered among the sweet-tongued choir. Her poetry is "beautiful exceedingly;" abounding in rich imagery and delicate thoughts, and full, to overflowing, of tenderness and feeling; while her versification is, at times, as smooth as the silvery-footed clouds, or a lake slumbering beneath the sunshine of a summer's noon. She dips her descriptive pencil in the rainbow, and glides her pages with the richest gold of sunset. It is long since we reviewed a volume of poems possessing so much sterling talent. *Ernangarde* is a gem; while the lesser lyrics remind us of the sweet effusions of Mrs. Hemans. We scorn to use any thing like half-praise towards a writer of so much promise as this lady. Within her soul burns the hallowed fire of genius—the true sterling poetic principle. But take the following description of Spring, which is very inferior to twenty other poems that we could have selected, but shows how genius can huddle even the most hacknied subject.

"The Spring-time, the Spring-time!

The spring-time, the spring-time, is it not fresh and gay—  
When the fairest flowers their offering bring, to deck  
The wreath of May;

When the skylark from his heather nest, or from the dew-scented lawn, (glancing down; Springs lightly with rejoicing voice, roused by the

When the blackbird plumes his jetty wing, and opens his golden bill (shrill; And tunes to pleasure's merry note his whistle clear and the speckled thrush, in softer tone, sings in the wood-lanched dells, (rustling bells; And the purple heath, to hail the morn, unfolds her

When the youthful shepherd counts his flock upon the grassy wild, (scented gold; Then rests beneath the prickly furze, with its flowers of the snowy lamb, with mimic strife, disport in gorgeous play, (beam of day; Or shrink beneath the emerald fern, from the glaring

The spring-time, the spring-time, is it not warm and bright— (new and light; When the noonday sun has robbed the earth in gorgeous— When the grasshopper is singing loud beneath the spreading trees, (labouring bees; And gorged with sweets, with flagging wing, still toll the

When the dragon-fly, with painted skin, floats o'er the sparkling pool (pure and cool; And the wearied cattle panting stand 'mid the brooklets Above the gelled waters play the aspen's quivering leaves, And the twittering swallow forms her nest beneath the cottage eaves;

When the speckled lizard darts to glide beyond the sheltering grass, (pass; While o'er his back the changeful hues in dim succession And the early rose unfolds her breast to hail the faithless ray (day; That casts her faded leaves to earth before the close of

The spring-time, the spring-time, is it not fresh and fair— When the falling dew in viewless showers perfumes the evening air;

When in the arching forest walks the nightingale is heard, (peering gale are stirred; And the tender leaves by the latest breath of the whispering flowers their sweetest scent give forth before they die, (glide by; And, mirrored in the dark blue stream, the white sail When, lengthening o'er the meadows wide, the hedge-row shadows fall, (forsets tall; Or 'mid the stems the golden light gleams through the

When the flagging breezes guide the flight of the purple clouds no more, (shore; And the ocean half forgets to urge his tides upon the The azure hills in pink are dyed, that skirt the blushing west, (his rest; And the sun his wearied coursers speeds to the mansion of

We have no doubt but that after this sample the stores will be visited.

7. *Belvedere. Baron Kolff, &c.* by Thomas Eagles, author of "Mountain Melodies." Pp. 246. (London, Whitaker and Co.)—This volume is an odd assemblage of good, bad, and indifferent; spoiled with petty conceits, weak expletives, and unnecessary epithets; yet, upon the whole, evincing considerable powers of thought and fancy, which, with care and pruning, might have been wrought into very respectable and gentlemanlike poetry, considering this matter-of-fact age. We have, for instance, such lines as the following, weakened by a quantity of useless words, merely to eke out the stanza.

"And close his scathed mortal reign."  
"Why doth he strain his anxious steadfast sight."  
"He had a wife, a beautiful, loving wife;  
A being fraught with virtue, good and kind."  
"His doting wife, and happy, lovely child."

But here is a verse, which to our ears conveys as much music as the whistling of a saw.

"My father was a soldier!—Oh! that men  
Can't live in peace, without the blast of war;  
Dread harbinger of woe!—what horrors then  
Would leave the earth.—Thy sanguine car,  
Thy implements of strife—Oh! hated Mars!  
Thy cannon's thunder, and thy hollow groans:  
Thy death-wounds dire—thy gaping, grumous scars;  
The parting spirit's plaintive dying moans—  
Fell, desolating god! blighter of joys and homes."

Mr. Eagles must do something better than this work, if his birds are to belong to Jove, or flap their broad wings above Parnassus. If he does not, his cryle will be reared amongst the owls and bats that build and hoot in the dark holes at the base of the mountain. There are a few things in his volume so very good, that we wonder at the many bad passages by which they are disgraced.

8. *Original and Select Hymns. A Companion to "Sacred Poetry."* Pp. 336. (London, John Van Voorst.)—One of the very best selections that we have met with for some time, amid this age and rage for compilation. The pieces are not only tastefully selected, but carefully and judiciously arranged; while the original poems (of which there is a considerable portion) breathe both the pure spirit of piety and poetry. Many of them, too, are fraught with that hallowed feeling which pervades the finest passages of Cowper. There is also a sweet vignette, after Bartolozzi.

9. *Xeniola. Poems, including Translations from Schiller and De La Motte Fouquet*, by John Anster, LL.D. author of "Faustus, a Dramatic Mystery," from Goethe. Pp. 174. (Dublin, Milliken and Son; London, Longman and Co.)—This volume contains much

powerful poetry, and shews a mind tinged with that deep and dreamy philosophy of thought in which the imaginings of Coleridge are embodied. A solemn shadow seems to slumber on its pages, here and there broken and intersected with a wild, branchy, and varied light, like that which streams through the painted window of some ruined abbey, and glids shrine, altar, and column with hues that seem to belong to another world. Sometimes we glide along beside a spirit of solitude, that harkens us to lonely islets, between shadowy rocks and overhanging crags, gloomy, and terrible as the grave; then we catch the sound of airy tongues, that seem singing between us and the sky, or glide over landscapes, such as we see only in our dreams. It is, in a word, such poetry as all may brood over with pleasure; but so full of deep thoughts and closely woven beauties, that poets only can wholly fathom them. Such, for instance, is the "Elegy," which, to only a matter-of-fact mind, would be as much understood as some of those isolated thoughts of Milton's when

"Silence was pleased."

We regret that our limits prevent us from giving an extract; and can only conclude by saying, that it is long since we have perused so original and striking a volume.

10. *An Autumn Dream: Thoughts on the Intermediate State of Happy Spirits, &c.* by John Shepherd, author of "Thoughts on Devotion," &c. Pp. 337. (London, Hall.)—This seems to be an excursion (but not Wordsworth's) into the world of spirits, where we are treated to a strange *mélange* of beings and incidents, such as people the pages of Emanuel Swedenborg. There are, really, several beautiful descriptions of celestial, or terrestrial, or rather fairy-land scenery in the volume; but the chain of reasoning is so mystified, so cleverly incomprehensible, that we could as soon understand Shan Von Shikraff's "History of the World before the Creation," as grapple with some of these passages. That the author's intention is well meant, we have no doubt; for, in spite of a few wild, peculiar notions, which here and there spring up, there is still a moral, and sometimes truly religious vein of feeling, flowing through the work. We have no doubt that some favoured few, recipients of the new light, may gather pleasure and benefit from its perusal; but to us, we must candidly confess, it has the appearance of outer darkness. The verification is, occasionally, very melodious; and, as we have before said, some of the descriptions beautiful.

*Gentleman Jack. A Naval Story.* By the Author of "Cavendish." 3 vols. London, 1837. Colburn.

UNLESS possessed of more than common merit we should guess that the public is becoming rather tired of naval stories and tales of the sea. The glut of such publications has been enough to induce a certain degree of that nausea which is peculiar to the element; and the repetition of morning guns has amounted to so continued a fire of artillery, that the cracking is disregarded. A few, it may be observed in carrying on the simile, have been well shot; but the greater number have been mere blank cartridges, such as are fired at Reviews, and exploded in Magazines, with much more of noise than effect, and more of scattering than aim.

There is another part of this system which we think has been pursued too long to be acceptable: we allude to the appearance of a series of papers in some periodical work, which are immediately afterwards published in volumes. Now, many people do not want to buy the same article twice, and yet these "continuations" must be taken, or you lose all their companions; and then to have them in their best form you have to purchase separately what is already in your possession. Such things, therefore, become the dead weights of popular magazines. A good deal also depends upon the character of the production. A narrative of continued and unbroken interest is altogether unfit for "to be continued" and broken appearances; while sketchy and insulated scenes (allowing them to be connected by a thread, though we do not consider these so proper as separate essays) are most fit for that course, and less suited for the collected shape. There are certainly some skilful and clever exceptions to these rules, which, nevertheless, are generally applicable; for there are not many writers who, in this respect, possess the tact of a Hook, a Poole, a Dickens, or a Lover.

The present performance, it seems to us, might have been cut up into a few periodical articles, with more success than it can expect as a three-volume fiction, or rather commixture of fiction with reality. We are told it is the genuine biography of a naval officer; and, indeed, it bears the marks of authenticity in that light. But in holding to the authentic, it loses the interest of able invention; and, what is worse, it presents us, in too many instances, the coarseness and vulgarity of sailor language and adventure. What midshipmen, or others, may say or do when ashore, may be painted in a manner perfectly true to life: but what is the result? The description does not engage the imagination, while it offends and disgusts the taste. Gentleman Jack may act like a young scamp at Portsmouth Point, and Boatswain Pipes, with his trull-wife, may commit every kind of grossness on board a man-of-war; but, surely, the best accounts of such matters are the least calculated to amuse the general class of novel readers, and are decidedly objectionable to be laid before the purer portion of them. With these impressions strongly upon our mind, though there are some good parts in these volumes, pictures of society in different climes, &c. &c., we must conclude, without extract or example, by saying that they do not display talent enough, if any talent could be enough, to recommend them to the favour of the public.

*The Picaroon.* By the Author of "Makanna." 3 vols. London, 1837. Saunders and Otley.

IT is now some three years since we noticed "Makanna" (*Literary Gazette*, No. 896, March 22, 1834), and spoke of it as displaying in parts a rich and wild invention, with an imagination very undisciplined, and, as a whole, incongruous, forced, and extravagant. Still we beheld in it those qualities which induced us to hope for "better things." This hope is not, we regret to say, realised in the *Picaroon*. The imagination is still as undisciplined, and the invention, if not so rich, is quite as wild. Bristol smuggling, arson, piracy, and murder, are connected with Calabrian carbonari-ism, robbery, and slaughter; and the writer leaps so from theme to theme, and group to group, that it is with much difficulty we can follow or make out the story. The want of clearness is its irretrievable drawback. In other respects, many of the actions are incredible, without being romantic; and the only praise we can fairly bestow is upon some passages of striking description, and some happy thoughts expressed in forcible language.

*A History of England, from the first Invasion by the Romans.* By John Lingard, D. D. Vol. I. Baldwin and Cradock.

IT is not our intention, at present, to offer any observations upon this History, which is so well known, further than to notice that Dr. Lingard's researches have brought to light much important information; whilst his peculiar views, as a Roman Catholic, have given a tinge to many controverted questions and characters, which prevent its being received as an undoubted authority in all cases where religion is concerned. The present is, nevertheless, the fourth edition of his valuable labours, and brought out, according to the current fashion, in neat, cheap monthly volumes, this being the first of thirteen, in which the undertaking is to be completed.

A very striking likeness of the author, from an original painting by Mr. Lover, and engraved by L. Stocks, forms a most appropriate and interesting frontispiece to the work, and is

in itself an admirable specimen of art. There is also a splendid vignette, of the surrender of Caractacus, by E. Goodall, after a drawing by W. Harvey.

## MISCELLANEOUS.

*An Essay on Man's Moral Agency, &c. with Observations on Education*, by R. J. Nelson, A.M. Pp. 199. (London, Baldwin, and Cradock.)—An able essay, containing many very sensible and useful observations, both on old systems and new views.

*Elements of Practical Knowledge, with Illustrations*. Pp. 232. (London, Van Voorst.)—One of those useful compilations which are well calculated to afford the young inquirer information on many subjects. A good index points the way, and, by question and answer, the intelligence is simply given.

*A Practical Compendium of the Diseases of the Skin, &c.*, by Jonathan Green, M.D. 8vo, pp. 371. (London, Whittaker.)—We are glad to see a second edition of this valuable work. No man has investigated the subject more closely and acutely than Dr. Green; and no man has done more towards discovering remedies for the painful complaints connected with it. We have here the bane and antidote ably described and applied.

*Tales about the Sun, Moon, and Stars*, by Peter Parley. (London, Tegg.)—The eclipse of the moon reminds us that we owe a favourable notice to this clever and excellent volume, which has deservedly reached a second edition, and obtained some very beneficial improvements. Under the sobriquet of Peter Parley, and the transatlantic reference, we recognise, we believe, Mr. Kendall, the popular author of "Keeper's Travels," and of several most agreeable and instructive publications. The young owe him a debt of gratitude for the present well-executed guide to astronomical studies.

*The Parlor Book, &c.*, by W. Martin. (London, Darton.)—A similar production by the author of "The Christian's Lacer," &c. and judiciously devised to inform youth on subjects of science and the arts, under the form of familiar conversations. To direct their minds to the interesting phenomena of nature, they could hardly have a more simple and attractive companion.

**PAMPHLETS.**—Among the pamphlets of the day we have to notice *A Reply to the Anglo-Christiano Pamphlet, entitled The Policy of England towards Spain*, by W. Walton. (London, Hatchard and Son; Booth; Baily and Co.) which assumes that the latter proceeded from Lord Palmerston, and strongly argues against the positions of our foreign secretary. As the subject has been debated for three nights in the House of Commons, we do not intrude any of our remarks upon readers.—*Review of C. S. Lloyd's Letter to the Constituents, &c.*, by W. Blacker. Pp. 79. (London, Groombridge.) The author combats the opinions of the chairman of the select committee on the present state of agriculture. He considers redundancy of corn crops to be the cause of distress; and advises the cultivation of other crops as the only remedy.—*Instructions for the Establishment of Friendly Societies, Savings Banks, &c.* We believe we owe this patriotic and useful production to the pen of Mr. Tidd Pratt. It is a work of national value and importance; and, with great distinctness, points out the best modes for forming and conducting Friendly Societies, Savings Banks, Government Annuity Societies, and Loan Societies; each of which, in their way, are admirably calculated to promote individual comfort and public prosperity.—*Structures on the Proposed Poor Law for Ireland, as recommended by C. Nicholls, &c.* Pp. 90. (London, Ridgways.) The author handles Mr. Nicholls's report rather severely, and treats it as a crude and superficial performance, which ought not to be relied on for legislation.—*National Impolicy of the High Duty on Tobacco*. Pp. 27. (London, Vacher.) Contents that extensive smuggling is the consequence of a too high rate of duty; fifty millions of pounds of tobacco being annually consumed, and only twenty-two millions accounted for to the revenue; a loss of four millions a-year, and much of it sent out of the kingdom in specie.—*The Java Question*, by a Dutchman. Pp. 48. (London, Macrae.) Defends the Dutch government from any charge of breach of faith in respect to its conduct towards Great Britain connected with Java.

## ARTS AND SCIENCES.

## GEOGRAPHICAL SOCIETY.

**APRIL 24.** J. R. Gower, Esq. in the chair.—Read a memoir on the northern frontier of Greece, by Lieutenant-Colonel Baker. Commencing at the western extremity, resting on the sea, the new boundary line, decided upon by the commissioners of the allied powers, crosses the promontory of Actium; thence traverses the gulf of Arta, in a north-east direction, about 16 miles, and strikes the coast-line at a point where one of the lower off-sets of the Macrin-oros range abuts boldly upon the sea: it is thence carried over the eastern slope of the basin inclosing the gulf of Arta, in a direction E.N.E. for about 15 miles; in

which distance it crosses the river Doubsa, and ascends the course of the river Comboti for about eight miles, to the source of its principal tributary in the plateau of Millia; thence along a well-defined ridge, the line attains the summit of Kelona, so called from the resemblance which this mountain, when seen from a distance, bears to a tortoise, both in its hump-shaped form, and in the variegated spots of heath, pine, and rock, scattered over its western face. It is, also, the most prominent and remarkable of the chain which encircles the gulf of Arta. The portion of the line here described may be said to cover all the principal approaches to Western Greece: the passes of the Macrin-oros, as well as the ridge of Drimonari, afford an excellent position for its defence. The valley of the Comboti, as well as the general face of the country between the gulf of Arta and the river Aspro, is covered with thick wood, increasing in size, and varying in character, in the ascent from the sea-coast to Mount Kelona; the lower levels abounding with many varieties of the oak and plane, and, occasionally, a dense underwood of arbutus, prickly oak, mastic, and other shrubs, whilst the upper slopes are studded with remarkably fine pines and silver-firs. Hellenic remains occur in three spots in this distance. From the summit of Kelona to that of Gabrovo, and thence to the wooded height of Itamo, the line traverses the basin of the river Aspro, including its tributaries, in an E.N.E. direction, for 34 miles. Descending by the precipitous bed of a mountain torrent, it reaches the Aspro between the bridges of Korakos and Tartarina, which are the only means of communication across the river, when swollen by winter rains. Both these bridges are remarkable for the boldness of their design; that of Korakos, especially, is, perhaps, unrivalled in the hardihood and lightness of its structure. The span of the arch measures 132 feet; length of roadway, from rock to rock, 181 feet; whilst the width, including a narrow and very low parapet, does not exceed seven feet eight inches; and the height above the bed of the river is 125 feet. The rocks on either side rise perpendicularly to a great height, and nothing can be more striking than this narrow rib of masonry, connecting the two precipitous banks of the Aspro, at the point where it issues in a romantic glen from the wild gorges of the Agrafiot mountains, and in a situation where the traveller is least prepared to meet with so beautiful and singular a triumph of the skill of the engineers, resembling more the flying buttress of some light Gothic edifice, than a substantial and permanent communication for man and beast over the foaming torrent of the first river in Greece. At Mount Bugikaki the boundary line attains the central chain of Pindus, which has a general direction of N.N.W. and S.S.E., by a crest  $6\frac{1}{2}$  miles in length. The usual formation of this part of the Agrafiot range is calcareous, varying much in character, and with strata very highly inclined. No rocks of a primitive character were observed, though in the more northern range of Pindus both serpentine and granite are found in abundance. From Papa to Pedama the river Platari appears to have forced its way through a wall of rock, many hundred feet in perpendicular height; the rock on either hand approaching so closely, that a traditional legend in support of the name denotes its having been leapt across by some active priest. It can scarcely excite surprise that the events of the last twenty years should have had a withering effect upon these parts of Greece. Even during the lifetime of Ali Pashá of Jannina, the wild in-

habitants of these secluded glens were only kept in awe by the strong arm of the despot; but at his death, and after the revolution in Greece, the habits of the people degenerated into the reckless calling of mere Kleftic hordes. Many villages have, in consequence, disappeared, others are reduced to a heap of ruins. Patrillo, noted by Colonel Leake, in 1805, as the second town of Agrafa, had, in 1832, only two inhabited houses! From Mount Bugikaki the boundary line descends the great chain of Pindus to the cave of Spilia Kamako, the principal source of the Karitza, which here rushes from the perpendicular face of the rock, in a stream of considerable force. From the mouth of this river the line ascends to Mount Itamo, a double-topped peak, thickly covered with pines; thence in a S.S.E. direction, thirteen miles along the crest of a line of hills, to the neck of Zacharachi Vrisi, the connecting link of the chains of Othrys and Eta with the main chain of Pindus, and the line of separation of waters between the basins of the Aspro, the Sperchius, and the Salembria. This spot, so interesting in a geographical, and important in a political light, was ascertained to be eleven miles N.E. of Veluchi, the ancient Tymphrastus. Hence, to the eastern coast, the line runs along Mount Othrys, till it descends to the gulf of Volo, in the Bay of Surbie, including the Pass of Thermopylae, which had been specially assigned to Greece, a few miles within the frontier line. The whole line, including its sinuities, extends over a distance of 137 miles; which is defined, where no physical feature is sufficiently conspicuous, by land-marks, 95 in number. Whenever the boundary happened to approach or to intersect any inhabited district, the most intense anxiety naturally prevailed amongst all classes of the population to profit by the advantages the new territorial division presented. A very remarkable instance of this occurred in the village of Janitzare, consisting of about sixty well-built houses, many of them of stone, and of two stories in height, and two small chapels; with the inhabitants, like all the rural population, wholly Greek. This village, placed about 200 yards below the ridge of Othrys, on the northern slope, having necessarily, from its situation, been consigned to Turkey, the inhabitants, finding any alteration in the line, in amendment of their position, impossible, set themselves to work to remedy the inconvenience by transferring their locale; and, by the following year, notwithstanding the opposition of the Turkish authorities, they had removed the materials of their houses, stone by stone, to the southern slope of the hill, within the Greek frontier. This memoir was illustrated by a very beautiful map of the line of country, laid down on a large scale, which will be an invaluable addition to our scanty stock of topographical detail of this part of Greece.—It was announced to the meeting, that the Geographical Society of Paris had recently awarded a medal to our gallant countryman, Captain Back, for his discoveries, in 1834, in the Arctic Ocean: a third instance of such liberality.

## ORNITHOLOGICAL SOCIETY OF LONDON.

The first general meeting took place at the Thatched House, on Wednesday, and was attended by a number of the nobility, and eminent naturalists and men of science. The report of the provisional committee was received, and the plan and regulations recommended by it were unanimously adopted, and a managing council elected to carry the design into effect. We have already expressed our opinion of

this excellent association, to the future progress of which we shall pay every attention.

### LITERARY AND LEARNED. UNIVERSITY INTELLIGENCE.

OXFORD, 20th April.—The following degrees were conferred:—

*Masters of Arts.*—F. T. Scott, Worcester College; Rev. G. Austen, St. John's College; Rev. H. B. Williams, Fellow, New College.

*Bachelors of Arts.*—G. P. Carew, New Inn Hall, Grand Compounder; W. Benn, Queen's College; R. Dalton, University College; W. S. Crowdy, Lincoln College; Hon. C. L. Courtenay, Hon. G. C. Talbot, Christ Church; W. J. Burgess, Exeter College; E. Smith, F. A. Bowles, J. B. Anstle, Magdalen Hall; E. M. Leod, Worcester College; C. Badham, Scholar, Wadham College; A. Morgan, Trinity College; W. S. Thomson, Jesus College; T. H. Lloyd, M. D. French, Brasenose College; G. M. Bullock, Fellow, St. John's College; R. P. Buller, B. C. Bridges, Oriel College; R. J. Oliver, Pembroke College.

CAMBRIDGE, April 19th.—The following degrees were conferred:—

*Honorary Master of Arts.*—F. G. J. Foster, Trinity College.

*Masters of Arts.*—W. H. Trentham, Fellow, St. John's College; Rev. H. A. Bishop, Catharine Hall, Compounder; Rev. A. Phillips, Jesus College; G. P. Phillips, Trinity College.

*Bachelors of Arts.*—F. Ricardo, W. Smyth, Trinity College; W. C. Sharpe, E. R. Golightly, W. Armstrong, St. John's College; R. B. Jukes, R. K. Cook, W. H. Smith, J. Chadwick, Corpus Christi College; W. Nicholson, H. N. Heale, F. Ibbotson, J. Wright, Christ's College; F. Simpson, J. Sabben, A. Scrivenor, Queen's College; G. Gibson, Catharine Hall; W. R. F. Boggs, Trinity Hall; F. F. Trench, Magdalen College; G. Green, C. P. Miles, Caius College.

### ROYAL SOCIETY.

MR. BAILY in the chair.—The concluding portion of Major Sabine's paper on Mr. Douglas's Observations made on the Western Coast of North America, was read. The first section refers to geographical observations; the second, to magnetical: both are tabulated. The introduction of another paper by Mr. Murphy, being an Analysis of the Roots of Equations, was also read, and reference made to the tables annexed. A third communication, entitled, On the first changes in the ova of Mammifera, by Mr. Jones, was likewise read. From the title of this paper, it will be seen that its details, and they are curious as well as interesting, would be out of place in our columns. Professor Ehrenberg, Mons. Becquerel, Professor Mirbel, and Admiral Krusenstern, were balloted for, and elected foreign members.

### ROYAL SOCIETY OF LITERATURE.

ON Thursday, the annual meeting, the President, the Earl of Ripon, took the chair; and, after hearing the report of proceedings, and going through other routine business, his lordship read a very admirable address on the occasion. He drew touching characters of the Bishop of Salisbury, the first president, now lost to the Society; and of Dr. Richards and Sir Francis Freeling, who have also died within the year, the former having bequeathed it a very considerable legacy. The noble lord then took a fine and philosophical view of the effects of the general and rapid diffusion of knowledge in our times; and pointed out the absolute necessity for taking means to render this a blessing to mankind, and not suffering it to be perverted into a curse. His lordship glanced at the progress of literature in America, the East Indies, Persia, Turkey, and Egypt, illustrating his views with interesting particulars and remarks, which, as the address was voted to be printed, we will not mar by an imperfect report. The whole was listened to with marked attention, and thanks given to the author with unanimous applause. The officers for the ensuing year were elected, and the meeting adjourned.

### SOCIETY OF ANTIQUARIES.

ON Monday, the Society held their annual meeting for election of the president, council, and officers, Mr. Hudson Gurney in the chair.—At the close of the ballot, the president and officers were declared re-elected; and the Bishop of Bath and Wells, Messrs. Bidwell, Brandreth, D. Burton, Cooper, Rev. P. Hunt, Sir F. Madden, the Marquess of Northampton, Sir G. T. Staunton, and Mr. Westmacott, were chosen into the council, in the room of Mr. Blore, Dr. Burney, the Rev. J. B. Deane, Sir R. H. Inglis, the Bishop of Llandaff, Messrs. Markland, Parker, Rosser, Saunders, and Stapleton, who retired.—After the election, the Society dined at the Freemasons' Tavern.

### LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

Monday.—Horticultural, 1 P.M. (Anniversary); Royal Institution, 2 P.M. (Anniversary); British Architects, 3 P.M. (Anniversary); Entomological, 8 P.M. [We observe with pleasure the announcement of other lectures, which may properly be classed with those we are in the habit of thus weekly noticing; namely, a series of six on German literature, commencing this day at 3 o'clock, at Willis's Rooms, by one of our most distinguished German scholars, Mr. Thomas Carlyle. These are to be followed up by a similar series, on the literature of France, by Baron de Lagarde, Membre de l'Institut, &c.]

Tuesday.—Linnæan, 8 P.M.; Horticultural, 3 P.M.; Civil Engineers, 8 P.M.; Lambeth Literary, 8 P.M. (Mr. Luiking on Cometary Astronomy); Architectural Society (Essay by Mr. T. L. Walker); United Service Museum (Dr. Ritchie on Rope, Wire, Chain Bridges, &c. &c.)

Wednesday.—Society of Arts, 7½ P.M.; Geological, 8½ P.M.

Thursday.—Royal Society, 8½ P.M.; Antiquaries, 8 P.M.; Zoological, 3 P.M.; Botanical, 8 P.M.; Western Literary, 8½ P.M. (Mr. Hanhart on Lithography).

Friday.—Royal Institution, 8½ P.M.

Saturday.—Royal Asiatic, 1 P.M. (Anniversary).

### FINE ARTS.

#### EXHIBITION OF THE ROYAL ACADEMY.

YESTERDAY, the king did the Royal Academy the honour of opening their new rooms in person. His majesty was received by the president, and the other officers of the institution, who conducted him through the various apartments. After the departure of the king, the possessors of tickets for a private view of the approaching exhibition were admitted. We ascended the noble flight of stairs, and entered the rooms with mingled feelings of regret and gratification: of regret, at the dissolution for ever of all the pleasurable associations connected with Somerset House, and the illustrious names that shed glory on its early history; of gratification, at beholding the superior accommodation now enjoyed by the Academy, and the vigorous and successful efforts made to mark so interesting an occasion, by a more than ordinary display of their talents. As we proceeded, the latter feeling increased; and our breasts dilated with triumph, as we gazed at the brilliant and magnificent proofs before us of our country's genius. To such of our readers as did not visit these new rooms when they contained the designs of the architects who were candidates for the rebuilding of the houses of parliament, it may not be uninteresting to learn, that those appropriated to painting are five in number (one larger than the rest, and all on the same floor); that they are not too lofty; and that the light is excellent. They are distinguished by the names,—*East Room, Middle Room, West Room, Drawings and Miniatures, and Architecture. Of the Sculpture Room* we cannot speak so favourably: it is on the ground floor, and has cross lights; but this defect can be easily remedied. At any rate, the sculptors are infinitely better off than when their works were huddled together in a little dark parlour in the Strand.

We do not know what the Exhibitions of the Royal Academy may have been when the productions of Reynolds, Hogarth, Gainsborough, and Wilson, graced the walls; but we can declare from personal observation that, during the last forty years, there has not been an exhibition even approximating to the present in interest and splendour. It contains nearly 200 more works; and there is a much greater proportion of large and important pictures than in any former assemblage of a similar kind; and they are admirably arranged. The *tout ensemble* is, indeed, most imposing.

Necessarily reserving for our next and succeeding Numbers any detailed account of the various productions of art which compose the collection, we must content ourselves at present with merely congratulating the members of the Royal Academy on this most honourable result of their labours, and wishing them, in their new domicile, and through a long course of years, that prosperity to which they have justly entitled themselves.

### EXHIBITION OF THE SOCIETY OF PAINTERS— IN WATER-COLOURS.

THIS charming Exhibition was opened to the public on Monday last. The brilliant talents and persevering industry of the members of the Society, during the long period of 33 years, have established for it such a name, that the announcement of the mere fact is sufficient to excite general attention and interest. We proceed to notice a few of the varied and well-selected works which now grace the walls of the Gallery.

37. *The Raft*. S. Bentley.—Of this performance it may justly be said, that it is an exhibition of itself. The artist could not have chosen a subject better calculated for the display of his powers. Mr. Bentley's performance attracts peculiar admiration by the skill with which he has filled a space of such ample dimensions, without a void in any one part to diminish the interest. The vision of the distant wreck, the furious war of the elements, and the perilous condition of the poor wretches whose lives depend on the frail tenure of a few booms and spars hastily bound together, will occupy the imagination of the spectator long after the picture itself has been withdrawn from his sight.

38. *Othello relating his Adventures*. W. Lake Price.—The name is new to us, and we welcome the appearance of the work which bears it with the same feeling we should that of a performer whose *début* gave more than promise of excellence in the histrionic art. The interior (for such it is, although the figures, as adjuncts, are well suited to occupy a place in it) is resplendent in its character; combining every conceivable variety of brilliant colours and costly materials. We congratulate the Society on the accession of a member who does so much credit to their choice.

120. *The Horn of Egremont Castle*. G. Cattermole.—Surprise and alarm are finely and variously expressed in the countenances of the different personages who compose the groups in this romantic subject, according as they are more or less excited by the sudden sound that breaks in upon the revelry of usurped possession. Wordsworth's lines,

"'Tis the breath of good Sir Eustace,  
He is come to claim his right,"

are admirably embodied by Mr. Cattermole's skill, while the fancy is left to form its own picture of the approaching catastrophe.

316. *A Spy of the Christiano Army brought before the Carlist General-in-Chief, Zumalacarré*.

*carregui.* J. F. Lewis.—We cannot withhold our admiration of this performance as a work of art; and, as the illustration of a romantic adventure, we should find pleasure in its pictorial character, but, alas! for the terror of the subject. It is no tale of fiction or of former times, but one of the present period, and we fear of almost daily occurrence: and that in a country, of which the dance of the bolero and the serenade of the lover, once formed the chief and best characteristics.

79. *Village Choristers Rehearsing.* J. M. Wright.—In happy contrast to the above, we are here presented with a picture of past days, although not sufficiently remote to be out of the memory of some. The abstracted and absorbed attention of the performers in the principal group, and the varied character of expression and accompanying action, would not discredit the pencil of Hogarth, or fail to call up the descriptive powers of a comic lecturer,\* to whose times the representation evidently belongs. Character without caricature, and expression without extravagance, happily united with grace and elegance where called for, will invariably be found in the works of this able artist.

83. *The Widow.* J. W. Wright.—Evidently the portrait of a mother and child: a subject interesting to every one, and treated with so much elegance of conception, and purity of execution, that we cannot fancy any work of the kind transcending it in pictorial excellence.

44. *Scarborough; early Morning; clearing off of a Storm.* Copley Fielding.—In the effect of light, and in the character of waves, Mr. Fielding has here manifested his accustomed skill. The versatility of his powers is exhibited in 78, *The Fairy Lake; scene from La Mort d'Arthur.* Here he has drawn upon his imagination for one of the most beautiful and enchanting visions that tranquil slumbers ever presented to the mind's eye of poet or painter.

251. *The Barber.* W. Hunt.—We know not if the visitors to the gallery will thank us for calling off their attention from the above exquisite creation of fancy to one of the whimsical realities of common life. The powers of this truly original artist appear to be inexhaustible, and his memory of fitting expression is most tenacious; for such intensity of apprehended pain in the countenance of the urchin on whom the operation of clipping his locks is about to be performed, could have been but momentary in the prototype. The illustrative print of Samson and the Philistines is a happy thought.

97. *A View on the Thames near Kingston.* 266. *Summer View on the Thames.* P. De Wint.—That noble river, the Thames, with all its pleasurable associations, never appeared to greater advantage than in these two delightful representations of its placid and pastoral features.

115. *Morning of the 12th of August.* 123. *Evening of the 12th of August.* F. Taylor.—These are no dandy sportsmen; although we have no doubt that their dogs are well trained, and their shots sure. They have all the rude picturesque of form and character to which Mr. Taylor's masterly style of execution is so happily adapted. At home in all such subjects, we think his powers are seen to most advantage in 270, *The Regimental Farrier*;—we wish it had been placed more on a level with the eye.

85. *Windsor Castle from Clewer; sunrise.* Frederick Nash.—This noble object of historical

and picturesque interest is here depicted under a most brilliant and striking effect.

174. *Venice.* J. D. Harding.—Has there ever been an exhibition of which Venice has not constituted a principal feature? Not of late, we think. Although it might be invidious to say that the present view is the climax of its representations, we can safely pronounce it, both in form and in colour, to be among the most masterly and splendid.

(To be continued.)

#### NEW PUBLICATIONS.

*Pearls of the East; or, Beauties from Lalla Rookh.* Designed by Fanny Corboux; drawn on stone by Louisa Corboux. Tilt.

AND a charming string of pearls they are. Whoever has noticed, and as a necessary consequence admired, the peculiar qualities of Miss Fanny Corboux's pencil, may easily anticipate the success of her "attempt to embody the female characters of 'Lalla Rookh';" to render those bright creations of the poet's fancy as familiar to the eye as they already are to the mind and to the heart." In twelve well-selected subjects, she has depicted oriental beauty in all its varieties of voluptuous languor and fascinating vivacity. They are all sufficiently bewitching; but, if we were allowed to throw the handkerchief to any of them, it would certainly be to "the lovely Lalla Rookh" herself; or "the young and enchanting Nourmahal." Miss Louisa Corboux has done her sister's designs great justice. "It is the first work," says the Preface, "consisting entirely of figures, in which application has been made of the newly discovered powers of lithography;—the production, namely, of the most delicate gradations of white on a tinted ground, from the faintest lights to the most brilliantly relieved touches." One of the finest exemplifications of the value of these "newly discovered powers," is the tasteful vignette in the title-page.

*A Scene at Bolton Abbey, in the Olden Time.* Painted by Edwin Landseer, R.A.; engraved by Samuel Cousins, A.R.A. Boys.

WE have not forgotten the impression which the original of this noble print made upon us, when we first saw it at Somerset House, three years ago. Frequently as Mr. Landseer's powers had excited our admiration, we certainly considered this production his *chef-d'œuvre*, and expressed our opinion of it accordingly. It gave us great pleasure, therefore, to hear that Mr. Cousins was employed in transferring it to copper. The result of his labours is now lying before us; and, unquestionably, a more splendid and highly finished mezzotint engraving never appeared. To say nothing of the extraordinary beauty of the execution, technically regarded, Mr. Cousins has been eminently successful in preserving the character of the various personages who form the interesting group. The venerable and dignified prior, the attendant lay-brother, the sturdy forester, the abashed falconer, and the charming peasant girl, are all rendered with a spirit and fidelity deserving of the highest praise. Nor are the dead game, the dogs, the fish, and the other accessories of this rich composition, less entitled to commendation. So admirable is the whole, that the absence of colours is scarcely felt to be a deficiency.

#### BIOGRAPHY.

DR. WILLIAM CUMMIN.

THIS gentleman's decease took place on Thursday, the 10th instant, at his residence, Great

Russell Street. He fell a victim to the ardour and perseverance with which he pursued his professional and literary studies. Although deeply imbued with all the learning of his profession, and qualified by the most refined education to adorn its highest rank, extensive practice he never enjoyed. He was chiefly known to the public as a teacher of forensic medicine at the Aldersgate Street school. His lectures on that interesting subject, as published in the *Medical Gazette*, exhibit the profound knowledge of the medical jurist, with all the elegant accomplishments of the scholar. To his profession he was known as a writer in the *Medical Gazette*; in which journal he distinguished himself by his contributions on every matter connected with medical literature. His writings were marked by extreme accuracy, correctness of style, exactness of knowledge, and elegance of expression. A tone of truth characterised all that he said, and all that he wrote. Against quackery and vain pretension he waged continual warfare, and ceased not to uphold, against ignorance and prejudice, the honour and the dignity of his profession. He was honest as a reviewer, and never allowed himself to be flattered or frightened into a false panegyric, or an unjust condemnation of any work, by any author, be he what or who he might. He had a passion for knowledge which he pursued to the last moment of his life, with singular devotion. In the University of Dublin he had won the highest honours, and with the principal continental languages was familiar. His habits were those of a retired student; but the few individuals who knew his heart loved him not less for the excellence of his disposition, his candour, and steady friendship, than for his high and cultivated talents.

#### SKETCHES.

##### STRANGE ADVENTURE.

IT was on the morning of St. George's day—and, I regret to add, of the last Sabbath—that, having been kept extremely late discussing the "*Elements*" of a potent Scottish philosopher, under his own roof, I wandered darkling homewards before the break of day. The first streak of dawn, a dim shadowy line of a dunnish hue, however, just *horizontalised* the east, as I crossed Pall Mall,—took a lamplight glance at the inimitable bronze horse, on which Wyatt has mounted, in his habit as he lived, the venerated form of the third George,—and cast my thoughts forward to the noble portico of St. Martin's Church, when suddenly the sound of voices in angry contention over my head, struck upon my astonished ears. On one side there seemed to be the subdued roar of the Lion, and on the other the angry growl of the Bear; so rough and inharmonious was the noise in the upper regions of the air! Yet the speech was human, though the accents were not; and the language was English, though the tones were brutal. Had I been near the Zoological Gardens, I should not have been so puzzled; but at Charing Cross—I could not tell what to make of it. At length, gazing up in wonder, as the atmosphere became a trifle more clear, I discovered, to my yet greater amazement, that the

#### DIALOGUE

WAS CARRIED ON BETWEEN

*The Lion* on the top of Northumberland House and *Mr. Wilkins*, the architect of, on the top of, the New National Gallery!!!

As, it may readily be imagined, there was not much of courtesy between the two: the Lion seemed the most polite, Mr. Wilkins the

\* George Alexander Stevens, the celebrated lecturer on heads.

most surly. Sometimes their voices fell, and I could not make out what they said; but when they spoke louder the words fell towards the street, and I distinctly made out the following passages of their colloquy:—

*Wilkins.* You are an old, ignorant, and impudent ass to censure my work; what can a Gothic monster like you know of the pure Grecian, the Doric, the Ionic, the Tuscan, the Corinthian, the—

*The Lion.* Truce to your calling names, my friend. In my day, taste in architecture was quite as well understood as it is now; and, assuredly, if any progress has since been made in the art, it cannot be laid to your door, with your Doric nonsense and trumpery.

*Wilkins.* Hollo! you brute, what do you mean?

*The Lion.* Simply, that you have made as pretty a piece of national butchery with your National Gallery as ever was perpetrated.

*Wilkins.* And who the devil are you? Who taught you to judge of your superiors?

*The Lion.* Whether the offspring of Bernard Jansen, or Gerard Christmas, or Moses Glover, it matters not.\* Whoever was my parent knew that "Omnes homines, non solum architecti, quod est bonum possunt probare: sed inter idiotas et eos hoc est discrimen, quod idiotas, nisi factum viderent, non potest scire quid futurum sit. Architectus autem simul animo constituerit, antequam incesserit, et venustate, et usu, et decore, quale sit futurum, habet definitum."

*Wilkins.* What is all this about? I don't understand Greek.

*The Lion.* Greek! It is Latin: it is Virgil, whom you translated.

*Wilkins.* Oh! is it? What does it mean, then?

*The Lion.* It means, that "that which is obviously good, not architects only, but all men are able to appreciate. But between architects and idiots the difference is this: that an idiot cannot judge of the effect of a work till he sees it done; whilst an architect, the moment he has conceived his design, has its beauty, its utility, its propriety, all present to his eyes before he begins."

*Wilkins.* Well, well, I thank you for the compliment—say no more about it.

*The Lion.* You thank me for the compliment! why, it is the heaviest censure I could pass upon you.

*Wilkins.* Bah! you're a—lion.

*The Lion.* You would use the other epithet if you durst. But come, I'll make an example of you, any how. You speak of my old friend, the portico of St. Martin's church, as a poor

work—nothing to your Stinkomalee, which, thank Heaven! I have never seen; and you vaunt your higher genius: "I should have passed a great many years of useless study if I could not design something very superior to this portico." Now, look at your own portico! Where is the fine depth of St. Martin's, even allowing the intercolumniations to be a little too wide; and what, in the name of the ridiculous, are these two strange-breasted ferocious doing in the centre, the one riding on the crupper of a horse, and the other on the rump of a camel?

*Wilkins.* The women are fancies of mine; and, as for the portico, is it not edged in the most novel style by two adjuncts, as it were? And speak of intercolumniation—are not these different from the portico? so, if you don't like the one, it is likely you may like the other, or else you are—hard to please, that's all.

*The Lion.* You began—as I overheard his grace read to the duchess one morning in the *Literary Gazette*—you began by abusing the church portico; and when that admirable journal shamed you out of your vain-glorious puffery, what have you done? You have, in the face of public opinion and the censure of every competent judge, contrived to indulge your spleen by throwing back your eastern wing, so that you still destroy the view of the church, though the western termination against the saddler's gabel-end is the most unsightly in all London. Why, if you had forty or fifty feet to spare, did not you give it to the other wing, and not try to spoil that which you could never emulate?

*Wilkins.* You be damned!

*The Lion.* Poor St. Martin's church! When Isaac Ware, as yet a workhouse lad, lay reclining on the pavement before this beautiful structure, sketching that rude, but correct outline which foretold his future greatness, little did he think how that spot, already illustrious, was still further destined to be distinguished,—not, alas! by another exhibition of genius, nor in a boy,—but by the handiwork of one who has cut his wisdom-teeth in vain in the character of an educated architect.

*Wilkins.* My name will go down to posterity as the architect of this splendid structure. You have already confessed that even the name of your edificator is unknown.

*The Lion.* Seven cities contended for the honour of being the birthplace of Homer: what glory! But the disgrace of being handed down to future years, without competition, as the author of the most vile production of the architecture of the 19th century, is yours alone.

*Wilkins.* D—n your tail! Descend to particulars.

*The Lion.* Why have you so incongruously surmounted a pure (impure) Greek building with balustrades?

*Wilkins.* Why, you fool, because every body saw that the building was too low; miserably mean near the College of Physicians; wretched even in comparison with the Golden Cross, Charing Cross. What could I do? I run on a balustrade to raise it.

*The Lion.* The ancients always tried to produce a grand effect, though they also looked to the beautiful. Whether did you consult the grand or the beautiful, or both, in the mustard-pot order of your Saracen turrets and cupola?

*Wilkins.* This is pretty well! Don't you see that these are in opposition to, and to shew my superiority over, your own dirty square turrets, and that centre on which you stand, more like a donkey than a lion?

*The Lion.* Cannot you discern the difference,

and that what is good in one place and style is the reverse in another? The old mews, designed by Lord Burlington, which you have unworthily superseded, was consistent; I am consistent; but your Gallery is a medley of all inconsistencies. Your turrets—

*Wilkins.* Are of the most perfect *outré* of the school of Boromini—

*The Lion.* Upon the Greek! and your figures?

*Wilkins.* Are odds and ends of sculpture, I picked up about the late Carlton House, and so forth. Isn't my Britannia fine? I pocketed off her lion and unicorn, that she might resemble Minerva; and set her looking contempt upon the portico of St. Martin's. There's an idea worthy of—

*The Lion.* Not of Minerva, for she is not your inspiring goddess. But who are all these niches for, along the front?

*Wilkins.* Let me see! Why, there are nine on each side of the portico for the muses.\*

*The Lion.* One side for the classic nine, and the other for the King's *meios*, I suppose—another class. But I see you have filled half a dozen in. What are these, with wings up?

*Wilkins.* How the devil should I know? Don't they fill their niches? that is enough for me. I tried some of them on the top, but the side views made them so like kangaroos that I took down my angels.

*The Lion.* Heaven help us! Your elevation is altogether deficient in unity. Utility ought always to be apparent; and you shew none whatever. Your arches cut through the story, and catch and offend the eye. Archways, a parapet, and balustrades, to a Greek building!—nonsense!

*Wilkins.* Be civil, or I'm— if I won't be worse than an Androcles, to tame you, ye beast!

*The Lion* (wagging his tail). Where is your unity?

*Wilkins.* I have divided my front into eleven compartments, in order to "break my outline."

*The Lion.* Broken, with a vengeance! Where is there ought to denote the purpose of the building, and its connexion with the fine arts?

*Wilkins.* Why, are not the slices of pilasters the same as those of St. George's Hospital? Here is drawing, there tooth-drawing; here sculpture, there amputations; here carving, there anatomy. They are the same—they ought to be the same.

*The Lion.* There is no use in talking to so impenetrable a block.

*Wilkins.* Then, hold your jaw, you miserable screen!

*The Lion.* I am a fitting screen to a princely mansion, with a noble suite of apartments. You are a wretched screen, even to a workhouse.

*Wilkins.* Fiddle-de-dee!

*The Lion.* You are a most consummate goose; but daylight is coming on, and I should be ashamed to be seen speaking to you. A living ass, it has been said, may kick at a dead lion; but the converse does not hold, that a stone-dead lion may kick at a living—

*Wilkins.* You are a stupid, impertinent, ignorant, and tasteless brute. If you could come down, I'd kick you. As it is, I will deprive your house of the boast of possessing one feature beyond what my Gallery possesses; for I will stand here myself, in *propria persona*, opposed to you for ever. You are a beast—I say no more.

\* A *verbatim* declaration of the architect: who must, therefore, have contemplated either two sets of the recognised muses, or eighteen of his own invention.

\* The architect by whom Northumberland House was designed is not accurately known; but it is generally attributed to Bernard Jansen, who practised in the reign of James I. The central part of the street front had, until the middle of the last century, the letters C. A. in a frieze near its summit from which circumstance, Vertue, finding that Gerard Christmas was an architect and carver of reputation at the time the house was built, supposed their meaning to be, "Christmas Edificavit," and imagined such frontpiece to have been designed by him. This is assented to by Walpole, who says, "Jansen probably built the house, which was of brick, and the front-piece, which was of stone, was finished by Christmas." The design of this building has, also, been attributed to one Moses Glover; which is presumed to have been probable, from the circumstance of an old and curious survey of St. John House and the neighbouring villages, still in existence, having been performed by that person, who was a painter and architect. The building originally formed three sides of a quadrangle, to which a fourth, to the south, was afterwards added, under the direction of Inigo Jones. About the year 1750, extensive repairs and additions to the house were made by its noble owner, nearly the whole of the street front having been rebuilt: the central part, however, was but slightly altered, and its appearance is now essentially the same as when first erected. It is surmounted by a carved lion passant, the crest of the family of Percy.

## INTERESTING HISTORICAL DOCUMENT.

The following curious unpublished letter from the Duke of Bedford to the Citizens of London, *temp.* Henry VI., having fallen under our observation, we have much pleasure in making it public, together with some historical remarks.

## By the Duc of Bedford.

RIGHT trusty and welbeloued, we grete you wel with al oure herte, And for as muche as hit liked our lord bat [but] late a goo to calle the King oure souverain lord, that was from this present world un to his pardurable bliage, as we truste fermely, by whos deces, during the tendre age of the King oure souverain lord, that is nows the gouuernance of the Reaume of England, after the lawes and ancien usage and custume of the same Reaume, as we be enfourmed belongeth un to us as to the elder brother of our saide souverain lord that was, And as next unto the courone of England, and hauyng chief interesse after the King, that is oure souverain lord, Whom God for his mercy preserue and kepe, We praye you as hartely and entierly as we can and may, And also requere you, by the faith and ligeance that ye owe to God and to the saide courone, that ye ne yeue in noo wyse assent, conseil, ne confort, to any thing that myght be ordenned, pourposed, or aduised, in derogacion of the saide lawes, usage, and custume, yif any suche be, or in prejudice of us. Laittyng yow faithfully wite that our saide prayer and requests procedeth the pot of ambition, ner of desir that we myghte haue of worldly worshippe, or other of any singuler commodite or prouffit that we myght receyue thereby, but of entier desir and entente that we haue, that the forsaide lawes, usage, and custume, ne shulde be blemished or hurt by oure lachesse, negligence, or defaulte, ner any iudices be engendered to any persone souffisant and able to the whiche the saide gouuernance myght in cas semblable be longyng in tyme comyng, Making plaine protestacion, that it is in no wise oure entente any thing to desire that were ayenst the lawes and custumes of the saide lande, ner also ayenst the ordonnance or wil of oure saide souverain lord that was sayyng our righte, to the whiche as we trowe and truste fully, that hit was not oure saide souverain lordes entente to deroge or doo prejudice. And God haue yow in his keeping. Written under oure signet, at Rouen, the xxvj. day of Octobre.

To our right trusty and withe al oure hert welbeloued the Maire, Sherif, Aldermen, bourgeois, and Comunes of the Cite of London.

This letter was written in the month of October, immediately following the death of Henry V. From the manner in which the duke alludes to Henry's will, we may infer, that that document, which is yet to be discovered, did *not* constitute him governor and protector of the realm during the minority of the young king, as has been stated by an able writer on the subject.\* Had such been the case, he would not have grounded his right to the chief administration of the government, upon the information of others, who stated it to pertain to him by ancient law and usage, as elder brother of the deceased monarch, when, in fact, no law or usage of the kind had ever existed; † nor would there have been the least necessity for him to disclaim, so repeatedly, all ambitious designs in requiring the citizens to acknowledge his authority; since, if his pretensions were recognised by the will, he could have distinctly referred to it, and thereby quieted all apprehension respecting his views. But the strongest confirmation, perhaps, of our

opinion, is to be found in the duke's observation, that "he trusted it was not the late king's intention to prejudice his right," which is almost a confession that that right was not alluded to nor acknowledged by the "ordonnance, or will." On the Parliament Roll, 1 Henry VI., is an entry deserving of some attention, as it supports this view of the matter.\* The Bishop of London, Chancellor of Henry V. for the Duchy of Normandy, shews the parliament that, of two great seals which he had in his keeping, the one ordained for the said duchy, and the other similar to the great seal of England, he had delivered the former, immediately after the king's death, to the Duke of Bedford, at Rouen; and this he did by the advice of the Duke of Exeter, the Earl of March, the Earl of Warwick, and several other English noblemen, seeing that the late king, on his death-bed, had committed the government of the same duchy to the said duke, for a certain time: but, as to the other great seal, he had delivered it to the king himself. Hence it is clear, that if Henry's will had given the duke the same authority over England, and the other dominions of the English crown, as, by the king's dying injunction, he possessed over the Duchy of Normandy, the bishop would have been advised, and in duty bound, to deliver the other seal to him also. But no such authority being recognised by the lords, the seal was, as a matter of course, given up to the young king and his council.

## MUSIC.

## ANCIENT CONCERTS.

THE Duke of Cambridge was director for the third concert, which, consisting almost entirely of old-established stock-pieces, may be dismissed in very few words. The only part of the bill of fare which had not been recently heard was a scene from Joshua, for treble and counter-tenor, consisting of recitative, airs, and a duet, to which Madame Caradori and Mrs. Shaw did great justice. The former lady, especially, sang the air "Hark! 'tis the linnet," in so finished and beautiful a style, as to extort very audible applause from even this usually apathetic audience. Among the principal singers, in addition to those already named, were Mrs. Knyvett, Messrs. Bennett and Phillips, who were admirable in their respective parts, and Messrs. Horncastle, King, and Green. The performance was, throughout the night, excellent; and we must not omit to mention, that Festa's madrigal, "Down in a flowery vale," bore evident marks of good rehearsing; the alternations of *piano* and *forte* were so well attended to, and the words were articulated so clearly and so exactly together, as to render the effect admirable, and produce a unanimous call for its repetition. Coralli's trio was charmingly played by Messrs. Lindley, Lucas, and Dragonetti; and Lindley's accompaniment to "O Liberty!" (excellently sung by Mr. Bennett), was delightful as ever. Q.

*Concerts.*—On Monday, Miss C. Novello gave a concert in the Hanover Square Rooms, previous to her departure to Italy for three years. The rooms were well filled by warm friends of this promising young singer, who has long been most deservedly a public favourite, and, we trust, will return to us only rendered more attractive by the study of the best models in the land of song. In "The mighty Power," a new song composed by V. Novello, with a *basso obligato* by Dragonetti, she displayed her talents to so much advantage, that we should

have thought a visit to Italy altogether unnecessary.

On the same evening the *Societa Armonica* gave one of their best concerts, which was fully attended and much applauded.

*Quartet Concerts.*—Mr. Blagrove's fourth and last concert for the season was given on the 13th, and ought to have been noticed by us before, especially as it deserved high commendation for the beautiful performance of Haydn's Quartets. But nearly all the music selected was equally worthy of praise, and finely executed; the whole being well calculated to refine and improve the national taste. On Thursday, we observe, another of these entertainments is to take place for the benefit of their originator.

## DRAMA.

*King's Theatre.*—*Don Giovanni* was, on Thursday, played here to an immense audience. Long ere the doors were opened, the Arcade and Haymarket entrances were surrounded by a crowd, some of whom were seen clinging to the near pillars, so great was the anxiety to be "in first." Owing to one of the doors not being properly opened several persons were slightly hurt. Many ladies turned back frightened; some, more bold, reached the pit, or the entrance to the pit, with no greater misfortune than a very considerable alteration in their costume. After some laughing and some quarrelling, as many as possible of the unfortunates who could not penetrate further than the passages were accommodated on the stage, and the opera commenced. As we belonged to the class of unfortunates, we could only hear, not see. The exquisite music was done ample justice to. Grisi, as *Donna Anna*, was in splendid voice; she almost surpassed herself: still, we would hint that Mozart needs no embellishment; the beautiful trio of the first finale could not be improved even by Grisi, and we would rather hear it as it was written. Albertazzi sang and played the part of *Zerlina* with great taste, but with a want of the energy necessary to the character; her voice is more suited to Mozart's music than any on that stage, and yet she appeared to less advantage on Thursday than on her former evenings—she was too tame. Nothing could exceed the ability displayed by Assaudri; she was delightful in every part of her performance. Tamburini, as *Don Giovanni*, Lablache, as *Leporello*, and Rubini, as *Don Ottavio*, were beyond excellence; the latter sang a song towards the end of the opera so beautifully as to tempt the audience to wish for it a third time.

## VARIETIES.

*Effects of Light.*—During the very foggy weather which occurred between the 7th and 10th of February last, the light-house at the Mull of Galloway was surrounded by small birds, in such amazing numbers that the keepers were employed for many hours in beating them off, so as to make the light free; and when the mist cleared away, they picked up more than 600, which had been thus killed. What is very remarkable, during the same period, similar birds appeared in still greater flocks at the light-houses on the island of Pladda, situated about sixty miles north of the Mull of Galloway. At Pladda, there are two distinct lights, on upper and lower stations. Both were beset by innumerable flocks, which were, as at the Mull Light, switched off by the light-keepers. No fewer than 1129 birds, chiefly larks, with some thrushes, blackbirds, starlings, fieldfares, and redwings, were found.

**Weather-wisdom.**—Our Oracle has been completely out during all the past week, and "the aspects of Mercury" not worth a pinch of snuff. Instead of winds, rains, cold frosts, and thunder, we have had a continuance of mild; fine, and seasonable weather. For the next he augurs, "windy and cool, though bright and fair at times. The sun approaching the opposition of Saturn, denotes cold rain, also hail-storms. The 4th and 5th, cold and ill weather for the season."<sup>†</sup>

**The Literary Fund Anniversary**, on Wednesday next, boasts of a very distinguished list of stewards; and the meeting is expected to be fully attended by many of our most eminent literati, who either belong to the ranks of the Society, or have accepted invitations to unite with their brethren in promoting the good cause. The Lord Mayor brings the influence of the city; Lord Stanley, the newly elected vice-president, will, it is hoped, be surrounded by many parliamentary friends besides those whose names grace the list; and we also antici-

\* To the Editor of the Literary Gazette.

SIR,—Will you permit me to answer your correspondent's query as to the hurricane of the 29th November last? He states that it commenced on the 23d off St. Lawrence, and was met with on the 25th in longitude 32°. But the evidence falls in with its being the same hurricane; for the full moon of the 23d brought here, also, "stormy and rainy" weather, and on the 25th, also, my diary has, "ante lucem, heavy rain and high winds," and again at 10 p.m., "high wind and heavy rain—ditto all night." Hence, it is only shewn that high winds prevailed on the 23d Nov. off America, and on the 25th in the Atlantic, when they occurred in England; but that the gale of the 29th was not felt in America about our latitude, is not shewn. Yet it should be, to build the inference that the moon passing the two planets was not the cause of the commotion in the atmosphere. The statement that the storm travelled 50 miles an hour, which it did nearly in England, disproves the assertion that it commenced off St. Lawrence on the 23d, or six days before the conjunction. For six days, at the rate of 50 miles an hour, would give the length of its course 7300 miles, but St. Lawrence (lat. 49° long. 60°) is only 5300 miles from London, not one-third the distance. It could have moved on only at the rate of 17 miles an hour, the rate of "a pleasant brisk gale." The balloon to Germany went 20 miles an hour in fair weather. The gale off America on the 23d was not, therefore, the hurricane we had on the 29th November. From the Land's End forward, it moved exactly at the rate of the tide. The time the tide differs at Weymouth from the Land's End is 2 hours; the storm took 23 hours; at Aldborough the tide differs from Weymouth 44 hours; the storm took 44 hours; and from Lowestoft Road to Hamburg, the difference of high-water is 3 hours 10 minutes; the difference of the storm was 3 hours 30 minutes. These remarkable coincidences tend to prove that when there is much electric action in the air, the current of it follows the tide waves, the rise and fall of which must affect the chemical condition of the atmosphere; and, as every chemical action develops electricity, must develop, and derange, or, as I term it, "excite the electric fluid." Whenever any change is going on in the weather, electric action may be detected in the atmosphere; therefore electricity seems to have more to do with those changes than any other agent. To shew the reality of this assertion, I send you the results of one hour's observation of the electricity here yesterday, by a simple little instrument which I have adapted for the purpose.—I am, &c.

Cheltenham, 25th April, 1837. R. J. MORRISON.  
P.S. I hope you will make allowance in criticising my judgments on the weather, as this is a very peculiar season. I only profess to give "the general character of the weather." We have this day the rain and high winds, at least, which I predicted from the sun coming to the declination of Saturn and sextile aspect of Herschel, &c.

Observations made on the Electricity of the Atmosphere by a Magnetic Electrometer, at Cheltenham, 24th April, 1837.  
At noon, the weather was becoming fair, after a rainy and windy morning, and the instrument was placed in the shade on the roof of the Literary Institution. The needle fell into the magnetic meridian; but, in a few minutes, began slowly to deflect to the eastward; and at 0 h. 25 min. had reached 70 degrees to the east of north. This denoted a great extent of positive electricity in the air, which was rapidly clearing; thermometer, 52°. At 0 h. 45 min. the needle had returned 20 degrees to the north: the air brighter; moderate wind, S.W.; dark clouds, N.W. At one o'clock, needle at 40° E.; air warm and pleasant; distant thunder-clouds over the Malvern Hills; thermometer, 54°. At five o'clock the needle was again observed, and found deflected 30 degrees to the eastward; dark clouds and heavy showers over the Severn; rain and wind in the evening. The barometer during the day, about 29.40.

† A common electrometer for measuring the electricity of the atmosphere, having a small magnet suspended within by a delicate gold thread, in lieu of the pith balls,

pate the presence of T. Moore, and other authors of the first rank, to honour the festival and promote the prosperity of this admirable institution.

**Cambridge Philosophical Society.**—The Rev. Dr. Clark, president, in the chair. The Rev. L. Jenyns made some remarks on the unusual degree of cold which prevailed during March. It was stated that the mean temperature of the month, as deduced from observations made at Swaffham Bulbeck, was only 36.2, being the same as that of January, and more than six degrees lower than the average mean for March. The maximum was only 49, and the minimum 11; this last, which was a lower temperature than any experienced since the hard winter of 1829–30, having occurred on the morning of the 24th. Professor Willis exhibited and explained a machine which he terms a Tabulographic engine. The object of this machine is to transfer to paper any numerical series of magnitudes, so as to exhibit the curve which would be obtained by making those magnitudes a series of ordinates; a process of very frequent and important use in comparing the results of observations of various kinds, as, for instance, meteorological, tidal, and statistical observations. The machine takes three places of figures, is capable of being worked with very slight attention, and with great rapidity, and produces a sheet very readily legible and intelligible.—*Cambridge Chronicle*.

**United Service Museum.**—Dr. Lardner's second lecture on steam communication with India was, last week, delivered to the members of this Institution. Dr. Lardner's remarks were principally confined to the route by the Red Sea; all the difficulties of which he considered easy to overcome. The lecture was well attended.

**Diorama.**—This week, a splendid new subject was opened here—"The Basilica of St. Paul," in its integrity, and after its destruction by fire. The illusion produced by the change from the magnificent interior to a mass of ruins, is perfectly extraordinary. A beautiful structure of columnar aisles is at once converted into a wilderness of broken shafts and fallen timbers, &c. Nothing can exceed the general interest and effect. "The Avalanche of Alagna" produces in nature what the other exhibits in art.

**Balloon Ascent.**—Mrs. Graham, accompanied by her husband and Captain Currie, ascended from the Surrey Zoological Gardens, on Thursday, about 6 o'clock, and lighted safely near Bromley.

**Overland to India.**—Major C. Davies, of the Bombay army, accompanied by his lady, left England on the 19th of May last, and arrived at Bombay on the 20th of September. Except the heat of the Red Sea, they experienced no inconvenience whatever, and were gratified by many interesting sights. The route was from London to Antwerp, Brussels, Cologne, Stuttgart, Inspruck, Verona, the Betuna Pass to Florence, Leghorn, Malta, Alexandria, Atfe (canal joins the Nile), Boulac (port of Cairo), Suez, across the Desert, Jeddah, Mocha, Bombay, and the whole expense travelling, 102l. 14s.; at inns and servants, 89l. 4s. 7d.; total, 251l. 18s. 7d.

#### LITERARY NOVELTIES.

In the Press.

A Series of designs, illustrative of Gray, from the pencil of the Hon. Mrs. John Talbot. — Some Account of the Lives of the Compilers of the Liturgy, by the Rev. John A. Bolster, A.M., &c. — The Life of the late John Thelwall, with Notices of his Contemporaries, &c. by his Widow. — Three Voyages in the Black Sea, on the Coast of Circassia, with an Account of the Commercial Importance of its Sea-ports (in one of which the Vixen was seized), &c. — Dr. Waagen's (Director of the Picture Gallery at

Berlin, who gave evidence in 1836 before the House of Commons) Art and Artists in England. — Lieut. Welsted's Travels in Oman (Muscat), Mount Sinai, and along the Shores of the Red Sea. — A Second Part of Hand-book for Travellers on the Continent, containing Southern Germany and the Danube, from Ulm to the Black Sea. — Rank's Popes of Rome. — Translation of the Pharmacopoeia Londinensis, with Notes, by Dr. Castle.

#### LIST OF NEW BOOKS.

Lardner's Cabinet Cyclopædia, Vol. XC.: Moore's Ireland, Vol. II. 12mo. 6s. — Diseases of the Chest, by William Stokes, M.D. &c., Part I. 8vo. 16s. — Modern Accomplishments; or, the March of Intellect, by Miss C. Sinclair, 3d edition, post 8vo. 7s. — R. J. Nelson's Essay on Man's Moral Agency, 12mo. 6s. — The Deluge, a Poem, by Mrs. E. T. Caulfield, 8vo. 7s. — Christian Modes of Thinking and Doing, by the Rev. John Pring, 3 vols. 8vo. 1l. 10s. — Hymns for Baptist Chapels, by J. Swain, 32mo. 1s. 6d. — Coghlan's Guide to Brussels, 18mo. 2s. 6d.: Ditto to Belgium, 18mo. 6s. — Ellis's Water-side Practice of the Customs, 12mo. 10s. — The Irish Tourist; or, the People and the Provinces of Ireland, f.cup. 4s. 6d. — Master Wace, his Chronicle of the Norman Conquest, from Roman de Rou, translated, with Notes, &c., by Edgar Taylor, 8vo. 1l. 8s. — Observations on Equity and Common Law, addressed to Country Solicitors, 12mo. 5s. — Church and State, by A. Alexander, M.A. f.cup. 4s. — The Scripture Gazetteer, by W. Fleming, D.D. 2 vols. royal 12mo. (Vol. I.) 12s. — The Pizarro, by the Author of "Makanna," 3 vols. post 8vo. 1l. 11s. 6d. — On the Presence of God, translated from the French, 32mo. 1s. — The Latin Tutor, a Companion to the Eton Latin Grammar, 12mo. 2s. — An Easy Introduction to the Greek Tongue, 18mo. 4s. — The Numerical Class-Book, by Mrs. Taylor, 12mo. 3s. 6d. — Lingard's History of England, Vol. I. f.cup. 5s. — Select Notes of the Preaching of the late Rev. Rowland Hill, by E. Sidney, 12mo. 4s. — Athens, its Rise and Fall, by E. L. Bulwer, Esq. M.P. 2 vols. 8vo. 1l. 11s. 6d. — Oriental Customs applied to the Illustration of the Sacred Scriptures, 3d edition, with additions, by S. Burder, f.cup. 8s. 6d. — Britannia's Royal Chieftain, 4to. 10s. — Martin's British Colonial Library, Vol. VI. (Nova Scotia), f.cup. 6s. — Rory O'More, a Romance, by S. Lover, Esq., with fifteen Engravings, 3 vols. post 8vo. 1l. 11s. 6d. — Rev. J. Wilson's Dissertations on the Reasonableness of Christianity, 3d edition, 7s. 6d. — Savery on the Original Election of the Church of God in Christ, 12mo. 3s. — Rev. C. L. Smith's Excursions through the Highlands of Scotland, royal 12mo. 10s. 6d. — The Banquet of Arisaphane, translated into English Verse, with Notes, &c., by C. A. Wheelwright, 2 vols. 8vo. 1l. 4s. — The Book of Health and Beauty, 3d edition, 12mo. 3s. 6d. — The Works of Thomas Gray, edited by the Rev. S. Mitford, 4 vols. f.cup. 1l.

Edmonton. CHARLES HENRY ADAMS.

#### TO CORRESPONDENTS.

Our Review is again a little curtailed of its fair proportions, in order to make room for the press of temporary matter—Exhibitions, New Gallery, &c. &c. The only exception we have made in our miscellaneous branch is in favour of what will be considered by English historians a very curious document, relating to an interesting period; and, even in our Review, we have only postponed a few articles that stand aside the delay, in order to pay the earliest attention to such subjects as Bulwer's "Athens" and Lockhart's "Life of Scott."

We will look to the "Society for the Encouragement of British Art" as soon as possible, and regret that we could not take it up in this No.

**ERRATA.**—In the account of Capt. Cavaglia's discoveries, in our last, we will thank our readers to improve its accuracy by making the following slight alterations:—Page 254, col. 3, line 49, after "behind the granite," instead of thus reaching, &c., read and thus to ascertain the direction of the northern one, if it should happen to pass that way; and five lines further on, for towards the west read towards the north-west. P. 255, col. 2, l. 17, for explored read cleared; and l. 20, for covered read faced.

On the 1st of May, 8vo. with Plates and a Map,  
**NARRATIVE OF THREE VOYAGES IN**  
 the BLACK SEA, to the COAST of CIRCASSIA,  
 including Descriptions of the Ports, and the Importance of the  
 Trade, With Sketches of the Manners, Customs, Religion, &c.  
 of the Circassians.  
 By the Chevalier TAITBOU DE MARIGNY,  
 Consul of H. M. the King of the Netherlands at Odessa.  
 \* \* \* This edition is the first of the original work  
 which were suppressed in Russia.  
 John Murray, Albemarle Street.

# LEWIS'S CONSTANTINOPLE. LEWIS'S SKETCHES of CONSTANTINOPLE.

This Work will consist of a Series of Subjects illustrative of the Scenes, Costume, and General Character of the Turkish Capital, &c. &c.; arranged and drawn on stone by John P. Lewis, from Sketches made on the spot, during a residence, by J. Coke Smyth, Esq.

This volume will be uniform in style and execution with Mr. Lewis's last work of Spanish Sketches.

Price, imperial folio, tinted (i.e., with the whites printed), 4s. 4s.; coloured and mounted, in imitation of the original drawings, 10s. 10s. in a portfolio.

Published by Thomas M'Lean, 20 Haymarket. Subscribers' Names received also by P. and D. Colnaghi and Co. Pall Mall East, and Ackermann and Co. 99 Strand.

# ENGLAND; with Sketches of Society in the Metropolis.

By J. FENNIMORE COOPER, Esq.  
Author of "The Pilot," "The Spy," "Excursions in Switzerland," &c.  
Richard Bentley, 5 New Burlington Street (Publisher in Ordinary to His Majesty).

# ADVENTURES of CAPT. BONNEVILLE; or, Scenes in the Rocky Mountains of the Far West.

By WASHINGTON IRVING, Esq.  
Author of "The Sketch-Book," "Astoria," "The Alhambra," &c.  
Richard Bentley, New Burlington Street.

# CAPTAIN CHAMIER'S NEW NAVAL NOVEL. THE ARETHUSA; a Naval Story.

By Captain CHAMIER, R.N.  
Author of "Ben Brace," "Life of a Sailor," &c.  
Richard Bentley, New Burlington Street.

# THE PICTORIAL HISTORY of ENGLAND, Part III. price 2s.

The Pictorial Bible, Part XV. price 2s.  
The Work is also published in Weekly Numbers, price 6d. each. The First Volume has been issued, price 17s. 6d. handsomely bound in cloth, and the Work will be completed in Three Volumes.

London: Charles Knight and Co. 25 Ludgate Street.

# THE PENNY MAGAZINE, Part LXI.

The Penny Cyclopædia, Part I.II. Price 1s. 6d. The Eighth Volume will be completed early in May, and each of the preceding Volumes may be had, uniformly bound in cloth, price 7s. 6d. each.

London: Charles Knight and Co. 25 Ludgate Street.

# DOVETON; or, the Man of Many Impulses.

By the Author of "Jerningham," &c.  
Smith, Elder, and Co. Cornhill.

# REMAINS of ALEXANDER KNOX, Esq.

Esq. containing Sermons, chiefly Explanatory of Christian Doctrine, and confidential Letters, with Private Papers, illustrative of the Writer's Character, Sentiments, and Life.

Lately published, in 2 vols. 8vo. with Portraits, 9s. cloth.  
The Life of John Jebb, D.D. F.R.S. late Bishop of Limerick, Ardferri, and Aghadoe, with a Selection from his Letters.

By the Rev. Charles Forster, B.D.  
Formerly Domestic Chaplain to Bishop Jebb, Perpetual Curate of Ash-next-Banwich, and one of the Six Preachers in the Cathedral of Christ, Canterbury.

"The life of this exemplary prelate, this amiable, accomplished, and pious man, not only leaves with the most weighty lessons of a practical kind for the imitation of every churchman in England, and still more especially in Ireland at the present time, but it exhibits one of the most engaging and soundly constituted characters that have ever been delineated for the lasting benefit of mankind."—*Monthly Review*.

Also, in 2 vols. 8vo. 9s. boards, 9d. edition of  
Thirty Years' Correspondence between Bishop Jebb and Alexander Knox, Esq. M.R.I.A. Edited by the Rev. Charles Forster. With Translations of the Greek and Latin Passages, and an Index.

Just published, in 2 vols. 8vo. 24s. boards, a 3d edition of  
Practical Theology; comprising Discourses on the Liturgy and Principles of the United Church of England and Ireland; Critical and other Tracts; and a Speech delivered in the House of Peers in 1814. By John Jebb, D.D. F.R.S. Bishop of Limerick, Ardferri, and Aghadoe.

Nearly ready, compressed into small 8vo.  
The Last Days of Our Lord's Ministry; a Course of Lectures delivered during Lent, in Trinity Church, Coventry. By the Rev. Walter Parguey Hook, M.A. Prebendary of Lincoln, Vicar of the Parish of the Holy Trinity, Coventry, and Chaplain in Ordinary to His Majesty.

James Duncan, 27 Paternoster Row.

# THE BRIDE of MESSINA; a Tragedy.

Rendered from the German of Schiller, By GEORGE IRVING, Esq.

John Macrone, St. James's Square.

# TABLEAUX from "CRICHTON." In a Series of Twelve highly finished Engravings, from Mr. Ainsworth's celebrated Roman.

By JOHN FRANKLIN, Esq.

John Macrone, St. James's Square.

# THE METROPOLITAN for May 1.

Will contain—  
Mr. Montgomery's Lectures on the true Safety of the Church  
Royal Institution of Great Britain (first portion), April 11, 1887  
Snarleyow. By Captain Marryat  
Parliamentary Portraits: Mr. Sergeant Wolfe, Sir W. Molesworth, Mr. Leader, Mr. Bunsenman, Mr. Charles Lushington  
Bohemian Sketches. By H. Reeve, Esq.  
Sonnets. By R. Howett  
The Friend of Early Years  
Lady Blessington's Victims of Society—Mrs. Butler's Star of Peril, &c. &c.  
Saunders and Otley, Condit Street, Hanover Square; Bell and Bradfute, Edinburgh; Smith and Son, Glasgow; J. Cumming, Dublin.

The First Week in May will be published, in 1 vol. demy 8vo.  
THE EUCHARIST; being principally Lent Lectures, delivered in All Souls' Church, 1885, and Portman Chapel, 1887.

By the Rev. Wm. J. E. BENNETT, M.A.  
Late Student of Christ Church, Oxford.  
London: Wm. Jones Clowes, 80 Baker Street, Portman Square.

# BOOKS PUBLISHED THIS DAY.

In 2 vols. 8vo. price One Guinea, with seven illustrative Enchiridia by W. Dyer, Esq.  
HIGHLAND RAMBLES, and LONG LEJUNDS to RHODEN THE WAY.  
By Sir THOMAS DICK LAUDER, Bart.  
Author of "An Account of the Morayshire Floods," "Lochanshield," "Wolf of Badenoch," &c.  
A. and C. Black, Edinburgh; Longman and Co., London.

# THE YOUNG DUELLISTS.

"An admirably executed little work; in which, through the medium of a well-told tale, the lamentable consequences of duelling are traced by an ingenious and powerful pen."—*Naval and Military Gazette*.  
"The story is well told, and may have influence in taming the impetuosity of youth."—*Atlas*.  
London: Simpkin and Marshall; Hailles: Darton and Harvey.

# S T R A F F O R D; a Historical Tragedy, in Five Acts.

By ROBERT BROWNING, Author of "Paracelsus."  
London: Longman, Rees, Orme, and Co.

# ENTOMOLOGICAL SOCIETY of LONDON. The Third Part of the Transactions (completing Vol. I.), is now ready, containing 308 Pages and 11 Plates.

Price 11s. 6d. to Members, 6s. 6d. to the Public.  
Vol. I. Part I. price 7s. 6d. (to Members, 4s. 6d.)  
Vol. I. Part II. price 7s. 6d. (to Members, 4s. 6d.)  
To be had at Messrs. Longman and Co., Paternoster Row; Ballière, Regent Street.

William Pickering, Publisher, Chancery Lane.

## LALLA ROOKH.

Just published, Imperial 4to.

## PEARLS OF THE EAST;

OR,

## BEAUTIES FROM LALLA ROOKH.

Twelve Portraits of Female Characters, illustrative of Mr. Moore's popular Poem. Designed by Fanny Corboux,  
 and drawn on Stone by Louise Corboux.

Besides the highly attractive nature of the designs which embellish this splendid volume, it derives interest from  
 being the first work consisting entirely of figures, in which the newly discovered process of printing the tints along  
 with the subjects, has been fully carried into effect. The designs are all of that finely imaginative character which  
 distinguish Miss Corboux's conceptions of female beauty. Tastefully bound and ornamented, 31s. 6d.; or beauti-  
 fully coloured, under the artist's direction, 52s. 6d.

CHARLES TILT, FLEET STREET.

## APPROPRIATE SPRING AND SUMMER PRESENTS.

In 1 handsome foolscap 8vo. volume, price 10s. 6d.

## WOODLAND GLEANINGS.

By the Editor of "The Sentiment of Flowers."

With Sixty-four Illustrations.

— Attractive is the woodland scene,  
 Diversified with trees of every growth  
 Alike, yet various.  
 No tree in all the grove but has its charms.

SECOND EDITION.

Cloth, gilt edges, price 6s.; silk, 7s. 6d.; or morocco elegant, 8s. 6d.

## THE SENTIMENT OF FLOWERS.

"This is a charming little book. Engravings of groups of the most beloved, the most popular, and the most  
 poetical flowers, are very neatly and accurately coloured, and interspersed with fanciful and elegant descriptions and  
 analogies, illustrated by quotations from the wide range of English poetry, and from whatever has been most grace-  
 fully and fondly said of those darlings of nature."—*Tait's Magazine.*

CHARLES TILT, FLEET STREET.

### RELIGIOUS DOUBT.

Second edition, revised, 12mo. 5s.

**A TREATISE on the NATURE and  
 CAUSES of DOUBT in RELIGIOUS QUESTIONS**  
 (having an especial reference to Christianity). With an Ap-  
 pendix on some Common Difficulties, Lists of Books, &c. &c.

"We go along fully with him; and we think, that, in a short  
 compass, he has compressed some very valuable and important  
 instruction."—*Christian's Magazine.*

"The candid, amiable, modest, and benevolent spirit which  
 pervades it, can scarcely fail to make a favourable impression."—*Edinburgh Review.*

"We commend the book to the attention of those who have  
 much contact with minds at once intelligent and audacious."—*Athenaeum.*

London: Longman, Rees, Orme, and Co.

In 1 vol. 8vo. 10th, with a Portrait of Hahnemann, price 7s.  
**PRINCIPLES of HOMŒOPATHY.**

By P. CURRIE, M.D.  
 Men Jer of the Parisian Homœopathic Society.

Thomas Hurst, 65 St. Paul's Churchyard; and may be had of  
 J. Ballière, 219 Regent Street.

N.B. Portraits of Hahnemann may be had separate,  
 price 1s. each.

### THIRD EDITION.

In 1 vol. 8vo. price 12s. cloth,

**THE TYROL;**  
 with a Glance at Bavaria.

By H. D. INGLIS,  
 Author of "Spain," &c.

"A more agreeable travelling companion than Mr. Inglis, or  
 one who takes his reader more completely along with him," at  
 absent at present, "we do not know. He is the observer of things  
 as they are; and next to the pleasure of seeing what he describes,  
 is the pleasure of hearing his descriptions."—*Literary Gazette*,  
 April 6.

Whittaker and Co. Ave Maria Lane.

### TOILETTE OF RANK AND FASHION.

Second edition, price 2s. 6d.

**THE BOOK of HEALTH and BEAUTY.**  
 By a Surgeon.

Embracing the economy of the

Beard	Feet	Mouth
Breath	Hair	Nails
Complexion	Clothes	Skin
Eyes	Hands	Teeth
Eye-brows	Lips	Tongue, &c. &c.
Eye-lashes		

With recipes and directions for use of safe and salutary cos-  
 metics, and a variety of select recipes for the dressing-room of  
 both sexes.

London: Joseph Thomas, 1 Finch Lane, Cornhill; sold by  
 Simpkin and Marshall.

Price 14s. boards,

**AN ESSAY on IMITATION in the FINE  
 ARTS**, translated from the French of De Quincy.

By J. C. KENT, Esq.  
 "An important and valuable volume."—*Nottingham Mercury.*  
 Smith, Elder, and Co. Cornhill.

1 vol. f. 8vo. cloth boards, 2s. 6d.

**ON the PUNISHMENT of DEATH.**  
 3d edition, greatly augmented.

By THOMAS WRIGHTSON.  
 John Hearne, 81 Strand, London.

In 3 vols. 8vo. 25s. boards,

**PROOFS and ILLUSTRATIONS of the  
 ATTRIBUTES of GOD**, from the Facts and Laws of  
 the Physical Universe, being the Foundation of Natural and  
 Revealed Religion.

By JOHN MACCULLOCH, M.D. F.R.S. F.L.S. F.G.S. &c.

"The gifted author's name and eminence have long been well  
 known in connexion with natural science; but it now appears  
 that all his devotion to that and other departments of human  
 knowledge has been made subservient to his his last and ablest  
 work, which we confidently predict will hand down his celebrity  
 to the latest times."—*Monthly Review*, April 1837.

"From creation, the author traces the progressive changes of  
 the earth, and brings enlightened views of every science to bear  
 upon the question."—*Literary Gazette*, April 1, 1837.

1.

In 8vo. price 7s. boards,

**A Commentary upon the Prophecies of Za-  
 chariah.**

By the Rabbi David Kimchi.  
 Translated from the Hebrew, with Notes and Observations  
 on the Passages relating to the Messiah.  
 By the Rev. Alexander M'Caul, A.M.

"To receive, therefore, the translation of any of the rabbinical  
 writers at his hands, is a matter of interest to all who are desirous  
 of knowing what they really say, because his translation may be  
 relied on; but to receive it enriched by long critical and contra-  
 versial observations, renders the volume doubly precious and va-  
 luable."—*British Magazine.*

II.

Nearly ready, in 1 vol. 8vo.

**The Book of the Patriarch Job**, translated  
 from the original Hebrew, as nearly as possible in the Terms and  
 Style of the authorised English Version. To which is prefixed,  
 an Introduction, on the History, Times, Country, Friends, &c. of  
 the Patriarch; with some Strictures on the Views of Bishop War-  
 burton, and of the Rationalists of Germany, on the same subject.  
 And to which is appended, a Commentary, Critical and Exegeti-  
 cal, containing Elucidations of many other Passages of Holy Writ.  
 Inscribed, by permission, to his Royal Highness the Duke of Sus-  
 sex. By Samuel Lee, D.D. Treasurer of Bristol, and Regius  
 Professor of Hebrew in the University of Cambridge.  
 James Duncan, 37 Paternoster Row.

May 1st will be published, with a Portrait, price 3s.

### REVIEW OF NEW BOOKS.

*P. Terentii Afri Comædiæ Sex, ex editione T. F. G. Reinhardt.* With explanatory Notes by D. B. Hickie, LL.D., Head Master of Archbishop Sandys' German School, Hawkshead. London, 1837. Priestley.

It is not long since we endeavoured to give our readers some slight idea of comedy as it existed in the time of Aristophanes. We are now called upon to view this branch of the drama in an entirely altered shape, closely resembling the appearance that it has worn in modern times. It may, perhaps, not prove an uninteresting or tedious employment to attempt to trace the changes which comedy underwent before it arrived at the pleasing form which it has assumed in the works of the elegant and gentlemanly Terence. As it was our object, in the number we have already alluded to, to shew the political and satirical character of the Aristophanic productions, we trust there is no occasion for us to enter into any further discussion on the licentious and democratical nature of the old comedy. When, in the course of events, the government of Athens became converted into a species of oligarchy, the freedom and liberty of satire, which were not merely allowed, but absolutely cherished, in former times, as might naturally be expected, ceased to find favour in the eye of the authorities; and, accordingly, an edict was issued to forbid the introduction by name of any individual whomsoever upon the stage: it was under this trifling restriction that the dramatists began to engage in what is called the middle comedy. This slight alteration, however, was clearly not likely to produce any real benefit; for, as the name of the personage against whom the malicious and witty shafts of the satirist were aimed was by no means one of his chief characteristics, the audience, who were keenly alive to the smallest allusion, could never fail of seeing the follies and absurdities attributed to the unhappy object of the poet's dislike through the flimsy veil of a fictitious appellation. This state of things lasted but for a short time: finding the facilities of abuse by no means lessened by their late regulations, the rulers of the Athenians put a complete stop to the congenial amusement of the populace by absolutely and unconditionally forbidding the employment of any personal remarks whatsoever. The very essence of the performance being thus abstracted, the satirical drama sank for ever; the poet, being no longer able to catch the exciting events of the passing time, and weave them into the materials of his piece, was forced to have recourse to the common incidents and adventures of domestic life; and from this source alone were drawn the subjects and characters of the new comedy. This species differed so much from those immediately preceding, that by some it is not regarded as belonging to the comic genius; and it is thought that comedy never revived from this last fatal blow, but that the representations which followed under the same name were, in fact, derived from tragedy, which, no longer

degenerated from its original heroic and mysterious tone into the commonplace narration of the affairs of ordinary mortals: and, in fact, some traces of this disposition to descend may be found in Euripides, and furnished material for accusation against the less eminent Agathon. In this new style of drama there was one important omission—that of the chorus, which, “*sublato jure nocendi*,” no longer amused its delighted hearers with its poetical vagaries and fantastical conceits. It was now that Menander came forth: we have no one play of his remaining, and but few fragments; but they are enough to fill us with the deepest regret for the loss we have sustained in the destruction of those master-pieces, which have been pronounced by those of old (and where shall we find better critics?) inimitable. With the exception of these detached passages, and a few more of other poets, which have been preserved by being quoted in more fortunate prose writers, the comedies of Plautus and Terence, derived, as was nearly the whole of the Roman literature, from the Greek, alone enable us to form a just notion of the plot and language of these later productions. Both of these authors selected the writers of the new comedy for their models, to which they bear the same or even closer affinity than the adaptations of the French vaudeville, so plentiful in the present day, do to their originals. The old comedy was so peculiarly Attic, and so deeply rooted in its native soil, that it was found impossible to transplant it, and it withered immediately in a nearly solitary attempt made by Nevius to naturalise it among the Roman people. The Romans, unlike the mercurial Athenians, were unable to see their losses and defeats made the subject of jesting and ridicule. Their extreme sensibility to the slightest disgrace, and their superstitious veneration for their country and its glory, could not permit them to look upon any of their institutions travestied or held up to laughter; and, in the words of an elegant writer, “when the Roman people were seriously offended, the Tarpeian rock, and not the stage, was the spot selected for their vengeance.” The new comedy, however, as founded upon the common propensities of mankind, was more universal in its application, and accordingly obtained no slight degree of popularity in its migration towards the west. It may be considered as the parent of all European comedies of the present age: the early Spanish dramas, and those of Ariosto, were constructed upon this same principle; and in the time of Randolph and our early comedians, it was considered as a mark of excellence to have attained a resemblance to the Roman Terence. An addition made by Terence himself to the production of Menander, was the interweaving of a second plot; but whether this is an improvement or not, has been disputed. On the one side it is contended that the chief intrigue of the piece admits of being agreeably relieved and varied by a slight digression, and that the mind derives more amusement from a skilful intermixture of incidents and purposes, than from a single unsustained action. On the other side it is argued, that there is great danger of the underplot weakening the attractions of the

principal characters, by diverting the attention too long; that the activity and liveliness of the whole may be seriously injured by a complicity of interests; and that, if the subordinate agents be made at all too prominent, the power of each plot is very much diminished. These last arguments, however, we can scarcely understand as condemning an underplot, abstractedly considered, but as pointing out the awkward results arising from an injudicious blending of intrigues; and it will scarcely be disputed but that these expected evils may spring from bad management: it seems, however, to us, that, under skilful direction, a second intrigue may be productive of increased interest. Whether Terence has been happy in his arrangement is another question, and one which has been variously decided. Every reader in this case must judge for himself. The characters introduced in these pieces, and their respective offices, are uniformly of the same species, and can, perhaps, in no way be more concisely and accurately described than in the poet's own words:—

“*Bonæ matronas facere, meretrices malas, Parasitum edacem, gloriosum militem; Puerum supponi, falli per servum senem, Amare, odisse, suspicari.*”

This is, it must be confessed, but a small round of personages to figure in the innumerable scenes that so long delighted an Athenian and Roman audience; but, in spite of these limited means, Terence has animated these invariable shadows with so much delicacy of sentiment and reality of feeling, that the attention of the reader is never wearied by the sameness of the succession, and the identity of the characters is lost in the peculiar and distinctive shades of colouring, distributed with so much art and discernment. The one great objection which has been brought against Terence, from the time of Cæsar to the present day, is deficiency in the *vis comica*, the faculty of drawing those ludicrous and humorous pictures which are supposed to be essential to a true comedy.

“*Unum hoc maceror et doleo tibi deesse, Terenti.*”

There are, notwithstanding, in our opinion, more passages and situations in our poet, which are capable of exciting the more risible emotions, than are generally supposed: at any rate, if the annual performances at Westminster may be considered as evidence, there is never any lack of laughter on those festive occasions. The attribute from which our poet derives the greater part of his laurels is the “*ineffabilis amenitas*,” the indescribable easiness and delicacy of language, which run in so smooth and continuous a flow through the whole of his works. While he carefully guards, on the one hand, against soaring into the more majestic and declamatory strain of tragedy, he is equally distant from degenerating into low and farcical expressions; so that, skilfully conducted between the two extremes, the style is sustained in a manner at once conversational and dignified. It is in this point that he most completely carries away the palm from Plautus, whose coarse, and often vulgar language betrays the company with whom he was used to associate, and the nature of the audience whom it was his endeavour to please. The com-

“*Presenting Thebes or Pelop's line, Or the tale of Troy divine,*”

parison between these two comedians has been so often drawn, that it is needless to attempt it here; all the distinctions, however, that are conceived to exist, may be nearly summed up when it is said that Plautus is meant for the stage, and Terence for the closet: the one caricaturing and distorting his truly comic characters; while the other, never "o'erstepping the modesty of nature," adheres to truth in his smallest details. Our limits begin to warn us that it is now time to turn our attention to the edition immediately before us. It is constructed upon the same principle as the edition of Anthon's Horace, which we had occasion some time back to mention favourably. The text has already been approved of, and the notes and remarks seem carefully and judiciously selected from the old commentators; the original matter, also, is well adapted to the purposes of instruction. We think, however, that, on the whole, the explanations are too profuse; for, though it may seem rather strange, it has always been our opinion that the road to learning may be rendered too smooth and easy. Habits of industry and reflection, the most valuable acquirements of the classical scholar, are not likely to be engendered where every seeming and fancied difficulty may be removed by turning over a few pages. By a constant custom of application to explanatory notes the mind becomes afraid to trust to its own resources; and, if the student is used to let another always think for him, he will in time be unable, though he require it, to think for himself. We are aware that, to the solitary reader, without some assistance, the perusal of many authors is impossible: the excess of notes is the only fault we complain of; and, as we said before, we think in many places of this edition the remarks are somewhat supererogatory. With this drawback, which to many, however, will seem an advantage, we heartily recommend Dr. Hickie's labours to those who desire to drink of this well of Latin undefiled.

*The Hussar.* By the Author of "The Subaltern." 2 vols. 12mo. London, 1837. Colburn.

THIS is a simple, unaffected, and true story, the life of one Serjeant Landshelt, now an inmate of Chelsea Hospital, and under the spiritual care of its worthy chaplain. Having, from time to time, like Othello to Desdemona, communicated the history of his adventures to Mr. Gleig, the latter found them strange and interesting enough to be woven into this narrative; and with him we pass from Germany to England, and thence to various lands—Sicily, the West Indies, South America, Portugal, Spain, &c. &c. and listen with pleasure to all the old soldier's reminiscences. Of their quality, the following selections will serve to afford a sufficient idea to our readers.

"My reader is not, perhaps, aware that there is a regulation in the Russian army, which prohibits any woman, whether married or not, from accompanying a body of troops upon foreign or active service. So rigid, indeed, are the Muscovites on this head, that, at the period of which I am speaking, the wife of a field-officer having been detected in her husband's quarters disguised as a page, she was sent home with ignominy, and he reduced to the ranks. It was, of course, impossible for Elizabeth's suitor to hide that fact from his mistress, because the occurrence took place in St. Helier, and the whole island rang with it. But, being master of her affections, he persuaded her to believe that, provided they could contrive to get her removed from Guernsey in one of her

father's schooners, it would be easy enough, when at sea, to pick her up, and hide her in the Russian transport. Accordingly, the poor girl consented to fix the day for the wedding; which was celebrated with all solemnity according to the rites of the established church, and toasted by myself, and a crowd of her friends besides, with great zeal after supper. About a week had passed in marriage festivities, when the Russians were ordered to embark; and the bride was reduced to the necessity of making her own arrangements for the purpose of not being separated from her husband. At his suggestion, she sent all her property, amounting to some hundred pounds, all her clothes, trinkets, and valuables of every description, to his ship; while she herself, with a stock of apparel barely sufficient for a few days' wearing, took her berth in a schooner which her father manned, and made ready to follow the squadron. On the appointed day the whole put to sea; the schooner keeping as near as possible to the husband's vessel, and steering for the coast of England. Elizabeth naturally expected that then, during the bustle of a general rendezvous, she would be enabled to join her lover. But she was cruelly deceived. The scoundrel never meant that she should join him. He had obtained all that he coveted of her little dowry; and now made no effort whatever, during three days and nights, so much as to communicate with the schooner, though all the while within hail. I need scarcely go on with my tale. The Russian admiral, perceiving the schooner at last, ordered its crew to sheer off, or he would sink them; and poor Elizabeth returned to Guernsey, a widowed wife, forlorn, and well nigh broken-hearted. Many years elapsed ere I heard of her again, though I never failed, as often as an opportunity offered, of inquiring into her fate; and then the bitterness of grief was past. She had given birth to a son, of whom the Russian captain was the father; and long devoted herself to the child's education. But the entreaties of her parents, and the devotion of another lover, overcame her sadness at last. She married a second time more prudently; and, succeeding to the business at her father's decease, carried it on at once respectably and profitably."

At Weymouth we have an interesting anecdote of our late venerated king, George III.

"His majesty's common custom was to ride along the front of the troops, and to inspect them cursorily, as kings are wont to do, without making any remark. It happened, however, that on one occasion he deviated from this practice, and the followed scene occurred. A portion of our corps, forming the cavalry plique, held the right of the line, which rendered it necessary for his majesty to begin his inspection with us. The appearance, first of one man, and then of another, struck him; and he stopped to ask questions. 'What countryman are you?' 'A Saxon.' 'Oh! a Saxon, a Saxon,' replied the king: 'a fine nation, a fine nation; very good soldiers, very good soldiers.' He then passed on to another. 'What countryman are you?' 'A Swede.' 'Good, good; excellent men the Swedes—very good men the Swedes.' A third arrested him, and the same question was repeated: the answer was, 'A Hanoverian.' 'Oh! my own country, my own country; all good men the Hanoverians—all good men—all good men.' Now came a fourth; and he was, in truth, as noble a looking fellow as ever mounted a horse. He was very tall, beautifully formed, with a dark oval complexion, piercing black eyes, hair like the raven's wing, and an enormous pair

of mustaches. The king gazed at him for some time, and then demanded, 'What countryman are you?' 'A Hungarian,' replied Forksh, whose name being rendered into English, signifies a wolf. 'All excellent soldiers the Hungarians,' cried the king,—'all excellent soldiers;' and then, as if attracted by the peculiar curl of the man's mustaches, he put forth his hand and began gently to twist one of them. It is impossible to say what motive could have actuated Forksh, for he never gave a satisfactory account of it; but the king had hardly seized his mustache, when he made a sort of snap, like a dog, at the royal hand, which was instantly withdrawn. In my life I never witnessed such a scene. The whole parade was convulsed with laughter, in which, after his first surprise, nobody joined more heartily than George III. As to the Prince of Wales, who rode next to his father, I thought he would have fallen from his horse. But he did not forget, as he passed by, to slip a guinea into the man's hand; who never permitted a muscle of his face to relax, nor swayed, even for an instant, from his upright and soldierlike attitude."

From Sicily we make our next selections, and with them conclude.

"The period of the occupation of Sicily was remarkable for the prevalence of crime among that portion of the British army which was employed in the service. How to account for the circumstance I do not pretend; but it is certain that a greater quantity of murders were perpetrated, and more acts of depredation committed, by the English troops, while they held Sicily in their hands, than by the whole of the Duke of Wellington's forces in Spain, though surpassing them at least four to one in point of numbers. On one occasion, for example, a soldier belonging to an infantry regiment came off guard at night, and, feeling fatigued, lay down upon his bed in order to sleep, but was hindered from sleeping by the serjeant of his squad, who, sitting in the same room, entered into an animated conversation with those about him. The weary man looked up, and begged the serjeant to be silent; a request with which the speaker did not think fit to comply. Again the man raised himself on his elbow, and declared, with an oath, that if the serjeant would not hold his tongue, and permit him to sleep, he would blow his brains out. The serjeant paid no other regard to his threat than to laugh at it; but he little knew the sort of person with whom he was trifling. The man sprang from his bed, deliberately took down his musket from the arms-rack, and shot the non-commissioned officer dead on the spot. He was, of course, tried, found guilty, condemned, and executed; a poor compensation for the life which, in his anger, he had taken away. On another occasion, a soldier was caught by a piano, plundering his vineyard. The countryman either wished to seize the robber, or in some way or another excited his fury; for a struggle took place, and the Sicilian was killed. The court which tried the murderer found him guilty on the clearest evidence, and he was sentenced to be hanged. In order to give to the execution as much solemnity as possible, all the troops in garrison were ordered to attend; while a proclamation went forth, in the Sicilian language, which called upon the people to come and witness the zeal with which the English authorities were prepared to protect their lives and properties. Large crowds of men, women, and children, came together where the scaffold was erected, and three cannon-shot were fired to warn them of the approach of the hour which

was to close the marauder's eyes upon the world for ever. The first gun gave notice that the prisoner had quitted his dungeon; the booming of the second told that he had reached the fatal platform; and when the third sent its echoes among the roots of Mount Etna, the drop fell. It was a hideous spectacle; for, the rope being weak and the man heavy, the former gave way, and the wretched creature was taken up, bruised, from the ground, but quite sensible. A pause necessarily occurred ere a fresh rope could be procured, and then he ceased to live. Strange to say, the effect of this example was so slight that, the very same day, a man of De Rolle's, a foreign regiment in the English service, was put in confinement for murdering his wife. He had gone home from the execution, quarrelled with the poor woman about some trifle, and stabbed her to the heart. He, too, suffered the penalty which the laws both of God and man have awarded to the homicide. Yet the practice continued occasionally, amid such aggravations of horror as to chill the blood of those who listened to the tale at the moment, and effectually to hinder me from adverting to it now.

"The Lady Patroness of Sicily is St. Rosalia, concerning one of whose votaries, in another country, I had occasion, some time ago, to say a few words. How she obtained her honourable station in the calendar my host informed me; and I tell the tale as he told it to me, without vouching either for its accuracy as a legend, or the correspondence of my version with the versions of other writers. According to the padre, Santa Rosalia was a lady of rank and fortune; if I recollect right, a princess, who dwelt near Jerusalem during the days of the Apostles, and was converted by them on the day of Pentecost. She lived in great splendour, and exercised much hospitality towards the believers, till the persecution consequent on the martyrdom of Stephen arose; when she was compelled to flee, attended by a single maid, and to seek an asylum in a country whither the authority of the high priest could not extend. As Providence would have it, the ship in which she embarked was bound for Sicily, and carried her safely to Palermo, in the vicinity of which she lived a life of seclusion during many years. Santa Rosalia was no nun, neither was her attendant; but they kept up very little intercourse with the world, dividing their time, both by day and night, between the practice of devotion and the exercise of charity. Santa Rosalia died at last, without having attracted any great share of public attention, and was buried; but her merits had not been wasted. There occurred, some years afterwards, a grievous sickness in Sicily, which cut down the population by hundreds, and which all the efforts of the physicians proved inadequate to arrest. The whole island, indeed, was in mourning; when, one day, a devout monk, walking out of Palermo into the country, was met, near the cell which Santa Rosalia used to inhabit, by a being manifestly not of earthly mould. There was a glory round the head of the stranger, whose robes were white and shining; while from her eyes a lustre beamed so pure and piercing, that the monk could scarce venture to look upon it. 'I am Santa Rosalia,' said the vision, in a voice whose tones were music. 'I hold a high place in the family of the Blessed Virgin. She has sent me to say that, provided you will raise my bones, and carry them in solemn procession through Palermo, the plague will cease.' The monk, bowing low, returned in all haste to the city, and communicated the substance of what had befallen. The bones of the saint were

exhumed; priests and magistrates bore them through the streets with lighted candles and bands of music; and that very day there came a change of wind, which wafted infection from the shores. I may add that, in honour of the good saint, a convent was forthwith built over the spot from which her body was taken; and that the precious relics, being there deposited, are still shewn to the pious and the liberal, greatly to the edification, as well as to the financial benefit, of the society. There are many festivals in Palermo in honour of departed worthies, but, in point of magnificence, that of Santa Rosalia far surpasses them all. It occurs on the anniversary of the miracle which her bones are said to have performed, and is kept with processions, and feasting, and fire-works, and all sorts of public shows, at which the king and his court, equally with the people, attend. For some weeks previous to the arrival of the great day, all Palermo is in commotion. Frameworks of timber are fabricated, which the carpenters arrange along the Marino, whence the fire-works may be shewn; and an enormous car is made, which, being covered over with silken hangings, supports upon poles a lofty stage, and is surmounted by an image of the saint, half hidden in a mass of silken clouds. The car itself is supported upon low truck-wheels; but on its sides there are four other wheels of a wider span, which never touch the ground, but are turned round and round by a winch, which some of the persons whom the hangings conceal set in motion. At an early hour on the morning of St. Rosalia's day—as soon, indeed, as it is light—the car is discovered on the Marino. On the stage, and surrounding the image of the saint, are groups of women, dressed in showy robes, and covered with flowers; while, tied to the four large wheels, are little children, whom the silks and feathery wings, fastened to their shoulders, cause to represent angels. Then there is a sounding of trumpets, and ringing of bells, which, together with a volley of pater noster, warn the surrounding country that the saint has appeared among men. No sooner is this clamour heard, than, from far and near, country-people are seen driving their bullocks towards the city, which they yoke in a long string to the car. The farmer, indeed, who should refuse to lend his cattle for this purpose, could not hope to prosper at the coming vintage; and happy is he who, arriving first at the Marino, succeeds in placing his bullocks next the car. Then is the machine set in motion; while, from windows and balconies, hats and handkerchiefs wave, and the air is rent with the tumult of voices, the braying of trumpets, and the roar of artillery. Thus slowly, and with frequent halts, the saint is conveyed through the main street towards the further gateway; while, as it moves, the large wheels are turned slowly round, and the poor little angels go up and down, till they are as effectually delivered from the weight of their morning's meal as if they were at sea in a gale of wind. It is surprising the degree of excitement which the procession seemed to create throughout the city; and the quantities of wine, fruit, sweetmeats, and other viands consumed, is enormous. Thus it is during the day; and when darkness sets in, a new and still more brilliant scene is presented. The long line of frame-work of which I have spoken as drawn through the Marino, is now surmounted by fire-works, to witness which the whole population of the city is astir. The Marino, I need scarcely observe, is a broad, open space, that intervenes between a row of

noble houses and the sea. It is the mall of Palermo on common occasions, where ladies in their carriages, and cavaliers on horseback, are accustomed to take exercise; and there is about the centre of it a small marble pavilion, within which the king and his family are in the habit of looking out upon the festivities. To-night neither carriages nor horses are permitted to interfere with the pedestrians, who, in dense crowds, but in perfect order, occupy the parade; while the surface of the bay is covered with boats, each carrying its load of happy spectators: and, it is but fair to add, that the spectacle is altogether magnificent. The fire-works themselves are exceedingly brilliant; and the effect of the light upon the dark-blue waters, upon the multitudes of people, upon the buildings and vessels, is such as I have no language to describe. Such is the feast of Santa Rosalia, which the good people of Palermo celebrate with great delight, and of which the festivities come not to a close till three or four o'clock on the succeeding morning."

*Strafford; a Historical Tragedy.* By Robert Browning, author of "Paracelsus." 8vo. pp. 181. London, 1837. Longman and Co. THE Poem of "Paracelsus" presented so many high poetical beauties, as to give its young author a strong hold upon the public attention, and teach it to expect much from any future production of his pen. He has now appeared in the more difficult and arduous character of a tragic dramatist; and so successfully, that we may truly say he has not disappointed the hopes his first work led us to entertain. There is much vigour in *Strafford*, and much genuine poetry, though Mr. Browning has rather sought to accomplish his aim by the impulses given to his *dramatis personæ*, than by endowing them with the beauties of style and diction. In his Preface he tells us, "I had for some time been engaged in a poem of a very different nature, when induced to make the present attempt; and am not without apprehension that my eagerness to freshen a jaded mind by diverting it to the healthy nature of a grand epoch, may have operated unfavourably on the represented play, which is one of action in character rather than character in action."

We confess we do not very clearly apprehend what this distinction means; but, at any rate, the play is more one of rapid events than of studied poetical embellishment. The only part that seems to admit of the latter, is an imaginary one of Lucy Percy, whom the author has painted as devoted in love to the ill-fated *Strafford*. In most of the scenes, the relation of political events, and the revelation of party purposes, supersede the Muse; and, with the exception of the passionate speeches of the hero, there was hardly room for that species of composition which would so strikingly contrast some other tragedies (such, for example, as Mr. Sergeant Talfourd's "Ion") with the present. We are not sure, indeed, that Mr. Browning has not fallen into the other extreme. The dialogue is very abrupt and interrupted,—the sentences broken and exclamatory, to a degree that often affects the sense. This was felt even more upon the stage than it is in the closet; and, as an acting play, the interest fails after the third act, when *Strafford* is overthrown. The fourth, in which he does not appear, lingers amid the plots for his destruction, and the vacillation of the King; and, though his prison scene is touching and sad, it insufficiently revives our sympathies for the prototype of royal martyrdom. Charles himself is drawn more weak and treacherous than even adverse history

represents him; and only Pym, among the rest, stands out prominently and consistently on the canvass. The younger Vane and Hollis remain to be noticed—Hampton, Savile, Rudyard, &c. are ciphers; and the Queen has not much either to say or do. In short, when we look at the whole, it appears to us as if the original character had been conceived and written; and nearly all else, except the rivalry of Pym, concocted, as it were, to set off the leading personage, and connect the events in which he was concerned. Where Strafford is not, there is nothing to care for; and where he is, is turmoil from the beginning, viz. his return from Ireland, to the end, when alternate doubts and hopes terminate in the despairing certainty that he has been betrayed and sacrificed.

Having given this brief outline of the tragedy, and of our opinions, it remains for us to seek a few specimens wherewith to exemplify the author's powers, though, from the circumstances of break and interruption we have mentioned, it is not easy to select any very connected passages. Thus, when Charles has been induced, contrary to Strafford's advice, to dissolve the parliament,—

"Charles. 'Twas Vane—his ill-judged vehemence that...  
Strafford. Vane?  
Ch. He told them, as they were about to vote  
The half, that nothing short of all the twelve  
Would serve our turn, or be accepted.  
Straff. Vane!  
Vane! and you promised me that very Vane...  
O God! to have it gone, quite gone from me,  
The one last hope—I that despair, my hope—  
That I should reach his heart one day, and cure  
All bitterness one day, be proud again,  
And young again, care for the sunshine, too,  
And never think of Elliot any more,—  
God! and to toll for this, go far for this,  
Get nearer, and still nearer, reach this heart—  
And find Vane there! (Suddenly taking up a paper, and continuing with a forced calmness.) Northumberland is sick.

Well, then, I take the army: Wilmot leads  
The horse; and he, with Conway, must secure  
The passes of the Tyne: Ormond supplies  
My place in Ireland. Here, we'll try the city:  
If they refuse a loan... debase the coin.  
And seize the bullion! we've no other choice.  
Herbert... (Flinging down the paper.)  
And this while I am here! with you!  
And there are hosts such, hosts like Vane! I go,—  
And, I once gone, they'll close around you, sire,  
When the least pique, pettiest mistrust, is sure  
To ruin me—and you along with me!  
Do you see that? And you along with me!  
—Sire, you'll not ever listen to these men,  
And I away, fighting your battle? Sire,  
If they—'t'is—charge me—no matter what—  
You say, 'At any time when he returns  
His head is mine.' Don't stop me there! You know  
My head is yours... only, don't stop me there!  
Ch. Too shameful, Strafford! You advised the war,  
And...

Straff. I! I! that was never spoken with  
Till it was entered on! That loathe war!  
That say it is the maddest, wickedest...  
Do you know, Charles, I think, within my heart,  
That you would say I did advise the war;  
And if, through your own weakness, falsehood, Charles,  
These Scots, with God to help them, drive me back...  
You will not step between the raging people  
And me, to say...

I knew you! from the first  
I knew you! Never was so cold a heart!  
Remember that I said it—that I never  
Believed you for a moment

—And, you loved me?  
You thought your perdy profoundly hid  
Because I could not share your whisperings  
With Vane? With Savile? But your hideous heart—  
I had your heart to see, Charles! Oh, to have  
A heart of stone—of smooth, cold, frightful stone!  
Ay, call them! Shall I call for you? The Scots  
Goaded to madness? Or the English—Pym—  
Shall I call Pym, your subject? Oh, you think  
I'll leave them in the dark about it all?  
They shall not know you? Hampton, Pym shall not...

Our next example is from the mouth of  
Lucy, Lady Carlisle.

"(Aside.) The king!—  
What way to save him from the king? My soul...  
That lent from its own store the charmed disguise  
That clothes the king... he shall behold my soul!  
To Strafford! Strafford... (I shall speak best if you'll not gaze

Upon me)... You would perish, too! So sure!...  
Could you but know what 'tis to bear, my Strafford,  
One image stamped within you, turning blank  
The else imperial brilliance of your mind,—  
A weakness, but most precious,—like a flaw  
In the diamond, which should shape forth some sweet face  
Yet to create, and, meanwhile, treasured there,  
Lest Nature lose her gracious thought for ever!..."  
A few lines from Strafford's conclusion, and we  
also conclude.

"Straff. I shall walk lightly, Sire!  
—For I shall save you... save you at the last!  
Earth fades, Heaven dawns on me... I shall wake next  
Before God's throne: the moment's close at hand  
When man the first, last time, has leave to lay  
His whole heart bare before its Maker—leave  
To clear up the long error of a life,  
And choose one happiness for evermore.  
With all mortality about me, Charles,  
The sudden wreck—the dregs—the violent death...  
I'll pray for you! Through all the angel-song  
Shall penetrate one weak and quivering prayer—  
I'll say how good you are... inwardly good  
And pure... (The King falls: Hollis raises him.)  
Be witness, he could not prevent  
My death! I'll go—ere he awakes—go now!  
All must be ready—did you say, Balfour,  
The crowd began to murmur?—They'll be kept  
Too late for sermon at St. Antholin's!  
Now—but tread softly—children are at play  
In the next room—Ah, just my children—Hollis!  
—Or... no—support the King! (a door is unbarred.)  
Hark... they are here!  
Stay Hollis!—Go, Balfour! I'll follow!"

"Pym. Have I done well? Speak, England! Whose  
great sake  
I still have laboured for, with disregard  
To my own heart,—for whom my youth was made  
Barren, my future dark, to offer up  
Her sacrifice—this man, this Wentworth here—  
That walked in youth with me—loved me it may be,  
And whom, for his forsaking England's cause,  
I hunted by all means (trusting that she  
Would sanctify all means) even to the grave  
That yawns for him. And saying this, I feel  
No bitter pang than first I felt, the hour  
I swore that Wentworth might leave us,—but I  
Would never leave him: I do leave him now!  
I render up my charge (be witness, God!)  
To England who imposed it! I have done  
Her bidding—poorly, wrongly,—it may be  
With ill effects—for I am but a man...  
Still, I have done my best, my very best,  
Not faltering for a moment! I have done!  
(After a pause.)

And that said, I will say... yes, I will say  
I never loved but this man—David not  
More Jonathan! Even thus, I love him now:  
And look for my chief portion in that world  
Where great hearts led astray are turned again,  
(Soon it may be... yes... it will be soon:  
My mission over, I shall not live long!)  
...Aye here I know I talk—and I will talk  
Of England—and her great reward—as all  
I look for there; but in my inmost heart  
Believe I think of stealing quite away—  
To walk once more with Wentworth—with my friend  
Purged from all error gloriously renewed,  
And Elliot shall not blame us! Then indeed...  
This is no meeting, Wentworth! Tears rise up  
Too hot... A thin mist—is it blood?—enwraps  
The face I loved so! Then, shall the meeting be!  
Then—then—then—I may kiss that hand, I know!  
Straff. (Walks calmly up to Pym and offers his hand.)  
I have loved England, too; we'll meet then, Pym!  
As well to die! Youth is the time—our youth,  
To think and to decide on a great course:  
Age with its action follows; but 'tis dreary  
To have to alter one's whole life in age—  
The time past, the strength gone! as well die now.  
When we meet, Pym, I'd be set right—not now!"

*A Birthday Tribute, addressed to H. R. H.  
the Princess Alexandrina Victoria, on at-  
taining her eighteenth Year.* By L. E. L.  
With a Portrait. 4to. pp. 19. London,  
1837. Fisher, Son, and Co.

MESRS. FISHERS have, with excellent taste  
and most opportunely, invoked the genius of  
one of the sweetest priestesses in the temple of  
Apollo, to embody the national feelings on this  
auspicious occasion. In olden times, such an  
event would have called forth hundreds of trib-  
utes from seats of learning, and all the scat-  
tered children of the muse. Now we are, we  
trust, not less gallant and loyal, but certainly  
more commercial and plodding, and must be  
contented with a more limited application of  
sympathy and talent to celebrate even so inter-  
esting an epoch as that birthday of the fair

Hope of England, which passes her from the  
state of infancy to the eminent height of his-  
torical importance.

What is here done is done beautifully. The  
poem opens with a clustering of youthful  
images all congenial to the subject, and full  
of kindred loveliness:—

"When has the day the loveliest of its hours?  
It is the hour when morning breaks into day,  
When dew-drops like the yet unfolded flowers,  
And sunshine seems like hope upon its way.  
Then soars the lark amid the azure, singing  
A seraph's song, that is of heaven, not earth;  
Then comes the wind, a fragrant wanderer, bringing  
The breath of vales where violets have birth.  
Which of the seasons in the year is fairest?  
That when the spring first blushes into bloom;  
There is the beauty, earliest and rarest,  
When the world warms with colour and perfume.  
Then are the meadows filled with pleasant voices,  
Earth one bright promise what it is to be;  
Then the green forest in its depths rejoices,  
Flowers in the grass, and buds upon the tree.  
Then the red rose reveals her future glory,  
Breaking the green moss with one crimson trace;  
So dawns the white—while old historic story  
Tells now they wreathe for England's royal race.  
If thus so fair the spring-time and the morning,  
But in the world of leaf and bud; how fair,  
With all their early loveliness adorning,  
Still lovelier in our human world they are.

Youth is around thee, ladye of the ocean,  
Ocean that is thy kingdom and thy home,  
Where not a heart but kindles with emotion,  
Dreaming of honoured years that are to come.

What is the light of morning's rosy breaking,  
To the young promise of that royal mind?  
What are the hopes of sunny spring's awaking,  
To hopes which in thy future are inscribed?  
Mighty the task, and glorious the fulfilling,  
Duties that round thy future hours must be;  
The east and west depend upon thy willing—  
Mistress art thou wherever rolls the sea.

Fair art thou, Princess, in thy youthful beauty  
Thoughtful and pure, the spirit claims its part;  
Gazing on thy young face, a nation's duty  
Bursts forth into the homage of the heart.

O'er thy high forehead is the soft hair braided;  
Be never darker shadow on that brow!  
Not yet one tint of youth's sweet hues are faded;  
The loveliness of promise lights thee now.

Around thee are a thousand hearts addressing  
Prayer for thy sake to every power divine;  
No lip that names thee, names without a blessing;  
A nation's holiest wishes are all thine."

The fair writer then casts a retrospect over  
the past history of the country, and deduces  
from it lessons for the future. A few verbal  
inaccuracies scarcely detract from the spirit  
and yet gentle philosophy which pervades this  
sketch, till we come to this period, when

"The progress of our race is marked  
Wherever we can turn;  
No more the gloomy woods extend,  
No more the death-fires burn.  
The village rises where once spread  
Th' inhabitable moor;  
And Sabbath-bells sweep on the wind,  
The music of the poor.  
The sun sinks down o'er myriads of spires  
That glisten in the ray,  
As almost portions of that heaven  
To which they point the way.  
There is not a more lovely land  
On all our lovely earth,  
Than that, Victoria, which now gives  
Its blessing on thy birth."

Breaking into another rhythm, we must  
quote a few lines more of fine imagining.

"Farwell unto thy childhood, and for ever;  
Youth's careless hours dwell not around a throne;  
The hallowed purpose, and the high endeavour,  
The onward-looking thought must be thine own.

From glowing Ind to Huron's waters spreading  
Extends the empire that our sword hath won,  
There have our sails been peace and knowledge shedding,  
Upon thy sceptre never sets the sun.  
A nobler triumph still awaits thy winning,  
The mind's ethereal war 'tis in its birth;  
The Cross of Christ is on its way, beginning  
Its glorious triumph o'er the darkened earth.  
God's blessing be upon thee, Royal Maiden!  
And be thy throne heaven's altar here below,  
With sweet thanksgivings, and with honours laden,  
Of moral victories o'er want and woe.

Glorious and happy be thy coming hours,  
Young Daughter of old England's royal line!  
As in an angel's pathway spring up flowers,  
So may a nation's blessing spring in thine."

Such are the tones and tender of this charming composition; and we have only to add, that it is encased in a most appropriate binding, embossed on primrose—the colour of the Spring.\*

*Travels of the Duke of Ragusa (Marshal Marmont.) [From the French.]*

WE lay before our readers some extracts from the work which the marshal Duke of Ragusa is about to publish. Every thing contributes to render this book highly interesting. The Duke of Ragusa has travelled through countries which are hardly known to France, and in which the most elevated questions of politics and civilisation are now agitated. He has visited them as a philosopher, a warrior, and a man of learning; he gives profound views and accurate delineations of each of them. His book every where bears the stamp of perfect tolerance and moderation: we always see in it the prudent reserve of a man who, as he says himself, has too often been the unhappy witness of the errors of others not to distrust his own opinions and his own judgment.

The Duke of Ragusa, leaving Vienna in 1834, intended first to visit Southern Russia, then Constantinople, Syria, Palestine, and Egypt. In order to reach Odessa, he had to pass either through Galicia or Hungary and Transylvania. He chose the latter route. Hungary and Transylvania are two countries which contain the germs of great future prosperity. They possess the elements of immense riches, and are destined to become the principal basis of the power of the House of Austria. We subjoin some extracts from the marshal's tour in Hungary.

"The actual state of a great part of Hungary is as follows. The country appears to be deserted, and entirely destitute of inhabitants. You traverse immense plains; assemblages of cultivators, to the number of 30,000 or 40,000 souls, are placed at great distances from each other. In the spring every one leaves his winter quarters, and goes to encamp on the land which he is to cultivate. During the whole week he remains at his work; and the town has no inhabitants left but the women, the young children, and some servants. On Saturday evening the head of each family returns home, leaving all his implements in the field; but, on Monday morning, he goes back to his labours. When these are ended, all return to the town. Some of the temporary encampments have been converted into collections of huts, which are adorned with plantations; and the huts will one day become houses. Then the population will remain there; the country will be covered with farms and villages; and people will live in Hungary as in the rest of Europe. The towns, losing a great portion of their population, will assume a different appearance; they will be inhabited only by persons who are not engaged in agricultural pursuits, who live on their incomes or the profits of trade, as they do in other countries.

"At Comorn they shewed me a very valuable natural production, namely, coals of very good quality, which are obtained, two leagues from the town, on an estate belonging to Count Sandor. The working of the mine

has but just begun; it promises to be a source of great riches to the proprietor, and of vast advantages to the country. The country through which you pass to reach Buda would give but a very imperfect idea of Hungary to a traveller who should go no further. It is well cultivated and variegated; it puts one in mind of Germany, though it does not present an image of the same prosperity: the influence of the vicinity of Vienna is very manifest. Accordingly, the land between the Leytha and Buda is more valuable, *ceteris paribus*, than that beyond the Danube. The country, as you approach Buda, is mountainous; high hills command the right bank of the Danube; the road lies at their feet; and there is a fine view of the rich and magnificent islands which cover the river. The sight of Buda is very striking. As an ancient city, the capital of Hungary, a city full of historical recollections, it fills the traveller with a feeling of awe, and reminds him of the middle ages. \* \* \* Buda is the seat of the public authorities, the city of the government; it is as handsome as its situation will allow, and is adorned with fine palaces. It is in this city that the palatine resides; it is here that the higher tribunals administer justice; it is the royal city. On the other side of the Danube is the city of Pesth. This is the city of the opposition, of innovators; the city of commerce and manufactures. It is rapidly improving; its population is constantly increasing; handsome streets are being built; and yet one invincible obstacle will prevent any Hungarian town from becoming a great place of trade—till the civil laws which govern the country shall have been modified. There is no extensive and advantageous commerce without credit; and there is no credit where property is uncertain, and where a debtor cannot be compelled to pay his debts. Such is the case in Hungary: the creditor has no security but in the morality of his debtor; and how can this value be estimated in the case of bills, covered with the signatures of persons, most of whom are often unknown? The people of Hungary are fully sensible of the wants of the country, of the changes which its interest requires; but, as every change that is useful to the generality is, however, unfavourable to some, the most happy innovations meet with opposition: confused ideas cross each other; people will and will not. Thus they wish to have coals, which are indispensable to commerce and improvement. As the government has not the necessary funds to execute such works, some commercial company must undertake them, and a toll be imposed to reimburse the expenses: but he who has demanded coals, who most ardently wishes for them, will not hear of a toll, because a Hungarian gentleman cannot and will not be subject to any tax. They do not yet comprehend in Hungary, that the only reasonable privilege is not to pay without having consented, and that people must consent to pay, in order to enrich themselves and to increase their fortune and their enjoyments. In general, Hungarian pride is indignant at the idea of a contribution; and, till the prejudices which are founded on ignorance, and in the want of the plainest dictates of common sense, are eradicated, the country will remain stationary, and without the immense amelioration of which it is capable."

We pass over several interesting pages, in which the author shews to what degree feudalism is still impressed on the constitution and manners of Hungary. The following is a striking proof of this fact:—

"Near Oedenburg is the fort of Torchen-

stein, which belongs to Prince Esterhazy. It is situated on an eminence, and contains a considerable quantity of artillery, arms for three or four thousand men, and a treasure, composed of precious jewels, of immense value. A statute of the house of Esterhazy binds every prince who is the head of that illustrious house, to add to this treasure. The statute does not authorise them to touch it, except to ransom a member of the Esterhazy family, who is a prisoner of war, or a slave among the Turks. Henceforth there will be no occasion to resort to this regulation, dictated by prudence and humanity. In 1809, the country of Oedenburg was occupied by the French army. A detachment of cavalry appeared before Torchenstein; the soldiers of Prince Esterhazy, who form the garrison, refused to open the gates; the detachment withdrew; and the fort, and the treasures it contained, were preserved to the owner. This situation of Prince Esterhazy, is, perhaps, the only one in Europe that gives us an idea of that of the great vassals of the middle ages. Immense estates, and a fortune which, if well administered, would equal that of a sovereign; fortresses belonging to himself; troops maintained in his service; the right, sanctioned by custom, of guarding his sovereign whenever he comes to his territories; the privilege of entering the suburbs of the capital, with a detachment of his soldiers with his colours flying,—all this exists here alone. A Prince Esterhazy, in a country like Hungary, possesses elements of greatness which might give him the highest place in society, next to the throne; he might be the right arm of his sovereign, and the benefactor of his country. In one of the halls of the palaces, you see painted on the wall a genealogical tree, which announces no very moderate pretensions. It begins with Adam: he is lying on the ground, the tree is planted in his side, passes through Seth, Noah, Ham, the patriarchs, and ends in 1676, with Nicholas Esterhazy, palatine of Hungary. Certainly such a document should put to shame the house of Levis, which goes back only to the family of the virgin, or the house of Croi, whose title-deeds, as every body knows, were preserved in Noah's Ark. It may readily be imagined, that the Esterhazys are the first to laugh at this folly."

The following is another of the most characteristic traces of the middle ages, in the constitution of Hungary. The author is speaking of the coronation of the kings.

"The reigning Emperor Ferdinand was crowned King of Hungary at Presburg, in 1830. This magnificent ceremony, now unique in Europe, calls to mind the middle ages, and still retains its original character. All passes on horseback in the open air: the bishops themselves, wearing their sacerdotal ornaments, with mitres on their heads, and croziers in their hands, march in the place belonging to their rank, mounted on horses splendidly caparisoned and led by grooms richly dressed. We see at once that this is the pomp of a nomade people; the political and religious act of a people whose life was devoted to warlike occupations, and whose destiny it was to conquer the country they had before them. The whole has a legal and religious character. The king takes an oath in presence of the nation—that is to say, of the nobility and the clergy, the only classes possessing political rights—to govern according to the laws, to preserve the privileges of all, to defend the state against all enemies; and, as a token of the duty which he takes on himself, and which he promises to perform, he gallops, drawing his sabre, to a mound erected for the

\* We regret to hear that the gifted writer is in such indifferent health, as to be obliged to decline contributing to any of the *Annals* of the ensuing year. They will thus be shorn of one of their most popular ornaments.

purpose: there he cleaves the air with his sabre in the direction of the four cardinal points, thereby indicating that he will defend the country, and combat its enemies on whatever side they may appear. The clergy consecrate, anoint, and crown the king; but the duties, the strictness and extent of which the monarch acknowledges, are first confirmed, and it is not till he has sworn to fulfil them that he is put in possession of the crown.

At present we can only give one other extract:

"From Deré Kegyhaza I went to pass the night at Mezohegyés. This is the finest establishment in the Austrian monarchy for the breeding of horses, and their improvement. I have examined it with care, and will give a detailed account of it. The stud of Mezohegyés is on 40,000 acres of land, of the best quality, and in one piece. This immense space is surrounded by a broad and deep ditch, which completely isolates it. It is environed by fine plantations, sixty feet broad, in its whole extent, which is fifteen leagues. A thousand acres, planted with walled groups of trees, break the uniformity of the plain: it is carefully cultivated, and its produce serves for the support of the establishment. Three hundred and sixty ploughs are employed on it; half of which are drawn by oxen, and half by horses. Formerly this stud had to supply horses to recruit the cavalry; 20,000 horses were kept there. But the horses were not good, and diseases shewed the defects of this system. At present, the object of the government here, as well as at Bablona, is only to obtain stallions of a good breed, which are sent to the dépôts in the provinces for the service of private persons, and in order to keep up the number, 2000, which has been judged to be necessary. In the annual supply of 400, the contingent of Mezohegyés is 150. To produce them, there are kept 1000 brood-mares and forty-eight stallions. Two hundred mares and 600 oxen are employed in cultivating the ground. The plain is divided into four equal parts; each of these four is subdivided into portions, which are like so many farms. An officer, and two subaltern officers, are placed at the head of each great division, to direct and superintend it. All the persons, the implements, and the teams necessary for the cultivation, are then collected, as well as the young animals, which are classed according to their age and sex. At the age of four years the young horses are all collected in the centre of the establishment, which is amply provided with all the necessary buildings. The best animals are selected to supply the deficiencies in the establishment, in order to keep it always on the same footing. A selection is then made of what may be wanted by the other studs; then, when the stallions have attained the age of five years, a hundred and forty, or a hundred and fifty, are sent to the principal dépôts. The remainder are sold by auction, or given to the army to remount the cavalry. At present, the whole number of horses here, including the stallions, the brood-mares, colts, and fillies, is 3000. The persons employed in the direction, the cultivation, and the care of the young animals, consist of a major-director, twelve subaltern officers, and 1170 soldiers, keepers, cultivators, &c. &c. Never was so vast an establishment conducted with more order and economy. The present director is Major Blockberg, an officer who appeared to me to be very capable, and worthy of the post which is confided to him. The imperial treasury advances to this establishment, every year, the sum of 118,000 florins: it is reimbursed by

the sale of the 150 stallions which the establishment sends every year to the provinces, at the price of 1003 florins each, and by the value of the horses supplied to the cavalry. All the other expenses, of every description, are paid for by the produce of the establishment, which is required to defray, and does defray, all. The consumption of oats is 72,000 bushels. The cultivation of wheat being extremely advantageous on this soil, it is carried on here, and the wheat is sold to provide for other wants. 150,000 quintals of forage are consumed, besides straw. The results of this system are, therefore, marvellous; and especially in the eyes of a Frenchman, whose country has nothing analogous to it. It is an immense estate; a farm on a colossal scale; a stud in proportion, managed for the account of the sovereign, which produces a considerable revenue, independently of the principal object which is attained, and which consists in the propagation of the best breeds, and the multiplication of horses. Thanks to this system, the success of which is complete, the Emperor of Austria can purchase, at a moderate price, a number of horses, always sufficient for the wants of his army. He pays for horses for the light cavalry, 110 florins; for the dragoons, 120; for the cuirassiers, 140; for the train, 160; and for the artillery, 180. It is a great element of power to possess at home such an immense resource against a time of war, at an expense so far below that which the powers of the west and south of Europe are obliged to incur."

*Lockhart's Life of Sir Walter Scott, Vol. II.*  
1837. Edinburgh, Cadell; London, Murray; Whittaker and Co.

[Second notice: conclusion.]

It is a remarkable portion in the life of Sir Walter Scott, to see the incredible efforts he made to keep his Edinburgh presses at work; the labour of incessant editing works of great magnitude, and all to bring grist to the mill. We are now at the year 1808, when his biographer tells us:—

"Conversing with Scott many years afterwards, about the tumult of engagements in which he was thus involved, he said, 'Ay, it was enough to tear me to pieces, but there was a wonderful exhilaration about it all: my blood was kept at fever-pitch—I felt as if I could have grappled with any thing and every thing; then, there was hardly one of all my schemes that did not afford me the means of serving some poor devil of a brother-author. There were always huge piles of materials to be arranged, sifted, and indexed—volumes of extracts to be transcribed—journeys to be made hither and thither, for ascertaining little facts and dates: in short, I could commonly keep half-a-dozen of the ragged regiment of Parnassus in tolerable case.' I said he must have felt something like what a locomotive engine on a railway might be supposed to do, when a score of coal-waggons are seen linking themselves to it the moment it gets the steam up, and it rushes on its course, regardless of the burden. 'Yes,' said he, laughing, and making a crashing cut with his axe (for we were felling larches); 'but there was a cursed lot of dung-carts, too.' He was seldom, in fact, without some of these appendages; and I admired nothing more in him than the patient courtesy, the unwearying gentle kindness with which he always treated them, in spite of their delays and blunders, to say nothing of the almost incredible vanity and presumption which more than one of them often exhibited, in the midst of their fawning; and I believe, with all their

faults, the worst and weakest of them repaid him by a canine fidelity of affection. This part of Scott's character recalls by far the most pleasing trait in that of his last predecessor, in the plenitude of literary authority—Dr. Johnson. There was, perhaps, nothing (except the one great blunder) that had a worse effect on the course of his pecuniary fortunes, than the readiness with which he exerted his interest with the booksellers on behalf of inferior writers. Even from the commencement of his connexion with Constable, in particular, I can trace a continual series of such applications. They stimulated the already too sanguine publisher to numberless risks; and, when these failed, the result was, in one shape or another, some corresponding deduction from the fair profits of his own literary labour. 'I like well,' Constable was often heard to say, in the sequel, 'I like well Scott's ain bairns; but Heaven preserve me from those of his fathering!'"

Again: "The reader does not need to be reminded, that Scott, at this time, had business enough on his hand, besides combing the mane of Brown Adam, and twisting couples for Douglas and Percy. He was deep in Swift; and the Ballantyne press was groaning under a number of works, some of them already mentioned, with almost all of which, his hand, as well as his head, had something, more or less, to do. But a serious change was about to take place in his relations with the spirited publishing-house, which had, hitherto, been the most efficient supporters of that press; and his letters begin to be much occupied with differences and disputes, which, uninteresting as the details would now be, must have cost him many anxious hours in the apparently idle autumn of 1808."

His disputes with Hunter, Constable, and Co. are related; and also the causes of his differences with Jeffrey. The results were, his embarking largely with the Messrs. Ballantyne as printers and publishers, in Edinburgh; and his taking a very active part in setting up the *Quarterly Review* in London, to counteract the political influence of the *Edinburgh Review*. All the accounts of these matters are of much literary interest and curiosity, and the correspondence of this period will be read with much gratification; though we must again reclaim against the disparaging tone in which the Messrs. Ballantyne are frequently spoken of by the biographer. It seems hard, after years of the closest intimacy and friendship, even with the greatest man of the day, to be shewn up as pigmies or puppets, as it were, merely to swell his gigantic proportions and importance. We quote an instance of the correspondence above alluded to.

"The enclosure (to Mr. Ellis, July 8th, 1809), and the rest of the letter, refer to the private affairs of Mr. Southey, in whose favour Scott had, for some time back, been strenuously using his interest with his friends in the government. How well he had, while in London, read the feelings of some of those ministers towards each other, appears from various letters written upon his return to Scotland. It may be sufficient to quote part of one, addressed to the distinguished author whose fortunes he was exerting himself to promote. To him, Scott says (14th June),—'Mr. Canning's opportunities to serve you will soon be numerous, or they will soon be gone altogether; for he is of a different mould from some of his colleagues, and a decided foe to those half-measures, which, I know, you detest as much as I do. It is not his fault that the cause of Spain is not, at this moment, triumphant.

This I know, and the time will come when the world will know it too."

His intercourse with this great and patriotic statesman was always of the most delightful kind; but we come to a sterner trait of character, which we hardly anticipated in the man.

"The unfortunate brother, the blot of the family, to whom Scott alludes in this letter, had disappointed all the hopes under which his friends sent him to Jamaica. It may be remarked, as characteristic of Scott at this time, that, in the various letters to Ellis concerning Daniel, he speaks of him as his relation, never as his brother; and it must also be mentioned as a circumstance suggesting that Daniel had retained, after all, some sense of pride, that his West Indian patron was allowed by himself to remain, to the end of their connexion, in ignorance of what his distinguished brother had thus thought fit to suppress. Mr. Blackburn, in fact, never knew that Daniel was Walter Scott's brother, until he was applied to for some information respecting him on my own behalf, after this narrative was begun. The story is, shortly, that the adventurer's habits of dissipation proved incurable; but he finally left Jamaica, under a stigma, which Walter Scott regarded with utter severity. Being employed in some service against a refractory or insurgent body of negroes, he had exhibited a lamentable deficiency of spirit and conduct. He returned to Scotland a dishonoured man; and though he found shelter and compassion from his mother, his brother would never see him again. Nay, when, soon after, his health, shattered by dissolute indulgence, and, probably, the intolerable load of shame, gave way altogether, and he died as yet a young man, the poet refused either to attend his funeral, or to wear mourning for him, like the rest of the family. Thus sternly, when in the height and pride of his blood, could Scott, whose heart was never hardened against the distress of an enemy, recoil from the disgrace of a brother. It is a more pleasing part of my duty to add, that he spoke to me, twenty years afterwards, in terms of great and painful contrition, for the austerity with which he had conducted himself on this occasion. I must add, moreover, that he took a warm interest in a natural child whom Daniel had bequeathed to his mother's care; and, after the old lady's death, religiously supplied her place as the boy's protector."

Pride and ambition steeled his heart; no wonder that a late repentance followed. To proceed, however, with our narrative, we find Scott now dabbling much in Edinburgh theatricals, and hear of his intimacy with Mrs. Siddons, J. Kemble, and others; and particularly with Mr. Terry, who acquired his unbounded confidence and friendship.

"Mr. Terry (we are informed) had received a good education, and been regularly trained as an architect; but, abandoning that profession, at an early period of life, for the stage, and was now beginning to attract attention as a valuable and efficient actor in Henry Siddons's new company at Edinburgh. Already he and the Ballantynes were constant companions; and through his familiarity with them, Scott had abundant opportunities of appreciating his many excellent and agreeable qualities. He had the manners and feelings of a gentleman. Like John Kemble, he was deeply skilled in the old literature of the drama, and he rivalled Scott's own enthusiasm for the antiquities of *verru*. Their epistolary correspondence in after days was frequent, and will supply me with many illustrations of Scott's minor tastes and habits. As their letters lie before me, they appear as if

they had all been penned by the same hand. Terry's idolatry of his new friend induced him to imitate his writing so zealously, that Scott used to say, if he were called on to swear to any document, the utmost he could venture to attest would be, that it was either in his own hand or in Terry's. The actor, perhaps unconsciously, mimicked him in other matters with hardly inferior pertinacity. His small lively features had acquired, before I knew him, a truly ludicrous cast of Scott's graver expression; he had taught his tiny eyebrow the very trick of the poet's meditative frown; and, to crown all, he so habitually affected his tone and accent, that, though a native of Bath, a stranger could hardly have doubted he must be a Scotchman. These things afforded Scott and all their mutual acquaintances much diversion; but, perhaps, no Stoic could have helped being secretly gratified by seeing a clever and sensible man convert himself into a living type and symbol of admiration. Charles Mathews and Terry were once thrown out of a gig together, and the former received an injury which made him halt ever afterwards, while the latter escaped unhurt. 'Dooms, *Daaniel*,' said Mathews, when they next met; 'what a pity that it wasna your luck to get the game leg, mon! Your *Shirra* wad hae been the very thing, ye ken, an' ye wad hae been croose till ye war coffined!' Terry, though he did not always relish bantering on this subject, replied readily and good-humouredly, by a quotation from Peter Plunder's *Bossy and Pious*:—

"When Foote his leg by some misfortune broke,  
Says I to Johnson, all by way of joke,  
Sam, sir, in Paragraph will soon be clever,  
He'll take off Peter better now than ever."

Mathews's mirthful caricature of Terry's sober mimicry of Scott was one of the richest extravaganzas of his social hours; but, indeed, I have often seen this Proteus dramatise the whole Ballantyne group with equal success—while *Rigdumfunnidos* screamed with delight, and *Aldiborontiphosphornio* faintly chuckled, and the Sheriff, gently smiling, pushed round his decanters."

The "Lady of the Lake" was now published, and had immense popularity. Touching it, the following quotation is full of interest:—

"Of the success of his new poem, he speaks as follows in his Introduction of 1830:—'It was certainly so extraordinary as to induce me, for the moment, to conclude that I had, at last, fixed a nail in the proverbially inconstant wheel of Fortune. I had attained, perhaps, that degree of public reputation at which prudence, or certainly timidity, would have made a halt, and discontinued efforts by which I was far more likely to diminish my fame than to increase it. But—as the celebrated John Wilkes is said to have explained to King George the Third, that he himself, amid his high tide of popularity, was never a Wilkite—so I can, with honest truth, exculpate myself from having been, at any time, a partisan of my own poetry, even when it was in the highest fashion with the million. It must not be supposed that I was either so ungrateful, or so superabundantly candid, as to despise or scorn the value of those whose voice had elevated me so much higher than my own opinion told me I deserved. I felt, on the contrary, the more grateful to the public, as receiving that from partiality which I could not have claimed from merit: and I endeavoured to deserve the partiality by continuing such exertions as I was capable of for their amusement.' James Ballantyne has pre-

served, in his 'Memorandum,' an anecdote strikingly confirmative of the most remarkable statement in this page of Scott's confessions. 'I remember,' he says, 'going into his library shortly after the publication of the 'Lady of the Lake,' and finding Miss Scott (who was then a very young girl) there by herself; I asked her, 'Well, Miss Sophia, how do you like the 'Lady of the Lake?' Her answer was given with perfect simplicity: 'Oh, I have not read it; papa says there's nothing so bad for young people as reading bad poetry.' In fact, his children in those days had no idea of the source of his distinction; or rather, indeed, that his position was in any respect different from that of other advocates, sheriffs, and clerks of session. The eldest boy came home one afternoon about this time from the High School, with tears and blood hardened together upon his cheeks. 'Well, Wat,' said his father, 'what have you been fighting about to-day?' With that the boy blushed, and lung his head, and at last stammered out, that 'he had been called a *lassie*.' 'Indeed!' said Mrs. Scott, 'this was a terrible mischief, to be sure.' 'You may say what you please, mamma,' Wat answered roughly, 'but I dinna think there's a *wasfer* (shabbier) thing in the world than to be a *lassie*, to sit boring at a clout.' Upon further inquiry, it turned out that one or two of his companions had dubbed him *The Lady of the Lake*, and the phrase was to him incomprehensible, save as conveying some imputation on his prowess, which he accordingly vindicated in the usual style of the Yards. Of the poem he had never before heard. Shortly after, this story having got wind, one of Scott's colleagues of the Clerks' Table said to the boy, 'Gillknockie, my man, you cannot surely help seeing that great people make more work about your papa than they do about me or any other of your uncles; what is it, do you suppose, that occasions this?' The little fellow pondered for a minute or two, and then answered, very gravely, 'It's commonly him that sees the hare sitting.' And yet this was the man that had his children all along so very much with him. In truth, however, young Walter had guessed pretty shrewdly in the matter, for his father had all the tact of the Sutherland Highlander, whose detection of an Irish rebel up to the neck in a bog, he has commemorated in a note upon 'Rokely.' Like him, he was quick to catch the sparkle of the future victim's eye; and often said jestingly of himself, that, whatever might be thought of him as a *maker* (poet), he was an excellent *trouveur*. Ballantyne adds: 'One day, about this same time, when his fame was supposed to have reached its *acmé*, I said to him, 'Will you excuse me, Mr. Scott, but I should like to ask you what you think of your own genius as a poet, in comparison with that of Burns?' He replied, 'There is no comparison whatever; we ought not to be named in the same day.' 'Indeed!' I answered; 'would you compare Campbell to Burns?' 'No, James, not at all; if you wish to speak of a real poet, Joanna Baillie is now the highest genius of our country.'—'But, in fact,' continues Ballantyne, 'he had often said to me, that neither his own, nor any modern popular style of composition, was that from which he derived most pleasure. I asked him what it was? He answered, Johnson's; and that he had more pleasure in reading 'London,' and 'The Vanity of Human Wishes,' than any other poetical composition he could mention; and I think I never saw his countenance more indicative of high admiration than while reciting aloud from those productions.'"

In 1811, "The Vision of Don Roderick" was published, as a contribution to the Portuguese Subscription Fund; and, about the same time, Mr. Scott purchased the land of Abbotsford, and began "Rokeby," in order to raise a sufficient fund to clear the purchase, and build upon it. His correspondence with Mr. Merritt is frequent and charming; but we must leave it to the readers of the work (as all will be), and conclude with a few brevities.

**Anecdote of Lord Napier.**—"Lord and Lady Napier had arrived at Castlemilk, with the intention of staying a week; but next morning it was announced that a circumstance had occurred which rendered it indispensable for them to return without delay to their own seat in Selkirkshire. It was impossible for Lady Stewart to extract any further explanation at the moment, but it turned out afterwards that Lord Napier's valet had committed the grievous mistake of packing up a set of neckcloths which did not correspond, in point of date, with the shirts they accompanied!"

**Anecdote of Mrs. Siddons.**—"John Kemble's most familiar table-talk often flowed into blank verse; and so indeed did his sister's. Scott (who was a capital mimic) often repeated her tragic exclamation to a footboy, during a dinner at Ashstead:

'You've brought me water, boy,—I asked for beer!'"

Lord Melville and President Blair died about the same period, and Scott tells the following singular story:

"There is a very odd coincidence between the deaths of these eminent characters, and that of a very inferior person, a dentist of this city, named Dubisson. He met the president the day before his death, who used a particular expression in speaking to him. The day before Lord Melville died, he also met Dubisson, nearly on the same spot, and, to the man's surprise, used the president's very words in saluting him. On this second death, he expressed (jocularly, however) an apprehension that he himself would be the third; was taken ill, and died in an hour's space. Was not this remarkable?"

**Scott's first opinion of "Childe Harold."**—"Have you seen the 'Pilgrimage of Childe Harold,' by Lord Byron? It is, I think, a very clever poem, but gives no good symptom of the writer's heart or morals. His hero, notwithstanding the affected antiquity of the style in some parts, is a modern man of fashion and fortune, worn out and satiated with the pursuits of dissipation; and, although there is a caution against it in the preface, you cannot for your soul avoid concluding that the author, as he gives an account of his own travels, is also doing so in his own character. Now, really, this is too bad; vice ought to be a little more modest, and it must require impudence at least equal to the noble lord's other powers, to claim sympathy gravely for the ennui arising from his being tired of his vassals and his paramours. There is a monstrous deal of conceit in it too, for it is informing the inferior part of the world that their little old-fashioned scruples of limitation are not worthy of his regard, while his fortune and possessions are such as have put all sorts of gratifications too much in his power to afford him any pleasure. Yet, with all this conceit and assurance, there is much poetical merit in the book, and I wish you would read it."

#### MISCELLANEOUS.

**Botany.**—Messrs. Brogniart and Jusseu, who were appointed by the French Academy of Sciences to examine the plants collected by Dr. Honigberger, have found

among them many that are very remarkable; some of them are also contained in the Herbarium of Jacquemont. The lovers of botany will be glad to learn that Dr. Honigberger's plants will be described by Mr. Jacquin of Vienna, to whom he has confided them. The first part is already published under the title of "Serium Cabulicum: Enumeratio plantarum quas in itinere inter Daraghistan et Cabul mensibus Maio et Junio, 1832, collegit Dr. M. H."

**The Millwright and Engineer's Pocket Companion**, by William Templeton. 4th edition. (London, Simpkin, Marshall, and Co.; Liverpool, Egerton Smith and Co.)—This fourth edition of "Templeton's Engineer's Companion," will be found most useful to all persons connected with machinery. Mr. T. is, we understand, an operative mechanic; and his work has been considerably enlarged by the addition of much valuable matter.

**An Analysis of Poisons**, by G. J. Cox, M.R.C.S. Pp. 174. (London, J. T. Cox; E. Portwine.)—A plain and sensible exposition of the qualities of various poisons, their action on the animal economy, and their safest and readiest antidotes.

**Southey's Cowper, Vol. XII.** (London, Baldwin and Cradock.)—With two fine and spirited embellishments from the pencil of W. Harvey, engraved by Goodyear and Goodall, this volume continues the *Iliad* to the end.

**A new Guide to German and English Conversation, &c. &c.** by J. Rowbotham. (London, Dulau and Co.)—Like all Mr. Rowbotham's works, a most useful publication; excellently arranged, and adapted to improve the student in speaking German.

**Murray's Pocket Byron, Vol. V.**—This is the second volume of the dramas, and contains the *Two Foscari*, *Cain*, the *Deformed Transformed*, and *Werner*. Venice by E. Finden, after Stanfield, forms a beautiful vignette.

#### ORIGINAL CORRESPONDENCE.

##### THE EUPHRATES EXPEDITION.

(Last accounts.)

Baghdad, January 31, 1837.

MY DEAR —, — *The Literary Gazette* (which, with great propriety, finds its way to the H. E. I. Company's Presidency at Baghdad, and has travelled across the desert with unaccustomed celerity since the Euphrates expedition stirred up the phlegm of the Asiatics) has reached as far as the loss of H. M. steamer *Tigris*, at the time when your correspondent is inditing his second letter from "the city of the Caliphs." He regrets extremely (although, with proper self-respect, he attributes to the lamp-black ink of the East, which effaces by damp, and not to his calligraphic inaccuracy) the errors which you have, with equal kindness and industry, endeavoured to amend. He hopes to be able to give you some detailed information upon these points; but, in the mean time, Deir, and not Dura, در, "a monastery," is a small town 211 miles, by water, below Balis, and nominally at present the frontier town of Ibrahim Pacha's possessions in Syria. The site of Thapsacus, of Xenophon and Arrian, is controversial. Those in the expedition who amused and instructed themselves with questions of historical geography, placed it at El Hummam, "the baths," 12 miles above Racca, where is a causeway leading to the city of Sura, "flavia firma Sura," between which and Palmyra was a great road passing through Resafa, and on the left or east bank of the river, another road leading by Aragla Castle to Racca, which was a favourite residence of Haroun al Raschid; the Nikephorium of Alexander, and Callinicum of the Romans. Unanimity is something. Rennell and D'Anville placed Thapsacus at Deir; in order to do which, and preserve any correspondence in distances, they had recourse to the extraordinary assumption, that Xenophon had transposed the distances between the Daradax and Thapsacus, Thapsacus and the Araxes. It remains, however, questionable, if Alexander did not pass higher up. "Zelebé" or "Zenobia," you are right, a marble city of the greatest interest. "Cercusium," limitrophical city of Roman dominion in the East: now Kerkissia, a corruption, or Abou Serai, "the father of palaces." Of Salahiyyat سلاحيه rather Salahiyyah, an extensive ruin, with castle and gateways in tolerable perfec-

tion, I know nothing. Erzi ارزي (arzy) the popular Arabic name of Ezra, whose tomb on the Tigris is a great resort for Jewish pilgrims. It was, probably, a colony of captive Israelites. Rauwolf and Balbi give an erroneous idea of its extent, from the river winding round the ruins. It was the Corote of Xenophon; and the river Masca, of the same historian and general, is a branch of the Euphrates. This will require detail.\*

The Euphrates steamer, after forwarding despatches from Baghdad early in October 1836, returned immediately to Korna, where the H. E. I. Company's steamer, *Hugh Lindsay*, had already arrived with a second mail.† The steamer having had the misfortune to bring up with her from Bombay a Mr. Samuel, whose apostolic labours, two years ago, nearly caused the destruction of all the European inhabitants of Baghdad, she was put into religious quarantine, and the Arabs threatened to kill any body who should land. This was soon put to rights on our arrival, and, having received the mail, H. M. steamer at once sailed up the river Euphrates upwards of 70 miles, and anchored off the encampment of the Sheik of Montefidge, when every possible explanation and concession was made in the most amicable manner possible. The mail was taken up as far as the Lemloon marshes, and thence forwarded, under charge of Mr. Fitzjames, by dromedary. In my last, I put you quite *au fait* to the difficulties under which the expedition laboured, with only the large steamer remaining, and a mail arriving at the very lowest season of the year. She struggled, however, for some days in the narrow and shallow channel in the Lemloon, till the cross-bar of one of the engine's pumps broke, and there was nothing left but to return alongside the *Hugh Lindsay*, and get it repaired. Under these adverse circumstances, and in consequence of orders received from his majesty's government, for the approaching suspension of our labours, Colonel Chesney determined upon proceeding at once to India, principally, I believe, with a view to put the navigation of the river upon that footing which experience has now shewn to be most likely to be attended with success. The opinion upon this subject of all our naval officers is, that it might be performed with expedition, and all the advantages desirable, by steamers of power, draught, and dimensions, varying with the portion of the river to be navigated. Opinions are here, I believe, a little divided, whether two or three, or even more, small steamers would not be required for the river navigation. The views, however, of none of the officers extend to the necessity of a system of steam navigation half so complex as that at present in force on the Danube, and which would secure to India a constant and speedy communication with the mother country; whereas the Red Sea, as yet, has been unapproachable in one direction during nearly one half of the year.

At the colonel's departure, after a ride to Zobeir in the Desert (the unfortunate sheikh of which has since been shot at Basra, while upon a visit to the governor, and his decapitated body thrown into the streets), we received orders to proceed in the important examination of the Delta of Susiana. While the steamer breasted the wholesome Karoon, or Khoaspes, "the drink of none but kings," a small party went along the old bed of the river at Sabia into the Gaban Canal; along which

\* Our readers will remark, that these interesting geographical and antiquarian details and corrections refer to our former correspondence.—Ed. L. G.

† See *Lit. Gaz.*, No. 1047, Feb. 11.

they navigated, a day and a night, to Felahy, or Dorack, the residence of the Sheik of Kaab, Chah, or Gab, as Europeans indifferently spell كعب Kaab, or Kaab, the heel of Arabia, as Otranto has been designated to be of Italy. Although subjects of Persia, they pay tribute to no one for Mohammra, and hence exact only trifling customs, which has caused the sudden and temporary rise of that mart, to the detriment of Basra. But retribution, not to mention cupidity, is not slumbering in the breast of Ali Pacha, and commerce may soon be expected to return to its old channel. Mohammra has, however, great natural advantages.

From Felahy the party proceeded up the Jerahy; afterwards, crossing the level plain at the foot of the Persian Appenines, to Ahwaz, celebrated for its bund, or dam, on the river, its ruins of the early times of the Caliphate, and remarkable for its rocky neighbourhood, where rocks are rare. The ledges of solid sandstone (tertiary) which cross the river, form a more complete obstacle to navigation than the remains of the dam itself; and the steamer, which had ascended as far as to the foot of the lowermost of the ledges, had completed all that was in its power of the navigation of the Karoon. Here the expedition found the ancient bed of a river, known to the natives by the name of Chabour, or Shahour, both at Ahwaz: and, from information subsequently obtained at Bendikil, this river, it appears, still flows past the tomb of Daniel, which is on the site of Susa, on the Ulai of Scripture, on the Khoaspes of Herodotus, and on the Euleus of Arrian; all three rivers celebrated for the same virtues as are attributed by the Easterns in the present day to the Karoon, of which the Chabour was a branch, but now flowing into the Ab-i-Dez, or Deshboul river. The ruins of Susa extend from it to the banks of the Keruli, or Karasou of the Turks, which has hence been confounded with the Chabour by one party (Rennell, Ouseley, Barbré de Bocage, Hoëk, &c.), who place Susa in its real position; and by another (D'Herbelot, Vincent, Mannert, D'Anville, Von Hammer, &c.), with the Ab-i-Shuster, or river of Shuster, another branch of the Karoon: these eminent geographers considering Shuster as the site of Susa. By the system, however, now proposed, the difficulties which existed in explaining (if Shus, or Sus, is admitted as the site of Susa) the navigations of Nearchus and of Alexander, and the movements of Eumenes and Antigonus, supposing Sus to be on the Kerah, are overcome. Nearchus ascended the Karoon, his Pasitigris, although not that of Pliny: Alexander descended the Chabour, Khoaspes, or Euleus, by which he could reach the sea. Spasinus Charax, being at Mohammra, and when designated as Alexandria, after the usual complimentary fashion of the Macedonians, only *iii mille passuum* from the sea.

The same party which had traversed the Kaaban proceeded up the river, in a native boat, to determine some of the numerous points of illustration which are connected with this question; and which Von Hammer (*Recueil de la Société de Géographie*, tom. ii. p. 320) announces as "*la plus grande difficulté qui se soit élevée parmi les géographes modernes*:" but the Arabs stood between us and the completion of our wishes. The character of the Uxli and Paratœceni, as given by Arrian and Strabo, remains unimpeachable for veracity. The sum of money demanded for our passage at Bendikil (Bendahel of the Arabs) was extravagant to excess; and being refused, we were, professedly,

neither allowed to go forward nor to return: till, finding further delay unavailing, we were obliged, to our infinite disappointment, to adopt the latter course, and regain the steamer, with faded laurels upon our brows. The Delta was not, however, left till the steamer once more descended the Bansishere; and we crossed the plain of alluvium, covered in parts with salt, like a wintry coat, to the bed of the old Karoon, not far from its mouth. Besides many questions of interest in historical geography, which will have received illustration from this *reconnaissance*, some points of importance were astronomically determined by Lieut. Cleaveland and Mr. Charlewood: magnetic experiments were carried on by Capt. Estcourt; and the Karoon was navigated with security on our return, by the survey effected on the ascent, and laid down by Sergeant-Major Quin, R.A.

The Euphrates steamer has now effected a second navigation of the Tigris to Baghdad, and made a further ascent up the river to the north of that city, previous to being laid up for the winter under charge of the residency. Guided by Colonel Taylor and Dr. Ross, of that establishment, our latest researches have been directed towards questions of geography, while the levelling between the two rivers is in progress for the intended canal. A series of accurate admeasurements have been already made in different lines between the two; and the learned world will be indebted to a corporal of the Royal Engineers (Greenhill) for an efficient and excellent survey of Babylon. The wall of Media, you will be glad to hear, still exists; it crosses from the Macepracta of Julian to above the site of Opis. The river Athem, or Phrycus, joins the Tigris in the same neighbourhood, and constitutes, with the Altoun Sou, or Little Zab (the Zabatus of Xenophon and the Caprus of Ptolemy), and the Great Zab (the Zathes of the Greek, and the Leukus of the Alexandrian historians), all the rivers that enter the Tigris between Baghdad and Mesul: the country in which hydrographical errors have so long taken up their home. The position of Sitace is, I hope, also satisfactorily determined.

The last remnants of the expedition will proceed to the Mediterranean, across the great Syrian Desert; the Retreat of the Ten—Thousand omitted. How differently, in modern times, are revolutions effected to what they were in ancient days! A handful of men can do more towards permanently bringing a country under the subjection of morals and civilisation than the armed hosts of antiquity. Will the spark that has been lit be allowed to pass away like the armies of Cyrus, Alexander, Trajan, Severus, Julian, and Timour?

Your correspondent proceeds, in company with Mr. Rasam, who is versed in Chaldean and Syriac, as well as the languages of the day, to the heart of Kurdistan, and will visit (*Deo volente*) the Nestorian Christians, journeying onwards to Argana Maden, in the Taurus; from whence the English consul at Erzeroum has sent good specimens of lignite. If the barometer survives the journey, there are hopes of determining approximatively the elevation of the sources of the Euphrates and of the Tigris, and of completing the geological survey of these rivers. It so often happens, however, in the East, that the accomplishment of your intentions is prevented by some flaw in the character of the people, that there is more rashness than judgment in anticipating the future.

## ARTS AND SCIENCES.

## ROYAL INSTITUTION.

MR. FARADAY brought before the members the very curious subject of the singular condition acquired by iron under certain modes of treatment, in relation to oxygen, nitric acid, &c. &c.; a subject which has lately been greatly developed by the investigations of M. Schonbein of Bâle. He first stated and illustrated the relation between the attraction of a metal, as zinc or iron, for oxygen, and the fitness of that metal for the construction of voltaic arrangements. He then shewed that clean iron, when put into strong pure nitric acid, was not acted upon after the first moment; but that if the acid had been previously mixed with its bulk of water, the iron, when immersed in it, would be acted upon, becoming rapidly oxydised. If, however, the iron which had previously been immersed in the strong acid, were put into the dilute acid, that piece would not be acted upon; or if a piece of ordinary iron were put into the dilute acid, being at the same time in contact with a clean platina plate, also immersed, then the iron did not suffer; and the platina might, after a few seconds, be withdrawn, and still the iron and the acid would not affect each other. But if now a piece of common iron were put into the same acid, it was affected; and when it was made to touch the iron in the peculiar inactive state, it at once destroyed that state, and both pieces were acted on as common iron. The cause of these singular relations of this metal remains as yet unexplained and unperceived; but some valuable results flow from them. Mr. Faraday shewed, by striking experiments, that when iron and platina were in contact in an acid so dilute that action would proceed, a voltaic current was produced, as was to be expected; but when the iron was made to assume the inactive state, then no current was occasioned, though metallic contact was continued. This result, combined with that he formerly published, in which the current was obtained without metallic contact, fully prove that voltaic electricity is due, not to the contact of metals, but to chemical action. Mr. Faraday then went into various other cases in which iron exhibited this peculiar condition, and in which it was made to assume the condition by contact with silver, charcoal, gold, &c. &c.; and concluded by drawing attention to the several singular relations by which iron is distinguished so much from other metals—as, for instance, its magnetic relations; its power of forming steels with a minute proportion of carbon, silica, &c.; and its falling on the earth, occasionally in large masses, from the regions above.—On the 1st of May the anniversary meeting was held: a very satisfactory report was read, and officers were chosen for the ensuing season.

## LINNEAN SOCIETY.

MR. LAMBERT in the chair.—Read a description of a new species of the genus *Trigonocephalus*, by Mr. Schomburgk. This snake is called "Bushmaster" by the colonists, and is reckoned the most venomous reptile of Guiana. It is from six to eight feet in length. It occurs in marshes and woods; and its habits are nocturnal.—Mr. Ward exhibited specimens of two new species of *Acterotes*, a remarkable genus of *Umbellifera*, from New Holland.—At the meeting on Tuesday evening, the Duke of Somerset in the chair, M. Gandichaud, Professors Hugo, Mohl, and Müller, were elected foreign members of the Society.—Among the presents were a collection of reptiles, and the eggs of a large gallinaceous bird, from Lieutenant Roe, R.N. surveyor-general of Western Australia. A

flowering specimen of the *Sterculia platanifolia*, from the Duke of Northumberland's magnificent collection at Sion House, was exhibited.—Read an extract of a letter from W. H. Harvey, Esq. stating his having ascertained the *Trichomanes cormophitum* to be only a peculiar condition of the fronds of *Hemitelia asperis*.—Read, also, the conclusion of Mr. Keith's paper on the evolution of the seed and bud.

#### ASTRONOMICAL SOCIETY.

MR. BAILY, at a late meeting, laid on the table a specimen of some delineations of the stars in the vicinity of the North Pole, made with Steinheil's astrophotograph. This is an ingenious instrument, by which a person can see, at the same time, the stars and the copy of them; and thus, by simultaneous observations, obtain the greatest accuracy. The instrument itself has not yet been introduced into this country.

#### BOTANICAL SOCIETY.

MAY 4th. W. H. White, Esq. in the chair.—A paper was read from the treasurer, John Reynolds, Esq., being a continuation of the translation of Father Kersch's *China Illustrata*. A paper was also read from Arthur Wallis, Esq. on the Flora of Chelmsford. This was followed by a paper from Mr. G. E. Dennes, being a translation of Professor Meyen's paper on the circulation of the cellular juice in plants, extracted from *Annales des Sciences Naturelles*, for November 1835. An interesting discussion ensued, after which the meeting adjourned until May 18th.

#### LITERARY AND LEARNED. UNIVERSITY INTELLIGENCE.

OXFORD, 27th April.—The following degrees were conferred:—

*Bachelors in Divinity*.—Rev. L. A. Sharpe; Rev. G. Adams, Fellow of St. John's College; Rev. G. P. Becker, Worcester College.

*Masters of Arts*.—J. B. Alexander; C. G. Bethune, Trinity College; Rev. A. Stackhouse, Lincoln College; Rev. J. Boucher, Worcester College; A. W. Black, Christ Church; T. K. Kingston, Exeter College.

*Bachelors of Arts*.—H. Wood, St. Edmund Hall; J. A. Clarke, Trinity College; E. T. Graves, Worcester College; W. H. Ripley, University College; H. G. Allen; L. Sanders; A. Hackman, Christ Church; R. P. Humphrey, Lincoln College; W. Hill, Magdalen Hall; C. D. Rees; J. G. Clay, Jesus College.

#### THE LITERARY FUND.

THE forty-eighth anniversary of this valuable Institution was held at Freemasons' Hall, on Wednesday; his Grace the Duke of Somerset, president, in the chair. The company was more numerous than for several years past; and the meeting went off in the most satisfactory manner. On the right of the chair were the Lord Mayor, Lord Sandon, Sheriffs Sir J. Duke and Johnson, Mr. Adolphus, Mr. C. Pearson, Mr. Wire: on the left, and around the table, Lord Stanley, Lord Bolton, Sir Jno. Elley, Sir R. Bateson, D. Maclean, E. Tennent, M.P.'s, Sir W. Chatterton, Mr. F. W. Hope, Dr. Roget, Professor Lee, Mr. Fitzgerald, Mr. S. Anderson, Mr. Barrow, C. Croker, &c. &c., while, in the body of the hall, acting as stewards, friends of, and officers belonging to the fund, were many gentlemen of high professional and literary distinction, and most of the eminent booksellers and publishers of the metropolis. After the removal of the cloth, the noble chairman gave the usual loyal toasts of "The King," "The Queen," "The Princess Victoria and the rest of the Royal Family," which were received with great applause, and accompanied by national music, finely executed by Mr. T. Cooke, C. Taylor, Bellamy, and Hawkins. The ensuing toast, "The Army and Navy," called up Sir J. Elley, who, in an appropriate speech,

sketched the glories of both services during the late war, when the army took up the cause, in consequence of the navy not having left a foe to encounter on the face of the ocean, and finished it under the illustrious command of the Duke of Wellington—whose name was hailed with loud plaudits. "Prosperity to the Literary Fund" was next drank, and Mr. Jordan briefly addressed the meeting on its behalf. He noticed that its leading principles were consideration of the cases of distress referred to it, promptness in their succour, and secrecy in preserving the names of parties from the curiosity or pity of the world. The only remaining quality wanted was, that there should be a sufficiency for relief; and for this, though possessed of considerable funds, the Society mainly relied on the bounty and generosity brought forth at the anniversaries. He alluded to some recent and striking instances of the good done by the Society to most meritorious characters, and the blessings it had the means to confer on the suffering children of literature. Mr. Croker read a list of subscriptions, which were numerous and gratifying, amounting to above 400*l*. The health of the president was proposed by Lord Stanley, who complimented his Grace on his long-continued devotedness to this benevolent Institution, the chair of which he had taken nearly twenty times in the course of thirty years. His Grace returned thanks, and proposed "The Lord Mayor, the Sheriffs, and Prosperity to the City of London;" which the Lord Mayor acknowledged for the city, and invited the Sheriffs to answer for themselves. Sir J. Duke, in a concise and neat manner, expressed their friendly feelings towards literature in general, and particularly to the Society whose laudable objects they had attended to support. "Lord Stanley and the Vice-presidents" were next toasted; and his lordship was greeted by loud and continued cheers. Being the last-elected Vice-president, he observed that it reminded him of his school-days, when the youngest was called on to be the sag. It was the first time he had attended these meetings, but he looked forward to many opportunities of doing so, and promoting the interests of the fund, till he, being then a senior, saw others entering upon the same career as he was now. "Lord Sandon, and the other Members of Parliament," was replied to by his lordship, who expressed his conviction that no higher duty devolved upon legislators than to aid to their utmost the literary and scientific pursuits of the country. It was delightful to remove from the struggles of politics for awhile, for relaxation in such society as he saw around him. "Sir R. Bateson and the Stewards" were drank, for which Sir R. returned thanks. "Mr. Dickens, and the rising talent of England," called up the author of the *Pickwick Papers*, who happily acknowledged the toast as a rising writer, and expressed his hope that, like many who had paid him so flattering a compliment, he might, in due time, be able to do so, as one who *had risen*. [He was much applauded.] One of Mr. Lover's sweet lyrics was, at the request of the president, sung by himself. "Mr. Adolphus and the Bar," procured an able address from that gentleman; and, after a few other toasts, the evening concluded to the entire satisfaction of the assembly.

#### SOCIETY OF ANTIQUARIES.

MR. AMYOT in the chair.—Signor Campanari exhibited a copy of an Etruscan painting in fresco, discovered at Vulci. It contained two figures, about three feet in height. Mr. C. R.

Smith exhibited several *penates*, or small statues of deities, in bronze, found in the bed of the Thames; some in his own possession, and others in the possession of Mr. Newman. From the beauty and perfection of their forms, Mr. Smith considered them of Grecian workmanship. In an accompanying paper he entered into an interesting dissertation on the ancient mythologies.

#### LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

*Monday*.—Royal Geographical, 9 P.M.; Belgrave Literary Conversazione.

*Tuesday*.—Royal Medical and Chirurgical, 8½ P.M.; Civil Engineers, 8 P.M.; Zoological, 8½ P.M.; Society of Arts, 8 P.M. (Illustrations; Mr. Hemming on the Art of Engraving); Lambeth Library, 8½ P.M. (Mr. Lukeing on Light, Colour, &c.); United Service Museum, 3 P.M. (Dr. Ritchie on the Laws of Motion); Belgrave Literary (H. H. Lewis on Pneumatics).

*Wednesday*.—Society of Arts, 7½ P.M.; Graphic, 8 P.M.; Literary Fund Committee, 3 P.M.; Medico-Botanical, 8 P.M.

*Thursday*.—Royal Society, 8½ P.M.; Antiquaries, 8 P.M.; Royal Society of Literature, 4 P.M.; Western Literary, 8½ P.M. (Mr. Fry on Milton).

*Friday*.—Royal Astronomical, 8 P.M.; Royal Institution, 8½ P.M.

*Saturday*.—H. R. H. the Duke of Sussex's Conversation (should his Royal Highness's health permit); Mr. Hope, President of the Entomological Society, Conversation.

#### FINE ARTS.

##### EXHIBITION OF THE ROYAL ACADEMY. [Second Notice.]

IN our last Number we described the general impression made upon us by the present exhibition. We proceed to mention some of the principal works of which it is composed.

160. *The Highlands*. E. Landseer, R.A.—Under this general and sweeping title, the visitor will find a perfect gem of art—a production to which the epithet "fascinating" may most justly be applied. As he looks at it, he will be reminded of David Gellatly's song, "My heart's in the Highlands." Mr. Landseer's heart has evidently been in his performance. The party returning from deer-hunting, headed by the piper in full blast; the boy aping the laird; "the laird himself;" his attendants; the horses bearing the noble game; the gleaners resting from their toil; the approaching group in the middle distance, are all admirable. Nor must we omit to notice the picturesque beauty of the mountain scenery, nor the exquisite tone and texture of the rustic bridge in the foreground; almost betraying the very quarry from which the stones that compose it were hewn. We repeat that this is a perfect gem of art.

104. *Raffaello and the Fornarina*. A. W. Calcott, R.A.—The first view of this picture created in us a degree of surprise, hardly justifiable, perhaps, when the well-known talents of the artist are considered. It is so different from the walk of art which Mr. Calcott usually pursues; and, at the same time, it is so charming. The ardent gaze of the admiring lover, and the coquettish employment of his beautiful mistress, are most happily expressed. The figures are of the size of life; they relieve darkly upon the ground; and the tone and treatment of the whole work are equal to those of the most pure and delicate productions of the Italian school. Let any one turn to 179, *Rocco on the Coast of Genoa*, by the same artist, and he cannot fail to be struck by the versatility of powers displayed. The latter is one of the finest specimens of that brilliant and masterly style of painting landscape by which Mr. Calcott has so long delighted the public.

138. *Scene in the Greek War: An Arab Chief of Reshid Pasha's army selling Captives; some Monks approaching to endeavour*

to ransom them. C. L. Eastlake, R.A.—A subject of more touching interest could hardly have been selected; and it is treated with Mr. Eastlake's usual skill. All the varieties of hope, fear, doubt, and anguish, are depicted—we had almost said too much to the life—for, while they evince the artist's powers, they, perhaps, lay too heavy a tax on the feelings of the spectator; since, alas! the story is not one of fiction.

144. *The Empress Josephine and the Fortune-Teller*. Sir D. Wilkie, R.A.—One of those extraordinary events in the romance of life which make a strong impression on those who do not reflect that, for a solitary prediction of the kind, which turns out to be true, tens of thousands are falsified by the event. Sir David has introduced great variety of character into his composition; and the half-serious, half-sportive action and expression of the future empress, are very naturally portrayed. The general tone of colour has a slight tendency to pinkishness, which is not quite agreeable.

21. *Samson betrayed by Delilah*. W. Etty, R.A.—In our opinion one of the finest and most powerful pictures (of a cabinet size) ever painted in this country. Its energy of action and character, its depth and richness of colour, and its masterly execution, are all transcendent, uniting the highest qualities of Rubens and Tintoret.

122. *The Sirens and Ulysses*. W. Etty, R.A.—We are unable to speak in terms of equal commendation of this performance; although there are portions of it—such, for instance, as the vessel, with its living freight, and the distant sea—which shew no ordinary power. But what could induce Mr. Etty to bestow his time and his talents on so disgusting a subject? Who would like to have the representation of a charnel-house suspended in his apartment?

46. *The Hindoo Girl's Offering*. W. Daniell, R.A.—The nature of the subject is explained in the catalogue. Mr. Daniell has embodied it with a taste and a feeling which leave nothing to be desired. The beautiful and elegant forms of the native females, launching their brittle barks, seen under the effect of moonlight, fill the mind with poetical visions, which almost hallow the gentle superstitions of the East.

50. *East Deen, Bonchurch, Isle of Wight*. W. Daniell, R.A.—A site more desirable for an embellished dwelling could nowhere be found; uniting, as it does, every charm of beautiful scenery. But for the well-known fidelity, as well as versatility, of Mr. Daniell's pencil, we might be induced to suspect that he had here been playing off a little of the witchery of his art upon us.

188. *Return from Hawking*. E. Landseer, R.A.—No artist enters more boldly into open daylight in all his works than Mr. Landseer. It is as if every part of his canvass contained a pet object, on which he had determined to exercise all his skill. Nothing is neglected nor hurried over. The admirable work before us illustrates this in a striking manner. The noble pair (Lord Francis Egerton and his lady), their lovely offspring, the huntsman and domestic, the horses (as fine as Cuyper), the hawks, the architecture, and all the accessories, are painted with a carefulness, and, at the same time, with a spirit and a fluency of pencil, wholly unrivalled. This is one of the most attractive performances in the room.

130. *Story of Apollo and Daphne*. J. M. W. Turner, R.A.—Apollo and Daphne! One of those gorgeous effects of prismatic colours in all their original and distinct vividness, which,

under any other management than that of Mr. Turner, would be offensive; but which he renders absolutely magical.

[To be continued.]

#### EXHIBITION OF THE SOCIETY OF PAINTERS IN WATER-COLOURS.

[Second notice.]

86. *Mountainous Scenery*. J. Varley.—Belongs to a high order of art. Though evidently a composition, it is based on the study of nature by one long acquainted with her grand features, as well as with her minute details.

126. *Interior of a Wood-house*. W. Hunt.—Such is the alchemy of this artist, that in his hands chips and straws, shreds and patches, become materials of value, things of price. Yet, when order and regularity are required, as in 213, *Morning*, every thing is in its proper place. The last-mentioned production is, in point of sentiment, greatly superior; in the effect of light equal to the works of Da Hooge, or the more elegant Metzger.

92. *Rosbuck*. R. Hills.—Mr. Hills' representations of domestic cattle are skilful and true; but still his subjects of wild deer, in the enjoyment of mountain liberty, are his best and most spirited performances.

112. *Girls ascending the side of Snowdon*. J. Crispall.—This picture reminds us of Anne of Geierstein. As a work of art, it derives great interest from its local character, its picturesque scenery, and the skill with which it is executed.

351. *Ploughing*. D. Cox.—Persons who visit this, or any other exhibition, with a predilection for any particular style of art, will lose much of the pleasure which variety ought to give. Truth appears in a plain, quite as frequently as in a florid garb. Mr. Cox's productions are all evidences of the fact. Slight as some of them seem to be, they are the result of long observation and great practice.

240. *Lady and Duenna*; 298. *Spanish Girls*. F. Stone.—In each of these performances, the qualities of expression and execution are so happily united that, without reference to any particular story or sentiment, it is highly attractive.

158. *Chatsworth Park*. W. A. Neafield.—The ducal mansion, and even the park itself, are but adjuncts to the deer; the noble and picturesque forms and action of which are depicted with admirable truth and spirit.

238. *Interior of a Shetland Cottage*. A. Chisholm.—Poverty and want are not the most pleasing objects of contemplation; but Mr. Chisholm has exhibited great skill in the management of the light, and in the picturesque character which he has given to this interior.

231. *The Antiquary*. J. Stephanoff.—The rage of the antiquary at finding his sacred apartment invaded by the housemaid is well expressed; but we think the subject rather overlaid by the number of the component parts. This is not the case with some of Mr. Stephanoff's smaller performances. In 202, *Pray remember the Grotto*, an annual nuisance, is whimsically illustrated.

227. *Old Buildings at Godalming*. W. Scott.—We have a great regard for ancient edifices of this description, and feel much indebted to Mr. Scott for the skill which he manifests in their pictorial preservation.

219. *The Stroll in the Woods*. Mrs. Seyffarth.—A very agreeable thing when summer suns give out their heat; and especially when, as in the present case, the stroller is accompanied by pretty faces and the expression of holiday delight.

218. *Taming the Shrew*; 211. *Scene from*

*Woodstock*. Joseph Nash.—These subjects are treated with great skill. They are forcible in effect, harmonious in colour, and just in expression.

348. *Morning*; 338. *Moonlight*; 167. *Lane Scene—Evening*. G. Barret.—Among the best specimens of this able artist's poetical pencil.

183. *Fruit*; 215. *Dahlia*. V. Bartholomew.—Mr. Bartholomew's composition, colouring, and execution, in works of this kind, have always excited our highest admiration.

In taking leave of these well-selected and fascinating performances—whether of those which we have noticed, or of those which our limits alone prevent us from noticing—we may truly say that, in their respective departments of art, the several members of the Society have nobly "done their duty."

#### THE ART-UNION.

SUCH is the rather foreign-sounding combination of a name given to a new association for the advancement of the Fine Arts; an advertisement, describing which, appeared in our pages a fortnight ago. It differs from the Society formed last year "for the Encouragement of British Art," inasmuch as in the first, the works were bought by the managing committee, and distributed by lottery among the subscribers; while, in the last, the lottery-prizes are intrusted to the selection of the fortunate holders. A few minor details are also at variance; but, upon the whole, the object is the same, and the organisation similar in spirit. We were, therefore, glad to hear that it was proposed to unite the two; and now regret to learn that the plan has proved abortive. Conjoined, we are inclined to think the power and influence would have been greater than if both proceed, more or less interfering with each other, and dividing and neutralising the public feeling.

#### NEW PUBLICATIONS.

L. E. L. Painted by MacIise, A.R.A.; engraved by E. Finden. Ackermann and Co. If, under any circumstances, a successful female portrait is rarely accomplished, how much must the difficulty be increased when, to delicacy of features, the artist has to add vivacity and delicacy of intelligence? Over this difficulty, however, Mr. MacIise and Mr. Finden have completely triumphed in this graceful and beautiful print, which we noticed during its progress, which is now finished, and which must be allowed by all who know the fair and celebrated original, to be a perfect resemblance. Should a copy be purchased by only one in a thousand of those who have read and admired Miss Landon's charming works, it will prove a very lucrative speculation to the publishers. It will not shine the less, being compared with the abominable caricature which deforms the last No. of the *New Monthly Magazine*. We never saw such an atrocious libel on the human face divine.

*The Maid of Saragossa*. Engraved by Samuel Cousins, A.R.A. from the original picture in the Royal Collection, painted in Madrid by Sir David Wilkie, R.A. Moon.

Most of our readers will recollect that "The Maid of Saragossa" was one of the first pictures exhibited by Sir David Wilkie, after his return from Spain; and that it excited great public attention, in consequence, not only of the interesting subject, but of the freer and grander style of drawing, of colour, and of effect, with which it was evident the able and popular British artist had been im-

buied, by his study of the vigorous and deep-toned works of the Spanish school. The heroic maid herself, her patriotism stimulated by revenge; the gallant and determined Palafox; that noble specimen of "the church militant," Father Consolación; the priest writing the despatches, to be forwarded by the carrier-pigeon held by the mulatto boy; the volunteers, two employed in training the gun, the other ready to be called into action; and the corpse of the unhappy cannoner, the lover of Angostina, form a group, the contemplation of which awakens some of the most powerful feelings of our nature. The name of Mr. Cousins is a sufficient guarantee for the excellence of the engraving,—which we understand has been executed under the immediate superintendence of Sir David Wilkie. It is in the highest degree honourable to both artists.

**James Emerson Tennent, Esq. M.P.** Drawn by G. Richmond; engraved by R. A. Artlett. A spirited and excellent likeness of the honourable and eloquent member for Belfast; which will form one of the embellishments of the next number of Ryall's "Portraits of Conservative Statesmen."

**Hafed, a celebrated Deer-hound.** Painted by Edwin Landseer, R.A.; engraved by C. G. Lewis. Ackermann and Co. As finely painted, and as finely engraved a dog's head (of the size of life), as it is possible to conceive.

**Pictures picked from the Pickwick Papers,** by Alfred Crowquill. Sheet I. Ackermann and Co.

LAUGHABLE little sketches. "The Fat Boy" and "Payne" are among the best.

#### MUSIC.

**Hanover Square Rooms.**—Mr. Sale's concert was too late for us to notice last week, though it was one of the best musical entertainments of the season. The choice of songs, duets, and instrumental pieces, was excellent. The opening carol, in honour of the Princess Victoria, who was present, was sweetly sung by Caradori Allan, Miss Hawes, Mr. H. Phillips, and chorus. Notwithstanding two or three disappointments in the second part, there was quite enough of delightful music to satisfy a large and fashionable audience.

On Saturday, Mr. Hawes, also, gave a brilliant concert.

On Thursday, for Mr. Blagrove's benefit, a choice selection of the finest music was performed, and received, as it deserved, with great applause.

#### DRAMA.

**King's Theatre.**—On Thursday *Il Matrimonio Segreto* was performed for the benefit of Lablache, who was in great force on the occasion. The whole cast was admirable, and the treat delicious.

**Covent Garden.**—Having delivered our opinion upon the published play of *Strafford*, we have here only to speak of the acting. That of Macready was most forcible and striking. *Strafford* is deeply agitated from first to last; and nobly and naturally did this accomplished performer embody the character throughout. The bursts of feelings were inimitably fine. Miss Faucit, also, played with great taste and effect. *Pym*, in Vandenhoff's hands, was rather croaky; but there is a sort of sameness in what he has to say and do, which, perhaps, led to this result. Mr. Ben-

nett, and Webster, junior, did well for *Hollis* and *Vane*. The *King*, Dale, was awfully bad; the *Queen*, Vincent, only a shade better. It is not in her pretty coquettish line.

**Adelphi.**—The Adelphi closed on Thursday, after, we believe, a season as prosperous as it has been active and enterprising.

**St. James's Theatre.**—The nightly entertainments here are of that pleasing kind which affords most entertainment to genteel and cultivated audiences. We rejoice to see that they win their way to the popular patronage they so richly deserve.

**Olympic.**—*Peculiar Position*, a very clever and amusing piece by Planché, with Liston in his best style, has been added to the very popular list of Olympic attractions.

**Strand Theatre.**—*Romeo and Juliet* has been produced here in the broadest burlesque, and with the most laughable success.

#### VARIETIES.

**Caricatures.**—H. B. is out-pouring his fancies with prolific fertility. We have this week three, Nos. 478, 479, and 480. The first is "Jim Crow Dance," with a dozen leading political characters capering away, with ludicrous activity: which way the "turn about, wheel about," is likely to end, is as dark and difficult to guess as in the present actual state of parties. "Something between the sublime and the ridiculous," represents a fine ship, the *Constitution*, in peril; the King and John Bull looking over the stern for succour. A boat, pulled by Wellington, Lyndhurst, &c. and steered by Peel, is pulling up hard; while on the other side is another boat, with the ministry hurrying from the wreck. In the last, "Looking out," O'Connell, as a smuggler, with a pistol, inscribed on the barrel "Repeal," is one of the boldest heads ever executed by the artist.

**Diffusion of Knowledge.**—"Friday, there were taken from the stomach of a trout, caught in the Tay, five pieces of the *Fifeshire Journal*. They appeared to have been but lately swallowed, as they were quite legible when dried."

**Perth Advertiser.** When trouts are tickled into taking in newspapers, we may, indeed, truly boast of the "spread," &c. and march of intellect. The only pity is that the critters are mute, and cannot, in return, communicate intelligence to the inhabitants of dry land. The name of one of Walter Scott's schoolmasters was *Whale*. There is no saying what may occur!

**Artists' Fund.**—To-day, this benevolent association observes its anniversary, with the Marquess of Northampton presiding. A numerous and distinguished attendance is anticipated: few charities deserve it more.

**Covent Garden Theatrical Fund.**—Another of our most meritorious charities, which has announced a very attractive bill of fare for Saturday next. It promises much social entertainment.

**King's College.**—The annual meeting, last Saturday, was attended by many very eminent persons; and the report was of the most satisfactory description.

**Weather-wisdom.**—All quite wrong again. Instead of cold and ill weather, it has been beautiful; and the sun, "approaching the opposition Saturn," has had no effect whatever. Now, to look forward: "Sudden dashing showers and thunder about the 7th. A change on the 8th; windy weather prevails. Fairer and warmer about the 10th and 11th, as the Sun aspects Mars, and the Moon Jupiter; yet high winds and thunder prevail. Growing weather, rather hot; mild rain."

**The King of the Rats?**—The natural curiosity known by the name of the "king of the rats" (*Rattenkönig*), has been declared, by many naturalists, to be a mere fable. On the 21st of March, there was found, in the wall of a stable at Zaisenhausen, in the grand duchy of Baden, a king of the rats, which consisted of twelve full-grown rats, which were all alive when found, whose tails are so entangled together that they cannot be unloosed. Four other live rats were found with them, by which the twelve so joined together were provided with food. The twelve rats are all nearly of equal size, and seem to be well fed. It seems evident that they must have got so entangled immediately after their birth, because the tails, when an attempt was made to disengage them, are bent quite conformably to the knot.

—*German Journal.*

**Conundrum.**—Why was Noah like one of the most unfortunate of rat-catchers?—Because he was forty days without seeing e'er a rat. (Ararat.)

#### Grammatical Epigram.

Come, now, Annie dear, how I wish you'd decide,  
And make up your mind if you will be my bride—  
Say at once—shall I go for the parson and ring?  
Give a definite answer, you whimsical thing!  
I won't be called "thing," Mr. Marry-in-haste,  
Love of definite answers in me were misplaced;  
Had you ever been taught by your grammar a particle,  
You'd have found out that Anne's an indefinite article.  
R. J.

#### LITERARY NOVELTIES.

Mr. Moore's second volume of the History of Ireland brings it down to the end of the twelfth century; and shall have due notice in our next Gazette.

#### In the Press.

A new Naval Novel, under the title of "The Anchorite; or, Ten Thousand Top-sail-sheet Blocks," by the Old Sailor.

#### LIST OF NEW BOOKS.

Hymns for the Sundays and Festivals throughout the Year, selected by Henry Alford, M.A., 18mo. 1s. 2d.—*A Treatise on the Influence of 1837*, by Peyton Blackiston, M.A., 2s.—*The Hussar*, by the Author of "The Subaltern," 2 vols. post 8vo. 1l. 1s.—*Sidney Smith's Chancery Practice*, 2 vols. 8vo. 2l. 4s.—*J. Rowbotham's Guide to German Conversation*, 12mo. 4s. 6d.—*Margam Abbey, a Historical Romance of the Fourteenth Century*, 12mo. 9s. 6d.—*An Inquiry into the Nature of the Books of the Ancients*, fcap 8vo. 7s. 6d.—*Gil Blas*, illustrated Edition, Vols. I. and II., each 10s.—*Chitty's Office and Duties of Constables*, 2d edition, royal 18mo. 3s. 6d.—*Lord Mahon's History of England*, Vol. II., 8vo. 14s.—*Rev. W. F. Hook's Last Days of our Lord's Ministry*, new edition, 12mo. 6s.—*The Book of the Young*, an Invitation to early Christian Piety, by Rev. Joseph Jones of Newchurch, 18mo. 6s.—*A Birthday Tribute to the Princess Victoria*, by L. E. L., 4to. 3s.—*Opinions of Lord Brougham*, post 8vo. 12s.—*A New Dictionary of the English Language*, by C. Richardson, 2 vols. 4to. 5s. 5d.—*Freedom, the Spirit of the Age, and other Poems*, by H. Mead, 12mo. 5s.—*The Young Duellist; or, the Affair of Honour*, royal 12mo. with plates, 6s. 6d.—*Hymns of the Primitive Church*, by the Rev. S. Chandler, fcap. 4s. 6d.—*Remarks on the Ecclesiastical Condition of the United Kingdom*, by Dr. Robinson, post 8vo. 10s. 6d.—*The Church of Christ Considered*, by G. Payne, L.L.D., fcap. 2s. 6d.—*Discourses on the Complete Restoration of Man*, by Dr. Chapman, 8vo. 10s. 6d.—*Dennis Kelly's Practical Sermons*, 2d edition, 8vo. 7s. 6d.—*The Great Metropolis*, Second Series, 2 vols. post 8vo. 1l. 1s.—*Library of Romance*, illustrated edition, Vol. I., fcap. 8vo. 6s.—*Autumnal Leaves*, Poems by H. F. Wallé, 2d edition, post 8vo. 6s.—*A Dream of Life, a Poem*, by Rev. W. G. Moore, fcap. 5s.

CHARLES HENRY ADAMS.

## ADVERTISEMENT,

Connected with Literature and the Arts.

## THE THIRTY-THIRD ANNUAL

EXHIBITION OF THE SOCIETY OF PAINTERS IN WATER-COLOURS, at their Gallery, Pall Mall East, is now open. Open each day from Nine till Dusk.

Admission 1s.—Catalogue, 6d.

R. HILLS, Secretary.

## JUST OPEN.—DIORAMA, REGENT'S

PARK.—New Exhibition, representing the Interior of the Basilica of St. Paul, near Rome, before and after its Destruction by Fire; and the Village of Alagna, in Piedmont, destroyed by an Avalanche. Both Pictures are painted by Le Chevalier Boston.

Open daily, from Ten till Five.

## CORREGIO MAGDALEN.—This

Divine Work of Art, perhaps the Chef-d'œuvre of Corregio, is now on View at the Scientific Institution, No. 49 Pall Mall, and will remain till the 30th of June.

Admission, 1s.

Open from Ten till Five o'Clock.

N.B. A few Doors from the British Institution.

## SONS OF THE CLERGY.—The Rehearsal of

the Music to be performed at this Festival will take place on Tuesday, the 9th of May, in St. Paul's Cathedral; and the Anniversary on Thursday, the 11th of May, when a Sermon will be preached there, before his Royal Highness the Duke of Cambridge, the Archbishops of Canterbury and York, the Bishops, the Lord Mayor, Sheriff, Aldermen, Clergy, and others.

By the Very Rev. THOMAS CALVERT, D.D.

Warden of Manchester Collegiate Church.

Divine Service will on Anthem at Ten o'Clock, the Doors of the Cathedral will be opened on each day at One o'Clock.

Stewards.

H. R. H. the Duke of Cambridge (sixth time).

The Marquess of Salisbury The Ven. Archdeacon Pott,

The Earl of Mansfield B.A. Rev. George Thos. Pretyman,

The Bishop of Durham (3d time) Rev. George Thos. Pretyman,

The Bishop of Lichfield B.A. Rev. James W. Vivian, D.D.,

The Bishop of Sodor and Mann Rev. David Williams, D.C.L.,

The Lord Bexley (3d time) Rev. John Lonsdale, B.D.,

The Right Hon. the Lord Mayor Rev. John Abbt, M.A.,

The Hon. Mr. Justice Patteson Rev. Samuel Bandy Broke, Esq.,

(3d time) Nicholas Charrington, Esq.,

The Hon. Mr. Justice Coleridge Benjamin Cotton, Esq.,

Sir Brook W. Bridges, Bart. John Deacon, Esq.,

Sir John Dodson Charles Francis, Esq.,

Sir George Smart John Foydner, Esq.,

The Vice-Chancellor of Oxford David Rowland, Esq., M.D.,

The Vice-Chancellor of Cambridge Thomas Arthur Stone, Esq.

The Performance of Music will consist of

The Dettingen Te Deum Handel.

The Hallelujah Chorus Handel.

The Grand Coronation Anthem ("O God, the King of Kings") Attwood.

Cantata Domino (composed for this Charity) Boyce.

Anthem, "Lord, thou hast been our refuge" (composed expressly for this Charity) Boyce.

Conductor, Sir George Smart.

Mr. Attwood will preside at the Organ.

Leader of the Band (which will consist of the Members of the Royal Society of Musicians), Mr. F. Cramer.

The Committee beg to state, that each person contributing

Gold will be admitted either at the North or South Doors of the

Cathedral, to the Galleries and Closets; and for admission into the

Choir, at the North-west and South-west Doors, it is earnestly

hoped that no person will contribute less than half-a-crown.—Carriages are to set down at the South Door.

The Collections at St. Paul's Cathedral and Merchant-Tailors' Hall are appropriated by the Corporation of the Clergy in

apprenticing the Children of necessitous Clergymen, or otherwise

placing them in situations of respectability.

After the conclusion of Divine Service on Thursday, the 11th

of May, the Annual Dinner will take place at Six o'Clock, at

Merchant-Tailors' Hall, Threadneedle Street, for which Tickets may be had of the Treasurer, and of Messrs. Elvington, St. Paul's

Churchyard, and Waterloo Place; and at the London Tavern, Chancery Lane.

Benefactions to this Charity will be thankfully received; and any

information communicated, by the Treasurer, Oliver Har-

grave, Esq., 3 Bloomsbury Place.

No Tickets are requisite for admission into the Cathedral.

## THE MINERVA LIFE ASSURANCE

COMPANY, King William Street, Mansion House, London.

Capital, One Million.

Its distinguishing features are—

Moderate Rates of Premium, with Participation of the Profits

every five years to the extent of four-fifths, or 80 per cent.

The Profits may be added as a Reversionary Bonus, or its value

applied to the reduction of future Premiums, at the option of the

policy holder.

By Premiums by Ascending and Descending Scales.

Liberty granted to reside abroad; and to pass and repass the

sea between Great Britain and Hamburg without obtaining permission

of the Directors.

Personal appearance before the Directors is dispensed with, the

certificates of the respective medical advisers being deemed sufficient.

Age 25 25 45 45 55 55 60 60

25 25 45 45 55 55 60 60

25 25 45 45 55 55 60 60

Every facility is afforded consistent with the security of the

Company.

JOHN TULLOCH, Actuary.

## BENGAL CARPETS AND RUGS, INDIA

and CHINA MATS.—The Nobility and Gentry are respectfully informed that an extensive Assortment of the above

are now on Sale at Messrs. Robinson's India Mat Warehouse, 28

Walbrook Lane, London. The Assortment is of the greatest

satisfaction expressed by the purchasers of the Bengal Mats

during the last season, and the want of a sufficient supply to

meet the great demand for them, Messrs. Robinson have im-

ported a still larger quantity of beautiful Mats, which, in

size and quality, far surpass any other kind of matting hitherto

seen in this country. They measure from 6 to 500 feet in length,

and 2 to 50 feet in width, without a join. Mats made to please,

and forwarded to all parts of the kingdom. A large quantity of

Ruska Mats for Gardens, &amp;c.

## ORNITHOLOGICAL SOCIETY

OF LONDON.

President.

The Earl of Liverpool.

Council.

The Duke of Bedford, K.G. Vice-President.

The Rev. R. W. Brown, B.A. The Bishop of Norwich, Vice-

President.

W. G. Chapman, Esq. Harry Chester, Esq. N. W. Ridley Colborne, Esq.

J. R. Gower, Esq. F.G.S. Robert Gordon, Esq. M.F. J. E. Gray, Esq. F.H.S. W. Holl, Esq. F.G.S.

The Earl of Liverpool, President.

Captain Mangles, R.N. F.R.S. W.S. Macleay, Esq. M.A. F.L.S.

The immediate objects of the Society are to provide in the Public

Parks a Free Exhibition of Living Birds—to hold Periodical

Meetings for the reading of Ornithological Papers, Scientific,

Popular, and Practical; for the Exhibition of Living and Dead

Ornithological Specimens, &amp;c.; and for Oral Discussions and

Conversations: to form an Ornithological Library, and to circulate

among the Members of the Society, British and Foreign Ornithological Periodicals.

If the funds of the Society should be sufficient, the Rooms will

gradually be enriched by the acquisition of an Ornithological

Museum, commencing with British Birds; and ultimately, if the

Public should support the undertaking, the Society will embrace

every legitimate object of a National Ornithological Society, in-

cluding the breeding of Domestic Birds, and the distribution of

them amongst the Members of the Society.

**THE FELONY of NEW SOUTH WALES;** being a faithful picture of the real Romance of Life in Botany Bay. With Anecdotes of Botany Bay Society, &c.  
By JAMES MUDIE, Esq.

Of Castle Forbes, and late a Magistrate for the Territory of New South Wales.  
"We have seldom met with a more striking illustration of the sophisms, that truth is stranger than fiction, than may be found in the well-authenticated statements of this volume, which we particularly recommend to the notice of our readers."  
—*Morning Post*.  
"Mr. Mudie, having been a resident Magistrate in the Colony, has had good opportunity to observe the nature of its people, and we confess we have been somewhat startled at the details which his book unfolds. People have expressed surprise that men should steal a vessel to get transported; yet there read Mr. Mudie's book, and their wonder will cease."  
—*Satirist*.  
"The curious disclosures contained in this work, as well as its general observations upon the Colony, commend it to attention."  
—*Atlas*.  
Printed for the Author, and sold by Whaley and Co., Holywell Street, and all Booksellers.

169 Piccadilly, May 1, 1837.

Price 4s.

**AN ESSAY ON MAN'S MORAL**

AGENCY. With Remarks on Causation; Liberty and Necessity; and Evidence. To which are subjoined Observations on Education; its importance to Great Britain as a Nation, &c.  
By ROBERT J. NELSON, A.M.

Head Master of the Non-Resident Boys' School, Liverpool.  
"This work is, unquestionably, one of the most extraordinary productions of the present age. It has certainly elevated the author to the rank of the first metaphysician and educationist in the country; while, as a composition alone, it constitutes one of the noblest triumphs of the language of Englishmen."—*Mercury*.  
"The Essay shows the author to be an acute dialectician and an accomplished metaphysician. We strongly recommend the work to every friend of education; and think its talented author entitled to national gratitude."—*Liverpool Advertiser*.  
London: Baldwin and Cradock. Edinburgh: Oliver and Boyd.

In 3 vols. crown 8vo. price 17. 11s. 6d.

### REVIEW OF NEW BOOKS.

*Society in America.* By Harriet Martineau. 3 vols. 12mo. London, 1837. Saunders and Otley.

THE name of this work is a misnomer. "Society in America" is the least applicable title which could have been bestowed upon it. Politics, parties, government, economy, agriculture, transports and markets, manufactures, commerce, currency, slavery, civilisation, and religion, are the heads of Miss Martineau's lucubrations; and her papers are essays upon these most important subjects, which relate to masses, and not to "Society." There are, however, many pages, illustrative of her arguments and opinions, which tell us something of her social intercourse with the Americans, though, certainly, not enough to give a bookselling title to the publication.

It stands upon higher grounds. Miss Martineau is a decided politician, political economist, and philosopher. Her book is redolent of all the profundities of speculation connected with these grand questions: then, why give a flippant, commonplace name to an article of a much higher order? Miss Martineau writes like a man; and she ought not, thus, to be treated as a woman. Saunders and Otley have to answer for it.

The *Edinburgh*, the *Quarterly*, the *Westminster*, perhaps the *Foreign*, and other *Reviews*, which take three, six, or nine months (as suits them) to concoct their articles, will, we doubt not, execute the justice it pleases them upon this work; shewing its ability, its foolery, its wonderful sagacity, its absurdity, its genuine philosophy, its false principles, its logical accuracy, or its stupidity, as may be their humour and interest. For ourselves we can only, in this, as in other lesser and greater concerns, go straight forward in our literary career, and simply tell the impression made upon us by the matter we have read.

Thus speaking, we must say that these three volumes have been one of the toughest yarns to which we have been obliged to tackle for a long while. There is so much of candour, and so much of pretension; so much of superior sense, and so much of inconclusive argument; so much of sound reasoning, and so much of illogical conclusion; in short, so many contradictions, that we can only say, a panegyric or a denunciation might be equally well supported. We shall take neither side; but endeavour to afford our readers some idea of the work.

In her Introduction, Miss M. says, "It has been frequently mentioned to me that my being a woman was one disadvantage; and my being previously heard of, another. In this I do not agree. I am sure I have seen much more of domestic life than could possibly have been exhibited to any gentleman travelling through the country. The nursery, the boudoir, the kitchen, are all excellent schools in which to learn the morals and manners of a people: and, as for public and professional affairs, those may always gain full information upon such matters, who really feel an interest in them—be they men or women. No people in the world can be more frank, confiding, and affectionate, nor more skilful and liberal in com-

municating information, than I have ever found the Americans to be. I never asked in vain, and I seldom had to ask at all; so carefully were my inquiries anticipated, and my aims so completely understood. I doubt whether a single fact that I wished to learn, or any doctrine that I desired to comprehend, was ever kept from me because I was a woman."

It is impossible to decide which sex can write best upon foreign travel. It depends upon circumstances. No man could have told us so much of Turkish harems as Lady Wortley Montagu (or as Miss Pardoe, we hope, is prepared to do); but, on the contrary, there are a hundred things in the manners of every country which no woman can explore. In the instance before us, we do not think that either Miss Martineau's sex, or fame as holding particular opinions, could have been favourable to her as an impartial observer of America. Like a government commissioner, she would have nothing brought under her notice but that which was wished to be reported. Every thing is got up for the occasion if we know that the party is going to write a book about it.

"If there's a hole in a' ye're coats,  
I'd ye tent it;  
There's ane among ye taking notes,  
And faith he'll prant it."

In another respect there is a rather whimsical claim to superior correctness in this work, which we copy for the benefit of the blind, the lame, &c., &c. The author says,—

"I laboured under only one peculiar disadvantage, that I am aware of; but that one is incalculable. I mean my deafness. This does not endanger the accuracy of my information, I believe, as far as it goes; because I carry a trumpet of remarkable fidelity—an instrument, moreover, which seems to exert some winning power, by which I gain more in *téte-à-téte* than is given to people who hear general conversation. Probably its charm consists in the new feeling which it imparts of ease and privacy in conversing with a deaf person."

It is funny that a lady, with an attractive "instrument," should fancy that the exertion applied to its resonance should be quite unknown to the folks round about! *Nothing admisters so much to human vanity as defects.*

But we must leave off our own axioms, to give a taste of this book. To treat it gravely would require a year's *Gazettes*; to treat it lightly would be unjust to its merits. It is a singular work for even a clever woman, but it is a woman's work. Come:—

"The experiment of the particular constitution of the United States may fail; but the great principle which, whether successfully or not, it strives to embody—the capacity of mankind for self-government—is established for ever. It has, as Mr. Madison said, proved a thing previously held impossible. If a revolution were to take place to-morrow in the United States, it remains a historical fact that, for half a century, a people has been self-governed; and, till it can be proved that the self-government is the cause of the instability, no revolution, nor series of revolutions, can tarnish the lustre, any more than they can impair the soundness of the principle that mankind are capable of self-government."

At page 85, Miss M. tells us,—"Never, perhaps, did statesmen begin their task of constitution-making with so much aid from preceding circumstances as the great men of the revolution. A social neighbourhood of colonies, all suffering under colonial grievances, and all varying in their internal government, afforded a broad hint of the present system, and fine facilities for putting it in practice. There was much less speculation in the case than might appear from a distance; and this fact so far takes away from the superhuman character of the wisdom which achieved the completion of the United States' constitution, as to bring the mind down from its state of amazement into one of very wholesome admiration."

So that, after all the high-spun theory of the beginning, we are taught, that a government might be framed of able men (not "the people,") upon good models all about them; and that the silly conclusion, "that mankind are capable of self-government," if we only knew what it meant, is, at any rate, unsupported by the half century existence of American experiment. Be it understood, we do not undervalue either the principle or the example, but we abominate such crude theories. Now we arrive at some of our author's ideas upon the conditions of various classes of mankind in every country:—

"As long as men continue as differently organised as they now are, there will be two parties under every government. Even if their outward fortunes could be absolutely equalised, there would be, from individual constitution alone, an aristocracy and a democracy in every land. The fearful by nature would compose an aristocracy, the hopeful by nature a democracy, were all other causes of divergence done away. When to these constitutional differences are added all those outward circumstances which go to increase the fear and the hope, the mutual misunderstandings of parties are no longer to be wondered at. Men who have gained wealth, whose hope is fulfilled, and who fear loss by change, are naturally of the aristocratic class. So are men of learning, who, unconsciously identifying learning and wisdom, fear the elevation of the ignorant to a station like their own. So are men of talent, who, having gained the power which is the fit recompense of achievement, dread the having to yield it to numbers instead of desert."

To our minds this is utter nonsense. First, men must, not "now," but *for ever* be "differently organised;" and, therefore, there must be "two"—many more—"parties under every government." We should imagine that "the fearful" would be the last, instead of the first, to achieve aristocracy; and that "the hopeful," beginning, in many instances, in an aristocratic career, would truly be the aristocrats. Wealthy men—nay, men who have ever so little to lose—are naturally averse to change; but this does not make them of "the aristocratic class;" on the contrary, the aristocratic class have none so much to dread, if they misconduct themselves, as those who have secured competency and independence. As for the argument against men of learning, wisdom, and talent, it is a miserable piece of sophistry, and as absurd as

it is sophistical. When the learned scholar of profound labour, the professional man of many years' study, and the man of native talent, are afraid of "the ignorant," then, indeed, will they be jealous, and the toe of the peasant tread so hard upon the heel of the courtier, that it will gall their gibes.

Of the author's nationality we cite one example

"Washington's influence is a topic which no one is ever hardy enough to approach, in the way of measurement or specification. Within the compass of his name lies more than other words can tell of his power over men. When the British officers were passing up the Potomac, in the last war, to perpetrate as dastardly a deed of spoliation at the capital as ever it was the cruel fate of soldiers to be ordered to do, they desired to be told when they were passing the burial-place of Washington, and stood uncovered on deck as long as they were within sight of Mount Vernon. Any in England, who happen to know how deeply disgraced their country was by the actors in this expedition, will feel what the power must have been which, breathing from that shore, humanised for the hour the cowardly plunderers as they floated by."

Upon this, comment is unnecessary. We will pass on to Miss Martineau's account of American newspapers—the free and unstamped press. She has told us that American rhodomontade nationality is not common to the people, but got up for public exhibitions; and then she says:—

"Side by side with the sinners of the rostrum, stand the sinners of the newspaper press. The case is clear—and needs little remark or illustration. The profligacy of newspapers, wherever they exist, is a universal complaint; and, of all newspaper presses, I never heard any one deny that the American is the worst. Of course, this depravity being so general throughout the country, it must be occasioned by some overpowering force of circumstances. The causes are various; and it is a testimony to the strength and purity of the democratic sentiment in the country, that the republic has not been overthrown by its newspapers. While the population is so scattered as it now is, throughout the greater part of the Union, nothing is easier than to make the people know only one side of a question; few things are easier than to keep from them, altogether, the knowledge of any particular affair; and, worse than all, on them may easily be practised the discovery that lies may work their intended effect, before the truth can overtake them. It is hard to tell which is worst—the wide diffusion of things that are not true, or the suppression of things that are true. It is no secret that some able personage at Washington writes letters on the politics and politicians of the general government, and sends them to the remotest corners of the Union, to appear in their newspapers; after which, they are collected in the administration newspaper at Washington, as testimonies of public opinion in the respective districts where they appear. It is no secret that the newspapers of the south keep out of their columns all information which might enlighten their readers, near and afar, as to the real state of society at home. I can testify to the remarkable events which occur in the southern States, unnoticed by any press, and transpiring only through accident. Two men were burned alive, without trial, by the gentlemen of Mobile, just before my arrival there; and no newspaper even alluded to the circumstance, till, many months after, a brief

and obscure paragraph, in a northern journal, treated it as a matter of hearsay. It is no secret that the systematic abuse with which the newspapers of one side assail every candidate coming forward on the other, is the cause of many honourable men, who have a regard to their reputation, being deterred from entering public life; and of the people being thus deprived of some better servants than any they have. Though a faithful public servant should be able to endure all the consequences of faithful service, yet there are many cases where men, undecided as to their choice of public and private life, are fixed in favour of the latter by this one circumstance. It is the one obstacle too much. A public man in New England gave me the history of an editor of a newspaper, who began his professional course by making an avowed distinction between telling lies in conversation and in a newspaper, where every body looks for them. Of course, he has sunk deeper and deeper in falsehood; but retribution has not yet overtaken him. My informant told me, that this editor has made some thousands of dollars by his abuse of one man; and jocosely proposed, that persons who are systematically railed at by any newspaper, should lay claim to a proportion of the profits arising out of the use of their names and characters. The worst of it is, that the few exceptions to this depravity,—the few newspapers conducted by men of truth and superior intelligence, are not yet encouraged in proportion to their merits. It is easy to see how a youth, going into the wilds, to set up a newspaper for the neighbouring villages, should meet with support, however vicious or crude his production may be; but it is discouraging to perceive how little preference is given, in the Atlantic cities, to the best journals over the worst. Still, there is a preference, and it appears to be on the increase; and that increase, again, is in proportion to the intrepidity of the paper in discussing affairs as they arise. There will be no great improvement in the literary character of the American newspapers, till the literature of the country has improved. Their moral character depends upon the moral taste of the people. This looks like a very severe censure. If it be so, the same censure applies elsewhere; and English morals must be held accountable for the slanders and captiousness displayed in the leading articles of British journals, and for the disgustingly jocular tone of their police reports, where crimes are treated as entertainments, and misery as a jest. Whatever may be the exterior causes of the Americans having been hitherto ill served in their newspapers, it is now certain that there are none which may not be overpowered by a sound moral taste. In their country, the demand lies with the many. Whenever the many demand truth and justice in their journals, and reject falsehood and calumny, they will be served according to their desire."

So much for journalism; but a still greater blame is cast upon America—indeed the greatest, except the abolition of slavery, which, yet, Miss M. softens a little in consequence of the kind treatment generally experienced by the slaves: we allude to the ill usage of the women in the United States.

"One of the fundamental principles announced in the Declaration of Independence is, that governments derive their just powers from the consent of the governed. How can the political condition of women be reconciled with this? Governments in the United States have power to tax women who hold property; to divorce them from their husbands; to fine,

imprison, and execute them for certain offences. Whence do these governments derive their powers? They are not 'just,' as they are not derived from the consent of the women thus governed. Governments in the United States have power to enslave certain women, and also to punish other women for inhuman treatment of such slaves. Neither of these powers are 'just;' not being derived from the consent of the governed. Governments decree to women in some states half their husbands' property; in others, one third. In some, a woman, on her marriage, is made to yield all her property to her husband; in others, to retain a portion, or the whole, in her own hands. Whence do governments derive the unjust power of thus disposing of property without the consent of the governed? The democratic principle condemns all this as wrong, and requires the equal political representation of all rational beings. Children, idiots, and criminals, during the season of sequestration, are the only fair exceptions. The case is so plain that I might close it here; but it is interesting to inquire how so obvious a decision has been so evaded as to leave to women no political rights whatever. The question has been asked, from time to time, in more countries than one, How obedience to the laws can be required of women, when no woman has, either actually or virtually, given any assent to any law? No plausible answer has, as far as I can discover, been offered—for the good reason, that no plausible answer can be devised. The most principled democratic writers on government have, on this subject, sunk into fallacies as disgraceful as any advocate of despotism has adduced. In fact, they have thus sunk from being, for the moment, advocates of despotism. Jefferson in America, and James Mill at home, subsided, for the occasion, to the level of the author of the Emperor of Russia's Catechism for the young Poles."

This is a serious question—this of the young Poles and Miss Martineau. We do not know, however, how to treat it gravely. We are inclined to think that women ought to have the political rights Miss M. demands for them: but we have just been looking on the Westminster election; and we have said, Should we like wife, daughter, sister, cousin, distant relative, or female friend, whom we loved or respected, to take a part in these drunken orgies and black-guard struggles? Oh, no. There are too often too many and too slight quarrels which break the bonds of amity between man and woman; for heaven's sake do not increase them by exposing the tender, the soft, the loving, and the loveable sex, to ruffian collision and the turmoils of the vestry, the committee, the club, or the ballot-room! Let us have them clever as Miss Martineau, if you please, but more feminine,—less Malthusian, if so be, but more natural and productive of every natural pleasure. Being rather better than angels, who would convert them into offensive politicians?

If we have a few words more to say of this work, we shall anon.

*The History of Ireland.* By T. Moore, Esq. Vol. II. (Vol. XC. of *Lardner's Cabinet Cyclopædia*. London, 1837. Longman and Co.

Pursuing the tangled thread of Ireland's early annals, this volume commences with the Danish invasion, A.D. 787, and brings us down to the end of the twelfth century, when the English had established themselves in the country, and it had seen the last of its native monarchs. About this time, we should imagine, the authentic history ought to begin; but it is not amiss to

accompany our poet-historian through the preceding and darker periods. It is, indeed, curious to remark the disposition of the poetic temperament to dwell on events and times which afford scope and play for the imagination; every genuine bard is more than half an antiquary, and, if he did not employ himself in writing verses, would assuredly devote much of his leisure to antiquarian researches. This is, perhaps, the reason why Mr. Moore has devoted two of his volumes to the obscure traditions and legendary lore of Ireland; and we have only to trust that it may not cramp him to confine the rest within the single additional volume originally announced.

Our task not being poetical, but critical, we shall not venture into the realms of Brian Boru, or Malachy, far less meddle with their barbarous ancestors, and the fierce Northmen with whom they contended. Even the battle of Clontarf shall be only a reference with us; but we may fairly afford a specimen of our author by a few selections from his notice of its famous leader:—

“In estimating the character of Brian Boru, it will be found that there are three distinct points of view in which he stands forth prominently to the eye—namely, as a great warrior, a successful usurper, and a munificent friend to the church. In the attributes belonging to him, under these three several aspects, are to be found the main as well as subsidiary sources of his fame. The career of Brian as a military leader appears to have been uniformly, with one single exception, successful; and, from the battle of Sulchoid to that of Clontarf, his historians number no less than fifty great battles in which he bore away the palm of victory from the Northmen and their allies. In his usurpation of the supreme power he was impelled evidently by motives of selfish ambition; nor could he have entailed any more ruinous evil upon the country, than by thus setting an example of contempt for established rights, and thereby weakening, in the minds of the people, that habitual reverence for ancient laws and usages which was the only security afforded by the national character for the preservation of public order and peace. The fatal consequences of this step, both moral and political, will be found but too strikingly evolved in the course of the subsequent history. Attempts have been made to lend an appearance of popular sanction to his usurpation, by the plausible pretence that it was owing to the solicitation of the states and princes of Connaught, that he was induced to adopt measures for the deposition of Malachy. In like manner, to give to this step some semblance of concert and deliberation, we are told of a convention of the princes of the kingdom held at Dundalk, preliminary to the assumption of the monarchy, and convoked in contemplation of that step. But the truth is, for none of these supposed preparatives of his usurpation is there the slightest authority in any of our records; and the convention held at Dundalk, or Dundalk, so far from being a preliminary measure, did not take place till after ‘the first rebellion,’ as it is styled by our annalists, of the King of Munster against the monarch. This very term, indeed, applied by Tigernach, by the Annals of Inisfallen, and the Four Masters, to the daring enterprise of Brian, sufficiently proves in what light it was viewed by all the most trustworthy of our historians. That the feelings of a people whose chief occupation was warfare would be easily enlisted on the side of the veteran of fifty battles, even in an aggression on the ancient throne of the Hy-Niells, may, without difficulty, be believed; but, that he

ever attempted to disguise or smooth away his usurpation by any such show of respect for public opinion as his later apologists have attributed to him, is a supposition founded on modern notions, and wholly unauthorised by the authentic records of his acts; which simply state that he twice, at the head of a numerous army, entered hostilely the royal precincts of Tara—that, on the second of these occasions, he dispossessed the legitimate monarch of his authority, and placed himself on the supreme throne in his stead. By some inquirers into his conduct, a far more enlarged and noble motive than the mere desire of self-aggrandisement has been assigned for this bold step, which they suppose to have been dictated by the patriotic conviction that the whole strength of the country ought then to be directed unitedly against the Danes; and that it was only by the grasp of one vigorous hand, consolidating her resources and collecting her scattered energies, that so great and vital an object could be accomplished. Of the spirit and wisdom of this view of the policy then required, there can exist no rational doubt. It was the same acted upon, as we shall see, by Brian, at an interval of nearly fourteen years after, and with perfect and glorious success. But a work neglected through so long an interval, and then forced upon him by a great and perilous exigency, will hardly be assumed as one of the chief and pressing considerations that now impelled him to usurp the supreme power. On the contrary, so remote and subordinate was the place held by the Danish intruders in his views, that, though they still had possession of all the chief maritime towns of the kingdom, not a single effort did he make, during the ten or twelve years following his accession, to dislodge or molest them. But, intent chiefly on strengthening and guarding his own usurped position, he left to the Danes by far the longest interval of repose they had ever been suffered to enjoy on Irish ground; content with awing, by his name, into peaceful submission, as well the foreign as the native princes over whom he ruled. How little even he had transcended the level of his times, or risen to any clear views of a patriot's duty or dignity, may be judged from his employing a squadron of Danes as his vanguard in the first incursion he made into the territory of Tara; thus sanctioning, by his own example, the treason of alliance with the invader, and resorting to the ranks of his country's enemies for aid in assailing and overturning her ancient monarchy. Of the beneficial effects attributed to his government, his wise laws and strict system of police, the numerous edifices he either built or repaired, the bridges and roads constructed by his order throughout the country,—of these, and other such happy results of his reign, there occurs no mention, whatever, in our annals; nor have we, I fear, any graver authority for them than that of the veracious chronicler who has described so minutely the corridors, kitchens, and wine-cellar belonging to the monarch's favourite banqueting-house, Ball-Borume.”

At the close of every century, Mr. Moore gives a sketch of its literature and literary men, which is always pleasant reading; we only wish we had more about Turlough and other distinguished writers. The following passage, relating to the church, is one which will attract attention:—

“It is true, from the secluded position of Ireland, and still more from the ruin brought upon all her religious establishments during the long period of the Danish wars, the intercourse with Rome must have been not unfrequently interrupted; and the powers delegated

to the prelate of Armagh, as *legatus natus*, or, by virtue of his office, legate of the holy see, may, in such intervals, have served as a substitute for the direct exercise of the papal authority. But that the Irish church has ever, at any period, been independent of the spiritual power of Rome, is a supposition which the whole course of our ecclesiastical history contradicts. On the contrary, it has been frequently a theme of high eulogium upon this country, as well among foreign as domestic writers, that here is the only national church in the world which has kept itself pure from the taint of heresy and schism.”

At last, we arrive at the grand point—the English invasion:—

“That Dermot's resolution to apply for aid to England was, in any degree, prompted by a knowledge of the papal grant, is by no means necessarily to be implied. Already the proximity of the two islands must not unfrequently have suggested the likelihood of an invasion, at no distant time, from the shores of the larger and more powerful. Up to this period, the tide of incursion appears to have been entirely from the Irish side of the Channel; and, in all the struggles of Wales against English domination, troops were waited over to her aid in the coracles of her warlike neighbours. In the rebellion of Godwin and his sons against Edward the Confessor, Ireland furnished, as we have seen, men and ships in their cause; and, after the defeat at Hastings, three sons of the conquered king sought refuge and succour in the same country, and were enabled to fit out from thence a large fleet for the invasion of England. On the other hand, it appears pretty certain that both William the Conqueror and the first Henry entertained serious thoughts of adding the realm of Ireland to their dominions; and William Rufus, in one of his expeditions against the Welsh, is reported to have said, as he stood on the rocks in the neighbourhood of St. David's, and looked at the Irish hills, that he would ‘make a bridge with his ships from that spot to Ireland.’”

“Though it must be clear that the fate of a nation such as the Irish were at this period, embroiled and distracted among themselves by an almost infinite division of interests and factions, nor as yet recovered from the effects of a long series of barbarous invasions, which, though not powerful enough to reduce them to subjection, were but too efficient for the purpose of enfeebling and demoralising them; though the doom of a people thus lamentably circumstanced was sure to be sealed, and perhaps irreversibly, whenever a more civilised foe found footing on their shores, with skill to avail himself of their dissensions, and a disciplined force to oppose to their rude numbers, yet it must be owned that the almost unresisted facility with which a mere handful of men was allowed to acquire that footing,—the either infatuated or treacherous passiveness with which the first steps of a design so formidable were witnessed,—far outwent even all that might naturally be expected from the weak, degenerate, and disorganised state of the whole

† See Leland, book i. chap. i. Girald. Camb. Itinerary. Camb. lib. ii. cap. i. Instead of citing the words of the original, I shall give the whole anecdote, as rendered by Hammer, in his Chronicle:—“Cambrensis, in his Itinerary of Cambria, reporteth, how that King William, standing upon some high rocks in the farthest part of Wales, beheld Ireland, and said, ‘I will have the ships of my kingdom brought hither, wherewith I will make a bridge to invade this land.’ Murchard, king of Leynster, heard thereof, and, after he had paused awhile, asked of the reporter, ‘Hath the king, in that his great threatening, inserted these words, *‘If I please God?’*” “No,” Then, said he, “seeing this king putteth his trust only in man, and not in God, I fear not his coming.”

kingdom. That neither the monarch nor any of the other princes were yet aware of the extent of Dermot's designs, nor of the powerful patronage he had secured for himself, appears to be highly probable; though, assuredly, there were wanting no further facts to awaken vigilance, if not foresight, than the flight of the traitor himself from the country, on avowed purposes of revenge, and his sudden reappearance in the field attended by foreign troops. Even then, had the Irish monarch and his liegeman of Breffny but followed up vigorously their first advantage over the fallen renegade, they might have crushed at once the whole base conspiracy, and at least postponed, if not wholly averted, the fatal extinction of their country's dearly bought independence.

"Among a people of strong religious feelings such as the Irish had, even to this period, remained, notwithstanding the ignorance and barbarism to which internal misrule and foreign invasion had reduced them, it was not unnatural that the new scourge which had now fallen upon their land should be viewed with terror as a judgment of God on account of the sins of the people,—an awful renewal, by the hand of Providence, of all that their fathers had endured in days gone by, when first the Black and the White Strangers descended in swarms upon their shores. That some such panic must, at this period, have taken possession of them appears manifest, not merely from the unmanly alarm with which, on several occasions, whole multitudes of the natives are said to have fled before small parties of these foreigners, but also from the proceedings of a remarkable synod, convened at Armagh this year, for the purpose of taking into their consideration the perilous state of the country. Concluding that the sins and offences of the people were the great cause of the awful calamities that threatened them, they resolved to seek, in some general and national act of repentance, the salutary means both of propitiation and self-relief. 'The synod declared,' says the chronicler, 'that this calamity was to be held as an infliction of Divine justice, on account of the sins of the Irish people; and more especially because that, in former times, they used to make bond-slaves of the English whom they had purchased as well from merchants as from robbers and pirates: a crime for which God now took vengeance upon them by delivering them into like bondage themselves. For the English people,' it was added, 'while yet their kingdom was in a state of security, were accustomed, through a common vice of the nation, to expose their children for sale; and, even before they were pressed by want or distress, to sell their own sons and kinsmen to the Irish. It was, therefore, natural to suppose that the purchasers, as well as the sellers, in such a traffic, would well deserve, for their enormous crime, to be doomed themselves to wear the yoke of servitude.'" Acting upon the

spirit of these humane and Christian views, the synod unanimously decreed and ordered, that all the English throughout the island, who were in a state of slavery, should be restored to their former freedom. It may be remarked here, that slavery had, from a very early period, existed among the Irish, as is proved by the regulations respecting bondmen and bondwomen, which are found in some very ancient canons of our church. Wherever the practice, indeed, of piracy, whether in ancient or modern times, has prevailed, there the traffic in human creatures, as an ordinary article of commerce, has also existed; and it was in the course, as we have seen, of a predatory expedition of Nial of the Nine Hostages to the coast of Gaul, that St. Patrick, then a youth, was carried away and sold as a bond-slave in Ireland. Besides the slaves imported from England, of which traffic Bristol was the great mart, the Irish had also a class of bondmen called villeins, which were regarded, as the law expresses it, to the manor, and esteemed a part of the inheritance or farm. In referring to the remarkable synodic decree just cited, an Irish writer of the seventeenth century,—one of the many whom, at that time, the persecution of their country's creed at home compelled to carry their talents and industry to other shores,—indulges in a wish as deeply significant as it is melancholy and hopeless. 'If, then, the Irish,' he says, 'as Giraldus intimates, made themselves accomplices in the guilt of the English by buying their children, when offered willingly by them for sale, it were to be wished that the English nation, which reduced the children of those Irish to slavery, contrary to the will and wish of their parents, would in so far imitate the act of the Irish of that period, as to release their posterity, long suffering in servitude, and restore them to their former independence and freedom. For, if the lighter crime drew down on its perpetrators such punishment, how heavy a judgment must fall upon the greater and more lasting wrong?'

[To be continued.]

*Adventures of Captain Bonneville; or, Scenes in the Rocky Mountains of the Far West.* By Washington Irving, Esq., author of "The Sketch-Book," &c. 3 vols. 12mo. London, 1837. Bentley.

FOLLOWING up his "Astoria," Mr. Washington Irving has, in these volumes, penetrated yet further into the West, crossed the Rocky Mountains, and spread out before us the wild scenery, and perilous adventures, which pertain to the trappers, as the hunters for peltry are called, in these remote and uncivilised regions. He states that he received the chief part of his information from a Captain Bonneville, who, in May 1832, at the head of one hundred and ten followers, formed an expedition of this sort; and, after enduring every exciting variety of dangerous and romantic life, returned, at the end of nearly three years, again into the bosom of society.

selling the English taken by pirates, or otherwise.' Of all share in this barefaced falsification, Sir James Ware himself is to be acquitted, being, as Dr. Lanigan justly remarks, 'too honest to corrupt his authority.' The blame, therefore, of the dishonesty, or the ignorance, whichever it may have been, must lie at the door of his translators. The calumny, however, has been adopted, without examination or scruple, by others; and we find Rapin confusedly assigning, as the pretext for Henry's invasion, 'the Irish having taken some Englishmen prisoners, and afterwards sold them for slaves.' Speed, also, who takes the same false view of the subject, adds, in the genuine spirit of misrepresentation, 'which made the Irish clergy themselves confess, that they had deserved no other than that their land should be transferred to that nation whom they had so cruelly handled.'

It is only within the last ten or a dozen years that these parts have been partially visited by American trappers, and strange accounts are given of the competition among rival companies and parties, such as the Hudson's Bay, and bands of free trappers, to outwit and overreach each other, and to induce the Indians to traffic with them in the furs they have obtained. Capt. Bonneville is described as being of a sanguine temperament, and full of jovial feelings; but hardy, intrepid, and daring. Not fearing any adverse dealing, he boldly embarked in his undertaking; and, accommodating his associates with wagons, dashed off into the mountains. Here we soon learn,—

"In these rugged and elevated regions they began to see the black-tailed deer, a species larger than the ordinary kind, and chiefly found in rocky and mountainous countries: they had reached, also, a great buffalo range. Captain Bonneville ascended a high bluff, commanding an extensive view of the surrounding plains. As far as his eye could reach, the country seemed absolutely blackened by innumerable herds. No language, he says, could convey an adequate idea of the vast living mass thus presented to his eye. He remarked that the bulls and cows generally congregated in separate herds. Opposite to the camp at this place was a singular phenomenon, which is among the curiosities of the country. It is called the chimney. The lower part is a conical mound, rising out of the naked plain; from the summit shoots up a shaft or column, about one hundred and twenty feet in height, from which it derives its name. The height of the whole, according to Captain Bonneville, is a hundred and seventy-five yards. It is composed of indurated clay, with alternate layers of red and white sandstone, and may be seen at the distance of upwards of thirty miles."

This party was the first that ever crossed the crest of the Rocky Mountains, and reached those bounds where the rivers, instead of running towards the Atlantic, sought the Pacific shore. But, before we notice any of their general procedure, we will give our readers a sketch of a free trapper:—

"To explain the meaning of the appellation, free trapper, it is necessary to state the terms on which the men enlist in the service of the fur companies. Some have regular wages, and are furnished with weapons, horses, traps, and other requisites. These are under command, and bound to do every duty required of them connected with the service; such as hunting, trapping, loading and unloading the horses, mounting guard; and, in short, all the drudgery of the camp. These are the hired trappers. The free trappers are a more independent class; and, in describing them, we shall do little more than transcribe the graphic description of them by Captain Bonneville. 'They come and go,' says he, 'when and where they please; provide their own horses, arms, and other equipments; trap and trade on their own account, and dispose of their skins and peltries to the highest bidder. Sometimes, in a dangerous hunting-ground, they attach themselves to the camp of some trader for protection. Here they come under some restrictions; they have to conform to the ordinary rules for trapping, and to submit to such restraints, and to take part in such general duties, as are established for the good order and safety of the camp. In return for this protection, and for their camp-keeping, they are bound to dispose of all the beaver they take to the trader who commands the camp, at a certain rate per skin; or, should they

prefer seeking a market elsewhere, they are to make him an allowance of from thirty to forty dollars for the whole hunt.' There is an inferior order, who, either from prudence or poverty, come to these dangerous hunting-grounds without horses or accoutrements, and are furnished by the traders. These, like the hired trappers, are bound to exert themselves to the utmost in taking beavers, which, without skinning, they render in at the trader's lodge, where a stipulated price for each is placed to their credit. These, though generally included in the generic name of free trappers, have the more specific title of skin-trappers. The wandering whites who mingle for any length of time with the savages, have invariably a proneness to adopt savage habitudes; but none more so than the free trappers. It is a matter of vanity and ambition with them to discard every thing that may bear the stamp of civilised life, and to adopt the manners, habits, dress, gesture, and even walk of the Indian. You cannot pay a free trapper a greater compliment, than to persuade him you have mistaken him for an Indian brave; and, in truth, the counterfeits are complete. His hair, suffered to attain to a great length, is carefully combed out, and either left to fall carelessly over his shoulders, or plaited neatly, and tied up in otter skins, or party-coloured ribands. A hunting shirt of ruffled calico of bright dyes, or of ornamented leather, falls to his knee; below which, curiously fashioned leggins, ornamented with strings, fringes, and a profusion of hawk's bells, reach to a costly pair of moccasins of the finest Indian fabric, richly embroidered with beads. A blanket of scarlet, or some other bright colour, hangs from his shoulders, and is girt round his waist with a red sash, in which he bestows his pistols, knife, and the stem of his Indian pipe; preparations either for peace or war. His gun is lavishly decorated with brass tacks and vermilion, and provided with a fringed cover, occasionally of buckskin, ornamented here and there with a feather. His horse, the noble minister to the pride, pleasure, and profit of the mountaineer, is selected for his speed and spirit, and prancing carriage, and holds a place in his estimation second only to himself. He shares largely of his bounty, and of his pride and pomp of trapping. He is caparisoned in the most dashing and fantastic style; the bridles and crupper are weightily embossed with beads and cockades; and head, mane, and tail, are interwoven with abundance of eagles' plumes, which flutter in the wind. To complete this grotesque equipment, the proud animal is bestreaked and bespotted with vermilion, or with white clay, whichever presents the most glaring contrast to his real colour. Such is the account given by Captain Bonneville of these rangers of the wilderness, and their appearance at the camp was strikingly characteristic. They came dashing forward at full speed, firing their fuses, and yelling in Indian style. Their dark sunburnt faces, and long flowing hair, their leggins, flaps, moccasins, and gaudily dyed blankets, and their painted horses, richly caparisoned, gave them so much the air and appearance of Indians, that it was difficult to persuade oneself that they were white men, and had been brought up in civilised life."

The following relates to the supply of food for the dwellers in these high places, and is a remarkable description:—

"The Salmon river is one of the upper branches of the Oregon or Columbia; and takes its rise from various sources, among a group of mountains to the north-west of the Wind river

chain. It takes its name from the immense shoals of salmon which ascend it in the months of September and October. The salmon on the west side of the Rocky Mountains are, like the buffalo on the eastern plains, vast migratory supplies for the wants of man, that come and go with the seasons. As the buffalo, in countless throngs, find their certain way with the transient pasturage on the prairies, along the fresh banks of the rivers, and up every valley and green defile of the mountains, so the salmon, at their allotted seasons, regulated by a sublime and all-seeing Providence, swarm in myriads up the great rivers, and find their way up their main branches, and into the minutest tributary streams; so as to pervade the great arid plains, and to penetrate even among barren mountains. Thus, wandering tribes are fed in the desert places of the wilderness, where there is no herbage for the animals of the chase, and where, but for these periodical supplies, it would be impossible for man to subsist. The rapid currents of the rivers that run into the Pacific render the ascent of them very exhausting to the salmon. When the fish first run up the rivers, they are fat and in fine order. The struggle against impetuous streams and frequent rapids, gradually renders them thin and weak, and great numbers are seen floating down the rivers on their backs. As the season advances, and the water becomes chilled, they are flung in myriads on the shores, where the wolves and bears assemble to banquet on them. Often they rot in such quantities along the river banks, as to taint the atmosphere. They are commonly from two or three feet long."

The most powerful Indian tribe in these regions are the Blackfeet,—the Crows are next; and then come the Nez Percés, Flatheads, Hanging-ears, and others; but nearly all in bitter hostility one against the other:—

"The Nez Percés, the Flatheads, and the Hanging-ears, pride themselves upon the number of their horses, of which they possess more in proportion than any other of the mountain tribes within the buffalo range. Many of the Indian warriors and hunters, encamped around Captain Bonneville, possess from thirty to forty horses each. Their horses are stout, well-built ponies, of great wind, and capable of enduring the severest hardship and fatigue. The swiftest of them, however, are those obtained from the whites while sufficiently young to become acclimated and inured to the rough service of the mountains. . . . One day a large band of Blackfeet appeared in the open field, but in the vicinity of rocks and cliffs. They kept at a vary distance, but made friendly signs. The trappers replied in the same way, but likewise kept aloof. A small party of Indians now advanced, bearing the pipe of peace; they were met by an equal number of white men, and they formed a group midway between the two bands, where the pipe was circulated from hand to hand, and smoked with all due ceremony. An instance of natural affection took place at this pacific meeting. Among the free trappers, in the Rocky Mountain band, was a spirited young Mexican, named Loretto; who, in the course of his wanderings, had ransomed a beautiful Blackfoot girl from a band of Crows, by whom she had been captured. He had made her his wife, after the Indian style, and she had followed his fortunes ever since, with the most devoted affection. Among the Blackfoot warriors who advanced with the calumet of peace, she recognised a brother. Leaving her infant with Loretto, she rushed forward, and threw herself upon her brother's neck, who clasped his long-lost sister to his heart, with a warmth

of affection but little compatible with the reputed stoicism of the savage. While this scene was taking place, Bridger left the main body of trappers, and rode slowly towards the group of smokers, with his rifle resting across the pommel of his saddle. The chief of the Blackfeet stepped forward to meet him. From some unfortunate feeling of distrust, Bridger cocked his rifle, just as the chief was extending his hand in friendship. The quick ear of the savage caught the click of the lock; in a twinkling, he grasped the barrel, forced the muzzle downward, and the contents were discharged into the earth at his feet. His next movement was to wrest the weapon from the hand of Bridger, and fell him with it to the earth. He might have found this no easy task, had not the unfortunate leader received two arrows in his back during the struggle. The chief now sprang into the vacant saddle, and galloped off to his band. A wild hurry-scurry scene ensued; each party took to the banks, the rocks, and trees, to gain favourable positions, and an irregular firing was kept up on either side, without much effect. The Indian girl had been hurried off by her people, at the outbreak of the affray. She would have returned, through the dangers of the fight, to her husband and her child, but was prevented by her brother. The young Mexican saw her struggles and her agony, and heard her piercing cries. With a generous impulse, he caught up the child in his arms, rushed forward, regardless of Indian shaft or rifle, and placed it in safety upon her bosom. Even the savage heart of the Blackfoot chief was reached by this noble deed. He pronounced Loretto a madman for his temerity, but bade him depart in peace. The young Mexican hesitated; he urged to have his wife restored to him; but her brother interfered, and the countenance of the chief grew dark. The girl, he said, belonged to his tribe—she must remain with her people. Loretto would still have lingered, but his wife implored him to depart, lest his life should be endangered. It was with the greatest reluctance that he returned to his companions. The approach of night put an end to the skirmishing fire of the adverse parties, and the savages drew off without renewing their hostilities.

A few months subsequent to the event just related, the young Mexican settled his accounts with the Rocky Mountain Company, and obtained his discharge. He then left his comrades, and set off to rejoin his wife and child among her people; and we understand that, at the time we are writing these pages, he resides at a trading-house established of late by the American Fur Company, in the Blackfoot country, where he acts as an interpreter, and has his Indian girl with him."

In the transactions of Bonneville's time this Loretto acts a conspicuous part; but we must refer the Indian conflicts, ambuscades, assassinations, and butcheries, to the readers of the work itself; only observing, that they are more prolific of extraordinary heroism in females, than we were prepared to expect among these savages. How they are taught murder by their more civilised, but not less cruel invaders, will appear from the following:—

"Who can calculate on security in the midst of the Indian country, where the foe lurks in silence and secrecy, and seems to come and go on the wings of the wind? The horses had scarce been turned loose, when a couple of Arickara (or Rickaree) warriors entered the camp. They affected a frank and friendly demeanour; but their appearance and movements awakened the suspicions of some of the veteran trappers, well versed in Indian wiles.

Convinced that they were spies sent on some sinister errand, they took them into custody, and set to work to drive in the horses. It was too late; the horses were already gone. In fact, a war party of Arickaras had been hovering on their trail for several days, watching with the patience and perseverance of Indians, for some moment of negligence and fancied security, to make a successful swoop. The two spies had evidently been sent into the camp to create a diversion, while their confederates carried off the spoil. The unlucky partisan, thus robbed of his horses, turned furiously on his prisoners, ordered them to be bound hand and foot, and swore to put them to death unless his property were restored. The robbers, who soon found that their spies were in captivity, now made their appearance on horseback, and held a parley. The sight of them, mounted on the very horses they had stolen, set the blood of the mountaineers in a ferment; but it was useless to attack them, as they would have but to turn their steeds and scamper out of the reach of pedestrians. A negotiation was now attempted. The Arickaras offered what they considered fair terms; to barter one horse, or even two horses, for a prisoner. The mountaineers spurned at their offer, and declared that, unless all the horses were relinquished, the prisoners should be burnt to death. To give force to their threat, a pyre of logs and fagots was heaped up and kindled into a blaze. The parley continued: the Arickaras released one horse and then another, in earnest of their proposition; finding, however, that nothing short of the relinquishment of all their spoils would purchase the lives of the captives, they abandoned them to their fate, moving off with many parting words and lamentable howlings. The prisoners seeing them depart, and knowing the horrible fate that awaited them, made a desperate effort to escape. They partially succeeded, but were severely wounded and retaken; then dragged to the blazing pyre, and burnt to death in the sight of their retreating comrades. Such are the savage cruelties that white men learn to practise who mingle in savage life; and such are the acts that lead to terrible recrimination on the part of the Indians. Should we hear of any atrocities committed by the Arickaras upon captive white men, let this signal and recent provocation be borne in mind. Individual cases of the kind dwell in the recollections of whole tribes; and it is a point of honour and conscience to revenge them."

With one quotation more we dismiss these entertaining volumes; it is a curious one, the description of the country of one Indian tribe, which seems to have the *amor patriæ* strongly impressed.

"Before (says our author) we accompany Captain Bonneville into the Crow country, we will impart a few facts about this wild region, and the wild people who inhabit it. We are not aware of the precise boundaries, if there are any, of the country claimed by the Crows; it appears to extend from the Black Hills to the Rocky Mountains, including a part of their lofty ranges, and embracing many of the plains and valleys watered by the Wind river, the Yellowstone, the Powder river, the Little Missouri, and the Nebraska. The country varies in soil and climate; there are vast plains of sand and clay, studded with large red sandhills: other parts are grand and picturesque: it possesses warm springs and coal-mines, and abounds with game. But let us give the account of the country as rendered by Arapooish, a Crow chief, to Mr. Robert Campbell, of the

Rocky Mountain fur company. 'The Crow country,' said he, 'is a good country. The Great Spirit has put it exactly in the right place; while you are in it you fare well—when ever you go out of it, which ever way you travel, you will fare worse. If you go to the south, there you have to wander over great barren plains; the water is warm and bad, and you meet the fever and ague. To the north it is cold; the winters are long and bitter, and no grass; you cannot keep horses there, but must travel with dogs. What is a country without horses? On the Columbia they are poor and dirty, paddle about in canoes, and eat fish. Their teeth are worn out; they are always taking fish-bones out of their mouths. Fish is poor food. To the east, they dwell in villages; they live well; but they drink the muddy water of the Missouri—that is bad. A Crow's dog would not drink such water. About the forks of the Missouri is a fine country: good water; good grass; plenty of buffalo. In summer, it is almost as good as the Crow country: but in winter it is cold; the grass is gone; and there is no salt weed for the horses. The Crow country is exactly in the right place. It has snowy mountains and sunny plains; all kinds of climates, and good things for every season. When the summer heats scorch the prairies, you can draw up under the mountains, where the air is sweet and cool, the grass fresh, and the bright streams come tumbling out of the snow banks. There you can hunt the elk, the deer, and the antelope, when their skins are fit for dressing; there you will find plenty of white bears and mountain sheep. In the autumn, when your horses are fat and strong from the mountain pastures, you can go down into the plains and hunt the buffalo, or trap beaver on the streams. And when winter comes on, you can take shelter in the woody bottoms along the rivers; there you will find buffalo meat for yourselves, and cotton-wood bark for your horses; or you may winter in the Wind river valley, where there is salt weed in abundance. The Crow country is exactly in the right place. Every thing good is to be found there. There is no country like the Crow country.' Such is the eulogium on his country by Arapooish. We have had repeated occasions to speak of the restless and predatory habits of the Crows. They can muster 1500 fighting men; but their incessant wars with the Blackfeet, and their vagabond, predatory habits, are gradually wearing them out."

*The Great Metropolis: Second Series.* By the Author of "Random Recollections of the Lords and Commons." 2 vols. 12mo. London, 1837. Saunders and Otley.

It is hardly possible to be serious with this second series of as curious a species of book-making as the public has been called upon to swallow and digest even in these days of literary manufacture. The subjects represented, or rather mis-represented, by the author, in this prolongation of his labours, are, Almack's, Political Opinions, Literature, Authors and Publishers, the Bank of England, the Stock Exchange, the Royal Exchange, the Old Bailey, Newgate, and that distinguished class of our periodical literature known by the name of Penny-a-liners.

Of Almack's, he knows as much as a Highland Scot knows of Italian music. The trash of pseudo-fashionable novels, the common journalist notices, and, perhaps, some inquiries through a waiter, with an inventive colouring of his own, furnish the picture of drunken brutes of lords, and absurdities about mammas and daugh-

ters, exclusives, &c. &c. &c., which is to pass for a likeness of this aristocratic resort.

Under "Politics" we have a most extravagant account of the Radicals, or Destructives, about town, and particularly in Marylebone; and the writer declares it is derived from his personal attendance at their meetings:—he does not say he visited Almack's! If not true, this is a horrid caricature: if true, it is yet more disgusting. He is describing the "Great Radical Association of England," which met every Tuesday at Mr. Savage's public-house, and he says:—

"The proceedings usually occupied about three hours. Before one hour had elapsed, the 'great hall' was 'choke full' of smoke. The scene was one which would have done a poet's heart good. Nothing could be more poetical than the graceful way in which the volumes of smoke curled, as they were whiffed, redolent of heavy wet, from each mouth, before losing themselves in the general mass,—especially in those cases in which two or three of the volumes affectionately entwined themselves in each other's embraces. A wag one night popped his head in at the door, and asked the patriot next to him what it was all about. The Destructive, in a gruff brutish tone, replied—'Vy, it's jist about a-ending.' 'Then,' said the other, coughing loudly, as if already half suffocated, 'it looks as if it would all end in smoke.'

"The torrents of eloquence which each successive speaker poured out, never interrupted the business of the house. In fact, the 'great hall' on such occasions only presented the spectacle of a tap-room on an enlarged scale. Mr. S——, to 'keep up the consarn,' as a bricklayer's hodman one night happily expressed himself, occasionally gave the 'Great Radical Association of England' five minutes of his seditious oratory; but at other times, he and a couple of pot-boys had their hands sufficiently full in executing the orders for 'haccy' and heavy wet. In giving these orders, the parties always spoke as loudly as did the demagogue for the time being. The effect was infinitely ludicrous. Take the following as an illustration. Dr. Wade was the orator:—'I say, gentlemen, that until the working classes are united among themselves, they will never ['Boy, bring me a pint of porter with the chill taken off'] be able to do any thing ['I say, you little chap with the jacket, get me a pipe and 'baccy'] to redress their grievances. It is now four years—['I say, Mr. S——, I won't stand that any longer any how. It's a good quarter o' an hour since I ordered a glass o' gin-and-water, and I've not got it yet.—'You'll get it presently.'] It is now four years since the Reform Bill passed into a law, and none of you ['Bring me a match to light my pipe with—will you, boy?'] have reaped the slightest benefit—[Mr. S——. 'Did you pay for your porter, Jack Hogan?'] 'Voy, to be sure I did. This here Bob Martin,' pointing to a son of St. Crispin who sat beside him, 'saw me fork out the hapienies. Didn't you, Bob?' 'Yes, I'll take my oath on't Jack.' Not one of you, I say, gentlemen, have yet derived the slightest benefit from the Reform Bill, and until ['Take a hearty swig of this heavy, Harry, my boy'] associations of this kind are established in all parts of the country, you never can ['Boy, a pint of porter of the right sort; none of your swipes now'] raise yourself to that station in society which you are entitled to occupy. Gentlemen, we owe whatever liberty we possess to a body of men who roamed eight hundred years ago amidst the forests of Germany: let us only be ['I say, Ned, old chap, shall we have another go of gin-and-water,'] united and energetic, and

we will complete what our German ancestors ['Mr. S—, have you got no spit-boxes?'] so gloriously began. I am sure, gentlemen, I need not remind you, in pressing on you the advantages of union, of the well-known story of ['Bring me a pint of half-and-half, you boy with the apron round your middle!'] the man and the bundle of sticks. I am well aware of what might be done by—[Here the worthy doctor was interrupted by Jim Rogers puffing a quantity of smoke down his throat while Jim was lighting his pipe afresh at the candle, which stood on a table just before the doctor's face. The effect of the four-feet-six patriot interposing his head and shoulders between the reverend orator and the candle, was that of a temporary total eclipse of the jolly-looking cabbage-coloured physiognomy of the latter, and caused a burst of laughter from the Destructive assemblage. After the cessation of a violent fit of coughing, caused by the dense volume of smoke which Jim had injected from his mouth, the doctor good-naturedly resumed]—'I am well aware, I was going to say, gentlemen, of what might be done by physical force; but I, as a minister of the Gospel of peace, cannot recommend you to have recourse to such extreme measures. I would say ['Mr. S—, bring me a crust of bread and cheese'] exert yourselves peacefully but spiritedly; ['Another glass of brandy-and-water, Tom, my boy;'] do this, and ['I'm blown if I don't have another pint of porter. Fill this pot again, Mr. S—, and here's your blunt;'] do this, I say, and you are sure eventually to succeed. Allow me to say, gentlemen, before I sit down, that perhaps I have gone, in the first part of my speech, a little too far. [A gruff voice from a stranger looking in at the door, 'I think you have a deuced deal, doctor; so good night,' followed by cries of 'No, no!'] If, gentlemen, I have, in the excitement of the moment—[Here the worthy divine wiped the perspiration off his brow, and gave two or three gentle coughs]—if I have said any thing unbecoming, I am sure you will ascribe it all to my zeal in your cause.' The rev. gentlemen sat down amidst tumultuous cheers, in which the stentorian lungs of 'the people' were ably aided by the application of Mr. S—'s pots to the forms on which the Destructives sat. In the midst of the uproarious applause, a recent importation from Tipperary, with his coat off and his breast open, just as if newly returned from paving the streets, advanced to the platform, with a pot in his hand, foaming with Barclay and Perkin's entire; and, looking the orator, with an approving smile, full in the face, sung out, 'Bravo, docther; here's your jolly good health! Isn't it yourself, docther, will be afther taking a drop of it to wet your throat with?' So saying, the Emerald handed 'the pewter' and its contents to the Radical divine, who took a hearty draught of the latter."

The Literary and Publishing chapters are a bundle of guesses, misinformation, and errors; mixed up with here and there a notorious fact. The style is usually a combination of platitudes and bombast; but occasionally can boast of novel nonsense. Thus a successful author, desirous of publishing a Sequel, consults his booksellers, but "they disadvised him from the speculation; and pointed out the probable difference as to sale, between their extensive and powerful bookselling connexion, and his utter want of such connexion. The advice was disregarded: it was ascribed to interested motives. To press he would go, and to press he went, on his own account. The same number of copies, viz. 20,000, was ordered to be thrown off. The

book appeared; it was largely advertised. What does the reader suppose was the number of copies sold in the same time as it required to dispose of 20,000 of the former parts, published by the influential house alluded to? It was considerably under 500!"

The Bank and the two Exchanges are like the rest, merely newspaper matter hashed up into book form—neither more nor less authentic, neither more nor less new, neither more nor less intelligent. Even at the Old Bailey our author is not more at home nor conversant with his subject. He speaks, if we gather his meaning rightly, of our worthy friend, John Adolphus, who delivered a very good speech at the Literary Fund dinner on Wednesday week, as having been dead some years (see p. 197); though it may mean Mr. Andrews: at any rate, the whole account is erroneous. But, however, there is one curious character here, whose portrait may serve as the best extract we could give from the work.

"There is one eccentric character whom it were unpardonable to pass over in a chapter devoted to the Old Bailey: I allude to Mr. Curtis, who is as constantly to be seen in the New Court as the judge himself. Mr. Curtis is known to every body in and about the place, and nobody can know him without being attached to him. A more honest, kind-hearted, or inoffensive creature, does not exist. For nearly a quarter of a century has he been in constant attendance at the Old Bailey, from the opening to the close of each session, never, so far as I am aware, being absent, with the exception of two occasions when attending the county assizes. He writes short-hand; and has, I understand, a stenographical work in the press, to be called 'Short-hand made Shorter.' He is so passionately fond of writing the trials, that he takes down, for his own special amusement, every case verbatim which comes before the New Court. What his horror of the Old Court arises from, I have never been able to learn; but one might as soon expect to find the Bishop of London in a Dissenting chapel, as to find Mr. Curtis in the Old Court. He is celebrated for his early rising: four o'clock in the morning he considers a late hour. It is quite an era in his life to lie in bed till five. By seven he has completed his morning journeys, which usually embrace a distance, including doubles—for he is particularly fond of going over the same ground twice, if not thrice, in a morning—of from six to eight miles. Among the places visited, Farringdon Market, Covent Garden Market, Hungerford Market, and Billingsgate, are never, under any circumstances, omitted. Farringdon Market has the honour of the first visit, because, as good luck (for it) would have it, he chances to reside in that neighbourhood. His own notion is, that he has walked as much within the last thirty years, before seven in the morning, as would have made the circuit of the globe three or four times. He is, perhaps, the most inveterate pedestrian alive; locomotion seems to be a necessity of his nature. It is the severest punishment that could be inflicted on him to be obliged to remain, for any length of time, in one place. There is only one exception to this rule; and that is, when he is taking down the trials at the Old Bailey. He regards it as the greatest favour that could be conferred on him, to be asked to walk ten or twelve miles by an acquaintance. He frequently inquires of his friends, whether they have occasion to go to any of the villages in the neighbourhood of London; adding, that in that case, he will be

happy to take 'a step' with them. He some time since kindly offered to give me a 'full, true, and particular account' of the eventful vicissitudes of his life, if I would take a walk out to Hampstead, or any other village in the vicinity of London, with him.

"He is particularly partial to wet weather, and is as fond of a rainy day as if he were a duck. He is never so comfortable as when thoroughly drenched. Thunder and lightning throw him into perfect ecstasies. \* \* \*

"He possesses a singularly strong constitution. I have spoken of his early rising; I should have mentioned, in proof of the vigorousness of his frame, that he is also late in going to bed. On an average, he has not, for the last twenty years, slept above four hours in the twenty-four. He is often weeks without going to bed at all. It sufficeth him, as Wordsworth would say, to have two or three hours' doze in his arm-chair, and with his clothes on. In the year 1834, he was seized with the ambition of performing an unusual feat in this way. He aspired to the reputation of being able to sit up one hundred consecutive nights and days, without stretching himself on a bed, or in any way putting himself into a horizontal position, even for one moment. He actually did, incredible as it may appear, accomplish the extraordinary undertaking. For one century of consecutive nights and days, as he himself loves to express it, Mr. Curtis neither put off his clothes to lie down in bed, nor any where else, for a second. Any little sleep he had during the time was in the shape of a doze, as just mentioned, in his arm-chair. His taste for executions, and for the society of persons sentenced to death, is remarkable. He has been present at every execution in the metropolis and its immediate neighbourhood, for the last quarter of a century. This may appear so improbable a statement, that it may be proper to mention I have it from his own lips; and nothing in the world would induce him to state what is not true. Nay, so powerful is his propensity for witnessing executions, that, some years since, he actually walked down before breakfast to Chelmsford, which is twenty-nine miles from London, to be present at the execution of Captain Moir. For a great many years past he has not only heard the condemned sermon preached in Newgate, but has spent many hours in their gloomy cells, with the leading men who have been executed in London during that time. He was a great favourite with poor Fauntleroy. Many an hour did Mr. Curtis spend in Newgate with that unfortunate man. He was with him a considerable part of the day previous to his execution. With Corder, too, of Red Barn notoriety, he contracted a warm friendship; sleeping, I think he has told me, repeatedly on the same bed as that unhappy man had been accustomed to sleep on. Immediately on the discovery of the murder of Maria Martin, he hastened down to the scene, and there remained till the execution of William Corder, making a period of several weeks. He afterwards wrote 'Memoirs of Corder,' which extended to upwards of three hundred pages. The work was published by the present lord mayor, then Mr. Kelly; and, being published in sixpenny numbers, had a large sale. Three portraits, all engraved on one piece of plate, embellished the work. They were portraits of William Corder, Maria Martin, and Mr. Curtis himself. I believe this is the only literary work of Mr. Curtis; he is proud of it; nothing pleases him better than to be called the biographer of Corder."

Of the Penny-a-liners we may presume the writer really possesses some knowledge; but his stories about them are weary, stale, flat, and unprofitable. Otherwise it might have been curious to obtain some accurate information of a class of men who daily and weekly inundate the public with as much folly and falsehood as the press, stamped and unstamped, can bear to carry.

## ARTS AND SCIENCES.

### ROYAL INSTITUTION.

ON Friday evening, Dr. Boase delivered an interesting lecture on tin, and its application to the fine arts. The working and smelting of tin are of very ancient date; it is recorded as having been known at or before the time of Moses, and introduced into the East by the Mideonites. Diodorus Siculus, lib. v. cap. 22, writes of the Cassiterides, now the British isles, that a store was established at *Ictis*, where the metal was brought in carts, at low water, and whence it was transported to Gaul. *Ictis*, of the olden time, from its semi-insular position, is supposed to have been the rocks of the present day on the coast of Cornwall, known by the name of St. Michael's: for this opinion, see "Cornish Geological Transactions." The ores of Cornwall are abundant, and of good quality; also those of the islands in the Eastern Archipelago: in Saxony, Bohemia, and Chili, ore is found, but in small quantities, and very inferior. Tin, in appearance, is very like lead, only whiter, and not so liable to tarnish; it emits a peculiar odour when rubbed, possesses the singular property, on being bent, of producing a crackling noise, and is fusible at 442° Fahr. The ore is found in two forms, oxides and tin-pyrites, or sulphurets; the former used for reduction, the latter selected for cabinet specimens. The oxides are more or less crystallised in four-sided prisms variously truncated; samples of great specific gravity have been procured, so pure and rich as to have yielded 78½ per cent. In proceeding to point out its geological position, Dr. Boase stated that, when it occurs in veins or lodes, it is called mine-tin; when worked from various diluvial deposits, stream-tin. The stratum in which stream-tin is met with, and which is technically named tin-ground, always rests on the solid rock, the nature of the rock varying according to its position on a higher or lower level—the geological arrangement of the superincumbent layers also differing from the like cause; but in either position, whether high or low, the tin-ground is always covered with a vegetable bed. The following description of the Pendelon and Pentuan workings, sections of which were exhibited, will render this more clear. In the Pendelon the foundation, if it may be so termed, is granite; on this the tin-ground, then a vegetable bed, granitic debris, another vegetable bed, granitic debris, marshy ground on the surface; in this case the vegetable beds are of considerable thickness, similar to the coal formation. In the Pentuan the base is slate-rock, on which rests the tin-ground, covered by a thin vegetable bed, upon which lies river-silt: the intermediate beds are wanting. In the river-silt fossil remains have been found; one specimen is a large humerus of an animal of the ox tribe. The oxides of tin are not of one uniform sort: a fibrous oxide, called toad's-eye, is procured near Penzance. Gold occurs in the stream-works, to collect which the workmen carry quills; and proud is he who picks up

sufficient for a wedding-ring. In working stream-tin, they go from one place to another, without any regularity of operations; the reason they give you for this is, that the old men have been there before them, which is soon discovered by the layers being in a confused state, not in their natural order. The process of working and smelting mine-tin is complicated: the mineral lodes traverse the solid rock in thin layers or strata, mixed with quartz and other substances. The manner of finding the lode is to trace, from the valley to the higher ground, the granite debris; this is called shoaling the stream. It requires an experienced eye to discover mineral matter in the granite pebbles; and, although the matrix presents a poor appearance, it often works profitably. Dr. Boase was of opinion that gold, silver, and other valuable metals, are mixed up with the earthy matter; and that the establishment of a mineralogical school, for the instruction of the workmen, would be attended with beneficial results. The ores are pounded with stamps and washed, and then called slime, which is placed on a succession of planes at different angles; a stream of water, trickling down, separates the particles according to their specific gravities. Arsenical pyrites and sulphuret of copper are always mixed with the ore; and the former being of equal gravity, fire is used to separate them. This is done in a reverberatory furnace: sulphurous acid gas is evolved, the arsenical pyrites sublimed, and deposited on the flues. The burnt tins are more or less red; the metal is run out into blocks, which are sent to the coining hall, and a duty of 4s. per cwt. paid to the duchy. Grain tin is always made from stream tin, and used for the finer purposes of art. Granulation is thus produced: block-tin is placed over a brazier of charcoal; when it begins to melt, it is instantly drawn up to some height, and let fall. Works on chemistry are defective on this point; they, and even Berzelius, state, that grain-tin, melted down and run out, becomes granulated, and that the residue is common tin; the former method described was, fifteen years ago, and is still, practised in Cornwall. Various experiments were shewn with the oxides and chlorides of tin, exhibiting their various properties under different combinations, and the changes they undergo. Dr. Boase alluded to the generating ammonia as an example of chemical change: which being beautifully curious, we will state the process. Sal ammoniac, powdered and mixed with three-fourths of its weight of powdered lime, and heated in a retort, gives out the gas plentifully. Sal ammoniac, or muriate of ammonia, consists of muriatic acid and ammonia, and the acid itself is constituted of chlorine and hydrogen; lime is composed of the metal calcium and oxygen. When the muriate of ammonia and lime act upon each other, the chlorine of the muriatic acid combines with the calcium of the lime, and the resulting chloride of calcium remains in the retort, while the hydrogen of the acid combines with the oxygen of the lime to form water, which evaporates with the ammonia evolved. Peroxide of tin, after calcination, is called tin-putty, and is used for polishing marbles, &c., and for enamelling. The chlorides form, for the dyers, in some instances, mordants; the perchloride is employed, with cochineal, for this purpose: it, also, heightens the colour considerably. Dr. Boase did not enter upon the alloys and amalgams compounded with this metal—bronze, bell-metal, mosaic gold, coatings for mirrors, &c.; the whole of which are replete with interest.

[Apropos of the lecturer: the following notice has been in type for insertion for several weeks; and we cannot delay it after this.—Ed. L. G.]

AT a special general meeting of the Royal Geological Society of Cornwall (Penzance), Davies Gilbert, Esq. president, in the chair, Dr. Boase, who has for many years been well known to our readers as the zealous secretary, then tendered his resignation, in consequence of his removal to London. This was received by the president, who paid a most feeling and eloquent tribute to Dr. Boase's invaluable services; not only to the Society as its secretary, but to the county, as the most successful investigator of its geological structure; and to the miner, as a solver of his doubts respecting the composition of such unusual minerals as sometimes fall in his way. A vote of thanks to Dr. Boase, for his important services to the Society as its secretary, for many of its most prosperous years, as well as for his general kindness in imparting the results of his successful labours, was proposed by the Rev. C. V. Le Grice, and seconded by Richard Pearce, Esq., with a proposition that Dr. Boase should be immediately elected an honorary member, which vote was carried by acclamation; and Mr. Henwood, F.G.S., the curator, was requested to act as secretary *pro tempore*.

### GEOGRAPHICAL SOCIETY.

MR. HAMILTON (president elect) in the chair.—Several foreign, honorary, and corresponding members of distinguished name were elected.—The chief business of the evening was the bestowal of the royal premium on Capt. Fitzroy. The chairman, in presenting it, addressed Capt. Fitzroy nearly in the following words:—"In consequence of the unavoidable absence of the president of this society, I have been unexpectedly called upon to announce to you, that the council of the Royal Geographical Society have resolved to award to you the royal premium given by his majesty for the year 1836, in testimony of the high sense they entertain of the valuable additions made by you to our knowledge of a large portion of the South American Continent, and the adjacent islands, whilst you were employed in his majesty's service on the late survey of the coasts of Patagonia, Chili, and Peru. It was in the autumn of the year 1831, that you were commissioned by the lords of the admiralty to proceed in command of H. M. S. Beagle, to conduct this important survey which was to open to the commercial world a new series of approaches to that part of South America, where are daily developing themselves germs of political associations and mercantile prosperity. The eyes of all who were interested in the subject, were directed towards your operations until your return to England in November last, after having surveyed, either in person or at your own expense, seven thousand miles of coast from the Rio de la Plata, on the east, to Guayaquil, on the west side of South America, and after having circumnavigated the globe: and they now greet your return with a degree of pleasure and gratification, and with a portion of national pride commensurate with the magnitude of the scale on which you have acted, and the unceasing perseverance which you have displayed in conducting to its term the task committed to your guidance. During these five years, one of the first of your discoveries laid open to the commercial and scientific world the harbour of Bahia Blanco, in latitude 39°, the only one upon the eastern coast in which a considerable number of line-of-battle ships can lie at anchor. On the same coast, in the face of great and

numerous difficulties, you explored, for the first time, the deep and rapid river of Santa Cruz, from the coast, in 50 degrees S. latitude, to the Cordilleras; the first occasion, it is believed, this part of the continent has ever been crossed by an European. You surveyed, at your sole expense, that very interesting and important feature in the political and physical geography of those seas, the Falkland Islands. You have given to our maps, besides the great inland waters, called those of Otway and Skyring, a new and important channel through the Tierra del Fuego. On the western side of South America you have, for the first time, laid down the archipelago of islands lying to the south of Chiloe, called Chonos. Amongst various material alterations in the old Spanish surveys of the shores of the Pacific and adjacent islands may be mentioned, as a sample of the rest, the important fact, that the island of Chiloe was before no less than 25 miles in error. When your term of service was on the point of expiring, and you were about to proceed on your way home, your zeal for science prompted you to engage a vessel at your own expense for continuing and completing the survey of the coast of Peru as far as Guayaquil; the result of which has been the examination of nearly seventy ports and roadsteads, of which at least forty were never before known to be of capacity to admit of vessels to enter. In circumnavigating the globe, you have, for the first time, carried a complete chronometric chain of measurement, having had twenty-two chronometers under your charge—many of them your own property—from east to west round the globe. You have, also, with the assistance of Mr. Darwin, the well-known naturalist, given us the best account we possess of the earthquake which took place at Concepcion, in 1835; a phenomenon which has given rise to much interesting discussion among those who are engaged in physical and geological pursuits. Captain Fitzroy, those who are best able to form a judgment of the services you have rendered to the science of geography, feel that they give you a fair and just title to be enrolled in the list of the most celebrated navigators, whose names adorn the maritime annals of this or of any other country. I cannot conclude without the expression of the high gratification which I feel at being thus made the organ of communicating to you this mark of the high admiration and esteem in which you are held by this distinguished Society. The premium having been given to Captain Fitzroy, that gentleman replied in the following terms:—"Sir,—Before attempting to thank you for the deep gratification which I feel, I must, indeed, disclaim having such pretensions to the position in which the too favourable opinion of the Royal Geographical Society would place me. But, Sir, however little I may really be worthy of much that you have been pleased to say, I feel so deeply that this honourable testimonial of the approbation of my countrymen is a most ample reward for those attempts to serve my country which I am conscious of having made, that I beg you will accept a feebly attempted expression of sincerely grateful feelings, which cannot be shewn adequately by words. Permit me, Sir, to mention that the Royal Geographical Society have removed from my breast every painful feeling which had there harboured. I, now, am rewarded for those services, such as they were, in the execution of which I was encouraged and assisted by the sincere friendship and decided support of the hydrographer of the admiralty, and by the most cordial co-operation of Mr. Darwin, and the officers of the

Beagle. And, Sir, to shew my gratitude to the distinguished Society of my countrymen over whom you are now presiding, I take this opportunity of declaring that if, at any future time, my humble efforts should be thought likely to be useful, I shall be willing and proud to prefer public duty to private happiness. I believe, Sir, there is a gentleman now present, whose name I have already mentioned, and of whose claims to your notice I beg you will allow me to say a few words. Mr. Charles Darwin embarked in the Beagle, in 1831, as a zealous volunteer in the cause of science. At his own expense he passed five years on board the Beagle, or travelling in those countries she visited; and, at his return, most liberally presented his valuable collections to the public. When it is considered that Mr. Darwin never ceased to be a martyr to sea-sickness, his perseverance may be appreciated. Of the value of his labours, I understand you have already been made partially aware; and, I believe, I am quite correct in saying that the best judges estimate those labours very highly. You have been pleased to mention the beneficial effects which are likely to result from the information obtained during this survey; and, I am sure, you will be of opinion that they will be much enhanced by that information being made available to the public as speedily as possible. All the charts and plans are finished, and deposited in the hydrographical office; and the principal written information will be completed during this year. You have been pleased, Sir, to notice the chronometric chain of measurement which has been carried round the world, from east to west. I have not yet discovered any error in the calculations or observations upon which the results of those measurements depend; and anxiously look forward to the results of some future chain of measurements, made from west to east, with a large number of chronometers, kept at an uniform temperature. Allow me, Sir, to thank yourself, in particular, for the very kind and, to me, so gratifying, manner in which you have communicated the sentiments of this Society, upon whose time and patience, I fear, I have trespassed too long."

A short but interesting paper, being extracts from the diary of an attempt to ascend the river Santa Cruz, with the boats of H. M. S. Beagle, by Captain Fitzroy, was read. To this communication we may have occasion to revert. Dr. Andrew Smith, leader of the late expedition into the interior of Southern Africa, was present at the meeting, and laid on the table many beautiful drawings of the natives, and of objects in natural history. He also stated, that he hoped to be able to open for exhibition, by the month of July, all the specimens in natural history, collected during the late journey of nearly eighteen months, and which, owing to the liberality of the Treasury, had been allowed to be landed free of duty; and that, before Christmas, the full account of his travels over 3000 miles of country would be laid before the public.

#### ENTOMOLOGICAL SOCIETY.

MAY 1st. J. F. Stephens, Esq. president, in the chair.—Numerous donations of entomological works and insects were announced from the Royal and other English and foreign societies of entomology, and thanks ordered to be returned to the several donors thereof. The memoirs read were as follows:—1. On some peculiarities observable in the hexagonal facets of the eyes of certain insects. By R. J. Ashton, Esq. 2. On the natural history of the chego

or jyger. (*Pulex penetrans*, Linn.) By W. Sells, Esq. 3. On the structural characters of the same insect. By J. O. Westwood, Esq. This insect, which burrows into the naked feet of the negroes in the West Indies, had been regarded as an *acarus*, *pulex*, and *pediculus*. From a minute examination of the characters, Mr. Westwood considered it as the type of a distinct genus, for which he proposed the name of *sarcopsylla*, or the flesh-flea. 4. On the emblematic worship of the scarabeus by the Egyptians. By the Rev. F. W. Hope; who was induced to consider that the insect had been regarded as a type of the resurrection, in consequence of its being constantly found in sarcophagi, and rolled up in the folds of mummies, in particular positions, such as upon the breast, under the eyes, &c. 5. On a disease to which chickens are subject, produced by a number of worms which are found in the windpipe. By Mr. J. Main. 6. Descriptions of the species of the genera, *arabus* and *cloasma*, brought home by Mr. Darwin, chiefly from Terra del Fuego. By the Rev. F. W. Hope. Various collections, chiefly of rare exotic insects, were exhibited by Sir P. Walker, Mr. Waterhouse, Mr. Ashton, and others; and specimens of the queen of the white ants, and of several other insects, were presented by Lord Prudhoe.

#### LITERARY AND LEARNED.

##### UNIVERSITY INTELLIGENCE.

OXFORD, May 5th.—The following degrees were conferred:—

*Masters of Arts*.—Rev. W. B. Mackenzie, Rev. J. W. Cole, Magdalen Hall; Rev. I. Spencer, St. Mary Hall; Rev. G. A. Chaplin, late Fellow, Rev. W. J. Sawell, Magdalen College.

*Bachelors of Arts*.—Sir G. Baker, Bart. Christ Church, Grand Compounder; A. Veltch, Magdalen Hall; C. C. Donville, Wadham College; H. Holden, Scholar, E. H. M. Sladen, Balliol College; E. C. Spedden, St. Mary Hall; J. Williams, Trinity College; C. J. Homfray, Oriel College; G. W. Huntingford, Fellow, New College; R. J. Buddicom, T. H. Haddon, Brasenose College; H. W. Burrows, Fellow, St. John's College.

CAMBRIDGE, May 4th.—The following degrees were conferred:—

*Doctor in Physic*.—F. J. Farre, St. John's College.

*Masters of Arts*.—E. Warter, Fellow, Magdalen College; T. H. Wright, St. John's College; A. H. Darley, H. Butterfield, Christ's College.

*Bachelors of Arts*.—J. W. Freese, Trinity College; S. Smithson, Christ's College; H. Knapton, Queen's College; J. Harrison, Magdalen College; M. Dashwood, Downing College.

#### ROYAL SOCIETY.

MR. LAWRENCE in the chair.—A portion of a paper on the absorption of light by coloured media, written by Sir David Brewster, was read. The author notices the speculations on the same interesting subject, of Sir Isaac Newton, Dr. Thomas Young, Sir John Herschel, and others; and supports the same from the results of a variety of experiments which, in that part of the paper read, he goes on to detail. The communication read at the previous meeting was from Mr. Wm. Barlow to his father, on the Drummond light. Mr. Barlow, jun. it appears, is at present prosecuting his inquiries on this discovery under the auspices of the Turkish government, with a view to the establishment of light-houses at the mouth of the Bosphorus. The chairman intimated that the conversazioni at Kensington palace commence this evening at 9 o'clock.

#### SOCIETY OF ANTIQUARIES.

MR. HALLAM in the chair.—Dr. Lee exhibited drawings of some Roman Sepulchral Inscriptions found at Watermore, near Cirencester, accompanied by a description, part of which was read, and the remainder postponed.

LITERARY AND SCIENTIFIC MEETINGS  
FOR THE ENSUING WEEK.

*Monday.*—Royal Geographical, 1 P.M. (Anniversary); Statistical, 8 P.M.; British Architects, 8 P.M.  
*Tuesday.*—Horticultural, 3 P.M.; Civil Engineers, 8 P.M.; United Service Museum, 3 P.M. (Dr. Ritchie on Hydrostatics.)  
*Wednesday.*—Society of Arts, 7½ P.M.; Geological, 8½ P.M.  
*Thursday.*—Western Literary, 8½ P.M. (Mr. Wyld on Railways); Botanical, 8 P.M.  
*Friday.*—Royal Institution, 8½ P.M.

## FINE ARTS.

## EXHIBITION OF THE ROYAL ACADEMY.

[Third notice.]

112. *The Old Shepherd's Chief Mourner.* E. Landseer, R.A.—No stronger appeal to the feelings of humanity in favour of the brute creation, more especially of that faithful creature the dog, can be made than will be found in this touching performance. As a work of art, it claims our admiration; as an expression of sentiment, our sympathy.

8. *The Lucky Escape.* W. F. Witherington, A.—A whimsical incident. It is impossible not to be amused at seeing the fry of urchins scrambling after the fry of fish. But the picture has higher claims to regard. It is beautifully executed; and the scenery is delightfully rural and picturesque.

154. *Aurora; painted for a compartment in a ceiling of Sir John Soane's Museum.* H. Howard, R.A.—No subject could have been better chosen for the pencil of this veteran and classic artist. He has given to Morning the brightest and warmest tints of his palette; and his Early Hours (like those of real life) float gracefully and joyously along.

42. *The Lesson.* T. Uwins, A.—Art, as well as literature, has its flowers and its fruits; to say nothing of its thorns and its briars. Mr. Uwins has successfully culled many of the former. That under our notice is a beautiful exotic.

47. *Perdita.* C. R. Leslie, R.A.—The charm in this performance arises from the simplicity of its character. There are no stirring passions to excite or alarm. Gentle emotion and silent admiration are all that are expressed; but they are expressed with great skill.

39. *Paulo and Francisca.* C. W. Cope.—“Looks are Love's arrows,” says Otho Venenius, in his “Love's Emblems;” and certainly a tale of love, whether in bower or in hall, cannot be better told than in their language. There is great originality in the composition of this picture; and a beautifully reflected light on the countenance of Francisca. The countenance of her lover is, we think, too boyish; and has, perhaps, too much of individual portrait for the romance of the subject.

86. *Roger and Jenny.* W. Allan, R.A.—A truly Scotch pastoral courtship; simply told, and clearly and brightly painted.

29. *Alex Moham-mad Beg, who accompanied the Horses presented by the Imâm of Muscat to King William IV.* S. A. Hart, A.—Not aware of the importance attached to a person employed on such a mission, we should probably have passed his portrait unheeded, had not the fine characteristic head and countenance, the firm and fine drawing, and the clear and vigorous execution, manifested its importance as a work of art.

123. *A Jew Rabbi.* Sir M. A. Shee, P.R.A.—In a similar manner do we feel ourselves called upon to express our admiration of this fine, historical, and patriarchal head. Such studies form a pleasing variety in the accomplished president's ordinary practice, and exhibit the versatility of his powers.

176. *A Syrian Maid.* H. W. Pickersgill, R.A.—Rich, powerful, and harmonious, as well in chiaroscuro as in colouring.

73. *Plato.* H. Howard, R.A.—We do not recollect having, in any former instance, thought a subject chosen by this able artist foreign to the nature of painting. As “Sleeping Infancy,” it would have been beautiful; but it is painful to see the fine metaphor of the Roman orator thus actually embodied.

The views and topographical subjects in the East Room are highly picturesque and interesting. Among them we especially remarked, 11. *Scene on the Coast of Normandy, near Gonville.* C. Stanfield, R.A.; 55. *Tower of the Giralda, Seville.* D. Roberts; 78. *Bellstein, on the Moselle, the Hundsrack Ridge in the distance.* C. Stanfield, R.A.; 103. *Strasbourg.* E. Jones, R.A.; 124. *View of Dunkeld Abbey, taken on the spot.* Miss F. Stoddart, H.; 216. *Vesuvius, with the Camaldoli Convent of Capuchins.* W. Havell; 217. *Meyringen, Canton of Berne.* H. H. Horsley, &c. &c. The Portraits in the same room are also powerful and attractive, particularly 67. *Portrait of his Majesty King William IV.* Sir D. Wilkie, R.A.; 68. *Portrait of the Queen.* Sir M. A. Shee, P.R.A.; 52. *Portrait of his Grace the Duke of Roxburgh.* T. Phillips, R.A.; 17. *Portrait of Lady Slade.* Mrs. W. Carpenter; 41. *Portrait of the late Mr. Parke.* Sir W. Beechey, R.A.; 170. *The Lady Johnstone and her Daughter.* F. R. Say; 171. *Portrait of his Royal Highness, Leopold, prince of Belgium.* J. Partridge; 12. *Portrait of William Wallace Currie, Esq.* T. Phillips, R.A.; 174. *Portrait of Sir C. Bethal Codrington, Bart.* Sir M. A. Shee, P.R.A.; 185. *Portraits of Lady Hill and Child.* H. W. Pickersgill, R.A.; 194. *Portrait of Joseph Neild, Esq.* M.P. Sir M. A. Shee, P.R.A.; 211. *Portrait of the late Pelham Warren, M.D. F.R.S.* J. Linnell, &c. &c.

[To be continued.]

## THE BATTLE OF COURTRAI.

THE Battle of Courtrai, or Field of Golden Spurs, is the most brilliant exploit in the military annals of the Flemings. The picture under our consideration is the production of M. De Kayser, a young painter of Antwerp. However patriotic the feeling, we own that we do not admire his choice of a subject. The world is, we hope, becoming too wise to look with much complacency at battles, or representations of them. But, setting that point aside, we are bound to say, that M. De Kayser has done himself exceeding credit by the manner in which he has executed his difficult undertaking. The moment selected is that at which the unfortunate Comte d'Artois, having been wounded and unhorsed, and seeking in vain for a nobleman to whom he may surrender his sword, is about to receive his *coup de grace* from the axe of a brawny butcher of Bruges. The canvass (which is a large one) is filled with armed figures, engaged in every variety of deadly strife; their action and expression are replete with energy; the groups are well composed, and sufficiently well coloured; and the *tout ensemble* is powerful and striking.

## CORREGIO MAGDALEN.

A VERY charming picture, attributed to Corregio, is at present exhibiting at the Scientific Institution, in Pall Mall. In tone and expression, it is one of the finest things of the kind that we ever saw; and the longer it is dwelt upon the more admirable it appears. We understand that this valuable work was purchased

last autumn, for a mere trifle, at the Auction Mart, so obscured with dirt, that its merits were completely hidden. It is now in a perfect state, and richly deserves a visit from every lover of high art.

## MR. YATES'S PICTURE GALLERY.

ALTHOUGH this gallery does not contain many pictures, it affords a pleasing lounge. The gem of the collection at present is a remarkably fine altar-piece—a Holy Family, by Murillo: sweetly composed and coloured. It has been many years in England, but has been shut up in a mansion in a remote part of the country; so that, to the London connoisseur, it adds to its other attractive qualities the charm of novelty.

*Artists' Benevolent Fund.*—The anniversary of this excellent charity took place at Freemasons' Tavern on Saturday last; the Marquess of Northampton in the chair. The meeting was well, but not so well, attended as usual; nevertheless, above a hundred sat down to dinner. After the usual toasts, the noble chairman, in a neat speech, proposed “Success to the Fund,” which was heartily responded to by the company; and Mr. John Martin, the secretary, read the report, which, we are happy to say, was a very good one; above 500*l.* having been collected after the dinner, including his majesty's annual donation of one hundred guineas. After the chairman's health, and several excellent speeches from Mr. Baring Wall, Mr. B. Bond Cabbell, Mr. Solly, &c. &c., the noble marquess proposed “Sir Martin Archer Shee and the Royal Academy.” “He was sorry,” he said, “that so praiseworthy an institution as the Benevolent Fund was not better supported by the Royal Academy, there being only one member present; he hoped it was not from want of will.” Mr. Reinagle, R.A. returned thanks. The company separated at a late hour, after a very pleasant evening, for which they were much indebted to the spirit of the president, and which was much enlivened by several glees and songs by Messrs. Broadhurst, Fitzwilliam, Hawkins, &c. &c. &c.

## NEW PUBLICATIONS.

*The Opening of the Seventh Seal.*—*The Flight into Egypt.* Painted and engraved by John Martin. Ackermann and Co.

THE fair way of estimating these striking prints is by considering what would have been thought of them had nothing ever been before seen from the same magical hand. Their having had predecessors in a similar style of art, in no way detracts from their individual and actual sublimity. That they have the stamp of Mr. Martin upon them is true; but it is the stamp of unrivalled power.

## ORIGINAL POETRY.

## SUMMER IS COMING.

By Henry Brandreth.

SUMMER is coming, with sunshine and song,  
 Wild bees are humming sweet flow'rets among;  
 Glad children are shouting, the careless and free,

Whilst valley and mountain re-echo their  
 Away, then, a while with the dark brow of care,  
 Where pleasure is smiling, our home shall be there.

To sorrow nor music nor sunshine belong—  
 And summer is coming, with sunshine and song.

Summer is coming, with fruit and with flower,  
 Gracing the garden, adorning the bower.

Who loves not the summer, who loves not to roam  
Where bee, bird, and butterfly, gladden his  
Where seldom the voice of the minstrel is mute,  
Where fragrant the flow'et, and fair is the fruit?

Oh! there would I dwell, in mine own summer bower—  
And summer is coming, with fruit and with

## MUSIC.

## ANCIENT CONCERTS.

THE fourth concert, under the direction of the Duke of Cumberland, was, like its predecessor, a legitimate ancient one; no such heterodox names as Haydn, Mozart, or Beethoven, being admitted into the programme. The singers were, Madame Caradori, Mrs. Knyvett, Mrs. Bishop, Miss Wyndham, and Messrs. Hobbs, King, and Phillips. Most of the songs were more familiar to the audience than a "thrice-told tale;" and, the merits of the respective singers being equally well known, particular remarks would be superfluous, except in the case of Miss Wyndham, who may be considered as new to these concerts, she having performed only at one rehearsal before the present occasion. This young lady sang the first part of Handel's air, "Lord to thee," with considerable feeling; but a stricter attention to the good old rule of swelling every long note would have given more dignity and finish to her style. The second movement she took considerably too fast, and clipped the words in a jaunty, theatrical manner, that appeared to result from a misapprehension of the sentiment. The feeling to be expressed here is not terror, but the courage and firmness inspired by faith in the Divine protection. Miss Wyndham may deem us hypercritical in pointing thus minutely at the defects of one of her early performances; but "we must be cruel only to be kind." We wish to urge her ambition on to the point it ought to aim at—the first rank in her profession. With such talents as she possesses, she will, unless spoiled and rendered indolent by early popularity, certainly attain that rank. Wilbye's delightful madrigal, "Sweet honey-sucking bees," was performed with a precision and delicacy that nothing but careful private rehearsing could have insured. It appears that our question, as to the practicability of private rehearsals, has been satisfactorily answered in the affirmative. Whatever be the cause of the improvement in the madrigals, the effect is most gratifying to all concerned, but especially to the audience. The same nice attention to the lights and shades was observable in the chorus to Purcell's beautiful frost-scene. The magnificent chorus from *Jephtha*, "When his loud voice," was so nobly performed as to make it matter of regret that it should be accompanied by the bustle of the company hurrying out to seek their carriages. Handel's trio for stringed instruments, in which Dragonetti has such an opportunity for the display of his powers, was played in its usual perfection by him, F. Cramer, and Lindley. Ere we conclude, we beg to offer a friendly suggestion to the conductor, and those among the noble directors who possess a real love and zeal for the art. The only fault that the most fastidious can find with these delightful concerts is their occasional want of variety. Now, though by no means disposed to quarrel with "the powers that be," for adhering to that school of music, a taste for which it is the main object of this institution to cherish, we yet see no good reason why the se-

lections should not be enriched with as much variety as that school affords. The majestic choruses of Leo (which even Handel thought worth studying and taking as a model for some of his own glorious double choruses), and the ecclesiastical compositions of Durante and Jomelli, would furnish excellent and perfectly legitimate materials for diversifying the character of these performances. There are, also, no doubt, in the library, many treasures of Purcell and Handel lying dormant; and the revival of only one good composition of the really ancient school, at each concert, would go far to strengthen friendly support and silence cavilling objections.

Q.

*Royal Academy of Music.*—On Saturday last, the second concert of our native school was given with excellent effect. The progress of the pupils was very marked; and we hailed in several of them the future ornaments of our theatres and concert-rooms.

The fourth Societa Armonica Concert, on Thursday, was, as usual, a treat. Albertazzi sang splendidly; Ivanoff, also, was in fine voice: this gentleman's proper place is the concert-room, or a small theatre; in the Opera House many of his sweet tones are lost. Lablache was unwell, but sang *Largo al factotum* with all his usual spirit and voice.

## Drama.

## KING'S THEATRE.

ON Tuesday, Cimarosa's beautiful opera of *Il Matrimonio Segreto* was repeated, we need scarcely say, to a crowded house. Nothing can exceed the magnificent acting of all the performers. Lablache is the perfection of comicality. Seconded by Tamburini, he has been nightly greeted by peals of laughter—a great proof of his real talent; as, in all probability, not one-third of the frequenters of the Italian Opera understand the language, or know, except from the incorrect translation purchased at the door, what is going on. If we attempt to particularise, we shall have to name almost every piece of music in the opera: we shall, therefore, only mention one or two of the most striking. Rubini sang one of his most exquisite arias towards the end of the opera; Grist, one piece of glorious recitative, alone worth the price of a ticket. Albertazzi's low voice was called forth in the part allotted to her; and, in one or two of the concerted pieces, the encores may be attributed to her. Assandri was also in delightful voice, and acted extremely well. A duet between Lablache and Tamburini was almost equal to the celebrated Puritani one. No noisy choruses, and no loud music, are to be heard in this opera; but, for the most exquisite, delicate touches of melody, it stands unequalled. Why does not Albertazzi have a chance of greater success given her by playing in the *Donna del Lago* or *Sémiramide*?

*Drury Lane.*—As one swallow does not make a summer, especially when out of place, among bats and sparrows, so neither can one Tagliioni make a ballet among hopping creatures of different breeds. Every foreign experiment tried at this ill-fated theatre, only serves to sink it deeper in the mire.

*St. James's.*—During the week, a new opera has been successfully played at this elegant little theatre. The plot is founded on the touching story of the dilloak-gatherer, in *Three Courses and a Desert*, and is more interesting than the plots of operas usually are. The music

is peculiar, being a selection of Bohemian melodies. The first act is full of characteristic airs; of which Braham sings two or three in his very best style. The last act is rather long and heavy; the airs are less frequent, and the recitatives long and monotonous. Miss Rainforth appears to great advantage; not in singing alone—her acting is simple and natural. Burnett, also, has one or two sweet morsels, which he sings with much feeling. Mr. Lenox played a part of no value, as his first appearance here; and his voice seemed much to want cultivation. Mr. Löffler sang not only his own part, but some of Madame Sala's, who was suffering from cold, with good effect. *Jack Brag*, a smart and laughable farce, extracted from Hook's novel of that name, was produced with entire success on Thursday evening. The original is so dramatic, that any adaptation could hardly fail; and, with Harley as *Jack*, Miss P. Horton as the *Widow*, and the other characters well cast, the piece was carried to the happy pitch which delights proprietors, authors, and audiences.

*Strand Theatre.*—A new farce, entitled the *Tiger at Large*, has been added to the amusements of this attractive little theatre. Hammond is as droll as ever as the *Tiger*, and Miss Daly makes a capital sweetheart. In fact, there is no company in London that plays better into each other's hands than that at the Strand. *Romeo and Juliet*, according to law, continues its laughable and prosperous career: it has been much curtailed, and is decidedly improved. We omitted to notice Mr. H. Hall's capital impersonation of Dr. O'Toole, in the *Irish Tutor*, last week, but beg to mention it now, as a masterly performance, and to hope it will be often repeated.

## VARIETIES.

A meeting of the Philosophical Society was held on Monday evening, Dr. Thackeray, V.P. in the chair.—A paper by A. Moore, Esq., of Trinity College, was read, on the solution of a difficulty of analysis noticed by Sir W. Hamilton. Mr. Whewell gave an account of the performance of a new anemometer, invented by him; which has been erected at the top of the house of the society, and also on the top of the observatory, and of which the indications for the last four months have been recorded. Mr. Kelland also read a paper on the effect of the electricity of the ether in crystals, as bearing on the undulatory theory.—*Cambridge Chronicle.*

*Earthquakes in Greece.*—The latest accounts state, that the shocks of earthquake in this quarter have continued with incessant violence, amounting to the number of fifty in a single day. Hydra and Paros are stated to have suffered severely.

*Earthquake in Italy.*—A letter from Lucca, 22d April, states, that forty shocks of earthquake had been experienced in the territory of Monaciano, which had done great damage, and caused the loss of seven lives.

*Phenomenon.*—The *Plymouth Journal* states, that, during a recent snow-storm, a large number of black worms, about three-quarters of an inch long, fell in the village and neighbouring fields of Bramford Speke, Devon. They are said to be quite different from the turnip-worm or any other known to agriculturists in that quarter.

*Panorama of Dublin.*—We had yesterday a brief glance at this new Panorama, by Mr. Burford, in Leicester Square. It is a sweet view of Dublin and its charming bay; and as

accurate as it is beautiful. The country, studded with villas, Kingston, the Hill of Howth, the Wicklow Mountains, the sea, indeed, all the varieties and changes of this splendid scene are vividly represented, and the rich landscape is all but equal to the original.

**The City Wellington Statue.**—At a meeting of the committee yesterday, at the Mansion House, the Lord Mayor in the chair, it was resolved—1st, that the statue should be an equestrian one of his grace: 2d, That Sir Francis Chantrey, who intimated his readiness to undertake the design for the amount subscribed, should be invited to send in models for the approbation of the committee. The only other artist proposed was Mr. Matthew Cotes Wyatt, the sculptor of the fine statue of George III. in Pall Mall East; when, on putting the question to the vote, it was carried in favour of Sir F. Chantrey; the votes being

For Sir Francis ..... 15  
For Mr. Wyatt ..... 14

Majority ..... 1

**Lady Morgan.**—It is stated that Lady Morgan has had a pension of 300*l.* a-year bestowed upon her, in consideration of her literary labours.

**American Returns.**—"You will never get gold back again from America," said a disputant on the commercial crisis. "How could it be expected?" observed a bystander, tired of the argument; "why, the Americans have not a Sovereign to send."

**Ashmolean Society, April 24.**—Seven large boxes of organic remains, collected in the Himalaya Mountains, consisting of bones of various large terrestrial mammalia, such as elephant, mastodon, hippopotamus, &c., have been received from Lieutenant-Colonel Stacy. Dr. Buckland has undertaken to examine them, and give an account of them to the Society at a future meeting. The secretary read a paper, by Mr. Duncan, which gave a history of the various kinds of fermented liquors which have been, and are, drunk by man; entering, at some length, on the characters of the wines mentioned by classic authors. Dr. Daubeny gave a description of the rocks of Adersberg, on the Bohemian frontier, one day's journey from the Reisengebirge, or Giant Mountains of Silesia; a spot remarkable for the weathered condition of the sandstone of which it consists. The rock is the quadersandstein, which is considered to correspond with the green sand of this country, and is a continuation of the rock through which the Elbe flows, in that district of Saxony called the Saxon Switzerland. The whole body of the sandstone formation, for a space not less than four miles by two, is divided into polyhedral masses, to a depth, from the upper surface, of little less than 100 feet. The causes are, evidently, running streams and the downward actions of rain; to which Dr. Buckland thought that the force of the wind ought to be added. A conversation ensued on the subjects of both papers, in which Dr. Buckland and other members took part.—*Oxford Herald.*

#### Consolation to a Spendthrift.

Though you're wasting your substance, don't be in a fright,  
When you've lost all that's left, Tom, you must be all right.

**Weather Wisdom.**—Our prophet did not foresee the hail, snow, and sleety weather, of Tuesday, Wednesday, and Thursday; so far "from being fairer and warmer about the 10th and 11th." At present we are promised "changes frequent, yet fair on the whole about the 16th. The Sun with Venus, on the 18th, will bring thunder-showers. The full

moon still denotes moist cloudy weather, with frequent showers about that period."

Why is a good cricketer like a frequenter of Almack's?—Because he rarely misses a ball.

#### SONNET ON THE APPROACH OF SPRING.

I hail thy bright approach, fair-handed Spring!  
Thy dancing step, and robes of flowery gold;  
For I do love thy fragrant blossoming,  
Thy breath of perfume warming winter's cold.  
First of thine harbingers, the snow-drop mild,  
Precursor of its race, with pendent bells,  
Braving the lingering frost, thy coming tells;  
The sleepy crocus next, and 'mid the wild,  
The violet, scarcely peeping from its bed;  
The staring daisy, with uplifted eyes;  
And virgin primrose, with its next of kin,  
The love-sick cowslip, whose averted head  
Still strives to hide the heart that bleeds within;  
And polyanthus with its various dies.

W. WALLIS.

#### LITERARY NOVELTIES.

We learn with pleasure that Mr. Haynes Bayly's Novel, "Marriage Settlements," which has been delayed by his dangerous illness, is now completed, and on the eve of publication.

#### In the Press.

New and Conclusive Natural Demonstrations, both of the Fact and Period of the Mosiac Deluge.—Dr. Lindley's second and concluding volume of "Ladies' Botany,"—Horticultural Tour through Germany, Belgium, and France, by Mr. Forbes, author of "The Gardens and Grounds of Woburn Abbey,"—Lord Palmerston on the Civil War in Spain, and on the Policy of England.—A Historical Account of the University of Cambridge and its Colleges, by B. D. Walsh, M.A.

#### LIST OF NEW BOOKS.

Seven Lectures on Meteorology, by Luke Howard, 12mo. 5s.—Icons Plantarum, Part III., by Sir W. J. Hooker, K.H., 8vo. sewed, 1*l.*—The Ocean, in Six Cantos, and other Poems, by John Trenhaile, 12mo. cloth, 7s.—Memorials of Shrewsbury, by Henry Pidgeon, 12mo. 4s. 6d.—The History of Banking in America, by J. W. Gilbart, 8vo. 7s.—The Philosophy of Human Nature, by H. M'Cormac, 8vo. 12s.—Principles of the Theory and Practice of Medicine, including a 3d edition of Diagnosis, by Dr. M. Hall, 8vo. 10s.—National Education, by Edmund de Bessy, 8vo. 10s. 6d.—Nick of the Woods, a Story of Kentucky, edited by W. H. Ainsworth, 3 vols. post 8vo. 1*l.* 7s.—The French Revolution, a History, by T. Carlyle, 3 vols. post 8vo. 1*l.* 11s. 6d.—Colonel Crockett's Exploits and Adventures in Texas, 12mo. 5s. 6d.—Observations on the Preservation of Health, by J. H. Curtis, fcap. 3s. 6d.—Born's Nautical Dictionary, in eight languages, 10s. 6d.—Treatise on Geology, from the Encyclopædia Britannica, by John Phillips, 12mo. 6s.—The Roman Catholic Chapel, by R. M. Zornlin, 18mo. 2s. 6d.—Elements of Botany, 3d edition, 18mo. 2s.—The Mechanical Euclid, by the Rev. W. Whewell, 12mo. 5s. 6d.—The Trinities of the Ancients; or, the Mythology of the First Ages, by R. Musket, 8vo. 8s. 6d.—Mammon Demolished: an Essay on the Love of Money, by B. H. Draper, royal 8vo. 2s. 6d.—The Kingdom of Christ, Vol. I. post 8vo. 7s.—The Book of Job Translated, with Notes, &c. by S. Lee, D.D., 8vo. 1*l.*—The Arctura, a Naval Story, by Captain Chamier, R.N. 3 vols. post 8vo. 1*l.* 11s. 6d.—The Vestal, and other Poems, by H. Verlander, 8vo. 5s.—Society in America, by H. Martineau, 3 vols. post 8vo. 1*l.* 11s. 6d.—Byron's Works, complete in 1 vol. royal 8vo. 1*l.*—Remarks on Ancient and Modern Art, in a Series of Letters, by an Amateur, 12mo. 10s. 6d.—W. Jones's Thirty Sermons on Primitive Christianity, 8vo. 12s.—Cavaler's Select Specimens of Gothic Architecture, 4to. plates, 3*l.* 3s.—Royal 4to. 5*l.*—Memoirs of the Rev. A. Collier, by R. Benson, 8vo. 6s.—The Eucharist; its History, Doctrine, and Practice, by the Rev. W. J. E. Bennett, 12s.—Observations, &c. by E. W., 2d edit. 3s. 6d.—Adventures of Captain Bonneville, by Washington Irving, 3 vols. post 8vo. 1*l.* 11s. 6d.

Extracts from a Meteorological Register kept at High Wycombe, Bucks, by a Member of the Meteorological Society. March 1837.

Thermometer—Highest.....	50.50 ..	the 9th.
Lowest .....	17.75 ..	23d.
Mean .....	35.28629	
Barometer—Highest.....	30.15 ..	1st.
Lowest .....	29.01 ..	11th.
Mean .....	29.69290	

Number of days of rain and snow, 13.  
Quantity of rain and melted snow, in inches and decimals, 1.08375.

Winds.—2 North-East—1 East—1 South-East—1 South—2 South-West—7 West—1 North-West—16 North.

General Observations.—Unlike the last month, which was warm for the season, this was the coldest March that has occurred during the last thirteen years,—the maximum never rising so high as temperate, by four degrees and a half; the minimum was fourteen degrees below the freezing point, and the mean of the month was but little more than three degrees above it. The barometer was generally high, and the mean has been exceeded only four times in the period above referred to. The quantity of rain, and melted snow was less than usual for the month. Snow fell on eight different days, viz., the 12th, 19th, 20th, 21st, 23d, 24th, 26th, 27th. That which lay on the ground, and could be measured, was eight inches in depth; and this fell on the 20th, 21st, and 23d. The wind blew from the northward on eighteen days, and the whole month may be considered as having been dry, bleak, and cold.

#### April.

Thermometer—Highest.....	61.50 ..	the 26th.
Lowest .....	23 ..	10th.
Mean .....	38.37916	
Barometer—Highest.....	30.09 ..	8th.
Lowest .....	29.08 ..	29th.
Mean .....	29.531.	

Number of days of rain and snow, 11.  
Quantity of rain and melted snow, in inches and decimals, 1.71876.

Winds.—2 North-East—0 East—3 South-East—0 South—5 South-West—5 West—9 North-West—6 North.

General Observations.—The same prevalence of cold weather was experienced during this, as in the last month, and the mean temperature was nearly three degrees lower than in any April in the last fourteen years; yet the maximum was five degrees higher than in the same month last year. The barometer was generally steady, the range being small, and the mean but little above that of last year. The quantity of rain and melted snow was much less than in the corresponding month last year, though more than in the two years preceding 1836. Snow, sleet, and hail, fell several times during the month, but the snow never lay upon the ground. An indistinct lunar halo was seen about 9 p.m. on the 14th, and thunder was heard on the 30th, about 5 p.m. The commencement of the eclipse, on the night of the 21st, was not seen advantageously at Wycombe: a thick bank of cloud obscured the horizon, and the moon had risen several degrees before she became visible, and even then she was partly covered by clouds. At the period of the total darkness commencing, large cumuli were formed, and the moon was again hidden until nearly nine o'clock, when the whole disc was seen entirely veiled by the earth's shadow, having a dusky rufous appearance. At nearly half-past nine, the first portion of the moon cleared from the obscuration was perceived, when the appearance was extremely beautiful, the brilliancy of the bright limb of the moon being highly contrasted with that under eclipse. After the eclipse was over, the moon shone with considerable lustre—at least she appeared to do so, from the impression made on the mind by her recent darkness.

#### TO CORRESPONDENTS.

To the Editor of the Literary Gazette.

Sir,—In reviewing the second volume of Mr. Lockhart's Life of Sir Walter Scott, you have twice had the goodness to mention my family in a way which calls for my warm thanks. What motives have induced Mr. Lockhart to adopt the very unkind, and certainly unexpected tone in which he has thought proper to speak of my late father and uncle, I do not know: but many passages, besides being in themselves ill-natured and undesigned, agree but ill with Mr. Lockhart's acknowledgments, in the earlier part of the book, of my father's efforts, as he says, in behalf of the work. These efforts, too, as Mr. Lockhart seems to be aware, were made on a death-bed, and by no means an easy one; and this consideration alone ought, in common decency, to have induced him to omit at least the personalities in which he indulges. Although this volume was printed at my own office, I, being absent from Edinburgh, had not an opportunity of seeing the proof-sheets before they went to press, else I should certainly have requested Mr. Lockhart to expunge these offensive passages.—Mr. Lockhart must be aware that he has deeply wounded the feelings of many who have given him no cause, that I know of, for dislike; and I must say, that his tone throughout is such as he would not have used had either his father or my uncle been alive; and such as I am sure Sir Walter himself would have been the first to censure when applied to at least one of his oldest friends.—I am, Sir, your very obedient servant,

JOHN ALEX. BALLANTYNE.

London, May 8, 1837.

ERRATUM.—In the last Number, page 293, col. 2, line 20, after W. S. Macleay, Esq. M.A. F.L.S. insert Vice-President.

In 8vo. with numerous woodcuts, &c.

On the 20th instant will be published,

**NEW AND CONCLUSIVE NATURAL**  
**DEMONSTRATIONS** both of the FACT and PERIOD  
 of the MOSAIC DELUGE, and of its having been the only Event  
 of the kind that has ever occurred upon the Earth.  
 By GEORGE FAIRHOLME, Esq.

Also, lately published,

**The Phenomena of the Earth—the Revolu-**  
**tions of the Globe** familiarly described. By Alexander Bertrand,  
 M.D. 1 vol. post 8vo. two plates, 7s.

"It is one of the most agreeable we have met with. \* \* \* The  
 surface of the globe is no new subject, yet see how interesting  
 our author makes it."—*Spectator*.

James Ridgway and Sons, Piccadilly, and all Booksellers.

## LORD COLLINGWOOD.

New and cheaper edition, with additional Letters. In a few  
 days will be ready, in 2 vols. 12s.

## MEMOIRS AND CORRESPONDENCE,

PUBLIC AND PRIVATE, OF ADMIRAL LORD  
 COLLINGWOOD.

Edited by G. L. NEWNHAM COLLINGWOOD, Esq. F.R.S.  
 "Having thus referred to Lord Collingwood's life, I may be  
 allowed to say that the publication of that volume is, indeed, a  
 national good; it ought to be in every officer's cabin, and in every  
 statesman's cabinet."—*Southey's "Nelson,"* p. 346.

Also, in 8vo. 6s. 6d.

## Alfred the Great: a Poem. By G. L.

Newnham Collingwood, Esq.

"At any other time than the present, when the tide of literary  
 taste is running against poetry of the severely heroic character,  
 the appearance of such a work as 'Alfred the Great' would have  
 excited a general interest, and ensured the author a high place  
 among the writers of his country."—*New Monthly Mag.*

James Ridgway and Sons, Piccadilly, and all Booksellers.

## THE SECOND EDITION OF THE HON. MR. MURRAY'S

## A SUMMER IN THE PYRENEES,

## THE ART OF COOKERY.

By JOHN COLLARD,

Of Paul Hotel, New York.

Whittaker and Co. Ave Maria Lane.

In 4to. price 2s.

## A BIRTHDAY TRIBUTE addressed to

to H. R. H. the PRINCESS ALEXANDRINA VIC-  
 TORIA, on attaining her Eighteenth Year. A Poem and Me-  
 morial.

By L. E. L.

Embellished with a Portrait of the Princess, engraved by  
 Cochran, after Hayter's esteemed Painting.

"Messrs. Fisher have, with excellent taste, and most oppor-  
 tunely, invoked the genius of one of the sweetest priestesses in  
 the temple of Apollo, to embody the national feelings on this  
 auspicious occasion. In olden times, such an event would have  
 called forth hundreds of tributes from seats of learning, and all  
 the scattered children of the muse."

"What is here done, is done beautifully. The poem opens  
 with a clustering of youthful images, all congenial to the subject,  
 and full of kindred loveliness."

"Such are the tones and tender of this charming composition;  
 and we have only to add, that it is encased in a most appropriate  
 binding, embossed on primrose—the colour of the Spring."—*Lit-  
 erary Gazette*.

Early application will be necessary, to secure copies.

London: Fisher, Son, and Co.

## CIVIL WAR in SPAIN, and the POLICY

of ENGLAND.  
 The Viscount Palmerston's Speech on the late Debate in the  
 House of Commons on the Policy of England, &c.

Also, a 3d edition of

## The Policy of England towards Spain con-

sidered. 2s. 6d.

"The writer before us has very satisfactorily shewn up the  
 many errors into which Lord Carnarvon has fallen, particularly  
 concerning the true state of the Basque forces and privileges,  
 the Elliot convention, and its observance, &c."—*Globe*.

James Ridgway and Sons, Piccadilly; and all Booksellers.

## BULBOS ROOTS.

In royal 8vo. 48 Plates, coloured and plain,

## AMARYLLIDACEÆ, with a Treatise on

Hybrid Vegetables subjunct.

By the Hon. and Rev. WILLIAM HERBERT.

Also,

1. Horticultural Tour through Germany,  
 Belgium, and France. By James Forbes, F.R.S., author of "Hor-  
 tus Woburnensis; or, the Gardens and Grounds of Woburn Abbey."

 Second, which will complete the work, will be published on the  
 1st of June.

James Ridgway and Sons, Piccadilly; and all Booksellers.

Price 7s.

## THE HISTORY OF BANKING in

AMERICA, with an Inquiry how far the Banking In-  
 stitutions of America are adapted to this Country, and a Review of  
 the Causes of the recent Pressure on the Money Market.

By JAMES WILLIAM GILBERT,

General Manager of the London and Westminster Bank.

By the same Author.

## The History of Banking in Ireland, price 5s.

A Practical Treatise on Banking, 4th edition,  
 price 6s.

Longman and Co. 30 Paternoster Row.

In Imperial 4to.

## PEARLS OF THE EAST; or, BEAUTIES

from LALLA ROOKH.

Twelve Portraits of Female Characters, illustrative of Mr.  
 Moore's popular Poem; designed by Fanny Corbux, and drawn  
 on Stone by Louisa Corbux.

"One of the best conceived and best executed volumes of this or  
 any season in our recollection. Mr. Moore has been a happy poet  
 all his life, and we by no means rank these illustrations among  
 the least brilliant evidences of his good luck. We never thought  
 the beauties of Lalla Rookh half so beautiful."—*Court Journal*.

"Pearls of the East, and a charming string of pearls they are.  
 They are all sufficiently bewitching; but if we were allowed to  
 throw the handkerchief, it would certainly be to 'the lovely  
 Lalla Rookh,' or to the young and enchanting Nourmahal."—*Lit-  
 erary Gazette*.

Beautifully bound and ornamented, 31s. 6d. tinted; beautifully  
 coloured under the Artist's direction, 5s. 12s. 6d.

Charles Tilt, Fleet Street.

## Completion of Dr. Ingram's Memorials of Oxford.

Price 90s. 8vo. cloth, the third and concluding volume of

## MEMORIALS OF OXFORD.

By the Rev. JAMES INGRAM, D.D.

President of Trinity College.

With thirty-six finished engravings on Steel, by John Le Keux,  
 and numerous wood-cuts.

Proofs in 4to. price 30s.; India proofs, 54s.

\* \* \* Subscribers are requested to complete their sets without  
 delay, as the publishers will not hold themselves bound to supply  
 separate Numbers after the limited period.

Charles Tilt, Fleet Street; Parker, Oxford.

In 2 vols. 8vo. price One Guinea.

## HIGHLAND RAMBLES, and

LONG LEGENDS TO SHORTEN THE WAY.

By Sir THOMAS DICK LAUDER, Bart.

Author of "An Account of the Moray and Fife Floods."

"Lochandhu," "Wolf of Badenoch," &c.

"Full of legend, full of adventure, full of interest. The author  
 has the advantage of knowing by heart every inch of the scenery  
 he describes. He possesses a clear and flowing style; can paint  
 well with words, and arrange dialogue not ungracefully. We like  
 his book much."—*Athenaeum*.

"Sir Thomas evinces a thorough knowledge and intense sym-  
 pathy with our Highland landscapes, people, and traditions."—*In-  
 dependent Courier*.

"They constitute a series of the most stirring narratives we  
 have almost ever read."—*Glasgow Courier*.

"We warmly recommend the book."—*Tait's Magazine*.

"His vivid descriptions of scenery betray the master-hand,  
 enthusiastically directed by an imagination always alive to the  
 poetical nature of the scene."—*Edinb. Cour.*

A. and C. Black, Edinburgh; Longman and Co., London.

13 Great Marlborough Street, May 13.

copious Body of Annotations, may be had in four volumes, price  
3*l*. 16*s*. in boards; or the Old and New Testament separately.

Mr. Holden's Exposition of the Old Testament.

In 1 large vol. 18mo. price 12*s*. 6*d*. boards.

**THE CHRISTIAN EXPOSITOR**; or,  
a Practical Guide to the Study of the Old Testament.  
Intended for the Use of general Readers.

By the Rev. GEORGE HOLDEN, M.A.

Though many Expositions of the Bible of great and deserved  
celebrity exist in our language, a Commentary sufficiently short  
to be read by those who have not leisure to consult learned works,  
yet sufficiently comprehensive to serve as a guide to the study of  
the Sacred Scriptures, appears to be still wanting. To supply  
this deficiency is the design of the present work, in which it has  
been the aim and study of the author to embrace, in a condensed  
form, such information as will enable the general reader to ascer-  
tain the real meaning of the inspired writers.

Printed for J., G., and F. Rivington, St. Paul's Churchyard, and  
Waterloo Place, Pall Mall.

Of whom may be had, by the same Author,

The Christian Expositor of the New Testa-  
ment.

LYON'S HEBREW GRAMMAR WITH POINTS.

In 8vo. price 5*s*. boards, the 4th edition of

**THE SCHOLAR'S INSTRUCTOR**; a  
Hebrew Grammar, with Points.

By ISRAEL LYONS,

Formerly Teacher of the Hebrew Language in the University  
of Cambridge.

Revised and corrected by HENRY JACOB.

London: Rivingtons, St. Paul's Churchyard, and Waterloo  
Place, Pall Mall.In 8vo. price 12*s*. boards,

**HARMONIA PAULINA**; being an Ar-  
rangement, in the Words of the Apostle, of the com-  
plete Scheme of Christian Faith and Practice contained in the  
several Epistles of St. Paul.

By the Rev. HENRY LATHAM, M.A.

Vicar of St. James and Aislston, Sussex.  
Printed for J., G., and F. Rivington, St. Paul's Churchyard, and  
Waterloo Place, Pall Mall.

KEITH'S MEASURER, ENLARGED BY MAYNARD.

In 12mo. price 5*s*. bound,

**THE COMPLETE MEASURER**; or,  
the whole Art of Measuring; being a plain and compre-  
hensive Treatise on Practical Geometry and Mensuration. For  
the Use of Schools, and Persons concerned in Measuring, Gaug-  
ing, Surveying, &c.

By THOMAS KEITH.

Twenty-second edition, corrected and enlarged.

By SAMUEL MAYNARD.

Author of the "Key to Keith's Complete Measurer."

AND

No. 1061.

LONDON, SATURDAY, MAY 20, 1837.

### REVIEW OF NEW BOOKS.

*Venetia.* By the Author of "Vivian Grey," and "Henrietta Temple." 3 vols. 12mo. London, 1837. Colburn.

THE talent, and the still higher quality of genius, which are the gifts of Mr. Disraeli, are too well known to the literary world to require any new notice or eulogy from us. His present work affords sufficient examples, both of the more ordinary, and more rare endowment. It displays throughout very considerable talent, and, in many parts, is redolent of the genius of the writer.

The story is shaped upon the character of Lord Byron, and some of the familiar events of his life. He figures here, as in his own poems, as the hero of the piece; and is introduced as Lord Cadurcis, a wayward, spoilt boy, at the age of eleven years. His fond, passionate, and inconsistent mother is also prominent in the first volume; whilst Miss Chaworth, somewhat metamorphosed, appears as Venetia Herbert. Her mother, Lady Annabel Herbert, is a lofty, aristocratic dame, living in proud seclusion, and labouring under a secret grief; the result of an unfortunate union with Marmion Herbert,—himself an idolon of Shelley, we presume; who, after a year of marriage, has deserted his wife and country, engaged with other ties, and forgotten his duty to both. The other leading persons are Dr. Masham, college tutor to Herbert, and friend and instructor to Cadurcis; George Cadurcis, a frank and noble naval officer, cousin to the young peer; Lady Monteaegles, apparently drawn for Lady Caroline Lamb, with a Tory fling at her easy and good-natured husband, now Lord Melbourne; and Mrs. Pouncefort, the attendant of Lady Annabel. The time is laid about sixty years ago; and the American war supplies the foreign events necessary to the author's purpose. Such are the actors on the scene: and the scene itself extends from Cadurcis, *alias* Newstead Abbey, and its neighbouring Cherbury, the seat of the Herberts, or Chaworths, to London, with its fashionable follies, and Italy, where a re-union of the parties takes place.

As we make it a conscience not to impair the interest of a novel with our readers by forestalling its incidents, or following out its thread, we shall endeavour to convey some idea of Venetia by a few insulated selections, only premising that the childish picture of the heroine is admirably conceived. After a quarrel with his mother, in which she boxes his ears, though seriously warned by him that if she does he will not live with her, the boy runs off and joins a crew of gipsies; and a few days after the leader of these outcasts is apprehended for robbery and murder, being caught in the fact of selling the lost lord's pony. Here we can afford an example of the author's humour, in the description of a country magistrate:—

"One Squire Mountmeadow, a very important personage in his way, the terror of poachers, and somewhat of an oracle on the bench, as it was said that he could even take a deposition without the assistance of his clerk. Although, in spite of the oater's lanterns, it was very dark, it was impossible ever to be unaware of the arrival of Squire Mountmeadow; for he was one of those great men who take care to remind

the world of their dignity by the attention which they require on every occasion, 'Coachman!' said the authoritative voice of the squire; 'Where is the coachman? Oh! you are there, sir, are you? Postilion! where is the postilion? Oh! you are there, sir, are you? Host! where is the host? Oh! you are there, sir, are you? Waiter! where is the waiter? I say, where is the waiter?' 'Coming, please your worship!' 'How long am I to wait? Oh! you are there, sir, are you? Coachman!' 'Your worship!' 'Postilion!' 'Yes, your worship!' 'Host!' 'Your worship's servant!' 'Waiter!' 'Your worship's honour's humble servant!' 'I am going to alight.' All four attendants immediately bowed, and extended their arms to assist this very great man; but Squire Mountmeadow, scarcely deigning to avail himself of their proffered assistance, and pausing on each step, looking around him with his long, lean, solemn visage, finally reached *terra firma* in safety, and slowly stretched his tall, ungainly figure. It was at this moment that Doctor Masham's servant approached him, and informed his worship that his master was at the inn, and would be happy to see him. The countenance of the great Mountmeadow relaxed at the mention of the name of a brother magistrate, and, in an audible voice he bade the groom 'tell my worthy friend, his worship, your worthy master, that I shall be rejoiced to pay my respects to an esteemed neighbour and a brother magistrate.' With slow and solemn steps, preceded by the host, and followed by the waiter, Squire Mountmeadow ascended the staircase of the external gallery, pausing occasionally, and looking around him with thoughtful importance, and making an occasional inquiry as to the state of the town and neighbourhood during his absence, in this fashion:—'Stop, where are you, host? Oh! you are there, sir, are you? Well, Mr. Host, and how have we been?—orderly, eh?' 'Quite orderly, your worship.' 'Hoh! orderly! hem! well, very well! Never easy, if absent only four-and-twenty hours. The law must be obeyed.' 'Yes, your worship.' 'Lead on, sir. And, waiter; where are you, waiter? Oh! you are there, sir, are you? And so my brother magistrate is here?' 'Yes, your honour's worship.' 'Hem! What can he want? something in the wind; wants my advice, I dare say; shall have it. Soldiers ruly; king's servants; must be obeyed.' 'Yes, your worship; quite ruly, your worship,' said the host. 'As obliging and obsequious as can be,' said the waiter. 'Well, very well,' and here the squire had gained the gallery, where the doctor was ready to receive him. 'It always gives me pleasure to meet a brother magistrate,' said Squire Mountmeadow, bowing with cordial condescension; and a gentleman of your cloth, too. The clergy must be respected; I stand or fall by the church. After you, doctor,—after you.' So saying, the two magistrates entered the room."

When Cadurcis leaves the country for Eton, we have another example of the writer's ability, but of a different class; it is like the advice of Polonius to his son, but given by Lady Annabel to her favourite:—

"Now, come hither, my dear Plantagenet," she said, extending her hand; "listen to me,

one word. When you arrive in London, you will go to your guardian's. He is a great man, and I believe a very good one, and the law and your father's will have placed him in the position of a parent to you. You must, therefore, love, honour, and obey him; and I doubt not he will deserve all your affection, respect, and duty. Whatever he desires or counsels you will perform and follow. As long as you act according to his wishes, you cannot be wrong. But, my dear Plantagenet, if by any chance it ever happens, for strange things sometimes happen in this world, that you are in trouble and require a friend, remember that Cherbury is also your home; the home of your heart, if not of the law; and that not merely from my own love for you, but because I promised your poor mother on her death-bed, I esteem myself morally, although not legally, in the light of a parent to you. You will find Eton a great change; you will experience many trials and temptations; but you will triumph over and withstand them all, if you will attend to these few directions. Fear God; morning and night, let nothing induce you ever to omit your prayers to him; you will find that praying will make you happy. Obey your superiors, always treat your masters with respect. Ever speak the truth. As long as you adhere to this rule, you never can be involved in any serious misfortune. A deviation from truth is, in general, the foundation of all misery. Be kind to your companions, but be firm. Do not be laughed into doing that which you know to be wrong. Be modest and humble, but ever respect yourself. Remember who you are, and also that it is your duty to excel. Providence has given you a great lot. Think ever that you are born to perform great duties."

Five years elapse before the young lord returns to the Abbey, and renews his intimacy with Venetia and her mother; which is again suddenly broken off. We are then carried back to the previous history of Herbert, which, though we have guessed that Shelley sat for the original, seems partly, as it will be seen by the following, to be also a sort of combination with Byron himself.

"His former tutor learned that Lady Annabel, accompanied only by Pouncefort and Venetia, had sought her father's roof; declaring that circumstances had occurred which rendered it quite impossible that she could live with Mr. Herbert any longer, and entreating his succour and parental protection. Never was such a hubbub in the world! In vain Herbert claimed his wife, and expressed his astonishment; declaring that he had parted from her with the expression of perfect kind feeling on both sides. No answer was given to his letter, and no explanation of any kind conceded him. The world universally declared Lady Annabel an injured woman, and trusted that she would eventually have the good sense and kindness to gratify them by revealing the mystery; while Herbert, on the contrary, was universally abused and shunned—avoided by his acquaintances, and denounced as the most depraved of men. In this extraordinary state of affairs Herbert acted in a manner the best calculated to secure his happiness, and the very worst to preserve his character. Having osten-

tation shewn himself in every public place, and courted notice and inquiry by every means in his power, to prove that he was not anxious to conceal himself or avoid any inquiry, he left the country, free, at last, to pursue that career to which he had always aspired, and in which he had been checked by a blunder, from the consequences of which he little expected that he should so speedily and strangely emancipate himself. It was in a beautiful villa, on the Lake of Geneva, that he finally established himself; and there, for many years, he employed himself in the publication of a series of works, which, whether they were poetry or prose, imaginative or investigative, all tended to the same consistent purpose, namely, the fearless and unqualified promulgation of those opinions, on the adoption of which he sincerely believed the happiness of mankind depended; and the opposite principles to which, in his own case, had been productive of so much mortification and misery. His works, which were published in England, were little read, and universally decried. The critics were always hard at work, proving that he was no poet, and demonstrating, in the most logical manner, that he was quite incapable of reasoning on the commonest topic. In addition to all this, his ignorance was self-evident; and, though he was very fond of quoting Greek, they doubted whether he was capable of reading the original authors. The general impression of the English public, after the lapse of some years, was, that Herbert was an abandoned being, of the most profligate habits, opposed to all the institutions of society that kept his infamy in check, and an avowed atheist; and, as scarcely any one but a sympathetic spirit ever read a line he wrote—for, indeed, the very sight of his works was pollution—it is not very wonderful that this opinion was so generally prevalent. A calm inquirer might, perhaps, have suspected that abandoned profligacy is not very compatible with severe study, and that an author is seldom loose in his life, even if he be licentious in his writings. A calm inquirer might, perhaps, have been of opinion that a solitary sage may be the antagonist of a priesthood, without absolutely denying the existence of a God; but there never are calm inquirers. The world, on every subject, however unequally, is divided into parties; and, even in the case of Herbert and his writings, those who admired his genius, and the generosity of his soul, were not content without advocating, principally out of pique to his adversaries, his extreme opinions on every subject—moral, political, and religious. Besides, it must be confessed, there was another circumstance which was almost as fatal to Herbert's character in England as his loose and heretical opinions. The travelling English, during their visits to Geneva, found out that their countryman solaced or enlivened his solitude by a mistress. It is a habit which very young men, who are separated from, or deserted by, their wives, occasionally have recourse to. Wrong, no doubt, as most things are, but, it is to be hoped, venial; at least in the case of any man who is not also an atheist. This unfortunate mistress of Herbert was magnified into a seraglio; the most extraordinary tales of the voluptuous life of one who generally at his studies outwatched the stars, were rife in English society; and

Hoary marquesses and stripling dukes,

who were either protecting opera dancers, or, still worse, making love to their neighbours' wives, either looked grave when the name of Herbert was mentioned in female society, or affectedly confused, as if they could a tale un-

fold, if they were not convinced that the sense of propriety among all present was infinitely superior to their sense of curiosity."

We are afraid that the latter part of this quotation will not be thought one jot more correct or moral than the lowest of Lord Byron's principles. To blame general society is a bad defence of individual vice or guilt. A bit of the London scenery may illustrate this system. Cadurcis is at home in the evening, and his man enters.

"The young lad has called again, my lord: he says he thinks your lordship has come to town, and he wishes to see your lordship very much." "Bring lights and shew him up. Shew him up first." Accordingly, a country lad was ushered into the room, although it was so dusky that Cadurcis could only observe his figure standing at the door. "Well, my good fellow," said Cadurcis, "what do you want? Are you in any trouble?" The boy hesitated. "Speak out, my good fellow; do not be alarmed. If I can serve you, or any one at the abbey, I will do it." Here Mr. Spalding entered with the lights. The lad held a cotton handkerchief to his face; he appeared to be weeping; all that was seen of his head were his locks of red hair. He seemed a country lad, dressed in a long green coat with silver buttons; and he twirled in his disengaged hand a peasant's white hat. "That will do, Spalding," said Lord Cadurcis. "Leave the room. Now, my good fellow, my time is precious; but speak out, and do not be afraid." "Cadurcis!" said the lad in a sweet and trembling voice. "Gertrude, by G—d!" exclaimed Lord Cadurcis, starting. "What infernal masquerade is this?" "Is it a greater disguise than I have to bear every hour of my life?" exclaimed Lady Monteaule, advancing. "Have I not to bear a smiling face with a breaking heart?" "By Jove! a scene," exclaimed Cadurcis, in a piteous tone. "A scene!" exclaimed Lady Monteaule, bursting into a flood of indignant tears. "Is this the way the expression of my feelings is ever to be stigmatised? Barbarous man!" Cadurcis stood with his back to the fire-place, with his lips compressed, and his hands under his coat-tails. He was resolved that nothing should induce him to utter a word. He looked the picture of dogged indifference. "I know where you have been," continued Lady Monteaule. "You have been to Richmond; you have been with Miss Herbert. Yes; I know all. I am a victim, but I will not be a dupe. Yorkshira, indeed! Paltry coward!" Cadurcis hummed an air. "And this is Lord Cadurcis!" continued the lady. "The sublime, ethereal Lord Cadurcis, condescending to the last refuge of the meanest, most commonplace mind, a vulgar, wretched lie! What could have been expected from such a mind? You may delude the world, but I know you. Yes, sir; I know you. And I will let every body know you. I will tear away the veil of charlatanism with which you have enveloped yourself. The world shall at length discover the nature of the idol they have worshipped. All your meanness, all your falsehood, all your selfishness, all your baseness, shall be revealed. I may be spurned; but, at any rate, I will be revenged!" Lord Cadurcis yawned. "Insulting, pitiful wretch!" continued the lady. "And you think that I wish to hear you speak! You think the sound of that deceitful voice has any charm for me! You are mistaken, sir. I have listened to you too long. It was not to remonstrate with you that I resolved to see you. The tones of your voice can only excite my disgust. I am here to speak myself; to express to you the contempt,

the detestation, the aversion, the scorn, the hatred, which I entertain for you!" Lord Cadurcis whistled. The lady paused; she had effected the professed purport of her visit; she ought now to have retired, and Cadurcis would most willingly have opened the door for her, and bowed her out of his apartment. But her conduct did not exactly accord with her speech. She intimated no intention of moving. Her courteous friend retained his position, and adhered to his policy of silence. There was a dead pause; and then Lady Monteaule, throwing herself into a chair, went into violent hysterics. Lord Cadurcis, following her example, also seated himself, took up a book, and began to read. The hysterics became fainter and fainter; they experienced all those gradations of convulsive noise with which Lord Cadurcis was so well acquainted; at length they subsided into sobs and sighs. Finally, there was again silence, now only disturbed by the sound of a page turned by Lord Cadurcis. Suddenly the lady sprang from her seat, and, firmly grasping the arm of Cadurcis, threw herself on her knees at his side. "Cadurcis!" she exclaimed in a tender tone, "do you love me?" "My dear Gertrude," said Lord Cadurcis, coolly, but rather regretting he had quitted his original and less assailable posture, "you know I like quiet women." "Cadurcis, forgive me!" murmured the lady. "Pity me! Think only how miserable I am!" "Your misery is of your own making," said Lord Cadurcis. "What occasion is there for any of these extraordinary proceedings? I have told you a thousand times that I cannot endure scenes. Female society is a relaxation to me; you convert it into torture. I like to sail upon a summer sea; and you always will insist upon a white squall." "But you have deserted me!" "I never desert any one," replied Cadurcis very calmly, raising her from her supplicating attitude, and leading her to a seat. "The last time we met, you banished me your presence, and told me never to speak to you again. Well, I obeyed your orders, as I always do." "But I did not mean what I said," said Lady Monteaule. "How should I know that," said Lord Cadurcis. "Your heart ought to have assured you," said the lady. "The tongue is a less deceptive organ than the heart," replied her companion. "Cadurcis," said the lady, looking at her strange disguise, "what do you advise me to do?" "To go home; and, if you like, I will order my *vis-a-vis* for you directly;" and he rose from his seat to give the order. "Ah! you are sighing to get rid of me!" said the lady, in a reproachful, but still very subdued tone. "Why, the fact is, Gertrude, I prefer calling upon you, to your calling upon me. When I am fitted for your society, I seek it: and, when you are good-tempered, always with pleasure; when I am not in the mood for it, I stay away. And when I am at home, I wish to see no one: I have business now, and not very agreeable business. I am disturbed by many causes; and you could not have taken a step which could have given me greater annoyance than this strange one you have adopted this evening." "I am sorry for it now," said the lady, weeping. "When shall I see you again?" "I will call upon you to-morrow; and pray receive me with smiles." "I ever will," said the lady, weeping plentifully. "It is all my fault; you are ever too good. There is not in the world a kinder and more gentle being than yourself. I shall never forgive myself for this exposure." "Would you like to take any thing?" said Lord Cadurcis; "I am sure you must feel exhausted. You see I am drinking wine; it is my only

dinner to-day; but I dare say there is some sal-volatile in the house; I dare say, when my maids go into hysterics, they have it!" "Ah! mocker," said Lady Monteaule; "but I can pardon every thing, if you will only let me see you." "Au revoir!" then, said his lordship; "I am sure the carriage must be ready. I hear it. Come, Mr. Gertrude, settle your wig,—it is quite awry. By Jove! we might as well go to the Pantheon, as you are ready dressed. I have a domino." And so saying, Lord Candurris handed the lady to his carriage, and pressed her lightly by the hand, as he reiterated his promise of calling at Monteaule House the next day."

With this quotation we will close, only observing that, in the third volume, in Italy, there is much of poetical beauty and vivid description. The personal scenes are also finely wrought; and the literary topics discussed, shew much of originality and power. The catastrophe occasioned by the "white squall" is a piece of deep feeling, for which we are well prepared by the striking meetings at Rovigo and the Convent of St. Lazaro; and the fate of poor Shelley in another personage is touchingly told. But, as we have said, we will not anticipate; and merely add, that there are some good poetical compositions in these volumes; and that, in the Rovigo meeting, the author seems to have forgotten that his heroine was an invalid when he speaks of her "glowing form" "beaming with grace, beauty, and love."

*Three Voyages in the Black Sea to the Coast of Circassia, &c.* By the Chev. Taitbout de Marigny, Consul of the King of the Netherlands at Odessa. 8vo. pp. 303. London, 1837. Murray.

THE late seizure of the Vixen and other political circumstances having turned the public attention towards the coasts and national position of Circassia, this volume has been produced with the view of gratifying, as far as it could, the curiosity excited in that quarter. The voyages, however, were performed some years ago; and details of the first, at least, published so long since as 1829, under the name of Count Potocki, at Paris. A short appendix notices events which have taken place within the last three or four years; but hardly sufficiently for their importance and for the great change they have wrought in the relative situations of Russia, Turkey, and Circassia. We are, therefore, inclined rather to look to this volume for its sketches of manners, &c. than for its information of a higher character, though it reprints certain mutilations and omissions which were suppressed in a Russian edition of the narrative.

From the whole it appears that the Circassians, or Tcherkesses, greatly resemble the Greeks of the early ages when Greece was divided into small independent states; and, in other respects, the knights and society of feudal times. Having no general government, they are incapable of combined resistance to any enemy; but they are strong in their mountainous country, warlike habits, and indomitable spirit. Almost inaccessible in their fastnesses, supported on the most simple and frugal fare, strengthened by athletic exercises from their childhood upwards; this remarkable people might, if united, bid defiance to every foe, and continue to enjoy their freedom for centuries yet to come; for "The Circassians at the present day offer the astonishing spectacle of a free population, which has always preserved itself in an almost barbarous state, although surrounded by more civilised nations.

They are scattered as far as the summits of the highest mountains, divided by populations of distinct denominations, and forming so many small feudal republics, of which some princes are the chiefs. The Turks alone, since the conquest of the eastern empire, have kept up commercial relations with them; and, without endeavouring to subdue them, they are contented with the possession of Anapa, a fortress situated at the northern extremity of the coast, and eight leagues from the mouth of Kuban, which serves as the boundary of Russia. It is there that they have established their market with the Circassians, of whom they receive boys and girls, corn, wax, honey, hides, skins, &c., in exchange for merchandise brought annually from Constantinople and Anatolia. This commerce, which introduces the plague among them, and carries away their children, necessarily occasions a marked diminution in the population. An enthusiastic love of independence, and an heroic valour which nothing can subdue, renders them formidable to their neighbours. Accustomed from the tenderest age to violent bodily exercise, and to the management of arms and horses, their only knowledge of glory is that of vanquishing the enemy, and of shame, that of flight; we see them, therefore, dashing across their frontiers, pouncing upon their neighbours, ravaging their lands, carrying away their flocks, and reducing to slavery all those whom their arms have spared. Even the sea offers no obstacle to their spirit of plunder: embarking in frail barks, they frequently seize on the vessels which approach their coast. Nevertheless, a usage which is not generally known, but which is also found amongst many other barbarous nations, tends to dissipate the fears of the traveller who comes to visit them. It consists in choosing a host, called a Konak, whose name it is sufficient to know to put oneself under his protection. This individual is thenceforward, in the eyes of his countrymen, the guarantee of all the actions of his *protégé*, to whom he shews every mark of the greatest hospitality, and whom he protects from every insult. Notwithstanding their love of plunder, these people are gentle and susceptible of friendship; this is more particularly remarked amongst the Noutakhaitsin, who amount to 5350 families, and who are the allies of the Chapsoukes, their neighbours, who are renowned for their bravery, and whose numbers may be estimated at 10,000 families. The incursions of the Circassians into the territory of the Tchernomorski Kossacks, and the reprisals of the latter, keep up a continual war on the frontiers, which Russia has for the last forty years fixed as the boundary of the empire. The Russian government has from time to time sent thither troops which, in a country very little known and of difficult access, have very rarely obtained any marked advantages; and these violent means have only rendered still more fierce, men who conceive themselves to be invincible in their mountains. During the last war with Turkey, the capture of Anapa, in 1807, and, in 1811, that of Soudjouk-kalé, a small fort seven leagues to the south, and defended by the Turks, would have been of some advantage if they had not been restored to the Grand Seigneur at the peace of 1818. At the present day, Soudjouk-kalé is deserted, and Anapa, whose fortifications have been increased, is commanded by a pasha.

"My interpreter (says our author) informed me that the Circassians have no fixed hours for their repasts; and that they only eat, when they are hungry, a piece of bread or a millet cake. During their journeys, or their incursions

against their neighbours, a small quantity of fermented flour of millet suffices for their support during the whole day. They carry this food, which they call *komi*, in a small leathern purse suspended to their saddles. It is only on the occasion of the arrival of some stranger, or upon *fête* days, that this frugality is ever broken through; they then eat at all hours, and fare luxuriously."

With regard to their learning, or want of it, we have the following remarks:—

"The Circassians have no idea of writing. Certain epochs in their history are consecrated by songs and by some old traditions, for the most part fabulous. In business they only make use of witnesses, or of an oath taken over some amulets, which, among them (where intrigue is unknown), suffices to cause the engagements which have been contracted to be scrupulously observed. Their relations being confined within a narrow sphere, they are seldom obliged to communicate their thoughts otherwise than by words; and when they are forced to do so, they send a messenger. Some Turks who are settled at Anapa, or in the interior of the country, are the only literati. The Circassians appear, however, to feel how useful writing would be to them. The different marks of their harness gave me the idea of forming an alphabet, by using these signs for the initials of each proprietor: there are about thirty-six of them. Perhaps it would be better to make them acquainted with the Latin characters now adopted generally in Europe, and which might suffice, in the hands of a skilful man, for every sound."

Their religion seems to be a chaos, and little regarded in any of its obscure features:—

"The Circassians acknowledge a Supreme Being, and several celestial powers of a secondary order. They believe in the immortality of the soul and in another world, in which men are to be rewarded according to their works; but careless about such a future state: all their actions have temporal prospects immediately in view. Merissa or Méréfme, surnamed the Mother of God, is the protectress of bees. The Circassians say, that the thunder, in its wrath, would have exterminated them all, but that this holy woman concealed one of them in her sleeve, by which means the species was preserved. The festival is celebrated in the month of September. The Circassians regale themselves, on that occasion, with viands and beverages prepared with honey. I think the etymology of the name of this divinity is Melissa. It is not extraordinary that in a country where honey is one of the chief articles of nourishment among the inhabitants, a protectress should have been given to the insect which produces it. The Greeks call the bee Melissa—Mérissa may very well have been originally a Dimatra (Ceres), whose name and worship are now disfigured and confounded with those of the Virgin Mary. Séozérés was a great navigator, to whom the winds and waves were subject. He is especially venerated by those who live by the sea-side. He is represented by a dry pear-tree, on which only a few remnants of branches have been left. Each family preserves one for this purpose in the court of its house; no one touches it excepting on the fête day of this divinity, which takes place in the spring. This tree is the emblem of Séozérés; it is plunged into water, and washed; a cheese is fastened to its summit, and it is adorned with as many little tapers as there are guests assembled. As soon as it is thus decorated, several persons go to take it to introduce it in full ceremony into the house. The rest of the company wait at

the door to receive it, and to compliment it on its happy arrival. Its entrance is preceded by a sacrifice and preparations for a grand festival. They eat and drink during three days at intervals, praying Séozérés to prevent the winds and waves from committing ravages. When this period of feasting is past, the cheese and other viands are distributed among the guests, and the tree is carried back to its place: the whole society accompany it, wishing the god a happy voyage, and he is then forgotten till next year. He is also the protector of the flocks, and has two brothers. His long voyage, his power, the form of his emblem, which resembles an enormous club, might induce the belief that this divinity was a Hercules. The devotion which the tribes on the shores of the Black Sea paid to Achilles, might likewise lead one to suspect some affinity with the worship paid to that hero, surnamed Pontarkhos, chief or protector of the sea. But the true origin of Séozérés is most probably the Akhaikoros or Akikaros, *Ἀχαικός* or *Ἀκίκαρος*, mentioned by Strabo in his Geography, (Book xvi. page 762) as revered by the inhabitants of the Bosphorus, equally with the Zamolxis of the Getae; and who, according to Lucian, was revered by the Scythians and Persians as a sacred object, and even as a divinity, under the title of Akinaki or Akiraki. Tliêbæ, king and protector of forges. On his fête-day, libations are made in honour of him on a hatchet and plough. Naokhatche, Skuska, Yémiche, and Mété, are other saints or demi-gods, who have also days consecrated to them. The Circassians hold in great veneration three sisters, who preside over domestic harmony and concord between neighbours, and who defend the traveller with their protecting shield. Whoever changes his abode makes a sacrifice to them on arriving at his new domicile, and the traveller who takes a journey does the same on setting out. The similarity between these three sisters, the Penates, and the Guardian Angels, are a new proof of the mixture of creeds which compose the religion of the Circassians. Towards the end of the October moon, they celebrate the commemoration of the dead: this epoch of recollections is marked by prayers, which each separate family addresses to the celestial powers, in order that they may not allow them to stand in need of any thing in the eternal regions. The Circassians have no god of thunder—but it might be erroneous to assert that they never have had one. Thunder is held in great veneration amongst them: they assert that lightning is an angel that strikes those who are distinguished by the benediction of the Creator: the body of a person who has been killed by lightning is solemnly interred; and whilst they weep for the deceased, the relations rejoice in the distinction conferred upon their family. These people come out in crowds from their houses at the noise made by this angel in his aerial course; and when some time has elapsed without his having been heard, public prayers are offered up that he may return to visit them. Thankgivings are made for the rains which have attended it, and for its having refreshed and purified the air during the heats of summer."

With this quotation we would conclude, but that our fair readers would think us very un-mindful of them, if we neglected to say something of the lovely and fascinating Circassian ladies—the principal mercantile export of the country too, let the economists and traders observe that—who form the ornaments and delights of Oriental harems. Well, we read, as an addition in the Russian edition, "All the

Circassian ladies have the itch, but it is of a very mild description, and is called the prince's itch; it must, indeed, be so, for during two voyages in the summer, when I frequently retained in my hands those of the beauties thus affected, I did not catch this disorder. I know not what can occasion it; all the Circassians have it, and I have also seen it in the Crimea among the Tartars, but not so frequently. At first it disgusted me; at length, however, I became used to it, so that it no longer excited my attention. Notwithstanding this effect of habit, we must believe that the Turks cure their slaves before they bring them into their harems. Their care must contribute much to embellish them, for it must be owned, that very few beauties can anywhere resist the effects of the labours and the kind of life to which the women are subjected in their native land. One example will suffice. I said one day to M. Tausch that the warehouses required plastering again. This young man replied, with his Circassian naïveté, that he would tell the princesses so; that they had already done it themselves, and would do it again with pleasure. Imagine, gentle reader, these powerful princesses, with their itchy hands, plastering with mud the warehouses of a merchant, and own that this really is too much in the style of Homer."

Might we not, however mild the disease, apply the old Scotch insult here?

"All ye that go to Anapa, and leave your native home, Provide yourselves with brimstone and a curry-comb."

*The Arethusa; a Naval Story.* By Captain Chamier, R.N. 3 vols. 12mo. London, 1837. Bentley.

CAPT. CHAMIER is certainly not inferior in descriptive power, in the naïve delineation of sea manners and characters, and in the general skill of the novelist, to any writer of the class to which his productions belong. Of that class we have so very lately given our opinion, that we will say nothing more of the *Arethusa* than that it is very clever, and very entertaining. Of these qualities we can hardly afford a better proof than the following middy yarn:—

"In the Shark, the midshipmen might smoke or do any thing else they pleased,—and they did please to smoke and drink—both. The wine was now put aside for grog; and although Abbot manifested some signs of coming inebriation in the thickness of his utterance, and the devil-may-care manner in which he handled the bottle, yet some of the more knowing ones saw that if he went on at the pace he was going, he would soon be rather too hazy to undertake a quiet excursion on shore; this being the *coup de grace*. The victim, after being walked or reeled about until he can no longer stand, is left without a hat on one of the logs near the shore, and 'the moon and the dew do their duty.' Murray saw what was going on, and he guessed that the doctor's advice was well worth following: he took only water, and this enabled him to see the end of the tragedy; for had he drunk brandy, the fork would have been stuck in the table, and he bundled off to his hammock. Oliver proposed a song: he sang a good one himself, and therefore having proposed it, and being able to do it, he set the example, and sang the following, all hands joining in respectable chorus, while Douglas occasionally poured a few drops of new rum—the bottle stood by him—into the sangaree of Abbot.

'When the world was first made, all was order, we know,

Until Admiral Noah took a cruise in the ark:

He had a strange crew to trim sails in a blow,

But he sailed without compass to steer in the dark.

If to north, south, or west, 'twas no moment to him;  
For who could make land when of land there was none?

He drifted about as it suited his whim,  
And the jolly old admiral revell'd in fun.

When he turn'd out at daylight,—he never slept late,—  
His daughters and sons took the scrub-brooms in hand;

And they fagg'd and they toil'd, but they never once ate  
Of the pairs of provisions which came from the land.  
They had ducks, geese, and sheep, with a lion or two;  
Camelopardals, with other large drones;

An elephant also, to clap in the stew,  
With a rather thin donkey to make some broil'd bones.

Now, we are much wiser than Noah, my boys;  
We eat and we drink of the good things on board;

Not a duck or a goose his existence enjoys,  
But a savoury stew he may also afford.

Let us live whilst we can, let us love whilst we may.

For the slight breath of life in a moment is past;

Seize the hour which is now, make the best of the day.

And a fig for the cloud which may evening o'ercast.

'Bravo!' said Douglas, 'Hurrah for the present time, and the devil run a-hunting with the future! Fill up, Mr. Abbot; here's Oliver's good health and song, and it's

'A very good song, and it's a very well sung,

Jolly companions every one.

Put on your hats, and keep your heads warm;

A little more liquor will do us no harm.'

'Ah!' sighed Murray, for he had got a little of his own good sense for his guide, 'that chorus is not like Parr's maxim of health, 'Keep your head cool by temperance, your feet warm by exercise; never eat but when hungry, nor drink but when dry.' 'Hulloa!' said Douglas, 'why, we have got a parson on board, rigged out like a boy of the first class. I dare say you know all about Noah and his Ark; now can you tell where he made the land?' \* \* \*

"The cry was 'Douglas!' the president beat the table, and this lieutenant in expectation gave forth the following song, in a deep, clear voice, his spirit warming with the subject, and his voice gradually increasing in the chorus.

'Saturday night was the sailor's delight,  
When they sang of their love, or described the fierce fight.  
It's in England, or far, far away from this spot,  
That this song of the seaman is never forgot.  
But who in this climate of sickness and sorrow  
Shall dare to look forth for the light of to-morrow?

Hark! hark! to the prayer of the Shark:  
Promotion's uncertain, our prospects are dark;  
Our toast shall be death, though it savours of treason;  
And this is the prayer of the mids of the Shark—  
For a bloody war, and a sickly season.

Hurrah! hurrah!

Near and far,

For a bloody war and a sickly season.

What's life but an ocean of strife,  
For ambition, promotion, another man's wife?  
Who cares for the living placed over our head?  
'Tis a world full of cares, and the blest are the dead.  
The captain's last sigh, though in madness it be,  
Or his groans, would make music the sweetest to me.

Hark! hark! &c.

What's death but the stoppage of breath,  
And a rather damp bed in the ground underneath?  
The best friend we have is the quick yellow fever,  
And the first toast we drink is, 'Promotion for ever!' Let them die who're above us, and, bless'd in repose, Their troubles all ended, we'll step in their shoes.

Hark! hark! &c.

It is needless to add, that the toast was drunk even by Abbot in a brimmer, for although it was partially directed at him, yet he had to move up the ladder, and in his delirium of drunkenness he would not have cried if the man on the step above him slipped off in a hurry. Again was the glass filled and emptied; and now the red eye of drunkenness was fixed in stupid gaze; then came indecent songs, revellings, cursings, complaints of prospects blighted, in almost inarticulate language; and as the relater of his woes dashed his hand on the table, the tears rolled down his face, the glasses danced before and around him. There sat systematic drunkenness, a kind of unmeaning smile upon his lips, his eyes scarcely human, muttering to himself the last words of the song, they-being what he really most wished and best

remembered. By his side was sullen indifference rolling upon his chair; if brandy or water went into his mouth, he could not distinguish the difference. By him, again, was delicate sensibility moistened in tears,—a man crying drunk, his mouth unable to contain the fluid which, like an infant's dribbles, oozed through his lips. On his right was frantic intemperance, quarrelling with all, but noticed by none; and as he rose higher and higher in his blasphemy, his laughing drunk companion was pouring the grog intended for his victim's mouth down the collar of his shirt. Murray eyed it all, and the lesson—the Spartan lesson of making their slaves drunk—was not lost upon him; he became an attentive witness of the danger of drunkenness. The man who had treasured the secret in his breast with religious caution, now blabbed it forth; he who was rigid in his duty, now scoffed at discipline; the silent found an incoherent tongue; the coward became the bravest of the brave; the mildest and most modest was now the fiercest and the most indecent."

A naval action is vividly described, but at too great length for our *Gazette* columns; and indeed, we find it so difficult to detach any fair example of the writer from his connected narrative, that we must be content, in one word, to say, that the *Arethusa* is one of the best of the sea-novels which have lately become so popular.

*Narrative of a Voyage of Observation among the Colonies of Western Africa, in the Flag-ship Thakia; and of a Campaign in Kaffirland, on the Staff of the Commander-in-chief, in 1835.* By Capt. J. E. Alexander. Illustrated with Maps and Plates, by Major C. C. Mitchell. 2 vols. 8vo. London. Colburn.

THE first volume treats chiefly of the voyage of the *Thalia*, and the results of its touching at Madeira, Teneriffe, the Gambia, Sierra Leone, Cape Coast Castle, Accra, the Bight of Biafra, St. Helena, and Ascension; whilst the second is dedicated to the Kaffir war of 1835, when Sir B. D'Urban reduced these unruly savages, liberated the Fingo nation from slavery,\* and secured a new and more extended frontier to the Hottentots and colonists. In the former division, though written in a lively manner, we do not find much of extreme novelty to tempt us to extracts: but the account of the Kaffirs and their country is, perhaps, the most ample which has yet been laid before the public.

"Kaffir-land," says our author, "from the Keiskamma to the Umtata, is a tract of South Africa highly favoured by nature. The air is so pure, the sky generally so serene, and the whole face of the country so parklike and inviting, that it realises all we have read of Arcadia. The continuation of the great range of the Winterberg bounds the country of the Amakosa on the north; and beyond these mountains are extensive plains, waving with rich pasture and abounding with game. There, on the Bontebok Flats, a part of the Amakosa hunting-ground near the Doorn river, are seen troops of bounding deer of many varieties: the splendid bontebok, or painted antelope, with its colours of bay, purple, and white; the magnificent koodoo, browsing close to cover, with its sweeping spiral horns; and gnoos, with their cow-head, horse's tail, and deer-limbs, sporting

and frisking in a most grotesque and strange manner. Wolves and lions are found in proportion to the great quantity of game. Wild fowl are in abundance; and, 'as where the slaughter is, there will the eagles be gathered together,' large vultures are continually soaring aloft, and keenly watching for their prey below.

\* \* \* The people who inhabit these fair regions, the Amakosa, are among the finest specimens of the human race: tall, straight-limbed, and active; their every attitude is graceful, and every motion is performed with ease. The head of the Amakosa is well developed, and his expanded forehead shews considerable intellectual capacity. The hair is woolly; the nose is tolerably prominent, and, though in general round, in some there is a tendency to an aquiline shape; the lips are inclined to fullness; the teeth are beautifully white; and the large eye, ever restless, shews deep cunning, is easily lighted up with a smile, yet often flashes with relentless cruelty when the evil passions are at work within. The colour of the skin is a light chocolate; and, though this is often concealed with a coat of grease and red clay, to preserve it from the effects of the sun, the persons of the Amakosa are not disagreeable. The chest is not so broad, nor are the arms so strong, as those of Europeans, for the Kaffir-people perform little manual labour; but the lower limbs are muscular in the extreme. The trousers of few Europeans are large enough for the brawny Kaffir thigh; the legs are really 'pillars of Hercules.' The Amakosa disdains to wear any covering on the head, which is occasionally ornamented by the females, who curl it closely with red ochre into small knots about the size of a pea. In war a band of leather encircles the brows; and from it stand erect, on both sides, the long wings of the blue crane, giving the head a demoniacal appearance. From the shoulders hangs the ungooba, kaross, or mantle of softened hide, worn with the hair next the body, and fastened with a thong at the neck. The Kaffirs near the colony are beginning to change their leather covering for one of cloth, which is not so heavy, and is warmer in wet weather than hide. The chiefs and counsellors wear karosses of leopard skins, neatly vandycked at the neck and skirt, and worn so as to shew a part of the closely spotted hair. In walking, the open kaross displays the whole of the naked body, and the Kaffir is without sense of decency.

"The women are as studious to conceal their persons, as the men are savagely proud and shameless in the exposure of theirs. \* \* \*

"One of the best traits of Kaffir manners is their hospitality. When a stranger of any consideration arrives at a kraal, a bullock is killed for him; he receives a clean hut for himself; and a widow is sent to assist him. Among the worst characteristics of Kaffir society, on the other hand, is its great incontinence. Most young women are frequently and forcibly violated before marriage; and widows are considered public property. When the chiefs, also, wish to carry any particular point, they seize a number of young women, and give them up to their wild warriors. \* \* \*

"The summary and capital punishments of the Kaffirs are merciful: that is, they take the culprit aside, and destroy him with clubs, or thrust him through with an assegai. But their torturing with black ants, and above all, with hot stones applied to the body, is dreadful. Some time ago, there crawled to the mission station of the Chumie, a Fingo herdsman, whose legs from the ankle upwards were perfectly roasted; and the skin and flesh of the sole

detached from the foot, and flapping against it. He died of lock-jaw in a few days, in the greatest agony; and why was this dreadful punishment inflicted? Because, in driving a cow into a kraal, he had thrown a stick at her; it had glanced off the horn, and struck the son of a Kaffir counsellor on the leg! And this is the fine pastoral race, whom travellers have held up for our admiration! and whom a religio-political party, in their mad ambition for extending their sway over South Africa, have pretended were far more 'sinned against, than sinning.'"

Such are some of the prominent features of the people against whom the war was waged, after their ruthless attack upon the colony and Graham's Town. The contest was attended by all the horrid incidents of barbarous strife, not only battles, but ambuscades, massacres, and murders of every description. Of a few of the most curious details we will make a selection, which will serve to shew the character of the people, of the struggle, and of the work.

"We passed (says Capt. A.) some huts burnt down by Colonel Smith in his late dashing inroad; only one hut having been left standing, for an aged and decrepit woman. There was a halt and an 'off saddle;' and several of us went to see the old Kaffir. She was sitting at the wicker door of her large bee-hive and very neatly thatched dwelling; several folds of cloth stained with red clay were round her crisped hair; and the lower part of her body was concealed by a kaross of softened hide. She drew in her stomach as we approached; and clapping it with her skinny hand, called out '*Lambelli, lambelli!*'—'I am very, very hungry.' Haversacks were immediately searched, and biscuit given to her. She leant forward and kissed the hands of the donors; soaked the biscuit in a little pot of water beside her; and rapidly munched it, still mumbling '*Lambelli.*'—'Where are Tyalie and Macomo?' was asked. She stretched out her lanky arm, and arching it, pointed to the mountains northwards, and drawled out the word '*Amatolee.*' We did not find out until after we had been some time in Kaffir-land, that it was customary with the Kaffirs to leave an old woman at their deserted kraals, to give information to the warriors, who stole back at night to communicate with her, and supply her with food. Of course, our old woman said she had been left by all her people, and was dying of hunger. Doubtless, she must have laughed heartily,—not in her sleeve, because she had none,—but at our simplicity, when we left her with a great pile of biscuit and *biltong* (dried meat), and clapping her belly with hollow sound for more. She pretended deafness too, and would answer nothing but '*Amatolee,*' and '*Tamboochanee*' (in the bush of the mountains), reminding me of the master of the good ship *Tyne* hailing a schooner on the coast of Brazil, '*Where are you from?*' Answer, '*Bahi.*'—'*Where are you going to?*'—'*Bahi.*'—'*Did you see the English admiral?*'—'*Bahi,*' (roaring with hands on each side of the mouth). '*We took you for a slaver.*'—(Louder still) '*Bahi!*'"

Again,  
"In order that the enemy might not harbour in our rear, we consigned all the kraals to the flames; and, after a march of eighteen miles, we established our bivouac in a beautifully wooded glen of the Cahoon River, at a place classically named by the Kaffir traders, '*Hangman's Bush.*' Here it was said that a Kaffir was strangled by his chief for a strange act of witchcraft, in milking a cow into his own mouth: which is not allowed in Kaffir land, as it is supposed to occasion misfortune to another party."

\* "On the 7th of May I witnessed a most interesting sight, and one which causes this day to be of great importance in the annals of South Africa. It was no less than the flight of the Fingo nation, seventeen thousand in number, from Amakosa bondage, guarded by British troops, and on their way across the Kye to find a new country under British protection."—*The Author.*

The style is occasionally somewhat stilted :  
*ex. gr.—*

"A tall, reckless-looking fellow of a Kaffir, with handsome rosettes of beads about his neck, and arrayed in a leopard's skin kaross, now came into camp to hear the news, as he said. It was curious to see how he swaggered; to note the wild independence in his eye; and to watch his graceful attitude, and arrangement of his kaross for exhibiting his muscular limbs, 'in all the pride of manhood.' Nor was it less remarkable how he 'pouted the lip of contempt, and upturned the nose of scorn,' when he came near any of the Fingoes. These poor people, indeed, now began to flock to us in great numbers; thankfully eating the heads, tails, and entrails of the slaughtered oxen; hammering out the fresh marrow from a shin and pleasantly licking it off a stone. When Driver, the elephant hunter, saw the proud Kaffir, his countenance kindled with wrath; and the finger of impatience itched to pull the trigger of destruction. 'There's an infernal rascal!' he cried; 'Coubu, a counsellor and a spy of Hintza's: that's the villain that headed the party which destroyed my trading station on the other side of the hills. Only let me drill a hole in his jacket,—the gallows scoundrel!' Coubu, leaning on his staff, merely sneered and grinned at Driver. 'Yes, you know me,' muttered the latter bitterly; 'and a ball and your hide shall be better acquainted before long.' Coubu was now closely watched, and prevented from leaving the camp; but civilly treated."

In the end, Hintza, the chief, came into the British camp, but after a time attempted to effect his escape, and was slain. It is a story of interest.

"On this day's march it was remarked, that Hintza rode for the first time a very powerful bright bay horse, of which he seemed to be very careful, dismounting and leading him up and down inequalities in the road. Colonel Smith, his light and sinewy form in oil-skin chako and blue jacket, rode up the steep ascent at the head of the troops, followed by Hintza leading his horse; and after them, the guides and the rest of the cavalry leading theirs. The colonel had nearly reached the open country at the summit, when he heard a cry of 'Hintza!' behind him; and at the same moment the great chief passed him, he and two of his followers having suddenly thrown themselves on their sheep-skin saddles. The colonel called to Hintza to stop, and presented a pistol. The great chief, unable to penetrate the bush by the road side, returned to the only path, smiling, which made the colonel, for a moment, ashamed of his suspicions. The chief of the staff then turned round to watch the troops ascending the defile, when he heard another cry; and looking for Hintza, he saw him galloping off across the plain at full speed, followed by the lieutenant of the guides, George Southey, an active, light-made, and good-looking young man; William Southey, and William Shaw. The colonel, spurring his horse violently, strove to overtake Hintza; and the fleet bay soon left the three guides far in the rear. Hintza urged on his long-tailed charger at full speed; whilst the colonel, unable to stop the great chief, drew a pistol and snipped it at him. It missed fire; his second pistol also failed him; and he then struck Hintza on the back of the head with the but. The great chief turned round and grinned in derision. The colonel then threw his pistol after him, which struck him; and, redoubling his efforts, after a hard gallop of a mile, succeeded in closing with the athletic chief, who retained his assegais. Twisting his hand into

the collar of Hintza's leopard-skin mantle, and assisting the effort with the weight of his horse, the colonel dragged the Kaffir king with violence to the ground: he fell heavily, with a look of mingled rage and despair. Hintza quickly sprang to his feet, drew the izaka, or man-killer assegai with barbed neck, from the bundle of javelins, and launched it after the colonel. It fell short; the colonel's horse having run away with him for some distance, towards a few huts. Hintza then continued his flight on foot, towards the bed of the river on the right. During this time George Southey was gaining ground; and, after Hintza fell, he sprang from his horse, and running toward the chief, called to him in the Kaffir language to stop, or he would shoot him. Hintza looked round as he ran, and took no further notice. Southey then fired and wounded him in the leg. Hintza fell on his hands, but got up again, and ran swiftly down the hill. By this time Colonel Smith had managed to stop his horse, and returned near to the spot where Southey was, who again called out to the great chief to stop, but he would not; and Colonel Smith then ordered Southey to fire a second time. He did so, when Hintza was two hundred yards from him. Hintza fell; but, strange to say, he got up again, kept on the same course down the hill, and disappeared in the bush skirting the river's bank. Lieutenant Balfour, the colonel's aide-de-camp, had galloped to intercept Hintza, but failed. Some of the cavalry, who had mounted quickly, and come up with shouts of impatience, fired into the bush, but without effect. Southey, having speedily reloaded, scrambled with Lieutenant Balfour down a steep descent of the Ghabacka; Southey going up the stream, and Balfour down it, searching for Hintza: no one else was near. They had each proceeded some distance, when Southey heard an assegai touch the stone on which he stood: quickly looking about him, he saw a Kaffir head, and an assegai uplifted close beside him. He stepped back a pace for room, fired, and shot Hintza through the head. He fell into the water quite dead. Southey then took, as 'spolia opima,' the assegais and brass belt of the great chief, and returned to Colonel Smith, who gave Southey Hintza's horse. The body of the Kaffir king was stripped of its ornaments, but not of the kaross, and left on the bank of the river. It was intended to have buried it; but time would not permit; and the bugle sounded the assembly and march. It was pretty evident that Hintza had expected the co-operation of an ambuscade, which was a little too late to assist him. Kaffirs were soon seen in the bush near his dead body. Umtenee, who had gone off in the morning, saw the whole transaction from a neighbouring rock, out of reach; whilst, of the two who fled with Hintza, one was shot by two of the provisional Hottentots to the right of the column; and the other, 'our friend with the turban,' got clear off. Thus fell the paramount chief of the Amakosa, a victim to the treachery and perfidy of his own character: having, instead of assisting Colonel Smith to recover the colonial cattle, as he had engaged to do, tried every means to mislead him, and to take him to districts where the cattle had been driven off by his own orders. His attempt at escape was a bold enterprise; and he shewed considerable intrepidity and obstinacy on the occasion; but as it was made in defiance of a solemn warning of the consequences, he owed his end to himself alone, and met the reward he so richly deserved."

With this we would conclude, but an in-

stance of canine fidelity is worthy of record. "The entire body of a Kaffir, who had been shot at least a week, probably when hanging on the rear of the retreating Fingoes, lay a little off the road, wrapped in its kaross; neither vulture nor hyena had touched this body; and we saw the cause of their forbearance on approaching it. A small yellowish dog, with a black muzzle, lank with famine, rose from its dead master's breast, where it kept watch, and angrily snarled defiance at every intruder. It was impossible to remove the dog for the purpose of saving it from starvation, until some Hottentots threw a noose of hide round its neck and dragged it off."

Altogether, Captain Alexander's work will sustain his literary repute, and induces us to look forward, with anticipations of pleasure, for other publications by the author of "Travels in the East" and "Transatlantic Sketches."

#### *Miss Martineau's Society in America.*

[Second and concluding notice.]

In various parts of her work, besides those we referred to last week, Miss Martineau stands up for her sex like a resuscitated and reinvigorated Mary Wollstonecroft. Treating of the southern provinces and slavery, she says:—

"It is enough here to say that, if, with the law of liberty and the Gospel of peace and purity within their hands, the inhabitants of the south are unconscious of the low state of the morals of society, such blindness proves nothing so much as how far that which is highest and purest may be confounded with what is lowest and foulest, when once the fatal attempt has been entered upon to make them co-exist. From their co-existence, one further step may be taken—and in the south has been taken—the making the high and pure a sanction for the low and foul. Of this, more hereafter. The degradation of the women is so obvious a consequence of the evils disclosed above, that the painful subject need not be enlarged on. By the degradation of women, I do not mean to imply any doubt of the purity of their manners. There are reasons, plain enough to the observer, why their manners should be even peculiarly pure. They are all married young, from their being outnumbered by the other sex; and there is ever present an unfortunate servile class of their own sex to serve the purposes of licentiousness, so as to leave them untempted. Their degradation arises, not from their own conduct, but from that of all other parties about them. Where the generality of men carry secrets which their wives must be the last to know; where the busiest and more engrossing concerns of life must wear one aspect to the one sex, and another to the other, there is an end to all wholesome confidence and sympathy, and woman sinks to be the ornament of her husband's house, the domestic manager of his establishment, instead of being his all-sufficient friend. I am speaking not only of what I suppose must necessarily be; but of what I have actually seen. I have seen, with heart-sorrow, the kind politeness, the gallantry, so insufficient to the loving heart, with which the wives of the south are treated by their husbands. I have seen the horror of a woman's having to work,—to exert the faculties which her Maker gave her; the eagerness to insure her unearned ease and rest; the deepest insult which can be offered to an intelligent and conscientious woman. I know the tone of conversation which is adopted towards women; different in its topics and its style from that which any man would dream of offering to any other man. I have heard the

boast of the chivalrous consideration in which women are held throughout their woman's paradise: and seen something of the anguish of crushed pride, of the conflict of bitter feelings with which such boasts have been listened to by those whose aspirations teach them the hollowness of the system. The gentlemen are all the while unaware that women are not treated in the best possible manner among them: and they will remain thus blind as long as licentious intercourse with the lowest of the sex unfits them for appreciating the highest. Whenever their society shall take rank according to moral rather than physical considerations; whenever they shall rise to crave sympathy in the real objects of existence; whenever they shall begin to inquire what human life is, and wherefore, and to reverence it accordingly, they will humble themselves in shame for their abuse of the right of the strongest; for those very arrangements and observances which now constitute their boast."

Altogether we would remark, that this is rather curious writing from a female pen; but political economy excuses every thing. If queerish, it is philosophical. As an unmarried lady, we hope Miss M. is wrong in her opinion that wives must be miserable as the ornaments of their husbands' houses, and domestic managers of their establishments. What she would propose instead, i. e. their being "all-sufficient friends," is, we confess, a little beyond our exact comprehension. But we have the subject again in vol. iii.—

"If a test of civilisation be sought, none can be so sure as the condition of that half of society over which the other half has power,—from the exercise of the right of the strongest. Tried by this test, the American civilisation appears to be of a lower order than might have been expected from some other symptoms of its social state. The Americans have, in the treatment of women, fallen below, not only their own democratic principles, but the practice of some parts of the Old World. The unconscionableness of both parties as to the injuries suffered by women at the hands of those who hold the power, is a sufficient proof of the low degree of civilisation in this important particular at which they rest.

"The intellect of woman is confined. I met with immediate proof of this. Within ten days of my landing, I encountered three outrageous pedants, among the ladies; and, in my progress through the country, I met with a greater variety and extent of female pedantry than the experience of a lifetime in Europe would afford."

The sequent reasoning upon this seems to be mere assumption, and quite inconclusive:—

"Where intellect has a fair chance, there is no pedantry among men or women. It is the result of an intellect which cannot be wholly passive, but must demonstrate some force, and does so through the medium of narrow morals. Pedantry indicates the first struggle of intellect with its restraints; and it is therefore a hopeful symptom."

From the pedantic style of what follows, however, we might fancy, were it not for the masculine character of her work, that the writer herself was precisely in her first intellectual struggle. Hear it:—

"The intellect of woman is confined by an unjustifiable restriction of both methods of education,—by express teaching, and by the discipline of circumstance. The former, though prior in the chronology of each individual, is a direct consequence of the latter, as regards the whole of the sex."

But we pass on to a branch of observation always interesting to a literary journal. The author's account and view of the literature of the country:—

"The more (she says) one sees of the people, and the less of their books, the stronger grows the hope of the stranger.

"The best productions of American literature are, in my opinion, the tales and sketches in which the habits and manners of the people of the country are delineated with exactness, with impartiality of temper, and without much regard to the picturesque. Such are the tales of Judge Hall of Cincinnati. Such are the tales by the author of 'Swallow Barn;' where, however, there is the addition of a good deal of humour, and a subtraction of some of the truth. Miss Sedgwick's tales are of the highest order of the three, from the moral beauty which they breathe. This moral beauty is of a much finer character than the *bonhomie* which is the charm of Irving's pictures of manners. She sympathises where he good-naturedly observes; she cheerily loves where he gently quizzes. Miss Sedgwick's novels have this moral beauty too, as has every thing she touches: but they have great and irretrievable faults, as works of art. Tale-writing is her forte: and in this vocation, no one who has observed her striking progression will venture to say what she may not achieve. Among the host of tales which appear without the names of their authors are three, which strike me as excellent in their several ways: 'Allen Prescott,' containing the history of a New England boy, drawn to the life, and in a just and amiable spirit: 'The New England Housekeeper,' in which the *ménage* of a rising young lawyer, with its fresh joys and ludicrous perplexities, is humorously exhibited: and 'Memoirs of a New England Village Choir,' a sketch of even higher merit. Irving's writings have had their meed. He has lived in the sunshine of fame for many years, and in the pleasant consciousness that he has been a benefactor to the present generation, by shedding some gentle, benignant, and beguiling influences on many intervals of their rough and busy lives. More than this he has probably not expected; and more than this he does not seem likely to achieve. If any of his works live, it will be his 'Columbus;' and the later of his productions will be the first forgotten. Cooper's novels have a very puny vitality. Some descriptions of scenery, and some insulated adventures, have great merit: but it is not human life that he presents. His female characters are far from human; and in his selections of the chances of mortal existence, he usually chooses the remotest. He has a vigour of perception and conception, which might have made him, with study and discipline, a great writer. As it is, he is, I believe, regarded as a much-regretted failure. The Americans have a poet. Bryant has not done any thing like what he can and will do: but he has done some things that will live. Those of his poems which are the best known, or the most quoted, are smooth, sweet, faithful descriptions of nature, such as his own imagination delights in. I shall always remember the voice and manner with which he took up a casual remark of mine, about sights to be seen in the pine-barrens. When the visitors had all departed, his question, 'And what of the pine-barrens?' revealed the spirit of the poet. Of his poems of this class, 'The Evening Wind' is to me the most delicious. But others—'The Past,' and 'Thanatopsis'—indicate another kind, and a higher degree of power. If he would live for his gifts, if his future years could be devoted to 'clear poetical

activity,' 'looking up,' like the true artist, 'to his dignity and his calling,' that dignity and that calling may prove to be as lofty as they, no doubt, appeared in the reveries of his boyhood; and he may be listened to as lovingly over the expanse of future time, as he already is over that of the ocean. The Americans have also a historian of promise. Mr. Bancroft's 'History of the United States' is little more than begun: but the beginning is characterised by an impartial and benevolent spirit, and by the indications which it affords of the author's fidelity to democratic principles; the two primary requisites in a historian of the republic. The carrying on the work to a completion will be a task of great toil and anxiety; but it will be a most important benefit to society at large if it fulfils its promise. The periodical literature of the United States is of a very low order. I know of no review where any thing like impartial, enlightened criticism, is to be found. The *North American Review* had once some reputation in England; but it has sunk at home and abroad, less from want of talent than of principle. If it has any principle whatever at present, it seems to be to praise every book it mentions, and to fall in as dexterously as possible with popular prejudice. The *American Quarterly*, published at Philadelphia, is uninteresting from the triteness of its morals, and a general dearth of thought, amidst a good deal of cleverness. The *Southern Review*, published at Charleston—sometime ago discontinued, but, I believe, lately renewed—is the best specimen of periodical literature that the country has afforded. After the large deductions rendered necessary by the faults of southern temper, this review maintains its place above the rest; a rank which is, I believe, undisputed."

Such are our author's opinions, from which, on many points, we essentially differ. On the subject of religion we take leave to be silent, and to conclude with a taste of Miss Martineau's conclusions:—

"However the Americans may fall short, in practice, of the professed principles of their association, they have realised many things for which the rest of the civilised world is still struggling; and which some portions are only beginning to intend. They are, to all intents and purposes, self-governed. They have risen above all liability to a hereditary aristocracy, a connexion between religion and the state, a vicious or excessive taxation, and the irresponsibility of any class. Whatever evils may remain or may arise, in either the legislative or executive departments, the means of remedy are in the hands of the whole people: and those people are in possession of the glorious certainty, that time and exertion will infallibly secure all wisely desired objects."

Even should these exertions cease to be just and good! how can any finite being foresee and be assured of this "glorious certainty?" This is going too far, but not further than, after all, her reprobation of the system of slavery in the Southern States, the author, because a considerable party in America now condemns that system, ventures to tell us, that "Europe now owes to America the justice of regarding her as the country of abolitionism, quite as emphatically as the country of slavery"!!!

*The Principles of English Grammar.* By David Booth, author of "The Analytical Dictionary." 12mo. pp. 343. London, 1837. Knight.

"In the composition of this work," says Mr. Booth, "I have made liberal use of the Intro-

duction to my Analytical Dictionary. I have borrowed very little from any other source, and nothing without acknowledgment."

We have read Mr. Booth's Grammar with much interest; and although we presume to differ from the learned author on some minor points, we perfectly agree with him in general, and think that he has placed many important grammatical truths in a clearer light than that in which they have been hitherto seen. As a brief specimen of this, we especially recommend the attention of certain Cockney writers to the following passage, in reprobation of a barbarous form of construction which they have been endeavouring of late years to introduce.

"It is the state of unfinished action which is understood in such phrases as 'the house is building,' and 'the house was building,' in which the action is taken abstractedly, without attending to the agent. The Romans expressed the same ideas by means of the passive voice, '*domus edificatur*,' and '*domus edificabatur*.' Every language has its idioms, which pedants only would attempt to change. For some time past, 'the bridge is being built,' 'the tunnel is being excavated,' and other expressions of a like kind, have pained the eye and stunned the ear. Instead of 'the stone is falling,' and 'the man is dying,' we shall next be taught to say, 'the stone is being fallen,' and 'the man is being dead.' This incongruous conjunction of a present with a perfect participle, as if for the purpose of producing a confusion of tenses, is an absurdity of very modern origin, and has scarcely yet appeared in any respectable composition. Johnson writes to Boswell, 'my *Lives are reprinting*;' Bolingbroke says that 'the nation had cried out loudly against the crime while it *was committing*;' and Milton, in his speech for the liberty of unlicensed printing, indignantly exclaims, 'yet these are the men cried out against for schismatics and sectaries, as if, while the temple of the Lord *was building*, some cutting, some squaring the marble,' &c. Viewing the present participle solely in its verbal state, it becomes assimilated to the infinitive, and is a general name for the whole class of *continuous exertions*."

*The Felony of New South Wales.* By James Mudie, Esq. 8vo. pp. 362. For the Author.

*Transportation and Colonisation.* By J. D. Lang, D.D. Pp. 244. London, Valpy; Edinburgh, Bell and Bradfute.

THE first of these publications is a curious one; and, as the writer truly says, a "*Romance of Life in Botany Bay*;" whether invented by himself, or absolutely true representations of what is more strange in reality than fiction, is not declared. Some of the stories told, however, are so fixed as to names, persons, and circumstances, that we cannot doubt they are founded in actual fact; and, if so, why then there are remarkable things done in Botany Bay. The other day, indeed, we were told of an advertisement of the sale by auction of the carriage, plate, and splendid furniture, &c. of —, "*leaving the colony*," which aforesaid — was only transported a few years since for picking pockets at the Royal Exchange. The Jew-boy now returns a rich man, to speculate in a different manner, if it so please him, as Moses Jacob, Esq. (or some such title), near the scene of his former exploits.

Dr. Lang thinks the transportation system may be much improved, as an adjunct to colonization. Dr. L. is too great a politician; but

having experience of the subject, there is much information to be got from his book.

#### ARTS AND SCIENCES. STATISTICAL SOCIETY.

MR. PORTER in the chair.—A paper, by Mr. Edmonds, On the movement of the populations of England and Sweden, throughout seventy-five years, ending with 1830, was read; of which the following are notes. Mr. Edmonds observes, in the commencement of his paper, that the increase or decrease of a population, during any period, is, in general, represented by the difference between the numbers born and the numbers dying during that period. The instances are very rare in which the movement of the population of an extensive territory is sensibly affected by migration. The difference between the number of immigrants and emigrants is generally insignificant, when compared with the difference between the births and deaths. In different parts of the same nation, however, the gain or loss from migration is frequently very considerable. In most nations, the town population is constantly receiving large additions to its numbers, at the expense of the village population. In the United States of North America, a large number of the natives of the old and eastern States are yearly transferred to the new, or western, States. In the majority of European natives, the annual births amount to one in thirty, and the annual deaths to one in forty, of the total population; which will yield an annual increase of about nine per cent every ten years. The highest rate of births observed in any nation has been about one in twenty-three; the lowest rate, about one in thirty-three. The highest rate of deaths observed, has been about one in thirty; the lowest rate (in England), one in fifty of the total population. The highest rate of increase of population ever observed, is that of the United States of North America; next to which is that of the population of England. In the United States, the increase, for a long period, has been at the rate of thirty-two per cent every ten years, independently of the gain from migration. The white population and the slave population have increased at the same high rate. In England, during a recent period, the rate of increase has been sixteen per cent every ten years; which is just twice as great as the average rate of increase in other European countries. This high rate of increase in England, compared with that in the rest of Europe, has not been derived from a higher average of births, but from a lower average of deaths. The higher rate of increase of the American population is, probably, the consequence of a rate of mortality, as that of England, combined with a higher proportion of births, say one in twenty-three. The decrease of the black population of the West Indies is mainly attributable to the diminished fecundity of females to meet the annual mortality; one in thirty-six has been frequently observed, and now exists, in several increasing European populations. The climate of the West Indies manifests its hostility to the constitution of African negroes, more by the diminution of births than by the increase of deaths; more by the destruction of the germs of life, than by the destruction of existing individuals. It is a remarkable fact, the author goes on to state, and one which has never yet been explained, that a very great increase in the deaths, for a short period, is always accompanied by a great diminution in the births at the same period. The most marked instances of this are found, in Sweden,

during the two years 1772-3, and during the five years 1806-10; in Belgium, during the year 1817; and in France, during the year 1832 (the year of cholera). The explanation of this fact, Mr. Edmonds believes to consist solely in an increase of deaths, including foetal deaths. From the observations of Dr. Granville, on women of lying-in charities in London, it appears that one in three of all conceptions terminates thus; for the entire nation, one in six is given. In order to account for the diminution of births in years of severe mortality, we have only to make the very reasonable assumption that foetal life is not more capable than respiratory life of resisting disease and privation; we have only to assume that an increase of thirty per cent in the respiratory deaths, is also accompanied by an increase of thirty per cent in the foetal deaths. The aggregate mortalities of two nations may differ in the proportions of one in forty to one in fifty, as in Sweden and England, and yet the mortality, at any age above twenty, may be the same in both nations. It was only at ages under twenty that the mortality of the English population was less than that of Sweden. Similarly, with respect to fecundity, we should not be warranted in concluding, because the proportion of births were equal, that the fecundity of one people was equal to that of the other. The author closes his paper by a few observations on vaccination; the proportion of births to deaths (on which the increase of population is mainly dependant); the proportion of annual deaths to the total population (reduced in England to one in forty-nine, during the twenty-five years from 1806 to 1830); the proportion of annual births to the total population in England (one out of twenty-nine, during the same period); and the proportion of marriages to the total population of England (reduced during the twenty-five years, ending with 1830, to one out of 123½). In Sweden, nearly the same proportion of marriages to the existing population occurred during the above period. In France, the proportion of marriages was one out of 132; in Belgium, the alleged proportion was one out of 141. The proportion of births to marriages has been nearly constant both in Sweden and in England, for the last seventy-five years.

#### GEOLOGICAL SOCIETY.

MAY 3d. Rev. W. Whewell, president, in the chair.—The first paper read was one by Mr. Darwin, describing the district in which had been found the remains of the toxodon, described at the last meeting, by Mr. Owen. The countries bordering the Rio de la Plata contain, in great numbers, the remains of extinct animals. The province of Bander Oriental consists of granitic and other primary rocks. The flat and extensive plains of the Pampas are very uniform in structure over a very extensive tract. A reddish argillaceous earth covers the surface with irregular concretions of an aluminous limestone, or indurated marl, which sometimes unite, and form a stratum, often replacing the former; both containing occasional layers of crystallised sulphate of lime. In the province of Entre Rios, these rest on strata, consisting of sand, layers of clay, and a fine white crystalline limestone, containing shark's teeth, arca, Venus, and pecten, all resembling recent shells. But it is in the superincumbent deposit that are found the fossil mammalia peculiar to this district, consisting of, besides the toxodon, megatherium, a lesser animal, protected by an armadillo-like covering; mastodon, another singular animal, of which only half

the head has been preserved; and, as Mr. Darwin believes, also the horse. In several places Mr. Darwin observed clear proofs of a change of the level between land and water. These he considers connected with the greater changes on the opposite coast; and concludes that, within a period geologically recent, a great bay occupied the area both of the Pampas and the low parts of Bander Oriental. Into this the river poured, as in the present day, reddish sediment from the decomposition of the granites of Brazil, and charged with lime and gypsum, perhaps from the Cordilleras. The bodies of the animals which formerly inhabited the surrounding country must have been likewise swept into this bay, which has now been elevated into dry land. An extract of a letter, dated 18th Nov., 1836, from Captain Cautley to Dr. Royle, was next read, permitting the announcement of a fact which had long been communicated to the latter, of the finding of the remains of a quadrumanous animal in the Sewalika, or Sub-Himalayan range of mountains. The animal must have been much larger than any existing one, and allied to Cuvier's *Cynocephalus* group. Captain Cautley also announced the discovery, by Major Colvin, of a specimen of the head of the *siatherium*, in which, in conformity to the conjectures of Dr. Falconer and Captain C., in their paper, for which the Wollaston medal was this year awarded, it is found that the animal had four horns; two in front, and two huge trifurcated ones behind. He considers the animal as allied to the *Dicranocercine* group of Major Hamilton Smith. A paper by Messrs. Hamilton and Strickland was then read, On a tertiary formation in the Island of Cephalonia, near Lixouri, on the western shore of the Gulf of Argostoli. The parallel ridges composing it extend for two or three miles to the N. and S. of Lixouri, sloping to the east according to the dip of the strata; or from 45° to 55°, and presenting a succession of steep and sharp escarpments towards the west. The conformable beds are of great thickness; and are remarkable as well for the great beauty and number of the fossils as for the variety of beds through which these extend. The beds, of which sixteen are enumerated, may be classed under three principal heads:—1st. The calcareo-arenaceous; 2d. The argillaceous; 3d. gypseous beds. The fossils belong to numerous genera, and many of the species are identical with those existing in the Mediterranean.

#### METEOROLOGICAL SOCIETY.

MAY 9th. Dr. McIntyre, vice-president, in the chair.—After the preliminary business had been disposed of, and members and associates admitted, an interesting paper was read, from Mr. T. G. Tatem, On luminous and auroral arches. A paper was also read from Capt. J. Ross, On the weather at Wigton, Scotland; in which he states that, in the county of Wigton, the late season has been mild, when severe every where else; the ground was never completely covered with snow, and there were only two days on which sufficient ice could be obtained for the ice-house. He also further observed, that, having returned from thence, he could testify that vegetation is further advanced than near London. Registers of the weather, kept by C. H. Adams, Esq. Edmonston; Samuel Moss, Esq. Cheltenham; J. O. Tatem, Esq. High Wycombe; and Patrick Murphy, Esq. were also received. The mean heights of the barometer and thermometer, with the fall of rain at the Observatory,

Oxford, during each month of the years 1828 to 1836, by Professor Rigaud, was presented to the society by Captain W. H. Smythe, R.N. Observatory, Bedford. Dr. McIntyre exhibited before the society, a very simple and beautiful graphic illustration of the mean heights of the barometer, thermometer, and hygrometer; and also of the force and direction of the winds, with observations on the weather, quantity of rain fallen, &c.; which appears to be a grand approach towards a simple and uniform method of keeping weather journals, not only upon a simple plan, but so constructed as to give the entire results of a day, week, month, &c. at a single glance. Dr. Lee proposed a vote of thanks to the chairman, and the meeting adjourned.

#### GEOGRAPHICAL SOCIETY ANNIVERSARY.

SIR JOHN BARROW, Bart. in the chair.—The report of the council was read. It was highly satisfactory; and as it formed the aggregate, as it were, of the transactions of the past year, which have been already fully reported in our columns, there is no occasion for an analysis in this place. The society now consists of 545 members, besides foreign, honorary, and corresponding members. The expenditure for the past year was considerable, being 2200*l.*; 490*l.* of which had been paid towards the expedition in British Guiana; 350*l.* towards that in Southern Africa, and so on. It is unnecessary to add, that the report spoke feelingly of the recent lamentable death of Mr. Davidson. W. R. Hamilton, Esq. was elected president.

#### BOTANICAL SOCIETY.

MAY 18th. J. E. Gray, Esq. F.R.S. president, in the chair.—Donations of seeds from the Cape of Good Hope were announced, presented by M. Schmidt. A paper was read from Mr. Hopkins, On vegetable fermentation, treating principally on the formation of sugar in vegetables. An interesting discussion ensued, after which the meeting adjourned until 1st June.

#### LITERARY AND LEARNED.

##### LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

Monday.—Royal Geographical, 9 P.M.—Marylebone, 8 P.M. (Mr. Hemming on the History of Chemical Inventions.)

Tuesday.—Royal Medical and Chirurgical, 8½ P.M.; Civil Engineers, 8 P.M.; Zoological, 8½ P.M.; Lambeth Literary, 8½ P.M. (W. C. Dandy on the Ear and Sound); United Service Museum, 3 P.M. (Dr. Ritchie on Hydraulics.)

Wednesday.—Linnean, 1 P.M. (Anniversary); Society of Arts, 7½ P.M.; Medico-Botanical, 8 P.M.

Thursday.—Royal Society, 8½ P.M.; Antiquarian, 8 P.M.; Royal Society of Literature, 4 P.M.; Western Literary, 8½ (Mr. Everitt on Faraday's recent discoveries in Electro-Chemistry); Marylebone, 8 P.M. (Mr. Fry on Milton).

Friday.—Royal Institution, 8½ P.M.

A new association is in progress, under the title of "The Metropolitan Society of Lecturers on Literature and Science," which has, we are informed, been already joined by a considerable number of individuals distinguished in this branch of scientific and literary exertion. The objects of the members are declared to be, "To facilitate the intercourse between members and the public institutions; and to guarantee to institutions, requiring the services of lecturers, efficient instruction, at a reasonable but sufficient scale of remuneration." To accomplish which objects, it is proposed, to procure accurate information as to the extent, objects, and means of the literary and scientific institutions, throughout the country; and to continue such information by correspondence, at stated times, with the secretaries of provincial societies; to promote correspondence between the directors of institutions in one neighbourhood, who may be disposed to receive the same courses of lectures, at times so arranged, as to lessen travelling expenses, and consequent charges to both parties; to afford institutions commencing their career under difficulties, such assistance as may fall within the reasonable convenience of each member.

#### FINE ARTS.

##### EXHIBITION OF THE ROYAL ACADEMY. (Fourth notice.)

On entering the Middle Room, we are induced, both by the celebrity of the subject, and by the excellence of the picture, to pay our first respects to—

268. *Portrait of His Grace the Duke of Wellington, as Lord Warden of the Cinque Ports; painted for the Mayor and Corporation of Dover.* J. Lilley.—A remarkably fine whole-length of our distinguished hero. The resemblance is excellent; and the depth and richness of the tones, and the general management of the effect, would do honour to the most experienced hand: yet we understand that Mr. Lilley has not yet attained the age of twenty-one. We expect great things from this young artist.

229. *Salzburg, Germany.* C. R. Stanley.—Notwithstanding its elevated situation in the room, the light falls well upon this able performance, and shows to great advantage the contrasted variety of its forms, and the successful treatment of its aerial perspective.

236. *Mill on the Avon, near Perthshire.* F. R. Lee, A.—Possessed of all the freshness of day-light. In its picturesque character it may vie with the celebrated mill from the hand of Waterloo; and it is a pleasing combination of sylvan scenery and agricultural occupation.

241. *Desdemona interceding for Cassio.* J. R. Herbert.—Although our acquaintance with the catastrophe renders it rather painful as a subject, we cannot but admire the talents of the artist in depicting the struggle that is going on in the Moor's mind. The expression of the hands comes finely in aid to that of the countenance.

250. *A Bower in a Vineyard, near the Tomb of Virgil, at Naples, with a Boy playing a Tune on the Mandoline to his Innamorata.* T. Uwins, A.—A bower, wine, poetry, music, and love. What a delightful association! In what bright and glowing colours is it presented to the imagination! yet not brighter or more glowing than those in which Mr. Uwins has steeped his beautiful composition.

274. *The Parting of Hero and Leander.* J. M. W. Turner, R.A.—It is seldom that we have seen a more splendid display of this extraordinary artist's peculiar powers.

276. *Returning from the Fair.* T. Webster.—The pleasing character, as well as the merits, of this clever and interesting little picture, ought to have insured it a better situation. It is a fine representation of the domestic affections in rustic life. The expression of the fond grandmother is inimitable.

288. *The Meeting of his Majesty's Stag-Hounds.* F. Grant.—To say nothing of the dogs, here are above forty portraits, principally of distinguished noblemen and gentlemen; in the arrangement of which (a matter of much difficulty) Mr. Grant has shewn the greatest skill. Although the general effect is admirably preserved, every individual head is painted with the utmost care and precision. It is really a curiosity in art.

297. *The poor Mendicants.* R. Rothwell.—Subjects of this description have always been great favourites with artists. Mr. Rothwell's group is, in every respect, well managed, and reminds us of Gainsborough.

303. *Spaniels, the property of the Earl of Albemarle.* E. Landseer, R.A.—High in condition, and animated in action, they would be still more pleasing to the eye, if otherwise engaged. However, they do but labour in their vocation.

304. *Richmond—Autumnal Morning.* J. J. Chalon, A.—Beautifully and skilfully executed; yet we are inclined to think that a glowing autumnal sunset would have better harmonised with the scene.

325. *Friends.* E. Landseer, R.A.—A striking contrast to "The Spaniels;" showing that noble animal, the dog, in a more amiable, and not less characteristic, point of view.

358. *The Cotter's Saturday Night.* Sir D. Wilkie, R.A.—Although admirable in its general effect, we confess ourselves disappointed in some of the details; especially with reference to "the sire," who is described by the poet as

—"Turning o'er, with patriarchal grace,  
The big ha' Bible;"

but who, in the picture, has nothing patriarchal in his appearance.

350. *The Lower Lake of Killarney.* T. C. Hofland.—The lakes of Killarney have long been considered among the beauties of "the sister kingdom;" and, like the subject of Lady Morgan's song, one of them has put on her best smiles while she sat to her artist, who has done great justice to her attractions.

375. *Morning—a Farm-Yard near Canterbury.* T. S. Cooper.—We will fearlessly say that the lordly bull, the principal in this group of cattle, was never surpassed by the pencil of any master.

364. *On the Scheldt, near Leiskershoek—Squally Day.* C. Stanfield, R.A.—Equal applause is due to this performance. The translucent and sparkling appearance of the waves has never been surpassed.

365. *The Brothers.* G. Lance.—It is no uncommon thing for a painter, by way of amusement, to step out of his usual line of art. Instead of fruits and flowers, in the imitation of which Mr. Lance so eminently excels, he has here spread his canvass to an extent which we were not prepared to expect; and has exhibited ascetic forbearance and sensual enjoyment in striking contrast.

305. *Saturday Night; or, the Social Pinch.* T. Clater.—Artists are often at a pinch for a title to their works. This is a well-painted interior, in which is seen ample provision for the Sunday's dinner. The social pinch, tendered and taken, has something of Flemish in its character; and the picture is not unworthy of that school.

There are several clever portraits of dogs (249, 332, 333), by A. Cooper, R.A.; and one (319) by J. Ward, R.A. As we wish to leave our readers with smiles upon their faces, we will enrich our columns with the poetical effusion attached in the catalogue to the title of the last-mentioned work.

"I'll sing about my little dog,  
And make him fat as little hog;  
As he sits watching close by me,  
We're both as snug as snugs can be."  
[To be continued.]

#### GRAPHIC SOCIETY.

THE fifth meeting of this society was held on Wednesday week. It was numerously attended by members and visitors; among the latter, we saw Earl de Grey, Lord Prudhoe, Lord de Tabley, Mr. Faraday, &c. Many objects of interest were shewn; among them, two models of Egyptian obelisks,—one of Karnac, the other of Heliopolis: the latter bearing the name of the Pharaoh of Joseph—these belong to Lord Prudhoe; a folio of spirited and clever drawings, made in the Himalah mountains, by Lieutenant Phillips, of the Bengal Artillery, son of Mr. Phillips, R.A.; some excellent studies in oil, made in Italy, by Rothwell; a

folio of finished drawings, by Brockedon, of Alpine scenery, for a new work, by him, on the Valleys of the Alps; a book of drawings, by Cowen; some drawings, by Pitts, &c. &c. But the chief attraction of the evening was a numerous and beautiful collection of drawings, made by Abyssinian Bruce, in Africa, immediately after he had resigned the consulate of Algiers, about the years 1765, 1766. The extent and grandeur of the ruins of cities, the remains generally of the lower empire of the Romans, in Barbary, as shewn in these drawings, far exceed any idea which even Dr. Shaw excited by his descriptions, when he first made us acquainted with their existence. Fortunately, they prompted Bruce to visit and examine them; and these admirable drawings are the result of his journey. They consist of views, elevations, plans, sections, restorations; details of enrichment, and accurate measurements of temples, arches, aqueducts, tombs, &c. &c. Among them are, a fine Corinthian temple, at Dugga, in the kingdom of Tunis; a triumphal arch, and a small temple, at Assuras; two triumphal arches at Muchtar; an aqueduct at Constantina, the ancient capital of Syphax, king of Numidia; ruins and restorations of the tomb of Syphax, at Mendrassem, in the kingdom of Algiers; a magnificent aqueduct, of three rows of arches, at Arriana; a quadri-frontis triumphal arch, at Tripoly. All these are highly finished, with numerous sections and restorations. Others, less finished, are, a cistern, at Lowan, and an aqueduct, at Carthage; a quadri-frontis arch, and a Corinthian temple, at Tipasa; the three temples at Soffetulla; a triumphal arch, at Termugadi; and a view of the ruins of the tomb of Juba and Cleopatra, the daughter of Anthony and Cleopatra (this tomb, like that of Syphax, formerly mentioned, is a vast cone, 180 feet in diameter at the base, resting on a cylindrical mass, surrounded by columns). These drawings are now the property of Major Cumming Bruce, M. P., who most kindly permitted them to be seen at the Graphic Society, where their appearance created a very general desire that they should become the property of the nation, and be deposited in the British Museum; and this was the more strongly felt, from the honest jealousy of their becoming the property of the French nation. An application has been made for them by that government, to Major Cumming Bruce, as the French are about to publish a national work upon Algiers, similar to their great work upon Egypt, and these drawings are necessary to such an undertaking, as many of them are of objects and places inaccessible to the French armies, and no traveller subsequent to Bruce has had access to them. Some interesting sketches, made in Africa, by Sir Greville Temple, were last year shewn, at a meeting of the Graphic Society; but there were few, except of the three temples of Soffetulla, of the subjects found in this collection of Bruce. Distinguished as Bruce is for his researches in Abyssinia, these drawings furnish grounds for an honourable and lasting reputation, from a very distinct source. It has been said, among some to whom their existence was known, that they were not Bruce's, but the work of a young Italian artist, named Balogani, who was sent to him by Lumisden, the author of "Roman Antiquities." But, among the drawings shewn at the Graphic Society, were some of Paestum, made by Bruce, when he was alone, prior to his visit to Africa, where Balogani first joined him. The execution of these prove the same hand as appears in the greater part and best of those of the African cities. Another proof

is, that, after Bruce returned to England, he presented to George III. some of his finished drawings. All the highly finished ones now shewn, were not then ready to present with them, and were subsequently finished by Bruce, at Kinnaird. It is to be hoped that the publicity now given to the existence of these drawings, and the acknowledgment of their interest and excellence by the artists, and especially the architects, at the Graphic Society, will lead to their becoming the property of the nation. Within the seventy years which have passed away since they were made, many of the ruins have sunk into deeper decay; and, inaccessible as they are likely to continue, whilst they exist, such a collection should be preserved with a national care and pride. We are permitted to close our remarks upon this extraordinary collection, with a letter written by Bruce to his friend, Mr. Seton, in which the dangers and difficulties of visiting the ruins in Mauritania and Numidia are stated, in an adventure of great interest.

"London, April 16, 1775.

"Dear Sir,—You desire that I should again repeat to you my adventure with the Moor of Gibbel Aurez. It is this. In the journey which I made through the southern part of Barbary, I was necessarily led to see the ancient Cirta, once, as you know, the capital of a large kingdom; now it is called Constantina, and gives its name to the most considerable province under the government of Algiers. The bey who commanded there was my particular friend. At my request he gave me nine Moorish horsemen to accompany me in the search after ruined architecture in the neighbouring mountains of Atlas. Lambesa, a principal station of the Romans in Africa, the third legion (*legio tertia Augusta*), was the place I chiefly wanted to see. It is situated in the middle of a circular range of mountains of no considerable height, which probably are the *Aurasius mons* of the middle ages, the Mount Andes of Ptolemy, if I mistake not, for I write without books and from memory. It is, however, a part of Mount Atlas, finely watered, the valleys all cultivated, the mountains covered with wood, and abounding with every sort of verdure. Several powerful clans or tribes of Arabs inhabit these mountains, some of them independent, and at constant war with the Bey of Constantina. It happened that one of these had his dwelling upon a pointed rock (probably the Tumar of Procopius), just over the ruins of Lambesa. As we approached them, these ruins, the nine soldiers of the bey began to murmur for fear of the *Neardie* (so they call this sturdy tribe, who had often beat the bey), and matters had come the length of an absolute refusal to follow, when we alighted at an encampment of Arabs, three hours' journey from Lambesa. I was fatigued with hunting and the heat of the day, and having pitched my tent, lay down to sleep, when I heard a dispute between my servants and an Arab who was wanting to come into the tent to speak to me. As every thing is of consequence to be attended to in these countries, I got up and brought the Arab into my tent. He was an old man of sixty, of a mean appearance. He asked me what countryman I was, if I had been in Italy, and if I spoke Italian. I answered, that I was an Englishman, had been all over Italy, and spoke Italian perfectly; and I was very much surprised to hear him ask me in very good Italian, if I had ever been at Nice, or knew General Paterson. Having satisfied him that I knew the general, and how near neighbours and intimate friends our fami-

lies were, he leaped up and embraced me with great joy and sincerity, calling General Paterson his father. He told me he had been taken by the Sardinian galleys, and at first ill-used; but that, by the interposition of General Paterson, he had been exempted from all hardships and confinement, and treated with great humanity, tenderness, and confidence; that he had also assisted him in his redemption. There was no end of his thanks and gratitude: he brought his wives and daughters into my tent, the greatest of all marks of veneration among the Arabs. He feasted us magnificently, and seemed only at a loss he could not do more. The Arabs, who from the door of the tent had heard their chief speak an unknown language, and shew such marks of respect to a stranger and a Christian, the object of their aversion, came all into the tent; and, after a very adroit explanation given by the old man, all of them made me the most fervent offers of service, as the friend of the deliverer of their chief. It was now time to enter into a discourse about the Neardie, the fears of my companions, and my resolution to see Lambessa, at all hazards. They laughed heartily at the fears of the bey's horsemen, which, however, they confessed to be well founded; but seemed to think lightly of the journey itself. 'You shall do,' said the old man, 'in this case, what no wise man will do in general. You shall have your old friends for your new. You shall have the bey's soldiers to eat and drink here, and I will conduct you to Lambessa. If any harm falls on you in my company, let the soldiers witness against me to their master.' I made no scruple to follow his directions, and the next morning we entered the dark, rocky, wooded defiles which lead to Lambessa; full of lions and tigers, and men more savage than these animals. We stayed three days at Lambessa without molestation, and returned to the tents of our Arab conductor. To this accident is owing my having made one of the most accurate drawings ever seen on paper, as well as the knowledge of many historical circumstances. He attended us two days' journey on our return, and, embracing me at parting, said to me in Arabic, 'God is a free agent in judgment; he saves whom he pleases, and condemns whom he pleases; if so, we may, though of different religions, meet in Paradise. To me it seems impossible, God the great and the merciful should make men like General Paterson and you for damnation.'—Your's, &c.

"JAMES BRUCE."

#### NEW PUBLICATIONS.

*Lewis's Constantinople.* M'Lean.

We have before us two specimens—the one, "The Fountain, from the Gate of the Seraglio," the other, "The Reception Room of the Turkish Pasha, New Orsova"—of a work preparing for publication, to consist of a series of subjects, illustrative of the scenes, costume, and general character of the Turkish capital, &c.; arranged and drawn on stone by John F. Lewis, from sketches made on the spot, during a residence, by J. Coke Smyth, Esq. The prospectus of the volume states, that it will be uniform, in style and execution, with Mr. Lewis's last work of "Spanish Sketches" (of which, on its appearance, we spoke in the high terms of commendation it deserved); and, judging from these specimens, we have not only no doubt that such will be the case, but we anticipate an extraordinary treat from the novel, picturesque, and attractive character of the subjects of the intended publication.

*The Lovely Sisters.* Drawn by Sir T. Lawrence, P.R.A.; engraved by F. C. Lewis. A FACSIMILE of one of the late president's most charming drawings, executed in black, white, and red chalk, on a neutral ground. It consists of two beautiful heads of children, of about six and eight years of age, is of the size of life, and conveys a perfect idea of the taste, firmness, freedom, and delicacy with which Sir Thomas handled the porte-crayon.

#### BIOGRAPHY.

MRS. LOCKHART.

IT is with sincere sorrow we have to record the death, on the 17th, of this most amiable and accomplished lady; one so dearly connected with the literary feelings of the country. Mrs. Lockhart was the eldest daughter of Sir Walter Scott, the wife of John Gibson Lockhart, Esq., and the mother of that child whose memory will long be preserved in the writings of his "Grandfather," addressed to him under the playful sobriquet of "John Littlejohn." The loss of Mrs. Lockhart at any time would have been a subject of heartfelt commiseration; but it seems to us to be rendered infinitely more poignant at this period, when the volumes of her father's memoirs are making the public so intimately acquainted with the affecting share she had in all his domestic enjoyments, and her sweet and gentle ministration of every duty which could delight his hours of happy family intercourse, or soothe those later years which were touched with infirmity and decay. Few could charm the dull cold ear with Scottish minstrelsy so beautifully as Mrs. Lockhart; but that voice is now mute to which her fond father\* so loved to listen. Her only sister preceded her to her grave. Mrs. Lockhart left two children, a son and a daughter.

#### SKETCHES.

CONVERSAZIONE AT KENSINGTON PALACE.

ON Saturday evening, H. R. H. the Duke of Sussex, as president of the Royal Society, gave his first conversations for the season (the appointments for February and March having been passed over) at Kensington Palace, and it was very brilliantly attended. From nine to eleven o'clock there was a constant influx of visitors, and almost every room in the whole extensive suite of apartments was filled with company. H. R. H. received them at the entrance of the principal room in the most gracious and affable manner; every one rejoicing, not so much even to see him in apparently good health, as to be seen by him after the painful operation on his eyes to which he had lately submitted. We were glad to observe that H. R. H., through his coloured preservative spectacles, perfectly distinguished individuals, and called them to him by name, at the distance of six or eight paces. Amongst the multitude of stars, garters, and ribands, which glittered through the assemblage, and the decorations of honour which graced many a breast, besides the number of eminent men, known only by their personal appearance; it would be a difficult matter to offer any tolerable list of this meeting. There were several foreign ministers, the Duke of Devonshire, Marquess of Northampton, Lord Glenelg, and other peers; many members of the House of Commons; and, indeed, the *élite* of men famed in literature, science, and the fine arts, who at this period of the year are generally to be found in the metropolis. In the

\* Such was the affection of Sir Walter Scott for his daughter, that he said, at her approaching union, "The man who marries that woman brings everlasting sunshine upon his house!"

long gallery the tables were covered with ingenious inventions, improvements on steam and locomotive apparatus, on chronometers (a *helix lever*, by Mr. M'Dowall), on microscopes, cloths made from the cocoon of moths, and other interesting specimens of novelty and talent. Refreshments were amply provided in an ante-room, which, also, had its share of visitors; though the other attractions of the evening, the interchange of intelligence, and the friendly intercourse of so many celebrated individuals, left little inclination for aught but the momentary indulgence in the tea or coffee cup.

#### MUSIC.

ANCIENT CONCERTS.

THE fifth concert, under the direction of the Archbishop of York, was, to our minds, much less interesting than his Grace's former selection, at the opening of the present season. The recitative from *Belshezzar*, "Rejoice my countrymen," though rather too long, contains some very fine points, of which Mr. Phillips invariably makes the most. The noble chorus which follows it, "Sing, O ye heavens!" was, to our feeling, the gem of the concert. The duet, "The Lord is a man of war," at all times worth hearing, is rendered additionally so, when two such singers as Phillips and Machin are associated in it. Mad. Caradori's performance of a florid song, by Paisiello, was, what her bravura singing always is, absolute perfection. Among the vocalists were Mrs. Shaw, whose beautiful voice, perfect intonation, and unaffected style, render her welcome to every audience; Mrs. Knyvett, of whom we can say nothing that has not been said a hundred times before; Mr. Hobbs, whose sweet voice blended excellently with Lindley's violoncello, in "Gentle Airs;" and Messrs. Hawkins and Lloyd. The two last-named singers, with Messrs. Hobbs and Phillips, performed Callcott's glee, "With sighs, sweet rose," so charmingly, as to make one almost forget that the composition scarcely rises above mediocrity. Miss Wyndham was evidently suffering from indisposition; a circumstance which fully accounts for her voice being not entirely at her command. There were, however, many indications of future excellence in her performance of Gagliardi's air, "Gran Dio." "Let the bright Seraphim" is pretty well worn, to be sure; but Harper's accompaniment of it cannot wear out. We have never yet heard this song with what we regard as the true reading; a remark from which we cannot except even the performance of Mad. Caradori, to whose talents we, at all times, bear a warm and willing testimony. The rapid bravura style, now generally adopted in it, destroys that stateliness which is its principal and most admirable feature. As for the final cadence, we cannot hope to see that impertinent interpolation done away with, while audiences are better pleased with mere physical exertion than with the exercise of good sense and correct taste. A chorus, by Handel, "O quanto bella gloria," in praise of hunting, was curious, as exhibiting a degree of vivacity and animal spirits, in which that great composer was not wont to indulge. We hope to hear some of Leo's fine choruses before the end of the present season. Q.

Having been somewhat in arrears with our notices of these performances, we cannot devote so much space as its merits deserve, to the sixth concert, which was under the direction of Lord Burghersh; and consisted of a most admirable selection. The reception of

Madame Pasta was most cordial, particularly at the rehearsal on Monday. The instant she appeared, applauses burst simultaneously from audience and orchestra, and were prolonged for a considerable time. Were it not for these occasional out-breaks, which are of rare occurrence, we should feel inclined to compare the good "ancients" to an assembly of Dutch people, on account of the phlegmatic indifference they usually testify to all that comes before them. The songs allotted to Madame Pasta were worthy her transcendent powers of impassioned declamation: they were Gluck's divine air, "Che farò," and Paisiello's recitative and air, "Crudele!" and "Ho perduto." Her old tendency to singing flat, which was occasionally very evident on Monday, was still more apparent throughout her performance on Wednesday evening, and greatly injured its effect. Indeed, any vocalist of ordinary pretensions must have been utterly ruined by singing so much and so perseveringly out of tune as Madame Pasta did on Wednesday night. But the dramatic energy of this extraordinary woman carried her safely through all disasters; and, in spite of them, extorted the applause of all who could appreciate the highest beauty of the vocal art—forcible and genuine expression. Our native vocalists performed most admirably the tasks assigned them, though, we can only afford space for their names, beyond this general testimony in their favour. The following is the honoured list:—Mesdames Bishop and Shaw, Misses Birch and Wyndham; Messrs. Braham, Phillips, Hawkins, Parry, jun., Lloyd, and Pyne. Mrs. Seguin was also engaged, and sang at the rehearsal on Monday; but, owing, we believe, to indisposition, she did not appear on Wednesday evening. Q.

#### DRAMA.

*King's Theatre.*—*Malek Adel* was produced at the King's Theatre on Thursday, for Rubini's benefit, with an immensely powerful cast of the original characters for whom the opera was composed, and embodying the principal strength of this superb company. It is got up with great care and excellent effect, both as regards the orchestra and the stage. The music we may hereafter criticise, but at present have only room to observe that there are several fine pieces; that in others, the accompaniments are overwhelming; and that the whole is gratifying, though without those ideas which constitute the composer of striking genius.

*Covent Garden.*—*Walter Tyrrell*, a historical drama of neither great historical nor dramatic merit, was produced on Tuesday, for the purpose of Mr. Elton's *début* at one of the large theatres. Of that gentleman we have often spoken in terms of high praise when we have seen him in good parts at minor houses; and we have now only to repeat, that he fully established his claim to that distinction by his acting on this occasion. Mr. Elton possesses much energy, which is directed by much discrimination; and, when intrusted with characters of any worth in themselves, and suited to his style, he will be found a valuable acquisition to any stage.

#### VARIETIES.

*H. B. Caricatures.*—A burst of four of these humorous political squibs (Nos. 481, 2, 3, and 4) have just appeared, and are quite worthy of the artist's inexhaustible talent, prompted by the passing circumstances of the times. Sir F. Burdett, as a "fine old English Gentleman, one of the olden time," is a capital whole-length.

"Following the Leader!"—O'Connell, at the head of a line of placard-bearers; Lords Melbourne, J. Russell, Palmerston, Sir W. Molesworth, Hume, and Sir J. Hobhouse, are supporting Leader for Westminster, while Peel, in the distance, is saying to Wellington, "These, I suppose, are some of the Pismires;"—is a very clever caricature, with striking likenesses, and much character. The next is still better and more laughable. It is "May Day;" the King, as Jack in the Green, finding himself in a rather hot birth, while his Ministers, as dressed sweeps, &c. are dancing round. O'Connell is beating the big drum, inscribed "Justice to Ireland;" Burdett is leaving the company in disgust; and John Bull is saying to the Chancellor of the Exchequer, a little sweep, who is collecting the pence, "You little Spooney! how came you to be intrusted with the ladle, eh?" The attitudes of the whole group are superb. The last is Mr. Leader, as the Dog and the Shadow. The bone Bridgewater is dropping out of his mouth, as he is snapping at the shadowy bone of Westminster in the stream.

*Caricatures.*—Besides his most popular H. B. productions, Mr. McLean throws off a multitude of humorous caricature publications, of which we have various laughable specimens now lying before us. "The United Service Alphabet," "The Medical Alphabet," "The Legal Alphabet," and "The Political Alphabet," are all clever performances, in which the various parties and professions indicated figure in alphabetic order. They are very amusing, and very cheap; so that, for the little bit of waiting before dinner, or any other uneasy little occasion, they are quite the thing. Of the same order is "Lavater's Gallery," a personified quiz upon passions and feelings; and "The Book of Etiquette," a satire upon modern manners.

*Fête Champêtre.*—Great preparations, we hear, are making for the grand fête in aid of the Dispensary for Diseases of the Ear. Among the novelties, it is stated that two gigantic inflated figures (Dædalus and Icarus) are to ascend instead of balloons, which have now become too common.

*Horticultural Society.*—The first spring meeting was appointed for last Saturday, at the gardens at Chiswick, when the badness of the weather interfered to spoil the show. Nobody can attend auriculas and anemones in the midst of hail and rain: the newspapers, however, state, that the collection and variety of the flowers were "beautiful exceedingly."

*Weather-Wisdom.*—The violent thunderstorm of Sunday, and high winds, may be reckoned to have come near enough to fulfil the predictions after the 11th, but the "rather hot, mild rain" turned out to be hail and extreme cold. It was not "fair on the whole, about the 16th, but excessively wet!" Now, "The full moon (i.e. this day, the 20th, at 7h. 28m. morning) still denotes moist, cloudy weather, with frequent showers. Changes on the 23d and 24th, with a tendency to rain. The 25th and 26th may be warm and fair, yet changes take place." We observe that, both in America and France, meteorology is exciting very great and constant attention. Eminent men in both hemispheres are looking into the phenomena; and M. Arago's prophecies are interesting the Parisians just as ours are the British public.

*The Covent Garden Fund.* on Saturday, went off with great *clat*, and above 900*l.* was subscribed. Sir George Murray presided in the chair most effectively; and the musical performances during the evening, including Mrs. Wood, Albertazzi, Puzzi, Miss Turpin, and some juvenile prodigies, were truly delightful.

*King's College.*—On Saturday, the prizes given to the medical school of this Institution, were presented by the Bishop of London, before a very numerous and distinguished assemblage. F. P. McDougall, and W. M. Prichard, received the gold medals for general medical proficiency. The chairman, in his address, noticed the great acquisitions made in the medical school by the gift of museums, herbariums, &c. &c., from various individuals and public bodies; and, also, other improvements, beneficial to the College and the pupils.

*Copyright.*—We rejoice to see that the laws of copyright are at last in a fair way to be remodelled, so that men of talent and genius will not be liable to have their property ravished from them any more than owners of lands, houses, or goods. Mr. Serjeant Talford, after a most luminous and conclusive speech in the House of Commons, on Thursday, obtained leave to bring in a bill to this effect; and Mr. Spring Rice, Sir H. Inglis, and Lord Mahon (all parties agreeing in the justice and expediency of the measure), were appointed to prepare the same.

*Balloons.*—Balloons now start almost every evening from various parts about town; and men, women, and monkeys, are to be seen ascending and descending. We hear less of commercial and other distress, probably in consequence of all the world's looking up.

#### LITERARY NOVELTIES.

In the Press.

No I. of Flinden's and Ryall's Portraits of the Female Aristocracy of Great Britain, containing the Marchioness of Aylesbury, Lady Louisa Cavendish, and the Honourable Miss Cotton.—Temples, ancient and modern; or, Notes on Church Architecture, by William Bardwell, Architect.—Voyages up the Mediterranean and in the Indian Seas, &c. by the late William Robinson.—Eureka, a Prophecy of the Future, by the author of "Mephistopholes in England."

#### LIST OF NEW BOOKS.

Stephens, 12mo. 4s. 6d.—Church and King, by E. Ostler, Imp. 8vo. 4s.—Pictures of Private Life, 3d. series, by S. Stickney, fcap. 7s. 6d.—The Heritage of God's People, by the Rev. A. Whyte, 18mo. 3s. 6d.—Selection from Poems of Louis, first king of Bavaria, by G. Everill, fcap. 4s.—Biblical Cabinet, Vol. XVII., Rosenmüller's Biblical Geography, Vol. II. 12mo. 6s.—Central Society of Education, First Publication, 12mo. 5s. 6d.—Venetia, by the Author of "Vivian Grey," 3 vols. post 8vo. 1*l.* 11s. 6d.—Outlines of the Law, or Readings from Blackstone, &c. by R. Maugham, Esq. 10s.—Rev. Philip S. Dodd on Life and Ministry of St. Peter, 8vo. 10s. 6d.—Practical Evils of Dissent, 2s. 6d.—Things hoped for: the Doctrine of the Second Advent, by Viscount Mandeville, M.P. 12mo. 5s. 6d.—Three Voyages in the Black Sea, by the Chevalier Taltbott de Marigny, 8vo. 10s. 6d.—Essay on Poisons, 7th edition, illustrated by 21 coloured plates, by Thomas Castle, M.D. 24mo. 4s. 6d.—Journal of a Horticultural Tour through Germany and Belgium, by Jas. Forbes, 8vo. 5s. 6d.—Tasso's Jerusalem, translated by J. R. Broadhead, Esq. 2 vols. post 8vo. 1*l.*—Family Prayers, by H. Cooke, D.D. 18mo. 1s. 3d.—Spiritual Garden of Sweet Smelling Flowers, 32mo. 2s. 6d.—Ministerial Responsibility, by Rev. A. Dallas, fcap. 8vo. 3s.

#### TO CORRESPONDENTS.

To the Editor of the Literary Gazette.

DEAR SIR,—I shall be much obliged to you, if you will correct an error into which your reporter has fallen, with respect to what I said at the dinner of the Benevolent Artists' Fund, respecting the Royal Academicians. I certainly expressed, as I felt, on my own account as well as that of the Society, my regret that I did not meet more than one member on that occasion; but I added not merely a hope that it was not owing to any want of goodwill, but a conviction that it was not so, as I saw the names of so many of our chief Artists among the contributors to the funds of the Institution. It would have been very unjust in me not to have said this; and I am anxious that I should not be supposed to have failed in this part of my duty.—I am yours truly,

NORTHAMPTON.

H. P. P.'s complaint is that of many other clever artists. In the Royal Academy, as in every other human institution, partiality is no doubt occasionally evinced; but it should be remembered that only a certain number of pictures can be admitted, and that they cannot all be hung in the best places.

Report of the Asiatic Society, and other papers, of necessity deferred.

## ADVERTISEMENTS,

Connected with Literature and the Arts.

**THE THIRTY-THIRD ANNUAL**  
EXHIBITION of the SOCIETY of PAINTERS in  
WATER-COLOURS, at their Gallery, Pall Mall East, is now  
open. Open each Day from Nine till Dusk.  
Admission 1s.—Catalogue, 6d.  
R. HILLS, Secretary.

**JUST OPEN.—DIORAMA, REGENT'S**  
PARK.—New Exhibition, representing the Interior of  
the Basilica of St. Paul, near Rome, before and after its Destruction  
by Fire; and the Village of Alagna, in Piedmont, destroyed  
by an Avalanche. Both Pictures are painted by Le Chevalier  
Bouton.

Open daily, from Ten till Five.

**CORREGIO MAGDALEN.**—This  
Divine Work of Art, perhaps the Chef-d'œuvre of Cor-  
regio, is now on View at the Scientific Institution, No. 49 Pall  
Mall, and will remain till the 3d of June.  
Admission, 1s.  
Open from Ten till Five o'Clock.  
N.B. Every known Artist will be admitted on presenting his  
own Card.

**THE ART-UNION; a Society for the**  
Advancement of the Fine Arts.  
The Committee beg to inform the Subscribers and the Public,  
that the period for receiving Subscriptions to this Society for the  
current year, is enlarged from the 20th of May, until Saturday, the  
10th of June.

Free Lists of the Subscribers up to the 20th instant, may  
shortly be obtained at the Bankers' or of the Secretary.

The mode of encouraging Art, by purchasing works, to be dis-  
tributed among the Subscribers, is neither novel in principle, nor  
untried in practice; institutions founded on such a plan have  
sustained a firm footing in France and in Germany; have been  
introduced with great success into Scotland, and also, more re-  
cently, into this country. But the promoters of the Art-Union  
propose to combine with this principle, that of leaving the Selection  
of Works to the Subscribers themselves. On the closing of the  
Subscription Books for the year, the Committee will determine  
(according to the state of the funds) the number of prizes and their  
respective amounts; these prizes will then be drawn for, and the  
holders of them will select, each for himself, from some one of  
the five public exhibitions, a work of Art of equivalent value.  
But any Subscriber will be at liberty to defer selecting his prize  
until the opening of the next year's Exhibitions, if he so please.

Subscriptions will be received by the Treasurers; by the Secretary;  
and at the London and Westminster Bank, 38 Throgmorton  
Street, City, and at the Branch Offices of the same, 9 Waterloo  
Place, Pall Mall; 155 Oxford Street; 215 High Holborn; 12 Wel-  
lington Street, Borough; and 37 High Street, Whitechapel.

The Subscription Lists for the current year will be closed on  
Saturday, the 10th of June next.

EDWARD EDWARDS, Hon. Sec.

35 London Street, Ely Street, May 17, 1837.

**SCHOOL of DESIGN, at the Rooms at**  
Somerset House, lately occupied by the Royal Academy.  
This School has been established, in pursuance of a Parlia-  
mentary grant, for instruction in such of the branches of the  
Fine Arts as are peculiarly applicable to the Manufactures of this  
Country, for which purpose the Students will be instructed in the  
principles of Composition, Light and Shade, Colour, Perspective,  
Modelling, &c.  
The School will be opened for the reception of Students on the  
1st of June.

The hours of attendance will be from Ten till Four daily.  
Each Student to pay Four Shillings per week.

Provisional Council.

The Right Hon. C. Poulett Thomson, M.P. President of the  
Board of Trade.  
The Right Hon. H. Labouchere, M.P. Vice-President of ditto.  
Mr Francis Chantrey, R.A.  
A. W. Calcott, Esq. R.A.  
C. E. Cochrane, Esq. R.A.  
Alderman Copeland.  
C. J. Eastlake, Esq. R.A.  
B. Hayes, Esq. M.P.  
Henry Hope, Esq. M.P.  
H. Holtenden Kay, Esq. F.R.S.  
James Morrison, Esq. M.P.  
A. Pollatt, Esq.  
John Thomson, Esq. (of Clitheroe.)

Director.

J. B. Papworth, Esq.  
To whom Application is to be made at the Rooms of the School,  
for the Regulations respecting the Admission of Students, &c.  
either personally, on Mondays, Wednesdays, and Fridays, from  
Ten to Four o'Clock, or by letter (post-paid).  
Arrangements are in contemplation for opening an Evening  
School.

**SOCIETY for the ENCOURAGEMENT**  
of BRITISH ART.

The Annual General Meeting of the Society was held at  
Messrs. P. and D. Colnaghi and Co. 14 Pall Mall East, on Mon-  
day, the 15th inst., when the following Members were elected of  
the Committee for the ensuing year, in lieu of six Members who  
died by rotation.

Thomas Boddington, Esq.  
Rev. E. T. Daniell.  
T. Hesketh Fleetwood, Esq. M.P.  
Colonel Fox.  
Rev. Henry Wallisley.  
Wm. Wells, Esq.

The powers of the Committee were extended to the purchase,  
from British Artists, of any Work executed by them, whether  
the same shall have been publicly exhibited or not, if executed  
within two years preceding.

SECOND EDITION.

Just published, by Ackermann and Co. Strand, price 14s.  
on India paper, elegantly bound.  
**LORD BYRON'S MANFRED, and**  
PRISONER of CHILLON, illustrated in Outline, by  
FREDERICK THURFF, Sculptor.

## THE PRINCESS VICTORIA.

Just published, a highly approved Print of H. R. H. the  
Princess Victoria, executed by command of H. R. H. the Duchess  
of Kent, by R. H. Laine, A.R.A.  
Published by J. Dickinson, 114 New Bond Street.

## A GRAND FETE CHAMPETRE.

under the patronage of Her Majesty, and their Royal  
Highnesses the Princesses Augusta, the Duchess of Kent, and  
the Princess Victoria, and principal Nobility, will be held in  
Lord's Cricket Grounds, Marylebone, on Saturday, May 27, in  
aid of the Royal Dispensary for Diseases of the Ear, Dean Street,  
Soho Square.

Tickets, 5s. each, may be had at the Dispensary; at the  
Grounds; and at the principal Libraries and Music-sellers. All  
Tickets issued on the day of the Fête will be charged 10s. each.  
HENRY S. SMYTH, Secretary.

## MADAME DUMAY, Institutrice, Rue du

Parabour Poissonnière, No. 102 bis, à Paris. Madame  
Dumay, whose Establishment for the education of Young Ladies  
has, for twenty years, been honoured by general approbation,  
respectfully informs her English friends and patrons, that she is  
now in London, where she will remain till the end of the month,  
and that on her return to Paris, she will be happy to take charge  
of those Young Ladies who may be confided to her care by their  
Parents or Guardians.

For Prospectuses, References, &c. apply to Messrs. T. and W.  
Boone, 39 New Bond Street; or to Mr. Rolandi, Foreign Book-  
seller, 20 Berners Street.

Bavarian Alps, and down the Danube from Linz to the Black  
Sea, including Descriptions of the most frequented Bath, and  
Watering Places, &c.

Lately published, 1 pocket vol. post 8vo. 10s. with Corrections and  
Additions down to 1837.

**The Hand-Book for Travellers in Holland,**  
Belgium, up the Rhine, and through Northern Germany.

John Murray, Albemarle Street.

On the 10th of June will be published, in 2 vols. with Portraits,  
**THE LETTERS OF CHARLES LAMB,**

with a Sketch of his Life.

By Mr. SERJEANT TALFOURD.

Edward Moxon, Dover Street.

Next week will be published, in 3 vols. post 8vo.  
**EUREKA; a Prophecy of the Future.**

By the author of "Mephistopheles in England."  
London: Longman, Rees, Orme, and Co.

Next week will be published, in 2 vols. post 8vo. with Vignettes,  
**SKETCHES in the PYRENEES.**

By the Author of "Slight Reminiscences of the Rhine,"  
"The Gospel's Week," &c. &c.  
London: Longman, Rees, Orme, and Co.

Preparing for publication, by Smith, Elder, and Co.

Booksellers to their Majesties.

MISS STICKNEY'S NEW WORK.

Early next week will be published,

**PRETENSION. Being the Third Series**

of Pictures of Private Life.

By SARAH STICKNEY.  
New editions of the First and Second Series of "Pictures of  
Private Life" are now ready, price 7s. 6d. cloth, and 10s. 6d. elegantly bound in morocco.

II.  
In folio 8vo. beautifully illustrated,  
**Investigation;**

Or, Travels in the Boudoir.  
By Caroline A. Haisted, Author of "The Little Botanist," &c.

This is a highly instructive and useful work for young people,  
conveying a general knowledge of various interesting topics con-  
nected with every-day life, in a form at once attractive and amus-  
ing.

III.  
**The Progress of Creation**

Considered with Reference to the present Condition of the Earth.

By Mary Roberts,  
Author of "Annals of My Village," &c. &c.

1 vol. folio 8vo. beautifully illustrated.

IV.  
**THE LIBRARY of ROMANCE ILLUSTRATED.**

Just published, in folio 8vo. price 8s. neatly bound,  
**The Ghost-Hunter and his Family.**

By John Banim,  
Author of "Tales by the O'Hara Family."

This work forms the First Volume of a New Series of the  
Library of Romance, to be embellished with beautifully finished  
illustrations, engraved on steel, after designs by the first Artists.  
The volumes will appear on the first day of every month, each  
complete in itself, and equal in size to three volumes of the mod-  
ern novels.

"The Library of Romance" is, unquestionably, one of the  
cheapest, the best, and most tastefully got up works in our lan-  
guage. It is indeed a standard work, and will be sought after  
and read with avidity, when its contemporary works of fiction are  
utterly forgotten."—Observer.

V.  
Just published, in folio 8vo. price 5s.

**A Dream of Life;**

Or, Augustine and Geraldine.

A Poem, in Five Parts.  
By the Rev. William Gordon Moore, M.A.

VI.  
**Illustrations to Byron's Works.**

The Proprietors of "The Byron Gallery" having been repeat-  
edly requested to resume that splendid series of Plates, accom-  
panied by appropriate historical and descriptive Letters, now  
announce a new series accordingly. The First Number, price  
2s. 6d. was published on the 1st of May.

Sets of the original Series, for binding up with the various  
editions of Byron's Works, may still be procured.

"Adequately to describe the delicate beauty of these splendid  
plates, does not appear to lie within the power of language.  
There is not an admirer of the works of the departed noble poet,  
who can feel satisfied that he has a perfect edition of them, unless  
the 'Byron Gallery' be attached to it. There is no instance in  
which excellence in poetry and the arts is so admirably com-  
bined."—Imperial Magazine.

LOVER'S LEGENDS OF IRELAND.

On Monday, the 22d inst. will be published,

**LEGENDS and STORIES OF IRELAND.**

By SAMUEL LOVER, Esq. R.H.A.

First Series. Illustrated with Cuts after his own Designs.

The fourth edition, in 12mo 8vo. price 6s. in green cloth extra,  
and lettered.

Also, by the same,

**Legends and Stories of Ireland. Second**

Series. A new and improved edition, with Illustrations by  
Harvey and the Author. Fcap 8vo. price 7s. 6d. green cloth  
extra, and lettered.

London: Baldwin and Cradock, Paternoster Row.

On the 30th, the First Vol. in demy 8vo. (to be completed  
in 3 vols.)

**THE LIFE and CORRESPONDENCE of**

JOHN THELWALL, with Notices of his Times and  
Contemporaries.

By his WIDOW.

Printed for John Macrone, St. James's Square.

## BOOKS PUBLISHED THIS DAY.

In 1 vol. demy 8vo. price 12s.

**THE EUCHARIST; being principally**

Lent Lectures, delivered in All Souls' Church, 1835, and  
Portman Chapel, 1837.

By the Rev. W. J. E. BENNETT, M.A.

Late Student of Christ Church, Oxford.

London: Wm. Jones Cleaver, 80 Baker Street, Portman Square.

In 4to. price 3s.

**A BIRTHDAY TRIBUTE addressed to**

to H. R. H. the PRINCESS ALEXANDRINA VIC-

TORIA, on attaining her Eighteenth Year. A Poem and Mem-  
oir.

By L. E. L.

Embellished with a Portrait of the Princess, engraved by  
Cochran, after Hayter's esteemed Painting.

Messrs. Fisher have, with excellent taste, and most oppor-  
tunity, invoked the genius of one of the sweetest priestesses in  
the temple of Apollo, to embody the national feelings on this  
auspicious occasion. In olden times, such an event would have  
called forth hundreds of tributes from seats of learning, and all  
the scattered children of the muse.

"What is here done, is done beautifully. The poem opens  
with a clustering of youthful images, all congenial to the subject,  
and full of kindred loveliness.

"Such are the tones and tender of this charming composition;  
and we have only to add, that it is encased in a most appropriate  
binding, adorned on primrose—the colour of the Spring."—Lit-  
erary Gazette.

Early application will be necessary, to secure copies.

London: Fisher, Son, and Co.

DR. ADAM CLARKE'S MISCELLANEOUS WORKS.  
In duodecimo, embellished with a fine Engraving, price 6s.  
In cloth boards.

**THE MISCELLANEOUS WORKS OF**  
DR. ADAM CLARKE, Vol. K. being the first of the detached Pieces; including Critiques on various Publications, Historical Sketches, Biographical Notices, Correspondence, &c. To which is prefixed, an Introductory Preface, by the Editor.  
London: Printed for Thomas Tegg and Son, 75 Cheap-side.  
Where may be had, just published.

A New Edition of Dr. Adam Clarke's Commentary on the Bible, Part I. in royal 8vo. 8s.; also, Part I. in 4to. price 5s.; to be continued Weekly until completed, in 60 Parts.

Beautifully Illustrated Works just published.

**PEARLS OF THE EAST; or, Beauties from**  
Lalla Rookh. Twelve Portraits of the principal Female Characters in Mr. Moore's popular Poem. Designed by Fanny Corboux, and Drawn on Stone by Louis Corboux. Imperial 4to. beautifully tinted, 31s. 6d.; full coloured, 55s. 6d.  
"One of the best-conceived and best-executed works in this or any other season in our recollection."—*Court Journal*.

**Le Byron des Dames; or, Portraits of the**  
principal Female Characters in Lord Byron's Poems.  
This volume is in large 4to. bound in rose-coloured morocco, very richly gilt, and contains Thirty-nine Plates from original Paintings, engraved under the superintendence of W. and E. Finden. Each subject is illustrated by optical remarks and poetical extracts. For luxury and elegance, it surpasses every work of a similar class yet produced. Price 31s. 6d.; coloured, 55s.

**Finden's Gallery of the Graces; a Series of**  
Thirty-six beautiful Female Heads, illustrative of Modern British Poets. Drawn by all the first Artists, and engraved by Messrs. Finden. Tastefully bound, in a style similar to "Le Byron des Dames." 31s. 6d.; coloured, 55s.

**Finden's Tableaux; a Series of Picturesque**  
Scenes of National Character, Beauty, and Costume. Containing Thirteen large Plates, double the size of those in the largest of the Annuals, carefully engraved by the first Artists, under the direction of William and Edward Finden. Splendidly bound in morocco, richly and appropriately embellished, after a design by Corboux, forming decidedly the most magnificent and attractive volume ever published. Imperial 4to. 42s.; India Proof, 63s.  
"The most richly illustrated production of the present day."—*Court Magazine*.

Charles Tilt, 55 Fleet Street.

**R. O. K. W. O. D.**  
By W. HARRISON AINSWORTH, Esq.  
"The success of 'Rookwood' is evinced by the fact that the edition which lies before us is the fourth, and that it has been thought worthy of being illustrated by the graphic powers of Cruikshank, who has given to the picture of Turpin's Flight to York, already described by Mr. Ainsworth with no ordinary vivacity in words, the most admirable representation of an excellent and characteristic illustration. 'Rookwood' is unquestionably a work of remarkable interest, and of very considerable ability."—*Edinburgh Review* for May.  
John Macrone, 31, James' Square.

4th edition, in one superbly bound volume, with 12 original Etchings by George Cruikshank, and an exquisite original portrait, by Daniel Maclise, A.R.A.

A Author of "The History of the Church in Scotland."  
By the appearance of this volume, the public are at length  
supplied with a "Connection of Sacred and Profane History,"  
from the creation of the world down to the era of the Christian  
Redemption; in which are set forth not only the most remarkable  
events which befell the ancient people of God, but also an ac-  
count of the origin, constitution, learning, commerce, and polity,  
of all the distinguished nations of antiquity.  
Printed for J. G. and F. Rivington, St. Paul's Churchyard,  
and Waterloo Place, Pall Mall.  
\* \* \* This work may be had now complete, in 3 vols. 8vo.  
price 21. 2s. boards.

Girdlestone's Commentary on the Bible.  
In 8vo. price 9s. the Second Part, containing Leviticus,  
Numbers, and Deuteronomy, of  
**THE OLD TESTAMENT**, with a Com-  
mentary, consisting of Short Lectures for the daily Use  
of Families.  
By the Rev. CHARLES GIRDLESTONE, M.A.

In this edition of the Bible, it has been one chief object to sup-  
ply families with an exposition for daily reading. The Scripture  
is divided into paragraphs of convenient length, and the explana-  
tory and practical matter is digested, under each portion, into  
one continuous lecture, so as to require no previous examination  
on the part of those who read it to their families. At the same  
time, it is hoped that the pains which have been taken to explain  
all obvious difficulties, and to derive from each passage its ap-  
propriate lessons, whether of doctrine or of duty, will render the  
work no less useful to those who study the Word of God in pri-  
vate.  
Printed for J. G. and F. Rivington, St. Paul's Churchyard,  
and Waterloo Place, Pall Mall.

Of whom may be had,  
The First Part, containing Genesis and Exo-  
odus, price 9s.; or the Two Parts in One Vol. 18s.

Also,  
The New Testament, with a Commentary.  
In 9 vols. 8vo. price 11. 16s.; or in Four Parts, at 2s. each.

Published by William Pickering, Chancery Lane.

This work consists of Two large quarto volumes, upon the composition of which the author has been employed for more than twenty years; and though the expense of publication has exceeded the sum of 6000*l*. It is published at the moderate price of Five Guineas. The two volumes contain nearly 2300 pages of three columns each, closely, yet clearly and beautifully printed. It combines the two branches, hitherto kept separate, of Etymology and Explanation.

## THE LA FAYETTE MANUSCRIPTS

WILL BE PUBLISHED ON SATURDAY, THE 20th,

In 3 vols. 8vo. with Portrait,

INCLUDING THE PERSONAL MEMOIRS OF THE GENERAL,  
WRITTEN BY HIMSELF.

PUBLISHED BY HIS FAMILY.

EDITIONS IN ENGLISH AND FRENCH.

SAUNDERS AND OTLEY, CONDUIT STREET, HANOVER SQUARE.

13 Great Marlborough Street, May 20.  
MR. COLBURN has just published the following New Works:—

I.  
Venetia.

"The child of love, though born in bitterness  
And nurtured in convulsion."

By the Author of "Vivian Grey," "Henrietta Temple," &c.  
3 vols.

## II.

## Captain Alexander's Narrative

Of a Voyage of Observation among the Colonies of Western  
Africa, in the Flag-ship *Thalia*; and of a Campaign in Kaffir-  
land, in 1836.

In 2 vols. 8vo. with Maps and numerous Plates, by  
Major C. C. Michell, R.H.

## III.

## The Hussar.

By the Author of "The Subaltern," &c. 2 vols. post 8vo.

## IV.

## Gentleman Jack;

A Naval Story.

By the Author of "Cavendish," &c. 3 vols.

In a few days,

## I.

## The City of the Sultan;

Or, Domestic Manners of the Turks.

By Miss Pardoe,

Authoress of "Traits and Traditions of Portugal," &c.

In 2 vols. 8vo. with numerous Illustrations.

## II.

## Souvenirs of a Summer in Germany.

Dedicated to Lady Chatterton. 2 vols. post 8vo.

## III.

## CAPTAIN MARRYAT'S NEW WORK.

## Snarley Yow;

Or, the Dog-Fiend. 3 vols.

2d edition, 2 vols. 8vo. with Illustrations of interesting Localities  
and Costumes, a new Map of Germany, and Frontispieces, in  
Oil Colours, by Baxter, price 3*l*. cloth, lettered.

SKETCHES OF GERMANY and the  
GERMANS; with a Glance at Poland, Hungary, and  
Switzerland, in 1834, 1835, and 1836.

By AN ENGLISHMAN, Resident in Germany.

"All who desire to have an enlightened conductor to the almost  
innumerable places and objects of high interest contained within  
the wide circuit expressed in the title, whether the tour is to be  
in person or in spirit, ought to become intimately acquainted with  
it."—*Monthly Review*.

"His observations on so much of manners as may be seen in  
passing are good, and some of his descriptions of scenery are striking."  
—*Quarterly Review*, April 1837.

Whittaker and Co. Ave Maria Lane.

## NEW WORKS.

## I.

## THE EDINBURGH REVIEW, No. 131.

## II.

## Copland's Dictionary of Practical Medicine.

Uniform with "Cooper's Surgical Dictionary."

Part IV. 8vo. price 9*s*.

"A miracle of industry, and forms a fitting companion to the  
justly popular Surgical Dictionary of Mr. Cooper."—*Med. Gaz.*

## III.

## Attila; a Romance.

By G. P. R. JAMES, Esq.

Author of "The Gipsy," &c. 8 vols. post 8vo. 1*l*. 11*s*. 6*d*.

"In this production, which displays to great advantage all the  
excellences of the writer, we have his research, his descriptive  
powers, his style, his identification of character, his poetry, his  
historical accuracy, and his actual presentation of remote times,  
mingled with all the interest of a well-conceived and finely ex-  
ecuted story."—*Literary Gazette*.

## IV.

## Sacred History of the World,

Philosophically considered, in a Series of Letters to a Son.

By Sharon Turner, Esq. F.R.S. and R.A.S.L.

The Third and concluding Volume. 8vo. 14*s*.

## V.

## Oriental Customs.

Applied to the Illustration of the Sacred Scriptures.

By Samuel Burder,

Late of Clare Hall, Cambridge.

2d edition, with Additions from the Works of the most recent  
Travellers in the Holy Land, Egypt, &c. viz. Laborde's Arabians,  
and Lane's Modern Egyptians, price 8*s*. 6*d*. cloth, lettered.

## VI.

## Lalla Rookh; an Oriental Romance.

By Thomas Moore, Esq.

18th edition, in fcap 8vo. with Four Engravings, from Drawings  
by Westall, price 10*s*. 6*d*. in cloth, lettered.

## VII.

## The Doctor.

Vols. I. to III. Post 8vo. 1*l*. 11*s*. 6*d*.

Vol. IV. is nearly ready.

"Rich beyond almost any other of the time, in the best know-  
ledge, and the most beautiful literature."—*Quarterly Review*.

## VIII.

## Domestic Duties;

Or, Instructions to Young Married Ladies on the Management of  
their Households, and the Regulation of their Conduct.

By Mrs. William Parkes.

"The volume before us is a perfect *va-de-mecum* for the young  
married lady, who may resort to it on all questions of household  
economy and etiquette."—*New Monthly Mag.*

London: Longman, Rees, Orme, and Co.

## DR. RAMADGE ON CONSUMPTION.

In 1 vol. 8vo. price 8*s*. the 3d edition, illustrated by coloured  
Plates.

CONSUMPTION CURABLE, and the  
manner in which Nature as well as Remedial Art  
operates in effecting a healing Process in Cases of Consumption,  
explained and illustrated by numerous remarkable and inter-  
esting cases.

By FRANCIS H. RAMADGE, M.D.

Fellow of the College of Physicians, &c.  
"The author's treatment is so simple, so in accordance with physi-  
ological and pathological laws, so free from charlatanism and  
imaginative dreams, that I not only feel a high predilection for it,  
but think it worthy to be recommended to the impartial and  
careful examination of my professional brethren."—*Preface to the  
German Translation, by Dr Holstmann*.

London: Longman and Co.

## CAPTAIN MARRYAT'S PIRATE,

Splendidly illustrated by Clarkson Stanfield, R.A.

Being the First of a Series of Illustrated Works by the best

Authors, executed under the Superintendence of

MR. CHARLES HEATH.

## THE PIRATE, and the THREE

CUTTERS. With Twenty Plates. Royal 8vo. price

1*l*. 11*s*. 6*d*.; imperial 8vo. with India proof Plates, 2*l*. 12*s*. 6*d*.

"Captain Marryat never produced any thing better than 'The  
Pirate.'"—*Metropolitan Magazine*.

London: Longman, Rees, Orme, and Co.

## THE CONFESSIONS of an ELDERLY

GENTLEMAN.

Edited by the COUNTESS OF BLESSINGTON.

With Six Plates, from Drawings made expressly for the work, by  
E. T. Parris; being Portraits of his Six Loves.

Post 8vo. price 14*s*.

"There is an exceeding charm in all the produce of Lady  
Blessington's pen. All she writes is attractive and popular...  
A higher moral lesson has never been taught in a book."—*John Bull*.

London: Longman, Rees, Orme, and Co.

## MAUNDER'S TREASURY OF KNOWLEDGE.

Ninth Edition.

In 1 thick volume, royal 18mo. neatly printed in pearl, 8*l*. 6*d*.

cloth; or 10*s*. 6*d*. embossed and gilt.

## THE TREASURY OF KNOWLEDGE,

and LIBRARY OF REFERENCE. In Two Parts: the

1st Part consisting of a new and enlarged English Dictionary, a  
Grammar, Tables of Verbal Distinctions, with Examples, &c.;

13 South Molton Street, in the Parish of Saint George, Hanover

Square, in the County aforesaid, at the LITERARY GAZETTE

OFFICE, Number 7 Wellington Street, Waterloo Bridge,

Strand, in the said County, on Saturday, May 20th, 1837.

Agent for Paris, G. W. M. Reynolds, Librairie des Etrangers,

55 Rue Neuve, St. Augustin.

## REVIEW OF NEW BOOKS.

*Aunt Dorothy's Tale; or, Geraldine Morton.*  
A Novel. 2 vols. 12mo. London, 1837.  
Bentley.

THERE is a freshness and talent about this unassuming production which has exceedingly captivated our fancy. There is not a hack line in it: what a treat for a reviewer! and a reviewer in these days, when one hack job succeeds another with such unrelenting activity, that it almost seems, at the end of the season, as if we had read only one huge hack work. We are not going to say that Aunt Dorothy is faultless; on the contrary, she exhibits sundry of the blemishes of unpractised writing; but her blots are very venial, and far more than redeemed by a natural beauty and a fine vein of genuine feeling which pervade the whole. The descriptions, too, are charmingly natural, and the reflections sweetly moral, flowing out of the circumstances, and not pedantically lugged in, as it were, just to prove that the tale was a moral tale.

Having said thus much, we shall merely add (for we will not impair the interest of the narrative), that the object of the author has been to contrast two female characters—the one founded on religious principles, the other left more unguarded to the temptations of the world. Something of the heroines may be gathered from the following extract; but we adduce it more to shew the happy qualities of Aunt Dorothy, to which we have alluded.

“A few months before my return to England, I heard that the Mortons were again residing in their beautiful old family mansion, Morton Hall, in ———shire. It was only twenty miles from my brother's place, Lyme Vicarage, where Matilda lived; and, since their return, she had been almost constantly staying at Morton Hall, Geraldine having resumed her youthful friendship for her with tenfold ardour. This surprised the timid girl beyond measure, for nothing could be more different than their true characters; but, perhaps, it was the cause of their extreme attachment: each beheld and admired in the other, those qualities in which she felt herself most deficient. This also delighted me, for I thought Matilda's religious feelings and strong common sense would check the wild ebullitions of Geraldine's enthusiasm. Full of pleasing anticipations I returned to my native land, after an absence of nearly five years. I was so delighted at seeing the dear old cliffs of Dover, that I wondered how I could have remained so long in foreign lands. Every thing enchanted me: I could scarcely refrain from kissing the waiter and chambermaid at the Ship Hotel, and continually asked them some question, and held out my trumpet, that I might have the unspeakable pleasure of hearing the dear language, to the common accents of which, at least, I had been so long a stranger. Even the small sitting-room was charming, with its narrow wooden chimney-piece, devoid of any ornament, save the little round mirror which, with cruelly unbecoming reflection, diminished my already diminutive sleeves and bonnet, but appeared to increase the size of my unfortunate nose, dreadfully reddened by sea-sickness and sea-breezes: but

it was England, and I forgave all, as well as the little, hard, slippery, black sofa, on which I tried in vain to repose my weary bones. Then the small bedroom, filled with a dear, heavy, four-posted bed, and no space left for the innumerable trunks I had brought home, full of foolish finery, for my friends and nieces. At dinner, too, the large silver dish, containing two small mutton-chops, triumphantly placed on the table, and its ponderous cover removed by the fat inn-keeper, the waiter following with a small dish of watery-looking potatoes, and a blue boat of still more watery-looking butter. All small, but the price they cost; every thing dear to me in every sense of the word: I was enchanted with all. I passed through London. It was the end of October; most of the beloved houses and buildings were veiled from my dotting eyes by a thick yellow fog: yet it was forgiven. I hurried on to ———shire, intending first to visit my favourite brother at Lyme Vicarage. Oh, with what joy I approached Lyme Vicarage, that peaceful abode! At the first sight of the old church-tower I nearly jumped out of the carriage-window. My maid, Sukey Sprat—who, though old, is not made like myself, inasmuch as she is very fat, and married to the old village clerk,—fully participated in my delight. We were expected, and many a well-known face was thrust out of the latticed windows as we rattled through the village. Adam Sprat, the clerk, was at the little garden-gate of his own neat white cottage, covered with roses and jessamines: it looked prettier than ever. I made the postboy stop and open the carriage-door, and I had the pleasure of seeing Sukey clasped in the fond arms of a husband she fondly loved, and restored to a comfortable home she had quitted out of affection for me. On I drove; passed the picturesque old church, and turned in at a gate, which was held open by my old friend, the gardener, who was there surrounded by his numerous children and grandchildren, all waiting to greet the ‘auld leddy.’ I passed on through the shrubbery, which had grown thicker than ever, to where a sudden turn in the gravel road discovered the old red-brick vicarage-house, with its irregular front and gable ends, and porch covered with a large — dear me! I forget the name—in full bloom. I discovered figures standing on the steps: my eyes were soon so full of tears, I could see nothing. The carriage stopped: I felt it was the old vicar himself who assisted me out;—that the fond kiss, and tears of joy that mingled with my own, were a brother's; and that the tall girl, who then clasped me in her arms and sobbed upon my breast, was my own darling Matilda. I tried to wipe my spectacles, that I might behold those beloved objects. I looked, and laughed, and cried, but could not speak a word, though I wanted to ask a thousand questions. My little niece and god-daughter, named after me, Dorothy, whom I had left a baby, and whose mother had died at her birth, came bounding down the old oak staircase, at one end of the hall, fancying that she, too, ought to be delighted to see the Aunt Dorothy, whose anticipated return had been the only subject talked of for some time. When she saw me, she stopped suddenly and blushed, and was

going to run away again; but I caught her up and covered her pretty little face with kisses. When my eyes were satisfied with beholding the dear living objects, I proceeded to regale them by examining the inanimate ones, to see if each familiar article was in its usual place. Yes! all wore the same character of tranquil comfort and simplicity which stamped it as the abode of goodness and benevolence—as the dwelling of minds naturally refined, though old-fashioned, and not highly cultivated.”

We have taken this from the opening of the book—a charming scene of a return from foreign travel,—and we shall only contrast it with a touching visit, at the conclusion, to a once happy home, whose light has fled.

“I often drive to Morton Hall, and wander over the grass-grown walks, and think of those who are no more. An old housekeeper of the family opens the great hall-door, which murmurs and groans at the unwonted disturbance. Within, every thing remains the same as when inhabited by the young, the gay, the beautiful. Lord Castleford allows nothing to be touched, nor is any stranger admitted within those stately walls. The old woman, with a melancholy smile of recognition, then opens the ponderous shutters, and the startled dust whirls and eddies in a gleam of brilliant sunshine; and myriads of drowsy flies, the sole survivors of former grandeur, awakened from their long slumber, dance in monotonous reels and melancholy mazes round the carved flowers of the lofty ceiling. Once more are the well-known objects in that splendid room revealed to my saddened gaze. In the centre is a billiard-table, a mace and cue still lying upon it; a ball in one of the pockets, another near the cushion, there left by the hand of the young and thoughtless—perhaps that of Vere or Geraldine, now cold in their graves! The flowers and choice exotics, that used to shed such intoxicating perfumes around, are now withered and dead, entombed in the rosso-antico and porphyry vases they once adorned. The family pictures, in many of whose noble features I trace a strong resemblance to Geraldine—*chefs-d'œuvre* of Reynolds, Lely, Kneller, and Vanddyke,—look from their dusty frames with a sad smile, as if astonished at the unwonted intrusion. I have always a great awe and respect for family pictures; in my youth I have often felt many a sinful thought and foolish jest checked, by knowing the eyes of many revered ancestors were fixed upon me; and I have even fancied their speaking features assumed an angry or pleased expression, according to the demeanour of their descendants. I open a door to the right, and, starting at the echo of my own footsteps on the polished floor, I traverse the long library. In one of the deep windows is a table, and here I pause, for it is there where Geraldine studied—where Lord Castleford instructed her in the obscure pages of ancient lore. A volume of Dante lies still open at the place where last they read; an Arabic manuscript is near, and on a torn sheet of paper I recognise some lines, written by Geraldine, in that language; scratched in pencil at the bottom of the same paper is a caricature, and some half-finished verses, in English, on

some odd gentleman who was then staying in the house. How strongly characteristic of her versatile talents! There, in its richly embossed golden case, lies the very identical pencil which traced those lines; I knew it well, it had been a gift of her husband, and, like him, like her Arabic and other studies, had been thrown aside—lost in the overwhelming current of a fatal passion. I pass on to the magnificent music-room: the piano is still open; the harp, a melancholy emblem of the misguided being whose genius had awakened its melodious tones, is unstrung; some of her favourite songs are upon the desk. I sigh, as memory recalls that lovely voice, now for ever silent. I then wander through the costly saloons to her own painting-room: there are the easels, the paints, and some half-finished pictures. Oh, how forcibly does all here remind me of her!—the colours seem scarcely dry upon the palette; her painting-apron and brushes are flung carelessly on a chair, as if she was gone away only for a few moments; a heap of prints, sketches, and manuscripts, are all in living confusion on the crowded table. Is it possible? Can that transcendent genius be for ever gone—snatched away before her young hand could have time to execute half the designs of her creative mind? In the drawing-room are the portraits of Lady Julia and Geraldine, by Sir Thomas Lawrence, glowing with life, and health, and hope. Can it be? Have I, indeed, outlived those two lovely creatures? Is it a dream? are they really gone? And, as if to convince myself of the truth, I step out through the high window, cross the neglected terrace, and, following a narrow path overgrown with weeds and brambles, I reach the beautiful little Gothic church. There, within its decorated walls, lie the mouldering remains of all its ancient lords, since the days when first they left their native Normandy with William the Conqueror. Monuments of every succeeding age may there be seen, recording the virtues and warlike deeds of the Mortons. Some, rudely engraved on brass, are inserted in the pavement, and their uncouth figures and old English inscriptions are nearly obliterated by the reckless tread of the living. On a raised tomb, beneath a window of old painted glass, lies the tall figure of a crusader, carved in stone, with crossed legs, and hands clasped upon his breast, attired in coat of mail, with helmet and sword by his side:

Gaspar Leondine de Morton was he,  
Far famed in ancient deeds of chivalrie.

Near the recumbent form of the crusader, are the kneeling figures of a lady and her numerous family; the women with large stiff ruffs, flowing robes, and close caps pointed on the forehead. On the opposite side of the church is the splendid monument of Melchior de Morton, created Baron Leondine by Edward the Third; the figures on this are all coloured, and the picturesque dresses of that period retain nearly their original brilliancy of hue. The inscription is rather a curious one: of the eight daughters it is recorded, 'Some were called into holy marriages, others into heaven.'

Melchior de Morton was he high;  
Three wives had he, thrice luckie wight;  
Nine sons,—each youth a val'rous knight;  
Eight daughters, virtuous, chaste, and bright.  
None, sure, could doubt this baron's might.

At the south end of the church is a beautiful monument, by Flaxman, of Geraldine's father; and near this a plain slab of white marble: but my eyes fill with tears, I cannot read, for I know that on it is recorded the name of the last, the loveliest, of that ancient race which, with all its hereditary honours, is now extinct. I kneel at that grave, and offer up a prayer to

the great Being with whom is the soul of Geraldine. Her remains, with those of the dear friend of my youth, her beautiful mother, repose in the vault beneath."

*The French Revolution: a History. In Three Volumes. By Thomas Carlyle. 12mo. London, 1837. Fraser.*

Of this strange work we hardly know how to speak. To treat of it seriously is impracticable; and yet there are portions of it of such an order, that we find it equally impossible to laugh at it. Caricaturing the worst manner of the worst part of the worst German school, Mr. Carlyle out-Richter's Richter, and robs Paul to the last farthing without satisfying Peter, or any body else, with the plunder. He calls his performance "The French Revolution;" but it is more than that: it is a triple revolution:—1st, allowing the French Revolution itself to be *one*; 2d, there is the Revolution of Mr. Carlyle, *two*; and 3d, the Revolution of the English language, *three*!

The volumes, also, are quaintly divided into "The Bastille," "The Constitution," and "The Guillotine;" and, especially when relating to the most horrid and sanguinary matters, so worded, that we cannot tell whether the author is in earnest or in jest. "Life is a jest," said Gay, and "Murder in jest," says Hamlet; but with Mr. Carlyle, not only life, but death, is a standing jest; not only murder, but fusillades, bayonades, and massacres, the merries of jocular descriptions. The very titles of his chapters are like grinning and hideous laughs at mortality and mortal sufferings. Thus, the chapters giving an account of the fall of the Gironde and the Reign of Terror, are headed, "Culottic and Sansculottic," "Growing shrill," "Sansculottism accoutred," "In death grips," "Sword of sharpness," "Death," "Destruction," "Carmagnole complete," "Like a thunder-cloud," "The gods are a-thirst," "Mumbo jumbo," "To finish the Terror" go down to "Grilled Herrings," and "The Whiff of Grape-shot." Surely this is sad trifling with such scenes as those of the French Revolution, and altogether revolting to taste and feeling: but it is the same with the narrative throughout. There is nothing like a history of the events which took place; but, instead, there is a series of rhapsodical snatches, which may remind readers acquainted with the facts, from previous histories and memoirs, what it is that the author is really writing about. By itself, his book is unintelligible.\*

Mr. Carlyle sets out with the last years and death of Louis XV.; and a fair notion of his style and mysticism may be gathered from his speculations on this subject.

"Ours is a most futile world; and man is the most fingent plastic of creatures. A world not fixible; not fathomable! An unfathomable Somewhat, which is *Not we*; which we can work with, and live amidst,—and model, miraculously in our miraculous Being, and name World.—But if the very Rocks and Rivers (as Metaphysic teaches) are, in strict language, *made* by those Outward Senses of ours, how much more, by the Inward Sense, are all Phenomena of the spiritual kind: Dignities, Authorities, Holies, Unholies! Which inward sense, moreover, is not permanent like the outward ones, but forever growing and changing. Does not the black African take of Sticks and Old Clothes (say, exported Monmouth-Street cast-clothes) what will suffice; and of these,

\* The author's peculiar style of punctuation, and strange system of commencing certain words with capital letters, have been retained in our extracts.

cunningly combining them, fabricate for himself an Eidolon (Idol, or *Thing Seen*), and name it *Mumbo-Jumbo*; which he can thenceforth pray to, with upturned awestruck eye, not without hope? The white European mocks; but ought rather to consider; and see whether he, at home, could not do the like a little more wisely."

This may resemble the philosophy of Cant and his school; but we have heard as sound sense and as meaning language in a large house called Bedlam. There is something more of method in the following; that is to say, we can comprehend from it that Mr. Carlyle is staunch for Church and King, and there is a degree of originality and genius, too, in his view.

"Observe, however, that of man's whole terrestrial possessions and attainments, unspeakably the noblest are his Symbols, divine or divine-seeming; under which he marches and fights, with victorious assurance, in this life-battle: what we can call his Realised Ideals. Of which realised Ideals, omitting the rest, consider only these two: his Church, or spiritual Guidance; his Kingship, or temporal one. The Church: what a word was there; richer than Golconda and the treasures of the world! In the heart of the remotest mountains rises the little Kirk; the Dead all slumbering round it, under their white memorial-stones, 'in hope of a happy resurrection' dull wert thou, O Reader, if never in any hour (say of moaning midnight, when such Kirk hung spectral in the sky, and Being was as if swallowed up of Darkness) it spoke to thee—things unspeakable, that went to thy soul's soul. Strong was he that had a Church, what we can call a Church: he stood thereby, though 'in the centre of Immensities in the conflux of Eternities,' yet manlike towards God and man; the vague shoreless Universe had become a firm city for him, and dwelling which he knew. Such virtue was in Belief; in these words, well spoken: *I believe*. Well might men prize their *Crede*, and raise stately Temples for it, and reverend Hierarchies, and give it the title of their substance; it was worth living for and dying for. Neither was that an inconsiderable moment when wild armed men first raised their Strongest aloft on the buckler-throne; and, with clanging armour and hearts, said solemnly: Be thou our Acknowledged Strongest! In such Acknowledged Strongest (well named King, *Kön-ning*, Can-ning, or Man that was Able) what a Symbol shone now for them,—significant with the destinies of the world! A Symbol of true Guidance in return for loving Obedience; properly, if he knew it, the prime want of man. A Symbol which might be called sacred; for is there not, in reverence for what is better than we, an indestructible sacredness? On which ground too it was well said there lay in the Acknowledged Strongest a divine right; as surely there might in the Strongest, whether Acknowledged or not,—considering *who* made him strong. And so, in the midst of confusions and unutterable incongruities (as all growth is confused), did this of Royalty, with Loyalty environing it, spring up; and grow mysteriously, subduing and assimilating (for a principle of Life was in it); till it also had grown world-great, and was among the main Facts of our modern existence."

His sort of poetical jargon is sometimes relieved by queer anecdotes, picked up in the course of much miscellaneous reading, and liberally sported by our author. For instance, speaking of the decline of the old feudal powers, he says:—

"These men call themselves supporters of the

throne; singular gilt-pasteboard *caryatides* in that singular edifice! For the rest, their privileges every way are now much curtailed. That law authorising a Seigneur, as he returned from hunting, to kill not more than two Serfs, and refresh his feet in their warm blood and bowels, has fallen into perfect desuetude, and even into incredibility; for if Deputy Lapouille can believe in it, and call for the abrogation of it, so cannot we. No Charolois, for these last fifty years, though never so fond of shooting, has been in use to bring down slaters and plumbers, and see them roll from their roofs, but contents himself with partridges and grouse. Close-viewed, their industry and function is that of dressing gracefully and eating sumptuously. As for their debauchery and depravity, it is, perhaps, unexampled since the era of Tiberius and Commodus. Nevertheless, one has still partly a feeling with the lady Maréchale: 'Depend upon it, sir, God thinks twice before damning a man of that quality.'

And again, at the death of Louis XV. :—

"Cardinal Grand-Almoner Roche-Aymon is here in pontificals, with his pyxes and his tools: he approaches the royal pillow; elevates his wafer; mutters, or seems to mutter, somewhat; and so (as the Abbé Georgel, in words that stick to one, expresses it) has Louis 'made the *amende honorable* to God;' so does your Jesuit construe it.—'Wa, Wa,' as the wild Clotaire groaned out, when life was departing, 'what great God is this that pulls down the strength of the strongest Kings!'

"Frightful (he observes in a better tone) to all men is Death; from of old named King of Terrors. Our little compact home of an Existence, where we dwelt complaining, yet as in a home, is passing, in dark agonies, into an Unknown of Separation, Foreignness, unconditioned Possibility."

There are often remarks of this class, which do credit to the writer's talent and reading:—

"A paradoxical philosopher, carrying to the uttermost length that aphorism of Montesquien's, 'Happy the people whose annals are threesome,' has said, 'Happy the people whose annals are vacant.' In which saying, mad as it looks, may there not still be found some grain of reason? For truly, as it has been written 'Silence is divine,' and of Heaven; so in all earthly things too there is a silence which is better than any speech."

"It is true every where that foolish Rumour bubbles not of what was done, but of what was misdone or undone; and foolish History (ever, more or less, the written epitomised synopsis of Rumour) knows so little that were not as well unknown. Atila Invasions, Walter-the-Penniless Crusades, Sicilian Vespers, Thirty-Years' Wars: mere sin and misery; not work, but hinderance of work! For the Earth, all this while, was yearly green and yellow with her kind harvests; the hand of the craftsman, the mind of the thinker rested not; and so, after all, and in spite of all, we have this so glorious high-domed blossoming World; concerning which, poor History may well ask, with wonder, Whence it came? She knows so little of it, knows so much of what obstructed it, what would have rendered it impossible. Such, nevertheless, by necessity or foolish choice is her rule and practice; whereby that paradox, 'Happy the people whose annals are vacant,' is not without its true side."

One cannot help lamenting the perversity which has marred all the better qualities of a writer like this, and by such rhodomontades as the following, on the retreat of Madame du Barry from the dying king;

"Nay already, in the afternoon, behold is not this your Sorceress Dubarry with the handkerchief at her eyes, mounting d'Aiguillon's chariot; rolling off in his Duchess's consolatory arms? She is gone; and her place knows her no more. Vanish, false Sorceress; into Space! Needless to hover at neighbouring Ruel; for thy day is done. Shut are the royal palaces for evermore: hardly in coming years shalt thou, under cloud of night, descend once, in black domino, like a black night-bird, and disturb the fair Antoinette's music-party in the Park; all Birds of Paradise flying from thee, and musical windpipes growing mute. Thou unclean, yet unmalignant, not unpitiable thing! What a course was thine: from that first trucklebed (in Joan of Arc's country) where thy mother bore thee, with tears, to an unnamed father: forward, through lowest subterranean depths, over highest sunlit heights, of Harlotdom and Rascaldom,—to the guillotine-axe, which sheers away thy vainly whimpering head! Rest there uncursed; only buried and abolished: what else befitted thee?"

It is, we have to repeat, difficult to make head or tail of this history, of which the fall of the Girondins may serve as an example:—

"History remarks that the Commission of Twelve, now clear enough as to the Plots; and luckily having 'got the threads of them all by the end,' as they say,—are launching Mandates of Arrest rapidly in these May days; and carrying matters with a high hand; resolute that the sea of troubles shall be restrained. What chief Patriot, Section-President even, is safe? They can arrest him; tear him from his warm bed, because he has made irregular Section Arrestments! They arrest Varlet Apostle of Liberty. They arrest Procureur-Substitute Hébert, *Père Duchesse*; a Magistrate of the People, sitting in Townhall; who, with high solemnity of martyrdom, takes leave of his colleagues; prompt he, to obey the Law; and solemnly acquiescent, disappears into prison. The swifter fly the Sections, energetically demanding him back: demanding not arrestment of Popular Magistrates, but of a traitorous Twenty-two. Section comes flying after Section;—defiling energetic, with their Cambrises' vein of oratory: nay the Commune itself comes, with Mayor Pache at its head; and with question not of Hébert and the Twenty-two alone, but with this ominous old question made new, 'Can you save the Republic, or must we do it?' To whom President Max Isnard makes fiery answer: 'If by fatal chance, in any of those tumults which since the Tenth of March are ever returning, Paris were to lift a sacrilegious finger against the National Representation, France would rise as one man, in never-imagined vengeance, and shortly 'the traveller would ask, on which side of the Seine Paris had stood!' Whereat the Mountain bellows only louder, and every Gallery: Patriot Paris boiling round. And Girondin Valazé has nightly conclaves at his house; sends billets, 'Come punctually, and well armed, for there is to be business.' And Megera women perambulate the streets, with flags, with lamentable *allelu*. And the Convention-doors are obstructed by roaring multitudes: fine-spoken *hommes d'état* are hustled, maltreated, as they pass; Marat will apostrophise you, in such death-peril, and say, 'Thou, too, art of them. If Roland ask leave to quit Paris, there is order of the day. What help? Substitute Hébert, Apostle Varlet, must be given back; to be crowned with oak-garlands. The Commission of Twelve, in a Convention overwhelmed with roaring Sections, is broken;

then on the morrow, in a Convention of rallied Girondins, is reinstated. Dim Chaos, or the sea of troubles, is struggling through all its elements; writhing and chafing towards some Creation."

Unless previously acquainted with the facts, who could make any thing of this description of the overthrow of one of the most important parties that figured in this tragical epoch? It is caricature, and even extended to the memorable act of Charlotte Corday.

"Tired day-labourers have again finished their Week; huge Paris is circling and simmering, manifold, according to its vague wont: this one fair Figure has decision in it; drives straight,—towards a purpose. It is yellow July evening, we say, the thirteenth of the month; eve of the Bastille day,—when 'M. Marat,' four years ago, in the crowd of the Pont Neuf, shrewdly required of that Besenval Huzzar-party, which had such friendly dispositions, 'to dismount and give up their arms then;' and became notable among Patriot men! Four years: that a road he has travelled;—and sits now, about half-past seven of the clock, stewing in slipper-bath; sore afflicted; ill of Revolution Fever,—of what other malady this History had rather not name. Excessively sick and worn, poor man: with precisely elevenpence-half-penny of ready money, in paper; with slipper-bath; strong three-footed stool for writing on, the while; and a squalid—Washerwoman, one may call her: that is his civic establishment in Medical-School Street; thither and not elsewhere has his road led him. Not to the reign of Brotherhood and Perfect Felicity; yet surely on the way towards that?—Hark, a rip again! A musical woman's-voice, refusing to be rejected: it is the Citoyenne who would do France a service. Marat, recognising from within, cries, Admit her. Charlotte Corday is admitted. Citoyen Marat, I am from Caen the seat of rebellion, and wished to speak with you.—Be seated, *mon enfant*. Now what are the Traitors doing at Caen? What Deputies are at Caen?—Charlotte names some Deputies. 'Their heads shall fall within a fortnight,' croaks the eager People's-Friend, clutching his tablets to write: *Barbarous, Pétion*, writes he with bare shrunk arm, turning aside in the bath: *Pétion and Lowest*, and—Charlotte has drawn her knife from the sheath; plunges it, with one sure stroke, into the writer's heart. 'A mot, *chère amie*, Help, dear!' no more could the Death-choked say or shriek. The helpful Washerwoman running in, there is no Friend of the People, or Friend of the Washerwoman, left; but his life with a groan gushes out, indignant to the shades below. And so Marat People's-Friend is ended: the lone Stylites has got hurled down suddenly from his Pillar,—*whither* He that made him does know."

Again:—"The Guillotine, we find, gets always a quicker motion, as other things are quickening. The Guillotine, by its speed of going, will give index of the general velocity of the Republic. The clanking of its huge axe, rising and falling there, in horrid systole-diastole is portion of the whole enormous Life-movement and pulsation of the Sansculottic System!"

And again:—"There are few Printed things one meets with, of such tragic almost ghastly significance as those bald Pages of the *Bulletin du Tribunal Révolutionnaire* which bear title, *Trial of the Widow Capet*. Dim, dim, as if in disastrous eclipse; like the pale kingdoms of Dis! Plutonic Judges, Plutonic Tinville; encircled, nine times, with Styx and Lethe, with Fire-Phlegathon and Coccyus

named of Lamentation! The very witnesses summoned are like Ghosts: exculpatory, inculpatory, they themselves are all hovering over death and doom; they are known, in our imagination, as the prey of the Guillotine."

Classical absurdities; multitudes of new-coined words; and concocted phrases; illustrations which darken, and expositions which perplex; and a hundred other bewildering follies crush the sense of this work in every page. It is only a literary curiosity, and rather a tiresome one. Let us conclude with one brief quotation from the chapter "Grilled Herings:—"

"Anarchy, hateful as Death, is abhorrent to the whole nature of man; and so must itself soon die. Wherefore let all men know what of depth and of height is still revealed in man; and, with fear and wonder, with just sympathy and just antipathy, with clear eye and open heart, contemplate it and appropriate it; and draw innumerable inferences from it. This inference, for example, among the first: That if 'the gods of this lower world will sit on their glittering thrones, indolent as Epicurus' gods, with the living Chaos of Ignorance and Hunger weltering uncared-for at their feet, and smooth Parasites preaching, Peace, peace, when there is no peace,' then the dark Chaos, it would seem, will rise; has risen; and, O Heavens! has it not tanned their skins into breeches for itself? That there be no second Sansculottism in our Earth for a thousand years, let us understand well what the first was; and let Rich and Poor of us go and do *therwise*."

*Souvenirs of a Summer in Germany.* 2 vols.

12mo. London, 1837. Colburn.

FROM a dedication to Lady Chatterton we surmise that the writer is also of the better sex, and that her travels must have been in company with the individual thus addressed and her husband, Sir William; and the more so, as we find the initials G— and W— often figure in the narrative. Be this, however, as it may, we have great pleasure in saying that this journal would do credit to any association of grace and talent. It is written in a style of lively simplicity and freshness which cannot fail to rivet the most vagrant attention. The manners of the Germans are well painted; and, in the way of relief, there are some ancient legends very pleasingly told. Indeed, there runs through the whole a vein of playful humour and a spirit of keen observation, which is highly attractive; and which reminds us more of Head's popular "Bubbles of the Brunnen" than any tour we can at present call to our recollection. The description of Dresden and the Saxon-Switzerland is beautiful; and, to add to all their other merits, these volumes are well calculated to be valuable travelling guides to whoever may visit the country to which they relate.

It will not be necessary for us to illustrate these opinions by setting out from Cassel, and following the route pursued by our author: on the contrary, we dart at once through Belgium and up the Rhine, and pause at Langen-Schwalbach, where lodgings were not readily obtained. At last:—

"Some one told us that something was to be had at the 'Goldene Kette' (golden chain), a hotel in the next street. We picked our way over the rough, uneven pavement, and soon reached an elderly looking building, with high roof and balconies, very like the old houses at Chester, and gaily painted white and green. Mine host of the Golden Kette made his ap-

pearance, with his mouth full of supper, his face full of smiles, and a napkin tied round his waist. He assured us, *tout en mangeant*, that he had that day sent away two families; 'But, let me see,' he added, 'I think you said you had a carriage and servants;' and, as if inspired by this idea, he mounted the stairs, making signs for us to follow. We threaded our way through sundry long, narrow, crooked passages, with as many turnings and windings as would have beaten Rosamond's bower, of immortal memory, quite hollow. Not that they were altogether as fragrant. However, when we were almost giddy from our evolutions, the host stopped opposite a door, at which he knocked. 'Herein' ('come in'), sounded from within, in two or three shrill female voices; whereupon, timidly, and with a thousand bows, smiles, and apologies, he half opened the door, and invited us to peep in. 'These charming rooms,' he said, 'you can have to-morrow—there is a whole suite of them, one inside the other, and the ladies start for Ems in the morning.' 'But to-night, good sir—' 'O to night!—I can manage that. I have one room vacant at the end of the passage—you shall have it—'tis not very small. Oh, I assure you, it is not,' he added, earnestly, seeing unfavourable symptoms in our faces—'and for one night only—for one single night!' This was said very imploringly, and in a sort of appealing tone, which seemed to imply some astonishment on the part of the host, that we could not possibly be so exceedingly unreasonable as to object to sleeping all together in one small room—'for one night only—one single night.' We proceeded on our way, and explored sundry other hofs. The result of our experience was to put us in much better humour with the 'Stadt Koblenz,' and, finally, all things considered—to pronounce it the most desirable quarter we had seen. We thought of the old song,

'Try me, try me;  
Prove ere you deny me.'

and, on the strength of it, turned our steps towards the despised domicile, and were received as warmly as ever by the smiling Zapphina and her bunch of keys.

"The day after our arrival here we were startled by the apparition of two extraordinary figures advancing towards us up the street. They were females, both very fashionably dressed, one in white, the other in some showy flowered pattern, with immense stiff gigot sleeves, that stood out like balloons. The ladies, perfectly well formed in other respects, were, horrid to relate, *headless*! We looked at them with amazement and curiosity. They moved on slowly and steadily, like any one else, keeping side by side, but were evidently timid, from the careful manner in which they avoided being jostled by the passers-by. Whenever, too, a carriage or cart approached, they were in a great hurry to get across to the other side of the street; and once, to escape a cloud of dust, raised by a large donkey-party, they both ran behind a large yard-gate for shelter. We watched anxiously, while nearer and nearer came the mysterious ladies without heads. At length, they were quite close, and now proved to be two well-starched gowns going home to their respective owners at the end of the laundress's fingers. This is the way all the dresses are returned from the wash at Schwalbach. The Wäscherin, instead of submitting these important *pièces de toilette* to the indignity of being doubled up and confined in a basket, convert their fingers into pegs, hang their dresses thereon as large as life, and bear

them away,—modestly content to be eclipsed behind their own handy work. You frequently see on some fair promenader at the brunns, the same identical gown you had met quietly walking home, apparently by itself, the evening before. At the end of our first week here, one day the door opened in a great hurry, and, to our dismay, all our petticoats walked in to us. We were just going to tea, and not at all prepared for such *stiff* visitors. The laundress, to whose digits they were appended, was a little, sharp, shrewish-looking creature, all bustle and flutter, with piercing black eyes, that were never still an instant,—and blessed with a volubility of tongue quite inconceivable. She broke into the room with a volley of eloquence that overpowered us, followed by two children, carrying the minor articles in baskets. In a moment her keen, restless eyes had been sent into every corner in search of some spot whereon to deposit her burden. We saw the 'fell intent,' but one might as well have talked to the Falls of Niagara, as attempt to explain that we did not keep our wardrobe in the salon. She kept chattering on, and peering and fussing about; and we trembled lest the whole contents of the baskets should be overturned into our laps—they, indeed, seemed the only vacant spots; for one table was occupied with tea-things, and the other with books, papers, &c. However, in a much shorter time than I have taken to describe it, the baskets were emptied; sofa, piano, wooden-chairs, and every thing were covered, and the poor room looked as if it had been overtaken in a snow-storm, or an avalanche suddenly upset into it. It was some minutes before we could get all the clothes and their loquacious wäscherin cleared away, and we were left to breathe after the noisy and unexpected irruption."

Of the style of living here, the following affords a lively notion:—

"Dinner here is one of the most characteristic, and, to an English visitor, newest features in the place. The sallying forth of the whole population from their abodes at the constitutional hour of one, to congregate together and dine in parties of two or three hundred at a *table d'hôte*, is, indeed, very unlike any thing we are accustomed to at home, and the novelty is very amusing. I looked forward with great delight to our first dinner at the Allee Saal; and as I had not then learned to be hungry at one o'clock, prepared to make active use of my eyes, and observe every thing that was going on. Sitting down to a German *table d'hôte* without an appetite, is not so great an evil as a similar failure elsewhere. The time is very long, it is true, but not tedious, even though you should not be fortunate in an agreeable neighbour; (in the latter case, of course, time is forgotten; as when thus pleasantly beguiled it flies but too fast.) Where there are so many people, and so many dishes, the eyes have ample amusement, and the ears are regaled with the charming music that plays the whole time of dinner. I expected to see the Germans eat an immoderate quantity, but observed this was not the case. At the first glance they might appear to do so, for they helped themselves to every thing that went round, and their plates were changed every two minutes. But these 'helps' were ridiculously small, such as half a chicken's leg, a single slice of tongue, &c. Indeed, the host of the Allee Saal seemed resolved that his guests should not transgress in this way, and on the strength of his hotel being the acknowledged most fashionable dining-place at Schwalbach, often took the liberty of providing very scantily. He seemed to have adopted as his

motto the German proverb, *Alle gute dinge sind drei* ('all good things are three'), for he seldom exceeded that number of the same article on each dish; three fairy cutlets, — three slices of ham that looked as if they had been carved for Queen Mab, and so on. Occasionally a buzz of discontent at this short commons would run along the lines, among the English part of the company; not that there was not enough, but the character for profusion which German diners deservedly enjoy, makes people unreasonable in their expectations. One day I translated this buzz to a German who sat next me, and who had inquired what they were speaking about. 'Ha, is that possible!' he exclaimed, 'your countrymen complaining of not having enough to eat—why I thought they accused us of being the most voracious people in Europe?' This was very true, and what could I say to defend my 'countrymen?' I could only feel sorry that my neighbour's feelings had been wounded, and for myself resolve to think well, how it might hurt others, before I ever give expression to any ill-natured opinion. The German kellers (waiters) are quite a peculiar race. Their office is a most arduous one, from the ceaseless activity it acquires, and the national out-of-door chair-and-table system. They are, of necessity, always young, and are by far the most dapper, spruce, smart, well-dressed youths one sees. If I were asked to translate the word keller, I should certainly render it 'a biped for carrying plates;' for their talents in this respect are quite marvellous. Trays are unknown; therefore the endless train of dishes and plates that compose a German dinner, are brought from the kitchen in the hands or rather on the arms of the kellers. How one left arm can be made to accommodate such a number I cannot conceive. We have frequently reckoned as many as seven, full of soups, ragouts, &c. perched on it, the right being actively employed in handing to the ober-keller (head-waiter), who alone has the privilege of putting them on the table. The rapidity with which the latter functionary discharged this office at the Allee Saal was quite extraordinary. I have often watched his progress down the table as he advanced, attended by a host of kellers, their arms garnished with smoking dishes. As soon as one had been relieved of his cargo, away he flew to the kitchen to fetch a fresh supply, while the indefatigable 'ober-keller' continued to fling down the dishes, stretching over the table with an effort that made one arm fly up in the air while its fellow was extended to its utmost with the dish, and sent the corresponding leg to as near a level with its owner's head as ever Taglioni's was. How the contents of the dishes spun down thus one after another, like a deal at cards, escaped overflowing, I could not conceive, until closer observation shewed me the sort of swing with which each was deposited on the table, causing the gravy, &c., to make a circular evolution within the dish without overpassing its edge. Owing to this extraordinary alertness of the active ober-keller, the long tables at the Allee Saal were replenished and cleared in a very short space of time; and not many minutes after the bevy of young kellers made their appearance with each course, the two or three hundred hungry expectants who had hailed its *entrée*, were busily engaged in eating it."

Frankfort, Leipsig, Dresden, &c. are all seen, and, with their roads, to and fro, and travelling incidents, pleasantly described. As a sample of which, we select a sketch in the Winterberg mountain:—

"Besides the actual enjoyment from present

sources, sights, and sounds, and smells, which I should fail in attempting to convey, there is something in the feeling of being in the midst of a *real German forest*, that must have its effect. The wild superstitions, the unearthly and most imaginative associations connected with it,—the poetical and fantastic tales of which these haunted spots have been the scene, —all these, to any one who has read and can *feel*, must move even the soberest, the most unexcitable. After passing along, sometimes through dark, gloomy paths, whence every ray of sun was excluded by the tall firs that closed over them, sometimes through open rocky glades, we came suddenly upon one of the wonders of the place, the Kuhstahl. It is an immense mass of rock, with a wide, lofty archway underneath. Passing through this natural archway, which forms a grotto, or vaulted chamber of rock, eighty feet high by seventy wide, the view that bursts upon you is magnificent; an amphitheatre of wooded hills, with rocks starting up between them, piled one above the other, like huge isolated pillars. The Kuhstahl, or cow-stable, as the word literally means, is so called, from its having been the place of retreat of the peasants of the surrounding country, their families, and cattle, during the thirty years' war. It is admirably well calculated for this, being a complete natural fortification. From the way in which these stupendous masses have been tossed together, there are within them, chambers, and vaults, and hiding-places, which it would be impossible to discover. Truly, it is a singular place. There are deep, narrow clefts, that reach from the top to the very bottom of the rocks. In one of these, a stairs, or ladder of wood, has been constructed, which we ascended. We entered at the bottom, and a most extraordinary effect it had, to find ourselves thus walled in on both sides in the very heart of the solid rock. The cleft, in some places, was so narrow, that it was not easy to squeeze up through it (a very stout person would certainly have been wedged in), and, of course, all the light we had was from the slit above, where the day appeared high over our heads. We climbed up a zigzag path, cut out of the rock, to an open space, where was a little monument, erected to the first discoverer of this beautiful region, the Columbus of the Saxon Switzerland. He was a great mineralogist, of the name of Götzinger; and, in his researches among the rocks and mountains, while pursuing his favourite study, penetrated into these lovely scenes. In gratitude to him for the source of emolument which he was thus the means of opening to them, all the guides and sessel-trägers subscribed, and erected this simple monument to their friend, in the year 1834. After stating its object, as sacred to 'Wilhelm Leb. Götzinger, born 1758, died 1818,' are the following words:—

'Oft wohl hob sich dein Blick diesen Höhen zum Himmel. Sich jetzt vom Himmel zu uns, treuster der Führer herab!'

'Full oft were thine eyes uplifted from these heights to heaven. Look down now from heaven upon us, thou trustiest of guides.'

"The deep feeling with which our guide, himself one of the erecutors of this little memento, read the simple words, was very touching. Another path disclosed the mouth of a cavern high up in the rock, where a magnanimous tailor had sheltered himself from the horrors of the war. He fled from a contact with cold steel, though one would have thought it more in his way than in that of most peaceful men, being so well-accustomed to handle sharp weapons. His shears are painted in black over the mouth of the cavern. After many climbings and

windings, we found ourselves once more under the archway, where a girl was seated playing a harp, the favourite instrument here as in Wales, and a constant mode of appeal to the liberality of strangers. The whole of the vaulted arch over our heads, and every inch of the rocks outside it, was literally covered with names. These were not, as is generally the case, roughly cut or scratched with a pen-knife, but were systematically painted in large black characters.

'Tis pleasant sure to see one's-self in print.'

As I stood under the archway, looking up at all those names, a very solemn thought came quite suddenly into my mind. The recollection of the two Books, where *all* our names are written, flashed so vividly upon me, that for a moment it drove away every other idea. Oh how ardent was the aspiration I then sent up that mine and those of all I loved, might be found in the book of life at the awful day of reckoning!"

We gather from our author, what we, indeed, knew well before, that Mr. Bulwer was one of the most enthusiastically admired of our writers throughout Germany. After suggesting some of the grounds for this, she concludes:—

"I often wish some of those who wonder at the admiration bestowed on Mr. Bulwer could hear the way in which the Germans speak of him. \* \* \* In short, if Mr. Bulwer would enjoy his reputation and wear his laurels while they are fresh and green, he ought to make a pilgrimage into Germany."

But we must finish our notice, which we do by most cordially recommending this Journal to our readers, whom it will entertain, inform, and improve, in no common degree.

*The Shores of the Mediterranean.* By Frank Hall Standish, Esq. 8vo. pp. 339. London, 1837. Lumley.

THIS volume is a pregnant example of the manner in which a well-educated gentleman, and one who has been prepared for the task of observation by previous travel as well as study, can produce a book the most unassuming, and, at the same time, the most agreeable, and replete with interest and information. A sojourn in Spain for a considerable number of years, and tours over the Continent, had super-added to the gifts of an originally intelligent mind and fine taste, all the experience which was requisite to enable Mr. Standish to make enlightened observations upon the objects presented to him on this, his latest journey; and we feel much gratitude to him for making us his companions on the way. His views of society and manners are described with simplicity and truth; his antiquarian notices, if not all that the labouring plodder might desire, are just and curious; his illustrations from classical writers\* always apt and pleasing; his account of pictures, &c. and criticisms on the fine arts, of the highest order; and his general style, like his general sense, of that excellent quality which never fails to attract the attention and lead the reader captive along—willingly captive along—with the writer. It is a lady phrase, but to us it is a charming volume!

We will not delay at Cadiz or Seville, except merely to note a singular statement, of which our London bakers ought to be proud.

"Near to Seville, on the north, is the small town of Alcala de Guadaina, to which the inhabitants of Seville retire for the spring and autumn seasons to enjoy the country. The

\* We would, perhaps, except the allusions to Hercules Melampiges; which are neither very genteel nor very accurate.

air is very pure, being in rather a high situation, and being purified by bakers' shops, the bread of which supplies Seville."

In February 1835, Mr. Standish proceeded to Italica, of which he says:—

"Ye who would see time deriding the works of man, hasten to Italica, and behold an amphitheatre overturned, baths overwhelmed, a town engulfed, and a convent occupying the palace of the Caesars. An earthquake is supposed to have been the cause of this revolution; and Santa Ponce, only about two leagues distant from Seville, is the halting-place for the explorers of what was once a large Roman city, and of which little now remains. A good tessellated pavement was discovered some years ago, and enclosed; but the building having no roof above, the rain, and the thefts of travellers, have left only trifling remnants of it for the curious. Huge fragments of the Circus are now heaped promiscuously together, and gipsies nestle in the ruins of the corridors, or in the dens where were enclosed the victims for the public games. It is matter for sober reflection, as the traveller stands above these ruins, to consider that they were once filled with the healthy and the gay, and that as they have passed off, so all shall fulfil the common lot, and recede from life's busy scene; whilst the sun rises as he is wont, and the face of nature, and the spring with returning vegetation, smile on a future generation, and will smile for ever on those to come, but cannot bring back what once has been. Italica was the birth-place of Trajan, Adrian, and Theodosius; and has had the honour of being, perhaps, the only one of the cities under the Roman dominion which furnished a man whom the empire styled, by common consent, 'The Good;' a title to distinction which public opinion now invests with honour far above all other fame. Conquerors pass away, dislodged as they are by other conquerors; wits flourish, and have a credit which 'plays round the head;' but none survive to the admiration of posterity, unless their intentions have been upright, and they have endeavoured by their conquests or their speculations to benefit society, and to relieve suffering humanity."

At Port St. Mary's, which contains some 25,000 inhabitants, we are told:—

"Sherry merchants swarm here: there is a good manufactory for beer; and it may be called a stirring and active town. Caleza drivers, mariners, bull fighters, smugglers, gipsies, and all the worst classes of society, are depicted in their genuine deformity. Combats with the knife are very frequent among the inhabitants of this town; and murders and robberies by no means unusual occurrences on every feast day. The English residents, who are mostly little wine-merchants, affect smartness; and a dandy at Port Saint Mary's is called a *peri*,—perhaps derived from the word *perico*, which means a small pet parrot of the women. The castle to which I have already alluded may perhaps have been erected soon after the conquest of Andalusia by the Moors, as they would at that time have turned their attention to guarding the sea border, and that period is the meridian of the Arab glory; for they were then most advanced in power, civilisation, the arts, and learning. The ground part of this building, which was once a mosque, is now a chapel, and in good preservation. Port Saint Mary's, San Lucar, and Xeres, are famous for the wine called Manzanilla, which, in its variety, is the basis of what is called sherry with us, the Amontillado wine, which is a growth of Manzanilla; and, being mixed with

what is called 'vino duro,' produces sherry; it is not, therefore, a pure wine, as some imagine. 'Vino duro' is the juice of the sherry grape boiled down, and is used for colouring; but is only good when very old to drink alone."

Pass we by Gibraltar, Malta (would it were sufficiently and zealously explored by competent philologists and antiquaries!), Messina, &c. &c., and land in Sicily, where our author remained for a season, and visited much that was worthy of his inspection. From his remarks thereon we shall make our selections; and begin with the Ruins of Selinuntum.

"The Phœnicians, always commercial and migratory, and expelled at last from Syria by Joshua, the general of the Jews, carried with them into Sicily their most industrious inhabitants, adopted the motto of

*'Omne solum forti patria est,'*

and founded Selinuntum, Palermo, and other towns. They acquired courage and force by change of scene and the necessity for exertion, and were repaid for their adventure. They established Carthage, in Africa; Cadiz, in Spain; and the glorious anticipated harvest of tin tempted them to Britain; they then penetrated amongst the skin-clad natives of the Rhine in search of amber, and founded 'Culm' (Cologne). A second Tyre rose at their command in the Persian Gulf. They are considered the inventors of glass of the purple colour, to which they gave a name, the art of dyeing, and the letters of the alphabet. When the Jews prevailed against Cadmus, he brought the instruction and the laws of his predecessors amongst a hitherto barbarous people, and civilised the western world; and the archives of the Jews themselves, and what Christians consider as inspired writings, would possibly have perished, or remained hidden and unknown, had not his countrymen communicated the light of learning by the use of letters, and diffused the fire of knowledge to warm the torpid intellects of the ignorant and savage hordes of the Mediterranean. The foundation of Selinuntum is supposed to be so remote in date as a hundred years before the Trojan war. The name we now know it by is received from the Greeks, who expelled its founders, and possessed themselves of it, calling it Selinus, from much wild parsley on the banks of a neighbouring small river; deviating in this case from the common rule of antiquity, which christened countries and towns after gods, goddesses, or the illustrious. It was afterwards inhabited by the Syracusans under Gelon. The extent of its dominion was from Sciacca to the point of Lilybæum. Dædalus, on coming into Sicily, visited Selinuntum, and constructed there a bath, famous for gradually transmitting heat. Empedocles of Agrigentum rendered the inhabitants an important service by curing a pestilential marsh by the introduction of a current of spring water, which existed in their neighbourhood; and for this he received divine honours, paid him on the sea-shore. Perhaps, indeed, some one of the temples which we now see may have been erected on this occasion. At that period, a number of cities almost incredible adorned Sicily, all rich and powerful, all democratic in their origin till falling into the hands of a designing leader, all governed by their own laws: so much was this the case, that it is scarcely possible to observe a single spot of the country, or a single stone of the highways, without their recalling to mind something of interest; nor to observe the neglected villages, the streets of houses with unglazed windows now occupying the places of palaces,

the careless agriculture, and the general decline of wealth, without feeling commiseration and sympathy for the unfortunate inhabitants of this once great and commercial and warlike land. After various fluctuations of fortune, Selinuntum fell into the hands of Hannibal, and was destroyed. Their allies, the Syracusans, arrived too late to assist them, but sent heralds to the conqueror, entreating that the temples of the town should be spared. He replied, that the gods were hostile to the Selinuntines, and had already left the place. The character of Hannibal has always excited the attention of the curious: he was rough, and bred to camps, yet had not neglected learning; he was a proficient in Greek, the fashionable language of the days in which he lived. He had no religion, nor could be bound by any ties; he believed in no divinity, and understood nothing of the compulsory nature of an oath, save what he offered when a child, of eternal enmity to the Romans, at the shrines of the Carthaginian gods. He achieved great things; he overran Spain, Sicily, and Italy, and had the honour of forcing a passage across the Alps, which none had attempted, save Hercules. He died an exile and in bondage, yet a terror to his enemies to the last hour of life. Although an excellent politician, he was a greater general, and, taken altogether, may be considered the most extraordinary character of the age in which he lived. Though he has met no favour from the Roman historians, his deeds are confessed, and speak for themselves. Hermocrates of Syracuse rebuilt Selinuntum in part, and it still existed in the time of Strabo; but it was again dismantled by the Saracens when they penetrated into Sicily, and the Normans completed the ruin of what little had been left by the Mussulmans."

From ancient, we come now to modern times, and extract with satisfaction the description of an asylum for lunatics near Palermo, highly deserving of consideration and imitation.

"I saw here (says our author) numberless apartments for every purpose; there are consultation rooms—rooms where the convalescent are allowed to see their friends, for both sexes—as well as for the display of the morbid anatomy of those who have exhibited uncommon and peculiar cases of phrensy. There are for recreation, gardens adorned with grottoes and images; and there is the representation of an ancient theatre, the walls of which are painted with views of what Syracuse was supposed to be in former times. These works have all been executed, and the gardens are cleaned and kept neat by the inmates of the establishment,—the celebrated conductor of it having ascertained that the surest and safest cure for madness is employment for the body and the mind, which may prevent the patient from dwelling on the cause of original malady, and improve at the same time the bodily health. He told me that, on an average, he was successful with rather more than forty cases in a hundred of ordinary occurrence; but in those of organic affections all remedies became ineffectual, and all treatment vain. In looking into the statistical accounts of the establishment, I find that among the moral causes, the largest number of cases of derangement, in the male sex, arise from domestic infelicity; and in the female, from jealousy and obstructed love. Among the physical causes, both in men and women, the greatest number in the list given proceed from epilepsy. The grand proportion, however, is greater of those diseased from moral than from physical causes. From investigations made by the Baron Pisani, it may be affirmed that the epochs most liable

to derangement in the human existence are the following:—Amongst males, from twenty years of age till forty; and amongst females, in the extremes of age, either before twenty or after sixty. In the establishment to which I have alluded, violence is never employed, and chains are altogether dispensed with. In the courtyard allotted to those furiously mad, I saw one of the sufferers in a paroxysm of the disorder, which attracted the notice of the baron; he gently approached, followed by the keeper, took the outrageous inmate by the arm, and enclosed him in an empty cell which excluded the light, and all noise instantly ceased. He did not, on being conducted thither, dare to offer the least outrage to his conductor; and it seems, although deprived of proper reason, he knew that he had misconducted himself, and submitted to his punishment without a murmur, being surrounded at the same time by at least twenty of his companions. I was told, also, that they, indeed, were aware of the punishment he underwent, and that this seclusion is much dreaded amongst all. It is doubtless a curious study to watch the evanescent rays of reason in the progress of the disease of madness; and were it attended with any profitable consequences, it would be a desirable object to trace the first symptoms, from irregularity of mental power to the full development of insanity: but, from all I can learn, no faith is to be entertained as to certain symptoms either in the moral or physical organisation in this cruel malady,—and most are decidedly insane, and the bodily functions are deranged, and physical causes complete and irremediable, before mental imbecility shews itself. The attendants on the maniacs in this establishment are generally (for both sexes, and particularly for women) persons who have been mad themselves and since restored to reason."

[To be concluded in our next.]

*Lockhart's Life of Sir W. Scott. Vol. III.*  
Edinburgh, 1837, Cadell: London, Murray; Whittaker and Co.

THIS volume relates to a busy, important, and we regret to say, a painful portion of Sir Walter Scott's life. Much of it was passed in a heavy struggle with adverse circumstances, through which he was only borne, not scatheless, by his own gallant exertions, and the aid of such friends as few find in the hour of need. The period embraced, lies within the years 1812, 13, 14, and 15; and the chief events are the removal from Ashiestiel to Abbotsford, the publication of "Rokeby," "Waverley," "the Lord of the Isles," "Guy Mannering," "the Bridal of Triermain," "Paul's Letters to his Kinsfolk," and some minor productions. The affairs of the co-partnership with Messrs. Ballantyne, and his diary of a voyage to the Shetland Isles, pretty nearly divide the volume: the former being, we think, brought more prominently forward than we would have expected from the judgment of the Editor. Details of business, of difficulties, of embarrassments, and of endeavours to clear the wreck, though they are truly momentous matters in an author's life, are not well to be too minutely dwelt upon; for they do smack of the trader and tradesman so much, that they are apt to injure the high prestige which surrounds and glorifies the Poet. We will not, however, descant on this topic, but only point to the humbling lesson it teaches, when we see the courted companion of peers and princes, the honoured of conquerors and kings, the admired of the wide world, labouring so bitterly under pecuniary troubles, that, with all his ardent and sanguine disposition, the delights of society,

the splendours of the palace, and the applause of mankind, were poisoned in their enjoyment, and cankered by the lowest cares and annoyances. It is a melancholy picture: and when such a man as Scott sits for it, we may too readily suppose how many of his less elevated, and less fortunate, literary brethren suffer like him, and perish in their sufferings.

Occupied by this overwhelming contemplation, we shall only run very briefly over a few striking points in the volume before us. It lets out a great deal of what they called in Edinburgh "literary gaggery." "Triermain" was published to hoax the Edinburgh reviewers, and pains taken to cause it to be believed to be written by George Cranstoun. It was also fathered upon R. P. Gillies; which even Scott himself sanctions in a letter to his friend Lady Louisa Stuart (pp. 53, 54.) Then came "Waverley" with a similar mystery, and again the Author invites his brother Thomas, in America, to fall in with, and help the trick and himself. The letter is a curious one.

"On the publication of the third edition, I find him writing thus to his brother Thomas, who had by this time gone to Canada as paymaster of the 70th regiment:—'Dear Tom, a novel here, called Waverley, has had enormous success. I sent you a copy, and will send you another, with the 'Lord of the Isles,' which will be out at Christmas. The success which it has had, with some other circumstances, has induced people

'To lay the bantling at a certain door,

Where laying store of faults, they'd fain heap more.'

You will guess for yourself how far such a report has credibility; but by no means give the weight of your opinion to the transatlantic public; for you must know there is also a counter-report, that *you* have written the said 'Waverley.' Send me a novel intermixing your exuberant and natural humour, with any incidents and descriptions of scenery you may see—particularly with characters and traits of manners. I will give it all the cobbling that is necessary, and, if you do but exert yourself, I have not the least doubt it will be worth 500*l.*; and, to encourage you, you may, when you send the MS., draw on me for 100*l.*, at fifty days' sight—so that your labours will at any rate not be quite thrown away. You have more fun and descriptive talent than most people; and all that you want, *i. e.* the mere practice of composition, I can supply, or the devil's in it. Keep this matter a dead secret, and look knowing when 'Waverley' is spoken of. If you are not Sir John Falstaff, you are as good a man as he, and may, therefore, face Colville of the Dale. You may believe I don't want to make you the author of a book you have never seen; but if people will, upon their own judgment suppose so, and, also, on their own judgment give you 500*l.* to try your hand on a novel, I don't see that you are a pin's-point the worse. Mind that your MS. attends the draft. I am perfectly serious and confident, that in two or three months you might clear the cobs. I beg my compliments to the hero who is afraid of Jeffrey's scalping-knife."

Of the portions of the narrative, which, in our opinion, smack too much of trade, we shall quote two or three examples.

"How reluctantly Scott had made up his mind to open such a negotiation with Constable, as involved a complete exposure of the mismanagement of John Ballantyne's business as a publisher, will appear from a letter, dated about the Christmas of 1812, in which he says to James, who had proposed asking Constable to take a share both in 'Rokeby' and in the

'Annual Register,' 'You must be aware that, in stating the objections which occur to me to taking in Constable, I think they ought to give way either to absolute necessity or to very strong grounds of advantage. But I am persuaded nothing ultimately good can be expected from any connexion with that house, unless for those who have a mind to be hewers of wood and drawers of water. We will talk the matter coolly over; and, in the meanwhile, perhaps you could see W. Erskine, and learn what impression this odd union is like to make among your friends. Erskine is sound-headed, and quite to be trusted with your whole story. I must own I can hardly think the purchase of the 'Register' is equal to the loss of credit and character which your surrender will be conceived to infer.' At the time when he wrote this, Scott, no doubt, anticipated that 'Rokeby' would have success not less decisive than the 'Lady of the Lake;' but in this expectation—though 10,000 copies in three months would have seemed to any other author a triumphant sale—he had been disappointed. And meanwhile the difficulties of the firm, accumulating from week to week, had reached, by the middle of May, a point which rendered it absolutely necessary for him to conquer all his scruples."

He applied to the Duke of Buccleuch, who at once guaranteed him a credit for 4000*l.*; and Mr. Morritt volunteered, in the noblest manner, the offer of his purse.

Another letter (May 1813) says, "After many offs and ons, and as many *projets* and *contre-projets* as the treaty of Amiens, I have, at length, concluded a treaty with Constable, in which I am sensible he has gained a great advantage; but what could I do amidst the disorder and pressure of so many demands? The arrival of your long-dated bills decided my giving in, for what could James or I do with them? I trust this sacrifice has cleared our way, but many rubs remain; nor am I, after these hard skirmishes, so able to meet them by my proper credit. Constable, however, will be a zealous ally; and, for the first time these many weeks, I shall lay my head on a quiet pillow, for now I do think that, by our joint exertions, we shall get well through the storm, save Beaumont from depreciation, get a partner in our heavy concerns, reef our topsails, and move on securely under an easy sail. And if, on the one hand, I have sold my gold too cheap, I have, on the other, turned my lead to gold."

The following are fine touches in the same unpleasant correspondence:—

"If to your real goodness of heart and integrity, and to the quickness and acuteness of your talents, you added habits of more universal circumspection, and, above all, the courage to tell disagreeable truths to those whom you hold in regard, I pronounce that the world never held such a man of business. These it must be your study to add to your other good qualities. Meantime, as some one says to Swift, I love you with all your failings. Pray make an effort and love me with all mine. \* \*

"I sometimes fear that, between the long dates of your bills, and the tardy settlements of the Edinburgh trade, some difficulties will occur even in June; and July I always regard with deep anxiety. As for loss, if I get out without public exposure, I shall not greatly regard the rest. Radcliffe, the physician, said, when he lost 2000*l.* on the South-sea scheme, it was only going up 2000 pair of stairs; I say, it is only writing 2000 couplets, and the account is balanced."

But later, the letters of Scott are very distressing. He writes:—

"If any thing more can be honourably and properly done to avoid a most unpleasant shock, I shall be most willing to do it; if not—God's will be done! There will be enough of property, including my private fortune, to pay every claim; and I have not used prosperity so ill, as greatly to fear adversity."\*

About this time Scott was offered the laureateship, which he declined, being admirably advised thereto, by a letter from the Duke of Buccleuch, which we cannot resist the pleasure of copying:—

"My dear Sir,—I received yesterday, your letter of the 24th. I shall, with pleasure, comply with your request of guaranteeing the 4000*l*. You must, however, furnish me with the form of a letter to this effect, as I am completely ignorant of transactions of this nature. I am never willing to offer advice, but when my opinion is asked by a friend, I am ready to give it. As to the offer of His Royal Highness to appoint you laureate, I shall frankly say, that I should be mortified to see you hold a situation which, by the general concurrence of the world, is stamped ridiculous. There is no good reason why this should be so; but so it is. Walter Scott, Poet Laureate, ceases to be the Walter Scott of the 'Lay,' 'Marmion,' &c. Any future poem of yours would not come forward with the same probability of a successful reception. The poet laureate would stick to you and your productions like a piece of court-plaster. Your muse has hitherto been independent—don't put her into harness. We know how lightly she trots along when left to her natural paces; but do not try driving. I would write frankly and openly to His Royal Highness, but with respectful gratitude, for he has paid you a compliment. I would not fear to state, that you had hitherto written when in poetic mood, but feared to trammel yourself with a fixed periodical exertion; and I cannot but conceive that His Royal Highness, who has much taste, will at once see the many objections which you must have to his proposal, but which you cannot write. Only think of being chaunted and recitativated by a parcel of hoarse and squeaking choristers on a birth-day, for the edification of the bishops, pages, maids of honour, and gentlemen-pensioners! Oh, horrible, thrice horrible! Yours sincerely,

BUCCLEUCH, &c."

The laureateship was accepted by Southey,

\* A letter following this, to Mr. Morritt, is, we regret to say, a very disingenuous one (see p. 91); nor do we much admire the bit of worldly craft exhibited in the following, though redeemed by other acts:—"My temper is really worn to hair's breadth. The intruder of yesterday hung on me till twelve to-day. When I had just taken my pen, he was relieved, like a sentry leaving guard, by two other lounging visitors; and their post has now been supplied by some people on real business."—*Monday Evening.*

Oh James—Oh James—two Irish dames  
Oppress me very sore;  
I groaning send one sheet I've penn'd—  
For hang them! there's no more."

A scrap, of nearly the same date, to his brother Thomas, may be introduced, as belonging to the same state of feeling:—"Dear Tom, I observe what you say as to Mr. \*\*\*; and as you may often be exposed to similar requests, which it would be difficult to parry, you can sign such letters of introduction as relate to persons whom you do not delight to honour short, T. Scott; by which abridgement of your name I shall understand to limit my civilities." It is proper to mention, that, in the very agony of these perplexities, the unfortunate Matuzin received from him a timely succour of 50*l*., rendered doubly acceptable by the kind and judicious letter of advice in which it was enclosed; and I have before me ample evidence that his benevolence had been extended to other struggling brothers of the trade, even when he must often have had actual difficulty to meet the immediate expenditure of his own family. All this, however, will not surprise the reader."

but on condition that he was not to profane his muse by the complimentary trash of birth-day odes, &c.; but only write when the spirit moved him, which, indeed, it has done very seldom. We do not think even the Victoria birth (that on which we pen this) will awaken him from his laurelled repose.

The subjoined is a drollery upon the Waverley mystery; it is in "reply to one of John Ballantyne's expostulations on the subject of the secret:—

'No, John, I will not own the book—  
I won't, you Picaroon.  
When next I try St. Grubby's brook,  
The A. of W.—shall bait the hook,  
And flat-fish bite as soon  
As if before them they had got  
The worn-out wriggler

WALTER SCOTT."

The diary of the Voyage to the Scottish Isles, commencing p. 136 and ending p. 277, is a charming journal, to which we can only refer readers, as, in truth, we must be content to do with the rest of the volume.

*The Eastern Seas; or, Voyages and Adventures in the Indian Archipelago, in 1832–33–34: comprising a Tour of the Island of Java, Visits to Borneo, the Malay Peninsula, Siam, &c.; also, an Account of the Present State of Singapore, with Observations on the Commercial Resources of the Archipelago.* By George Windsor Earl, M.R.A.S. 8vo. pp. 461. London, 1837. Allen and Co.

THIS week we have only an hour to notice the work of this enterprising and intelligent traveller, who brings before us very interesting accounts of parts in the Eastern Seas, very little known. It is but a snatch or two at what is curious.

"The only annoyance which I experienced in this abode, proceeded from a large lizard called a *tokkay*: this reptile disturbed my slumbers nightly, by its vociferations; and although I frequently tried to dislodge it from the spot in which it had taken up its station, I never could succeed. These lizards pronounce the word *tokkay* in a loud distinct tone; and a stranger, if not informed of the peculiar nature of the cry, would certainly imagine the word to proceed from the lips of a human being. A story is told at Sourabaya of rather a ludicrous nature, relative to a mistake, occasioned by the oral powers of one of these lizards. An American ship, commanded by a Captain Tookey, arrived at Samarang, and the captain, being much fatigued, retired to rest early in the evening at the house of his agent. When on the point of falling asleep, he thought he heard some one calling out 'Tookey.' 'Hallo!' said the captain, 'what is it?' A dead silence. Presently came the voice again, 'Tookey.' 'That's my name,' answered he, 'if you want me, come round to the door.' After a short pause, he heard his name pronounced a third time, louder than before. 'Well,' said he, 'these savages are unnatural chaps altogether, to come to a man's window bawling out his name when he wants to go to sleep; however, I'll try if I can't spoil his pipe;' and he forthwith seized a decanter, and opened the window, but not a soul was to be seen. He was on the point of closing it, and returning to his bed, when he heard his name called out again, as he thought, in a jeering manner, and the decanter was immediately dashed in the direction from which the voice proceeded. The host, and two or three of his friends, happened to be enjoying their cigars in an adjoining apartment, and they imagined at first that the cap-

tain was talking in his sleep; but when they heard him rushing about the room, and stumbling over the furniture, they thought it high time to interfere; upon their entrance they found him boiling with rage, and searching for some other missile to hurl at the offender; and it was some time before they could persuade him that he had been holding a conversation with a lizard about twelve inches long. The ceiling of my room was constantly occupied by several little gray lizards, about three inches long, which traversed it in pursuit of flies. During the evening, they were always over my table, either in consequence of being able to see better, or on account of the flies being attracted to that part by the light of the lamp, and I was often amused by watching their proceedings. When a fly settled on the ceiling, a lizard would advance cautiously to within about an inch, and then make a dart at it, generally succeeding in seizing the insect. They sometimes attacked large moths, but were not always successful, unless they could manage to seize the head, when, after a struggle of a few minutes, the little reptile would bear away his prey to devour at his leisure. One of them fell down among my papers one evening, and was stunned by the fall; so that I had an opportunity of examining him before he acquired sufficient strength to run away. On holding him up to the light he appeared semi-transparent, and his feet were velvet-like to the touch, from which I supposed he possessed his extraordinary prehensile powers. They were great favourites with me, as they waged constant war with mosquitoes; and I established such an intimacy with one of them, in consequence of feeding him frequently with flies, that he would at last come down the wall to take one from my fingers."

Of the general character in these important tales, the following is a good view:—

"The genuine Arabs are often high-minded enterprising men, but their half-caste descendants who swarm in the Archipelago, comprise the most despicable set of wretches in existence. Under the name of religion, they have introduced among the natives the vilest system of intolerance and wickedness imaginable; and those places in which they have gained an ascendancy, are invariably converted into dens of infamy and piracy. In Java, although they have succeeded in rendering their religion paramount, they have been unable to introduce the bigotry which has caused the ruin of all the Malay states, the feelings of the natives being directly opposed to any thing approaching to the fanaticism which forms a distinguishing mark of too many of the followers of the prophet. The Javanese, indeed, are so far from being rigid Mahomedans, that although the natives of the coast are brought into closer contact with the Arabs than those of the interior, there is considerable difficulty in discovering whether they have any religion at all. Some remains of Hinduism are still to be found in one of the up-country districts, but the community amid which it exists is very small."

A whimsical story of a native:—

"A young man, from one of the inland provinces, came down for some purpose to the south coast of Java, where a heavy sea is always tumbling in upon the land from the Indian ocean. On arriving at the sea-shore, he was amazed at the sight which presented itself; for the waves came rolling in, apparently endeavouring to jump on each other's backs, and dashing with the greatest fury against the beach. This state of affairs being so different from the quiet inland waters which

had hitherto been the object of his contemplation, he concluded that there must be a battle-royal going on among the billows; and, with some trepidation, filled his bottle with the fighting water to shew to his friends at home. When he returned to his native village, the inhabitants crowded about him to hear an account of his adventures. After relating the perils he had encountered on his journey to the coast, he proceeded to describe the appearance of the sea. 'When I approached the great sea,' said he, 'I heard a noise like the roaring of bulls, and I saw that there was a great battle of the waters. They were not quiet and peaceable, like those of our lake, but were tearing and fighting—ay! fighting like tigers and buffaloes.' The gaping audience was struck with astonishment. The Jaxa, who was the oldest, and, therefore, considered the wisest man in the village, at last found his speech. 'Beware, young man,' said he, 'how you endeavour to impose upon us. Waters fight! Are we goats, or are we buffalo-calves, that you tell us this? What is there to make the waters of the great sea fight, any more than those of our lake? I have seen the sea myself, when I went to eat the wind on the top of the Taggal mountain, and it was as smooth as a paddy field.' The traveller looked around him with a triumphant glance, and requested one of the women to bring him a bottle she would find in his bag. 'Now,' said he, 'I expected that the extraordinary fact would be doubted; and I, therefore, procured a bottle of the water. Bring me a basin, and you may judge for yourselves.' The listeners crowded about him, and happy was he or she who could procure a near view of the proceedings. With a sneer at the ignorance of his countrymen, the man who had seen the world drew the stopper from the bottle, and, after a moment's hesitation in order to acquire courage, poured the water into the basin. To his utter amazement and discomfiture, the water 'wouldn't fight,' but lay quite still, as if it had never been pugnacious. The Jaxa, who from the confidence displayed by the traveller had begun to fear that he had been premature in his doubts, and that his consequence as the village oracle would, therefore, be lowered, now denounced the poor man as a vile impostor, and pushed his 'vantage ground' so strongly, that the luckless experimentalist was glad to shut himself up in the house, to avoid the reproaches of his townsmen. Even here, however, he was not safe; for his wife, who had expected that his discovery of the fighting water would exalt her husband to a post of honour, and cause him to be regarded as the leading man of science in the village, the president, in fact, of the Royal Society of the place, vented her disappointment on him in the shape of a curtain lecture: and thus badgered on all sides, the luckless traveller wished that he had drowned himself in the fighting water before he had said any thing about it."

For the present, two paragraphs more must suffice.

"Of the monkey tribe there is an immense variety, a very small proportion of the different species being known, even to the Europeans at Sambas. One variety of baboon, of which M. Benant was kind enough to give me a stuffed specimen, I have not seen described in any work on natural history that has come under my observation. It is about three feet high when standing erect, is covered with short, glossy, brown hair, and has no tail. The chief point in which it differs from all others I have seen, consists in the conformation of the face;

for the nose, instead of being broad and flat, is long and aquiline, projecting about an inch and a half from the face. The countenance, however, does not bear so strong a resemblance to that of the European, as the face of the ourang-outang to that of the negro."

"M. Benant had also several varieties of apes and monkeys in his possession, the most interesting being a wou-wou; a small, tailless, long-armed ape, of a light-brown colour. He was extremely gentle, having none of the mischievous tricks of the monkey; and was, therefore, permitted to be at large, and enjoy the free range of the house. He seemed to be rather afraid of men, but with the children became playful in the extreme; and he might often be seen running after them with his eyes shut, and his arms spread out, like a child playing at blind-man's-buff. He generally walked on his hind legs in a slouching manner; but, when alarmed, would run away upon all-fours, displaying great agility."

*Das Sprachgeschlecht der Titanen (The Linguistic-Genaeology of the Titans).* Von J. Ritter von Xylander. 8vo. Frankfurt, 1837. London, Schloss.

THE object of the author of this curious volume is to shew the affinity which may still be traced between the languages of the different Tartar tribes and that of the ancient Greeks, whom, as peoples, he considers at a remote period to have had a common origin. With this object, he enters into long and detailed comparisons, both of the grammatical forms and the words of the languages of the Tanguisians, of the Mongols, of the Turks, of the Tybetans, and of the Chinese, and, more briefly, of twenty other Asiatic tribes; and, though we must confess that the affinity sometimes appears to us rather fanciful, yet he has collected a mass of analogies between them all and the Greek which is truly amazing. Nothing, indeed, is more certain than that, as we go on arranging and comparing languages, we find them reduced in the end to a very small number of varieties. We recommend Ritter's book to all persons interested in such researches, for the immense mass of arranged material which it contains.

*Wörterbuch der Deutschen Sprache in Beziehung auf Abstammung und Begriffsbildung (Dictionary of the German Language, with Reference to Derivation and Meaning).* Von Konrad Schwenck. Large 8vo. Frankfurt, 1836. London, Schloss.

WE notice this as a most invaluable work, not only for the study of the Teutonic languages in general, but for the particular study of our own also. Every word (and there are contained in it many words not generally given in German dictionaries) is carefully traced through all the dialects in which it can be found; and the exact idea which the word itself conveys to the mind, is similarly traced in the progress of derivation. The Anglo-Saxon and English are allowed, as they deserve, a very important place. We will take, as an example, the German word *futter*, food, and *füttern*, to feed. These words are traced through—Goth. *fodjan*, to feed. Old High-Dutch, *vuotar*; Middle High-Dutch, *vuoter*, food; Swedish, *foeda*, to beget, to feed, and food; *foster*, the thing begotten; *fostra*, to feed, educate; *fostri*, a pupil; Goth. *faderin*, the parents; Anglo-Saxon, *fæder*, father; *fædera*, uncle; *fæthe*, *fæthu*, aunt; *fedan*, to feed; *feded*, begotten; *fedd*, fat; *fednes*, food, nourishment; *fæstrud*, nourished; *fodor*, fodder, food; *foster*,

food, the thing fed or nourished; *fostrian*, to nourish; Icelandic, *faeda*, food; Dutch, *voedan*, to feed; English, *feed*, food, fodder, &c. We may add the Middle-English, *fode*, a youth.

*Pictures of Private Life. Third Series.* By Sarah Stickney. 12mo. pp. 357. London, 1837. Smith, Elder, and Co.

THE name of this picture is "Pretension," and the tale is written in Miss Stickney's earnest manner. Impressed with certain truths herself, she is zealous in enforcing them upon the rest of her sex, and takes much pains in dressing them in strong colours, from realities well observed in various familiar scenes, to check the errors, and improve the virtues, of womankind.

*A Treatise on the Greek Expletive Particles*, by E. Stephens, M.A. 8vo. pp. 154. (Oxford, Talboys.)—This little book comes before us without pretence, but not without worth. There is much sound scholarship to be gathered from its pages, which many who have waded through Viger, or have been long wandering in the grammatical-nursery-grounds of Matthiæ, never bring away with them. The nice distinctions, and peculiar force of the Greek expletives, are here bolted upon the mind in a concise and simple form, which more voluminous labours tend, perhaps, as often to conceal as to exhibit. We quote one short passage, as a specimen of the author's method of illustrating his subject:—

“Φαλάν ὡς ἔστις ἀ-  
φνίσις ἀπὸ χειρὸς ἰλάν,  
ἀμπίλου ἴδου καὶ χλάει-  
σαν δρόση, δροῖσινται  
νιανί γαμβροῦ πρεσβίον—  
καὶ ἰνὸν ἵκταρ χυτίν,  
Μοισῶν δέσιν, ἀλοφύρου  
ἀνδροῦν πύκτων, γλυκύν καρ-  
πὸν φρενὸς γ', ἰλᾶσκαυμα  
Οὐλομπή τι Πυθὶ τι νικόν-  
τισσιν.

"As a man taketh a cup, sparkling within with the dew of the vine, and with a hand, liberal of its wealth, presenteth it to his youthful son-in-law, drinking him prosperity—so I, with the flowing nectar which the muses give, the sweet fruit which the mind only [γ'] yields, present my offering to the successful champions, the conquerors at Olympia and Pytho.—Pindar *Olymp. 7. v. l. &c.* γ' draws the attention of the hearer to the comparison instituted between *καρπὸν φρενὸς* and *ἀμπίλου δρόση*—poetry and wine. They are compared as being both productions,—one of the human mind, the other of the vine-tree. If this particle has ever been the means of preventing any to whom this ode may have been recited, from passing unnoticed this beautiful comparison, it has done him a service which many a longer word is incapable of rendering." Many acute philological remarks are scattered throughout: for instance:—"But it is by no means a light or easy task which language has to perform. If we reflect for a moment on what is passing within our own minds, and observe with what rapidity thought succeeds thought in infinite succession, we cannot enough admire that wonderful contrivance by which our ideas, being incorporated, as it were, with the substances of the material world, are borne away in an uninterrupted series to other minds—to spirits like ourselves, not slow in recognising the welcome resemblances of a kindred nature, by them to be stored away in the memory; there, perhaps, to live for ever, though brought thither by fugitive and momentary sounds. But—while with pleasure and astonishment we contemplate these vehicles of thought, as they traverse their airy path, bearing the commerce of the mental world—still the feeling arises, that it is hard for them to keep pace with the progress of mind; and that, notwithstanding all the delicacy and refinement of art by which they have been adapted to their purpose, still they are imperfect and cumbersome contrivances for carrying on the light and unsubstantial traffic in which they are employed. Nor is the expression of thought, in a direct and uniform series, the only difficulty which language has to overcome. There are sudden turns in the mental progress, unexpected deviations from the general direction. Ideas arise, apparently little connected with the previous train of thought; and as each in its turn passes away into temporary oblivion, it leaves behind it a successor, often not exhibiting any perceptible traces of relationship, but always united by those subtle and mysterious ties, which, though they are obscure, and sometimes elude our minutest inquiry, yet hold together in one unbroken association, the remotest varieties of human thought and feeling. Language, in order adequately to represent this circumstance, must not only afford a clear and timely warning to the audience, whenever the series of ideas arising in the speaker's mind diverges from its previous direction, but the intelligence must be conveyed in the briefest manner, or it will not produce its proper effect. For thought, though circuitous

in its course, still flows on with unabated rapidity." We safely recommend Mr. Stephens' book, as a useful tutor's assistant in the labour of "cramming," and as directing the student's attention to those minutiae points of scholarship which cannot be neglected with impunity.

*Vir Sum; or, the Lords of the Creation: a Satire.* Pp. 37. (Edinburgh, Olliphant, jun.)—*Vir Sum* may be, *set popta non est.*

*Wordsworth's Poetical Works. Vol. V.* (London, Moxon.)—This volume contains a number and great variety of the author's sweetest little poems. It is a treasure of thoughts and feelings, and alone well worthy the cost of the whole of this neat and cheap edition.

*The Naturalist's Library, by Sir W. Jardine, Bart.—Vol. VII. Birds of Western Africa, by W. Swainson, Esq.* (Edinburgh, Lizars; London, Highley; Dublin, Curry.)

—This is a beautiful ornithological volume, and commences the history of the birds of Western Africa, in a manner which must excite an ardent longing for the sequel. A memoir and portrait of Abyssinian Bruce, are preludes to admirable delineations and descriptions of the falcons, hawks, owls, crows, grackles, finches, sparrows, shrikes, babblers, thrushes, &c. &c. of the African climate. We note only one curious general observation, which is new to us:—"Every family of birds (says Mr. S.), we may even say every genus, contains one division which puts on some characteristic of the swallow tribe, or in scientific language, is a representation of the *fasiostralis* and *natorialis* type of nature."

## ARTS AND SCIENCES.

### ROYAL INSTITUTION.

DR. MANTELL, on the Iguanodon, and other fossil remains, discovered in the strata of Tilgate Forest. The learned doctor quoted Sir J. Herschel's Discourse on Natural Philosophy, placing geology, for magnitude and sublimity, next to astronomy; stated that there were certain reserves in the minds of most persons listening to the testimonies of the geologist, and regretted that equal justice was not meted to him as, for instance, to the antiquary. In recent excavations, coins, pavements, and architectural remains, had been discovered; their character stamped them Roman: had they been broken to pieces, the beholder of an accumulation of such fragments would have been satisfied that they could not have been of natural production, that they were the remains of works of art; and the antiquary, on examining them, pronounced that they had belonged to the Romans. These assertions were believed: why had not the geologist a similar passport to belief? Pebbles, scattered every where, supplied to him the same information. They never could have been formed in their present state; they were the remains of flints imbedded in chalk; and they had been rounded and transported there by the waves. There was an abundance of marine shells under Primrose Hill and Highgate—the sea had once covered the site of London; he would not, however, spend time on bringing forward further proofs, but would proceed to relate the geological construction from London to the remarkable strata of the Weald of Kent and Surry; and conclude with a summary, and with important deductions. He then invited his auditors, as we do our readers, to travel with him the road from London to Brighton, and he would describe as he passed along; he feared it was a dull road, but he recollected Mrs. Barbauld's story of "Eyes and No Eyes," and the anticipated gratification for many. He would first pause on London Bridge, to make a few remarks. The Thames bears along quantities of mud, with bones of cats and dogs, and limbs of trees, which are deposited in its delta; the reflux of the tide covers this deposition with layers of sand, thus forming alternate deposits, and giving rise to important changes. Similar formations are in progress in the delta of the Nile, imbedding man and his works, crocodiles, &c. An examination of these deltas would furnish evidence of the character of the contiguous countries, and their inhabitants. The superficial deposits around London consist of

sand and gravel, containing bones and teeth of elephants and other large mammals—mastodon, hippopotamus, &c. These are never found with bones of modern deposits. In the neighbourhood of Huntly occur marine deposits,—crabs and other crustacea,—differing from existing species; therefore, deposited at different and distant times, deduced from similar evidence as the antiquary in proving from Saxon remains being discovered over the Roman, that the latter people had been there first. The chalk appears in the Croydon valley. The remains of many millions of insects were enclosed in a square inch of chalk, and of itself would be sufficient subject for a lecture; he would, therefore, pass on to the Riegate quarries. In them are found ammonites of the class *cephalopoda*, echini, and various shells of other mollusca. The outlines of some are so clearly developed, that they appear like natural mummies. Beyond Riegate there is a clear valley, with large fragments of Sussex marble, with shells on the surface, but these are fresh-water shells; and we are now in the strata of Crawley and Tilgate Forest, arriving at a different epoch. In the vast number of quarries extending to Hastings, bones of enormous magnitude are discovered, various bones of reptiles, belonging to several kinds, many to one kind, but all to the class of water lizards; on the other side of the Weald there is a ridge of sand, then chalk, forming the South Downs, and the remains are the same as those in the North Downs. After the chalk, shells similar to those at Highgate, and bones and teeth like those found in the neighbourhood of London. The strata have been thus laid successively on the Weald. On these, marine deposits, then chalk, and, lastly, elephants and mammals under our modern deposits. Suppose, then, the Wealden to have been upheaved, raised by pressure from below, the superincumbent strata would have been severed; but, still, the original arrangement would have been preserved. And so it is: this will appear on tracing it to the anticlinal axis. The deposits of the Wealden were supposed to have been marine, but Dr. Mantell stated that he had never collected ammonite nor sea shells; that they did not belong to the ocean, but were the remains of dry land or fresh-water animals. The Iguanodon was the largest and most extraordinary; he related the mode of its first discovery, and the steps of tracing its character. A lady, with him, picked up a fragment of a tooth; it appeared insignificant, but, on examination, the surface was worn off; it belonged to an herbivorous animal; at the base, the root had been absorbed by another tooth underneath; the animal's dentation was developed. On further inspection of the tooth and various bones, other qualities were disclosed. The next step, or inquiry, was its assimilation to modern animals, and it answered, in every respect, to the iguana of the Brazils; but, how immense in comparison! The fossil tibia, or thigh bone,  $3\frac{1}{2}$  feet long; the modern, a mere pigmy: a toe bone of great magnitude was exhibited, claws, &c. The Iguanodon was 100 feet long; startling as it may appear, every one must be convinced of the fact; and, according to a representation shewn, it must have had scales, muscles, and integuments. The figure was not ideal, but, by careful comparisons and close reasoning, a real and mathematical deduction. In the deltas of modern formation, crocodiles, turtles, and palms, would be allowed to be the proofs of tropical climates, and that animals, &c. of those descriptions existed at the time of those deposits. Surely, the

similar conclusion must be arrived at, that the soil, in which the remains of such enormous animals, of fresh-water shells, and vegetables different from those of the existing state, are discovered, did give support and nourish the animals and vegetables themselves. Dr. Mantell alluded to remarks made upon him in Kirby's "Bridgewater Treatise;" and he denied his geological deductions to be unphilosophical or unscriptural.

### ORNITHOLOGICAL SOCIETY OF LONDON.

At a meeting of the council, on Saturday last, the Earl of Liverpool, president, in the chair, ten new members were elected: among them were, Viscountess Milton, Lady Rolfe, Lord Beresford, &c. &c. The secretary reported that the president had appointed the following noblemen and gentlemen vice-presidents of the Society; viz. the Duke of Bedford, the Bishop of Norwich, Sir Robert Peel, Bart., Mr. W. S. Mackay, Mr. Swainson, Mr. Vigor.—Letters were read from Mr. Swainson and other gentlemen, offering to place a considerable quantity of specimens at the disposal of the Society, for exhibition in the museum, so soon as rooms for their safe custody shall have been provided.—A letter was also read from Mr. Selby, the distinguished ornithologist, stating that he was of opinion that the Society is well calculated to promote the advancement of ornithological science, and that he would be happy to furnish the museum with skins, eggs, &c. from the neighbourhood of his residence.—Mr. Holl, F.G.S. was appointed joint-secretary with Mr. Chester; and the Earl of Derby and Dr. Burchell were elected honorary members.—Arrangements were made for opening the Society's Rooms, in Pall Mall, to the general meeting, on Saturday next.

### LITERARY AND LEARNED.

#### UNIVERSITY INTELLIGENCE.

Oxford, May 13th.—The following degrees were conferred:—

*Doctors in Medicine.*—W. E. Page, Student, Christ Church; R. C. Alexander, Wadham College.  
*Masters of Arts.*—W. Thorold, Worcester College, Grand Compounder; R. Smith, W. Fenn, Christ Church; H. G. Wells, Trinity College.

*Bachelors of Arts.*—J. Graham, New Inn Hall; D. C. Legard, Scholar, University College; J. W. Horsley, Exhibitioner, University College; A. W. Street, J. Barney, Magdalen Hall; E. B. Smith, Michel Exhibitioner, Queen's College; T. D. Wintle, L. H. Rudd, Scholars, Pembroke College; G. Stott, Scholar, J. Mortou, E. W. Robertson, W. Winthrop, Worcester College; W. R. S. Fitz-Gerald, T. D. Ryder, E. C. Woolcombe, T. H. Sheppard, J. R. Shortland, Oriel College; D. Roberts, Scholar, Jesus College; R. Stanley, Scholar, W. Milman, P. R. Robin, Brasenose College; H. P. Foulkes, G. Robinson, F. Cooke, H. Mills, Balliol College; J. Cooper, E. W. Tufnell, Scholar, H. D. Skirne, A. R. Symonds, H. Rutland, W. H. Stokes, G. W. B. Wills, C. Mitchell, Wadham College.

May 18th.—The following degree was conferred:—

*Bachelor of Arts.*—J. R. J. Coles, University College.  
May 19th.—Permission was granted to J. D. Harding, M.A. Oriel College, to commute the degree of Master of Arts for that of Bachelor in Civil Law; and the following degrees were conferred:—

*Masters of Arts.*—Rev. B. B. Beckett, Rev. K. Homfray, Magdalen Hall; Rev. J. R. Mitford, Christ Church; J. Inglis, S. Horsley, Balliol College; Rev. R. Govett, Fellow, J. French, Worcester College; Rev. E. H. Dowar, Rev. H. Barne, Rev. A. Dene, Rev. R. H. Fortescue, Exeter College; Rev. J. Garnier, Fellow, Merton College; G. Renaud, J. Wilson, T. Pelly, H. S. Slight, Scholar, M. Burrell, Corpus Christi College; Rev. W. F. Radcliffe, N. Pocock, Michel Scholar, J. Phelps, Queen's College; C. Bourne, Oriel College; Rev. W. B. Holland, Wadham College; T. Chaffers, Rev. B. King, Fellows, R. F. Taylor, E. Ball, Brasenose College; W. Dyke, Fellow, Rev. B. Rees, Jesus College.

*Bachelors of Arts.*—W. H. Woodhouse, Christ Church; J. P. Fletcher, New College; R. B. Jones, Wadham College, Grand Compounders; C. E. Strong, G. W. Chamberlain, R. J. Shirreff, Wadham College; S. C. Malan, St. Edmund Hall; T. A. Clarke, Lincoln College; R. G. Lucas, University College; S. E. Bathurst, A. Cox, T. F. Twemlow, Christ Church; W. F. Pole, E. D. Tinsling, J. E. Bode, Students of Christ Church; J. R. Chater, H. P. Dunster, Magdalen Hall; E. Duke,

B. P. Clement, Exeter College; J. Dennis, C. Whately, St. Mary Hall; W. H. Stevens, Worcester College; H. F. Gray, Exhibitioner, Christ Church College; J. Davis, W. Tattersall, J. Maxwell, T. B. Croome, Trinity College; J. Sparling, Oriel College; J. D. Dixon, E. Sleep, C. E. Gray, Brasenose College; R. Jones, Jesus College.

CAMBRIDGE, May 17th.—The following degrees were conferred:—

*Bachelor in Divinity*.—Rev. W. Battridge, St. John's College.

*Masters of Arts*.—J. W. Cardew, St. John's College; J. Manners, Corpus Christi College.

*Licentiate in Physic*.—S. W. J. Merriman, Caius College. *Bachelors of Arts*.—F. F. Hole, J. Wauchope, Trinity College; J. E. Karshaw, J. Idolls, H. Cogan, St. John's College; J. Abbott, H. F. Corrance, J. M. Widdow, Clare Hall; J. K. Fowler, W. Faulkner, Queen's College; R. B. Frank, Catherine Hall; T. T. Storke, Jesus College; T. Reddall, Corpus Christi College; T. Lowry, Christ's College; J. Fountaine, Emmanuel College; P. I. Harrison, Magdalen College.

The Rev. Benjamin Cronyn, M.A. of Trinity College, Dublin, was admitted *ad eundem* of this University.

#### ROYAL SOCIETY.

MR. BAILLIE in the chair.—A highly interesting paper, On the hereditary instinctive propensities of animals, by Mr. Knight, was read. The author narrates several curious facts illustrative of his position, viz. that the propensities of animals are conveyed to them by their predecessors, without reference to education or habit. A terrier and spaniel, brought up in utter ignorance of their natural pursuits, if we be allowed the phrase, were taken out by the author, and placed within sight of a pole-cat: the terrier displayed all the symptoms of violent anger, while the spaniel looked on with indifference, but sprung his game the moment it was observed. Mr. Knight supposes that these hereditary propensities might be made to cease, and others be substituted. The springing-spaniel, for example, probably would never have been heard of, had not shooting on the wing been introduced. On this point, also, the author observes that the woodcock, now a very wild bird, was, sixty years ago, on its first introduction amongst us, comparatively tame; this wildness being superinduced, as it were, by the constant alarm in which it is kept during the shooting season. Other facts are given with respect to that class of dogs called retrievers, in sportsmen's language; though wholly untaught, they acted as well as the best instructed dogs. The paper terminates with a remark on the hereditary propensities of the Norwegian pony, which are singularly confirmatory of the foregoing.—A paper by Capt. Lloyd, of Port Louis, was noticed: this communication contains the results, we believe, of 50,000 observations, barometrical and other, made by the author at the above-named place.

#### ROYAL ASIATIC SOCIETY.

THE fourteenth anniversary of this Society was held on Saturday last, the Right Hon. C. W. Williams Wynn, M.P., the president of the Society, in the chair. The secretary read the annual report of the council. After advertizing to the death of Mr. Colebrooke, the late director of the Society, and to the intention of proposing to members to enter upon a subscription to defray the expense of a marble bust of the deceased, to be placed in the Society's meeting room; as well as to the demise of many others of the Society's members during the past year, among whom were several distinguished literary characters,—the report gave an outline of the Society's proceedings since the last anniversary. The number of members who had joined the Society exceeded the usual average, and comprised seventeen gentlemen, natives of India; affording a gratifying proof of the interest excited among the latter in European literature, and in the success of the

Society. The report then proceeded to remark on the regret of the council at the failure of its hopes of obtaining apartments for the Society in Somerset House; but expressed a conviction that the disappointment would not have the effect of damping the exertions of the members to promote the usefulness of the Society as regards the welfare of our fellow-subjects in Asia, or as regards the people of this country, in being made the medium of communicating to them that knowledge of the former, their arts, sciences, manufactures, and commerce; and of the valuable natural productions of India, of which daily experience was now proving the great and increasing worth. The report then stated that the committee of agriculture and commerce, announced at the last anniversary as about to be set on foot, was now in operation, and that its first day's proceedings had been printed and circulated. It then alluded to the munificent support which the Oriental Translation continued to receive; and a list of the recent publications of that committee was read, as well as of those in progress. The report concluded by a notice of several of the literary communications the council had received from members residing abroad; and expressed a hope that the example would excite those residing in England to communicate the results of their observations and inquiries on subjects connected with the East, and thereby contribute to the literary reputation of the Institution. The report of the auditors on the finances of the Society was then read. The total of receipts for the year 1836, had been 1820*l.* 15*s.* 4*d.*; expenditure, 1310*l.* 11*s.* 8*d.* In the disbursement for the current year, the auditors regretted to observe, that it would be necessary to include a heavy sum for the payment of outstanding accounts for printing, and also for unavoidable repairs to the Society's house; they, therefore, recommended that, for the purpose of meeting those demands, a sale of as much of the Society's capital in the three per cents be effected as might be necessary to discharge the same.

Sir Alexander Johnston, as chairman of the committee of correspondence, in an able speech of great length, detailed the various subjects on which the attention of that committee had been engaged. Sir Alexander particularly alluded to the desirability of our possessing accurate information on the geography, and even topography, of that part of the East through which Russia must pass her forces, should it ever be her policy to aim a blow at our Indian possessions. The labours of that distinguished body of men, the Indian navy, had contributed greatly to our information on those points. It was to the diplomatic tact of one of the members of that navy, Captain Cogan, that a friendly intercourse between this country and the Imaum of Muscat had been effected. It would be in the recollection of the meeting, that this prince had presented to the King of Great Britain a splendid teak ship, the *Liverpool*; and that his Majesty had made an appropriate present, in return, of one of his finest yachts. Captain Cogan had been intrusted with the command of both those vessels; and it was at his suggestion that the Society had resolved to elect his highness an honorary member, in testimony of its appreciation of his desire to extend the benefits of European science amongst his people. Sir Alexander then alluded to the beneficial effects likely to be produced by the permission now given to Europeans to settle in India, tending, as it would undoubtedly do, to the raising of the condition of the natives to the level of European civiliza-

tion. After advertizing to the steps the committee had taken to obtain records of the early history of India, and its present statistics, Sir Alexander alluded to the ancient college of Madura; and expressed his hope, that learning would one day again take up its residence there. He then referred to the establishment of the committee of agriculture and commerce; and congratulated the committee on the choice it had made of a chairman in Sir Charles Forbes. Sir Alexander, after touching upon several interesting subjects and occurrences in connexion with the East, concluded by expressing his conviction, that the exertions of the Society would have a great moral effect upon the natives of India, and of the East in general.

The right honourable the president addressed the meeting. He expressed the lively pleasure he felt in witnessing so numerous an attendance of members, evincing as it did the increased interest the Society had attracted. In the progress of his address, the right honourable gentleman passed a high eulogium on the labours of the Oriental Translation committee. He alluded, also, to the suspension of the printing of Oriental works at Calcutta, at the expense of government, which he considered an impolitic measure; inasmuch as we could not arrive at an accurate knowledge of the manners, habits, and customs of the people of India, without cultivating an acquaintance with their native languages and literature. He was glad, however, to find that the works in progress when this measure was carried were to be completed; and that it now rested with the governor-general of India to decide whether the encouragement formerly given to Oriental studies in that country should be resumed or not. The right honourable chairman of the Committee of Correspondence had expressed some fears as to the hostile intentions of Russia. No doubt that country, as well as others, entertained ambitious views; but when he considered the intimate union which had existed between that country and England for more than a hundred years, with little interruption, he thought that greater hopes of continued peace ought to be entertained from that circumstance, than from any precautionary measures that could be taken. When the abrogation of the Emperor Paul had, for a short period, interrupted the harmony which existed between the two countries, the usual commercial intercourse went on, notwithstanding every opposition; and the catastrophe which violently finished the autocrat's reign put an end to every appearance of disunion between Russia and England. He begged to call the attention of the members to the financial state of the society, and he trusted that the members would exert themselves to procure new subscribers. He then gave a short sketch of the circumstances which led to the formation of the Society in 1823, and to the readiness which the government had always evinced to support any measures having for their object the good of the people of India. With reference to the office of director to the Society, rendered vacant by the lamented decease of Mr. Colebrooke, he had to acquaint the meeting that Sir Graves Haughton, a gentleman who occupied a very distinguished place in Oriental literature, had been requested to allow himself to be put in nomination to the vacant chair, but ill health had prevented him from complying with the council's wish. Application had afterwards been made to Professor Wilson, who stood conspicuous as the first Sanscrit scholar of the day; and the Professor had consented to be nominated to the office. He felt

quite sure that the election of that gentleman would confer credit and lustre on the Society, not only in this country, but also on the continent of Europe and in the East. In conclusion, he must again express his pleasure in the full attendance of members that day; and begged to recommend to their good offices the task of procuring a further addition of numbers, in order to promote the prosperity of the institution. The thanks of the Society were severally voted to the council and officers. A ballot then took place for eight new members of council, and for a director and librarian; which latter office had become vacant by the resignation of Sir Graves Haughton. Professor Wilson was elected director; Colonel W. Franklin, librarian; and the Hon. M. Elphinstone, the Right Hon. Henry Ellis, Sir Graves C. Haughton, Colonel J. Briggs, John Francis Davis, Esq., Charles Elliott, Esq., W. Newnham, Esq., and W. Oliver, Esq., were elected into the council.

#### SOCIETY OF ANTIQUARIES.

Mr. HALLAM in the chair.—Mr. Prosser presented a print of a Norman crypt at Guildford.—Mr. Yates exhibited some ancient rings from Egypt; and described their use as ear-rings, in the hair, and other ornamental purposes, and, also, as money. He also observed, that paper was made in Egypt from linen rags, at a very early period.—The reading was concluded of Observations by Dr. Leeman, of Leyden,\* on Roman sepulchral inscriptions, and particularly relative to some found at Watermore, near Cirencester.

#### LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

*Monday.*—British Architects, 8 P.M.—Marylebone, 8 P.M. (Mr. Hemming on the History of Chemical Inventions, &c.)—Society of Arts, 7½ P.M. (Polite Arts: on Specimens made by Candidates; Mr. Birch's Drawings of a Marine Steam-Engine; Mr. J. Esquillant's Ornaments in Leather for Mouldings, &c. and other matters.)

*Tuesday.*—Civil Engineers, 8 P.M.; Belgrave Literary, 8 P.M. (Rev. Mr. Mortimer on Egyptian Antiquities, &c.)—Lambeth Literary, 8½ P.M. (Conversazione).—Society of Arts, 7½ P.M. (Mechanics: on Mr. J. Gray's Instruments for Tooth-drawing; Mr. H. Chapman's Improved Cross-trees for Ships of War; Mr. J. B. Humphreys on Mr. Dodd's Safe-plug for Steam-boilers; Mr. C. Walters's Reflector for Street Lamps, and other matters.)

*Wednesday.*—Society of Arts, 7½ P.M.—Geological, 8½ P.M.

*Thursday.*—Royal Society, 8½ P.M.; Antiquarian, 8 P.M.; Zoological, 3 P.M.; Marylebone, 8½ P.M. (Mr. Parsons on Shakespeare); Botanical, 8½ P.M.

*Friday.*—Royal Institution, 8½ P.M.  
*Saturday.*—Royal Asiatic, 2 P.M.

#### FINE ARTS.

##### BRITISH GALLERY: ANCIENT MASTERS.

A HURRIED glance at this gallery, of which the private view takes place this day, and which is opened to the public on Monday, enables us confidently to say, that it is one of the most striking and important to the arts which the institution has ever had it in its power to exhibit. The Duke of Devonshire has been a very distinguished contributor. Previous to removing some of his finest pictures to Chatsworth, his grace has liberally sent no fewer than thirty-five of them here; and has been nobly seconded by other friends and patrons of our national school. We have accordingly many of the choicest Rembrandts ever seen; also, splendid Murillos and Gaspar Poussins; Titians, of marvellous beauty; Salvator Rosas, of the highest class; Cuype, all sunshine (including Lord Farnborough's delightful landscape, of which, however, he only painted a share); Zuccherò's Mary Stuart—but, in short,

\* Not Dr. Lee, as stated, by mistake, in our last notice.

altogether such a number and variety of the greatest masters in every stile of art, that it is impossible to particularise their wonderful efforts. It is a treat of the richest kind where-with to charm the remainder of the London season.

#### EXHIBITION OF THE ROYAL ACADEMY.

[Fifth Notice.]

BEFORE quitting the Middle Room we must mention, that among the most distinguished of the portraits on its walls, are,—336. *Andrew Spottiswoode, Esq.*; 284. *The Right Rev. the Lord Bishop of Lichfield. T. Phillips, R.A.*; 232. *Lieutenant-General Sir Edward Barnes, G.C.B. J. Wood*; 233. *Lord Strangford, H. P. Briggs, R.A.*; 242. *The Rev. Dr. Chalmers, J. Watson Gordon*; 264. *His Grace the Duke of Norfolk*; 357. *Mr. Alderman Daniel, of Bristol. H. W. Pickersgill, R.A.*; 382. *Reza Kouli Meerza, Timour Kouli Meerza, and Nefes Kouli Meerza, Princes of Persia. J. Partridge, &c.*

On entering the West Room, our attention was immediately attracted to

479. *Bohemian Gipsies. D. MacIise, A.*—It is impossible, in limits like ours, to do justice to this extraordinary performance. It displays an exuberance of imagination which we never before met with in a work of a similar description. The subject is a gipsy encampment; and the whole canvass (which is not a small one) teems with vigorous life. The left of the picture is principally made up by fresh arrivals; men, women, children, mules and dogs, pouring in to swell the throng: feasting, and preparations for feasting, occupy the right: while the centre exhibits a scene of unrestrained enjoyment; forms of exceeding beauty, and charming touches of infant innocence and maternal affection, mingling with the rude and riotous, though still the picturesque. We hardly need add, that the spirit of the execution keeps pace with that of the composition.

455. *The Battle of Langside. C. Landseer.*—The dying Douglas, and the pitying Mary Stuart, are the principal figures of the group; the general tumult of which is finely contrasted by this touching incident. Mr. C. Landseer has treated his subject with a poet's, as well as with an artist's, feeling. He is rapidly placing himself in the highest rank of our historical painters.

402. *Ferry-Boat on the River Thames. F. R. Lee, A.*—The terms "silver Thames," or "placid stream," could never be better applied than to a scene like this. It speaks a simple language, which all understand. Here are no eye-traps (if we may be allowed the expression) to attract the gaze of the spectator. Truth and day-light compose the charm of this admirable work.

415. *Hen and Chickens. T. Woodward.*—Let not the lofty minded disdain to have their attention called to so humble a subject. There are few things to which good art cannot communicate interest. The performance under our notice has been well studied; and it is admirably painted. Dame Partlett and her feathered brood exhibit more intelligence in their look and action than many human beings can boast.

487. *Festa of the Madonna del Arco, at Naples. P. Williams.*—A fine assemblage of graceful forms, and brilliant colours.

453. *The Village Sign-Painter. A. Fraser.*—There is much point and humour in this Anglo-Flemish picture. The rustic artist is just putting to his production the title of "The Great Unknown," and is surrounded by groups of spectators; some in admiration, others dis-

posed to criticise. Among them is a cobbler, whose look and action decidedly shew, that (in spite of the old proverb) there is more of emendation than of commendation going on in his mind. In this and in other instances, the work is full of the comedy of art.

438. *The Valley of Aosta, with Mont Blanc and the Great St. Bernard. W. Linton.*—Few persons could pass this spot without being struck by its character, both of softness on the one hand, and of sublimity on the other; much less an artist like Mr. Linton, who travelled to select such scenes, and who, in this as well as in other of his works, has so skilfully transferred them to canvass.

515. *Clifton, near Bristol, from the Avon. J. B. Pyne.*—The artist could hardly have avoided giving an elevated character to his subject. The foreground, or base of the picture, is composed of the craft of commerce; and the result is seen in the lofty buildings of Clifton. As a work of art, it is highly creditable to Mr. Pyne's talents; although we suspect some pictorial license has been taken with the scene.

491. *Collecting Sea-weed, St. Aubin's Bay, Jersey. E. W. Cooke.*—There are few artists whose works have attracted more universal admiration for fidelity of representation and beauty of execution, than Mr. Cooke's. We were surprised, therefore, at observing his present performance (which appears to possess all the valuable qualities of his pencil) placed in such a situation. He has only, however, to "bide his time;" he will find his level very soon.

335. *The English Harvest; a Dream of the Olden Time: Ploughing—Sunrise*; 460. *English Harvest: Reaping—Mid-day*; 541. *The Harvest-home—Evening. J. P. Knight, A.*—A series of subjects which, to have been exhibited to advantage, ought to have been placed in immediate succession. In the treatment of the first two there is much poetical feeling: into the last, the liberal hospitality and innocent pageantry which formerly belonged to the occasion, are very appropriately introduced.

443. *Rehearsing the new Ballad. T. Clater.*—Music, like painting, speaks a language that is felt, if not understood, by all; and the charms of a favourite song or ballad find their way to the heart of a peasant as well as to that of a prince. It is the impression made on the former which is the subject of this village interior. In composition, colouring, and chiaroscuro, it is in Mr. Clater's best style.

445. *Spaniels, the property of Lady Scott Douglas. E. Landseer, R.A.*—No artist introduces his accessories with more effect, or to better purpose, than Mr. Landseer. In the present instance he has been especially happy. The gloves and the book indicate a fair owner, and the character and action of the dogs her approach. The beauty and condition of these spaniels cannot be surpassed.

Besides the views already noticed in the West Room, 430. *Windsor Forest. J. Linnell*; 463. *Scene on the Medway. C. Stanfield, R.A.*; 461. *The Lock on the Thames, near Queen's Elms, after sunset. W. Davison*; and, 542, *Norwegian Scenery, T. Fearnley*, deserve particular attention.

[To be continued.]

#### NEW PUBLICATIONS.

*Compositions in Outline, from Lord Byron's "Manfred," and "Prisoner of Chillon."* By Frederick Thrupp, Sculptor. London, 1837. Ackermann and Co.

ALTHOUGH by a sculptor, on stone, not in stone; still they are of a character more suited

to sculpture than to painting. We have, however, looked at these compositions with great admiration. There are nine from "Manfred," and four from the "Prisoner of Chillon." Mr. Thrupp has treated his subjects with great energy and pathos. He has retained enough of the natural to render them interesting to human beings generally, and has introduced enough of the ideal to redeem them from the slightest meanness or vulgarity.

*Details of Ancient Timber Houses of the 15th and 16th Centuries; selected from those existing at Rouen, Caen, Beauvais, Gisors, Abbeville, Strasbourg, &c.* Drawn on the spot and etched by A. Welby Pugin. London, 1837. Ackermann and Co.

THE admirers of the carpentry of former days, as exhibited in the highly wrought fronts, gables, and other external portions of the edifices of that period, but which are now, owing to various causes, rapidly hastening to destruction, will feel much obliged to Mr. Pugin, for rescuing a few of the most curious and picturesque of such relics from absolute oblivion. It is that gentleman's intention, we perceive, to publish a similar series of examples of internal fittings and decorations of the same period, drawn from the same sources.

#### MUSIC.

##### ANCIENT CONCERTS.

THE seventh concert, under the direction of the Duke of Cumberland, for the Earl Fortescue, proved most triumphantly, that all the requisite variety and freshness may be given to these performances, without having recourse to the stimulus afforded by the rich instrumentation of the modern school. Bearing in mind the legitimate object of this institution, we regard the concert of last Wednesday, as the most delightful and satisfactory one of the whole season. We know not whether we have to thank the royal director, or the conductor, or both, for the gratification of hearing that sublime double chorus, the "Gloria Patri," from the "Dixit Dominus" of Leo. This, with the string of choruses from *Israel in Egypt*, the *Coronation Anthem*, "My heart is inditing," and the majestic chorus "Immortal Lord," from *Deborah*, would have stamped the concert as one of superior excellence, even had there been nothing else worth listening to. But the rest of the bill of fare was selected with equal judgment. Greene's noble anthem, "Oh, clap your hands!" would have been all the better for a little previous rehearsing. We hope Sarti's charming trio, "Amplius lava me," will become a stock-piece here. Madame Pasta sang Paisiello's "Il mio ben," with such beautiful expression and chaste embellishment, as fully to merit the *encore* (a rare compliment from this audience) which it received. Her embellishments to "Frenar vorrei," were more redundant, and of a less choice quality, than in her first song. It is gratifying to find her voice, now that it is recovering from the effects of indisposition, exhibiting few, if any, symptoms of decay. Miss Birch, in her performance of Purcell's "Mad Bess," displays union of delicate execution with energetic expression, that fully justifies the reputation she has earned by it. She, however, makes one or two deviations from the simplicity of the original, which are not quite to our taste, however beautiful and finished her style of performing them; but we feel no doubt of being in a decided minority on this point. Mr. Phillips has made "Revenge!

Timotheus cries," completely his own; his performance, not only of this song, but of all that is allotted to him, is usually so perfect, as to leave no room for criticism. Callcott's glee, "Once upon my cheek," which is too seldom heard, is infinitely superior to many other things by the same composer, that are in constant requisition. It was very sweetly sung by Miss Birch, Mrs. Knyvett, and Messrs Hawkins and Phillips. We have only left space for the names of the other vocalists, Mrs. Seguin and Mr. Hobbs; and for a brief allusion to the violoncello performance of M. Moritz Ganz, who exhibited much taste and talent in an *adagio* by B. Romberg. Q.

Mr. Salaman's annual benefit concert on Monday night, was, as it usually is, one of the best of the season. The vocalists were, Mesdames Pasta and Schroeder Devrient, Miss Clara Novello, Signor Ivanoff, and Mr. Balfe. M. Labarre played, with exquisite taste and feeling, a fantasia on the harp, introducing two Irish airs; and Mr. Salaman displayed his talents as a pianist, in a concerto by Weber; a rondo of his own composition, on an air from *The Maid of Artois*; and last, not least, in Thalberg's celebrated fantasia on subjects from *Les Huguenots*. He was much and most deservedly applauded; and the whole concert appeared to give great satisfaction to a crowded audience.

#### DRAMA.

*Drury Lane*.—On Monday, a series of dances, called a new ballet, under the title of *A Day at the Carnival*, was produced here, and considerably hissed. Taglioni danced, but not with such effect as in already established characters; and the other Taglionis danced foreign dances—Styrian, or Syrian, or Assyrian, we believe—and these were well enough. But, in our national theatres, it would be impossible to do a graceful thing without a large admixture of vulgarity and folly. A parcel of pantomime gesticulations were accordingly presented by brats some fourteen inches high; by Wieland, monkeyism; and by a miserable caricature of the *Cachouca* of Duvernay, called the *Cashew-nut* dance, by Mr. Mathews. The tedious nonsense would not go down, even at Drury Lane.

We should have noticed that the admirable Devrient has appeared here in *Fidelio*: it is a delightful performance in every way.

*Theatres*.—Thursday night seems to have been a climax of confusion at all the large theatres. There was an extra row at the opera, where Grisi was so ill of Epsom (*quare, salts?*), they say, that she could not appear, and the *Cenerentola* was substituted for *Don Giovanni*. At Drury Lane and Covent Garden, also, we are told, matters were all amiss. Nevertheless, we see Sheridan Knowles is to have a benefit next week, and Evans, whose successful *début* in *Farmer Ashfield* we remember some *fourteen* years ago, is to walk the boards on the occasion—not returned from transportation, but from well treating his friends at his hotel in Covent Garden.

#### VARIETIES.

*Weather-Wisdom*.—M. Arago's fine weather arrived two days before the appointed time, i.e. the 24th instead of the 26th; but, as it continues to hold, we will not quarrel with its want of punctuality, and only hope it will last beyond the three weeks predicted. For our home prophecies: the last few days have

been pretty fair, but unseasonable hail of Sunday and Monday was unannounced. The immediate future is not so agreeable. Lieut. Morrison says, "27th and 28th, many changes with rain and thunder storms; the air grows cooler as the Sun nears the square of Herschel. June 1. The weather improves as the sun comes to the sextile of Jupiter; cloudy weather about 3d."

*New Church in St. Bride's*.—Among our pamphlets, this week, Mr. Elmes, the architect, has published one, in which he charges the Rev. Mr. Dale with exceeding want of ingenuousness towards him, in some competition for the building of a new church in St. Bride's parish. The correspondence is of unpleasant local interest, and we are sorry to see church disputes at this time.

*National Monuments, &c.*—We are glad to see a meeting announced for Monday, at Freemasons' Tavern, "to take into consideration the propriety of petitioning His Majesty and both Houses of Parliament, on the advantages of admitting the public, free of expense, to all depositories of National Monuments and Exhibitions of Art in National Buildings, especially to Westminster Abbey, St. Paul's, and the Annual Exhibition of native talent in the new National Gallery." The expediency of some extension of liberality in these respects, has long been felt; but, since our renewed intercourse with the Continent, it is impossible, on returning from a tour or trip, not to be deeply ashamed of the contrast.

*Emma Albertazzi*, in the character of *Zerlina*, is one of the best lithographic prints of celebrated actors which has been produced. It is from a drawing by Miss Fanny Corboux, and reflects honour upon her talent. The likeness is excellent; the attitude natural and graceful; and the costume picturesque. Altogether, the taste and artist-like feeling it displays, are enough to make it a very popular performance, even were its object less of a public favourite than Albertazzi deservedly is.

*Aug. Barre*.—In the *Psyché*, Parisian *Journal des Modes, Littérature, &c.* is a piece, entitled "Adieux de Mlle. Taglioni," with a print of her as *La Sylphide*, and a copy of verses by M. Méry, which are also reprinted, with other poetical compliments, and a memoir, in a separate brochure: but the fair subject, and others of the same class, Duvernay, F. Essler, &c. &c. have been still more vividly brought before us by the productions of M. Aug. Barre, a young French artist, who has just arrived in London. His works are well known and much admired in Paris, though new to us. They consist of whole-length figures, from ten or twelve inches to two feet in height, most accurately representing these characters, in graceful and beautiful attitudes, as they appear on the stage. Nothing can be more perfect or pleasing; and as ornaments of many a boudoir, they are well calculated to supersede Dresden china shepherdesses, or public personages honoured in Sevre. We recommend our fashionable friends to visit the *table-atelier* of M. Barre.

*Dutch Pictures*.—We have been gratified this week by the view of a collection, at Messrs. Fosters, of pictures by Dutch Masters, the property of Mr. Edward Solly. The mechanical talents displayed in many of these productions, and the extent to which they carried many excellences of art, recommend them greatly to the notice of amateurs.

*Fine Aphorism*.—Gratitude has a strange retractive force, which loses its effect, and perishes in its exertion.—Sir F. Burdett.—*Speech in the House of Commons, on Monday.*

**Booksellers' Provident Institution.**—Mr. Brown, the treasurer to this excellent Institution, has paid 5000*l.* into the Bank of England, to be invested in national securities, for the purposes of the fund. It is very gratifying to find so ample a foundation laid for an association so recently formed, and so eminently deserving of prosperity.

**G. P. R. James, Esq.**—It is with extreme pleasure that we observe the literary merits of Mr. James royally acknowledged. The *Gazette* of Tuesday announces his appointment as historiographer in ordinary to his majesty, in the room of the late Dr. Stanier Clark, who held that office under George IV., and was also librarian to the king.

### LITERARY NOVELTIES.

#### LIST OF NEW BOOKS.

The History and Topography of the Isle of Axholme by the Rev. W. B. Stonehouse, M.A. Part I. 4to. 10*s.* 6*d.*

Fellow of Trinity College, Cambridge.  
John Murray, Albemarle Street.

**THE NINTH BRIDGEWATER TREA-  
TISE.** A Fragment.  
By CHARLES BABBAE, Esq.  
The volume here presented to the Public, does not form a part  
of the series of works composed under the will of the late Earl of  
Bridgewater. I have, however, thought, that in furthering the  
intentions of the testator, by publishing some reflections on that  
subject, I might be permitted to connect with them, a title which  
has now become familiarly associated in the public mind with  
the subject of Natural Religion. — Extract from the Preface.  
John Murray, Albemarle Street.

**SIR GEORGE HEAD'S NEW WORK.**  
A new edition, post 8vo. 2s. 6d.  
**A HOME-TOUR through the MANU-  
FACTURING DISTRICTS OF ENGLAND.**  
By SIR GEORGE HEAD.  
In a few days, post 8vo.  
A Continuation of the Home-Tour in Scot-  
land, Ireland, the Channel Islands, and Isle of Man.  
John Murray, Albemarle Street.

**TWO YEARS AT SEA; being the Narrative  
of a Voyage to the Swan River and Van Diemen's Land;  
thence through the Torres Straits to various Parts of India.  
With Notes of a Visit to, and Residence in, the Burman Empire;  
including an Account of the Burman Empire, and of the  
Missions in that Country, from the Date of the First Protestant  
Mission there.**

By JANE ROBERTS.  
London: John W. Parker, Publisher, West Strand.

**NARRATIVE of an EXPEDITION to  
GREENLAND,** sent by order of the King of Denmark,  
in search of the Lost Colonies, under the Command of Captain  
Graah, of the Danish Royal Navy. Translated from the Danish,  
by the late G. G. MACDONALD, Esq. of Copenhagen, and ac-  
companied by the original Danish Chart, completed by the Ex-  
pedition.

London: John W. Parker, Publisher, West Strand.

**JOURNAL of the ROYAL ASIATIC  
SOCIETY OF GREAT BRITAIN AND IRELAND,**  
containing original Papers, relative to the History, Manners and Customs,  
Laws, Religion, Natural History, Arts & Commerce, Manu-  
factures, and Productions, of the Oriental World. Contributed  
by Members and Correspondents of the Society, at Home and  
Abroad.

London: John W. Parker, West Strand.

**A MANUAL of FAMILY PRAYER;**  
comprising Three Weekly Courses of Morning and  
Evening Devotion. I. From the authorised Formularies of the  
Church. II. From the Manual of Devotion. III. From Jenks's  
Prayers and Offices. To which are added, Collects on the Prin-  
cipal Feasts and Fasts.

By the Rev. A. HORSFALL, M.A.  
Of Queen's College, Cambridge.  
London: John W. Parker, Publisher, West Strand.

**THE MOSAIC DELUGE.—GEOLOGY.**  
In 8vo. with numerous woodcuts, &c.  
On the 26th instant will be published,  
**NEW AND CONCLUSIVE NATURAL  
DEMONSTRATIONS** both of the FACT and PERIOD  
of the MOSAIC DELUGE, and of its having been the only Event  
of the kind that has ever occurred upon the Earth.  
By GEORGE FAIRHOLME, Esq.

Also, lately published,  
**The Phenomena of the Earth—the Revolu-  
tions of the Globe** familiarly described. By Alexander Bertrand,  
M.D. 1 vol. post 8vo. two plates, 7s.  
"It is one of the most agreeable we have met with. \* \* The  
surface of the globe is not a new subject, yet see how interesting  
our author makes of it."—Spectator.  
James Ridgway and Sons, Piccadilly, and all Booksellers.

**LORD COLLINGWOOD.**  
New and cheaper edition, with additional Letters. In a few  
days will be ready, in 2 vols. 12s.

**MEMOIRS and CORRESPONDENCE,  
PUBLIC and PRIVATE, of ADMIRAL LORD  
COLLINGWOOD.**  
Edited by G. L. NEWNHAM COLLINGWOOD, Esq. F.R.S.  
"Having thus referred to Lord Collingwood's life, I may be  
allowed to say, that the publication of that volume is, indeed, a  
national good; it ought to be in every officer's cabin, and in every  
statesman's cabinet."—Southey's "Reveries," p. 268.

Also, in 8vo. 6s. 6d.  
**Alfred the Great: a Poem.** By G. L.  
Newnham Collingwood, Esq.  
"At any other time than the present, when the tide of literary  
taste is running against poetry, the severely heroic character,  
the appearance of such a work as 'Alfred the Great' would have  
excited a general interest, and ensured the author a high place  
among the writers of his country."—New Monthly Mag.  
James Ridgway and Sons, Piccadilly, and all Booksellers.

1 vol. 8vo. price 12s. cloth,  
**THE EASTERN SEAS; or, Voyages and  
Adventures in the Indian Archipelago, in 1820-23-24;**  
comprising a Tour of the Island of Java; Visits to Borneo;  
the Malay Peninsula, Siam, &c.; also, an Account of the Present  
State of Singapore; with Observations on the Commercial Re-  
sources of the Archipelago.

By GEORGE WINDSOR EARL,  
Member of the Royal Asiatic Society.  
London: Wm. H. Allen and Co. 7 Leadenhall Street.

**DR. ADAM CLARKE'S MISCELLANEOUS WORKS.**  
In duodecimo, embellished with a fine Engraving, price 6s.  
In cloth boards.

**THE MISCELLANEOUS WORKS of  
DR. ADAM CLARKE,** Vol. X. being the first of the  
detached Pieces, including Critiques on various Publications,  
Historical Sketches, Biographical Notices, Correspondence, &c.  
To which is prefixed, an Introductory Preface, by the Editor.  
London: Printed for Thomas Tegg and Son, 73 Cheapside.

Where may be had, just published,  
**A New Edition of Dr. Adam Clarke's Com-  
mentary on the Bible, Part I. In royal 8vo. 2s.; also, Part I. in  
4to. price 3s.; to be continued Weekly until completed, in 60  
Parts.**

**THE THREE EXPERIMENTS OF LIVING.**  
In 1 pocket vol. neatly printed, price 2s. bound in canvass boards,  
**THREE EXPERIMENTS OF LIVING;**  
viz. Living within the Means—Living up to the Means—  
and Living beyond the Means. To which is now first added, the  
Sequel to the Work. The 16th edition.  
"Every individual should bear in mind, that he is sent into this  
world to act a part in it; and though one may have a more splen-  
did, and another a more obscure part assigned him, yet the actor  
of each is equally accountable."  
London: Printed for Thomas Tegg and Son, 73 Cheapside; and  
may be procured, by order, of every Bookseller in the Kingdom.

In 1 vol. demy 8vo. price 12s.  
**THE EUCHARIST; being principally  
Lent Lectures, delivered in All Souls' Church, 1835, and  
Portman Chapel, 1837.**  
By the Rev. W. J. F. BENNETT, M.A.  
Late Student of Christ Church, Oxford.  
London: Wm. Jones Cleaver, 80 Baker Street, Portman Square.

**WORKS ON FLOWERS, with COLOURED PLATES.**  
Dedicated to the Princess Victoria,  
**FLORA'S GEMS; or, the Treasures of the  
Parterre.** In Twelve Bouquets, drawn and coloured by  
James Andrews; with Poetical Illustrations,  
By LOUISA ANNE TWAMLEY,  
Author of "The Romance of Nature."  
Imperial 4to. tastefully bound and ornamented, 2l. 2s.

**The Romance of Nature; or, the Flower  
Seasons Illustrated.** By Louisa Anne Twamley. Second edition,  
in one large 8vo. vol. morocco, elegant, 31s. 6d.  
"This is a book of singular beauty and taste. Twenty-seven  
exquisite coloured drawings of favourite flowers, are accom-  
panied by graceful quotations from the various authors who have  
felt their 'sweetest inspiration,' and some charming original  
poems. Whether for tasteful decoration, originality, or grace,  
we have seen no superior to this most beautiful volume."—*Lit-  
erary Gazette.*

**The Sentiment of Flowers, with Twelve  
Groups of Flowers,** tastefully designed and coloured. 2d edition,  
cloth, gilt edges, price 6s.; alk. 7s. 6d.; morocco elegant, 9s. 6d.  
"One of the prettiest little books we have seen. It contains  
twelve coloured engravings, a neatly told biography, if we may  
use the term, of each flower—all the graceful anecdotes connect-  
ed with them, and some very beautiful and appropriate poetical  
quotations. Well, if we were a young lady, we would neither  
cite nor receive a billet-doux, save in the shape of a bouquet."  
—*Court Journal.*

**Floral Conversation Cards. Fifty coloured  
Plates, with Key.** In a handsome Case, gilt edges, price 12s.  
Charles Tilt, Fleet Street.

2s. embossed cloth, gilt edges,  
**THE COTTAGERS OF GLENBURNIE;**  
a Tale, illustrative of Scotch Manners.  
By ELIZABETH HAMILTON.  
"A picture of the rural habits of Scotland, of striking and im-  
pressive fidelity."—*Sir Walter Scott.*  
This popular little work forms part of a Series, now in course  
of publication, under the general title of  
**Tilt's Miniature Classical Library.**

Every volume is printed with the utmost care, on superfine  
paper, with new, legible type, and is embellished with the dis-  
tinction. As the binding is elegant and of the best quality, they  
will be found admirably adapted for Presents or School Prizes.  
The prices vary according to size: 1s. 6d. and 2s. embossed  
cloth, ornamented in gold; alk. 6d. calf extra, 1s. per volume ad-  
ditionally. Lists of the works already published, may be had of  
every Bookseller in the Kingdom.  
N.B. It is necessary to ask for Tilt's Editions, as the popularity  
of this series has called into existence a variety of spurious imita-  
tions, got up in an inferior style.  
Charles Tilt, Fleet Street.

8 St. James's Square, May 20.  
**SECOND EDITION OF THE HON. MR. MURRAY'S  
NEW WORK,**

**A SUMMER IN THE PYRENEES,**  
is now ready.  
These volumes are quite a treasure. Indeed, since the publi-  
cation of Sir George's admirable "Tour through Germany in 1831," we  
do not remember to have met with any work combining, in any  
equal degree, the interesting with the useful."—*Sun.*  
Printed for John Macrone, St. James's Square.  
Of whom may be had, 2 vols. 8vo. fine Plates,  
**Germany in MDCCCXXXI.**  
"Mr. Strang, for fulness of information, and accuracy of re-  
mark, deserves to rank far before his more immediate competi-  
tors."—*Quarterly Review.*

**ROLLIN'S ANCIENT HISTORY.**  
Best edition, in 8 vols. 8vo. price 3l. 14s. boards, with Maps and  
other Engravings, a new edition, carefully corrected, of  
**THE ANCIENT HISTORY of the  
EGYPTIANS, CARTHAGINIANS, ASSYRIANS,  
BABYLONIANS, MEDES and PERSIANS, MACEDO-  
NIANS, and GRECIANS.**

Craddock; J. Bohn; Hatchard and Son; J. Booker; Hamilton  
and Co.; J. Duncan; Whittaker and Co.; J. Bly; Allen and  
Co.; T. and W. Boone; Simpkin and Co.; J. Bain; Nisbet and  
Co.; J. Dowling; E. Hodgson; T. Beman; J. Templeman;  
W. J. and J. Maynard; J. Capet; Smith, Elder and Co.;  
Houlston and Son; also, for J. and J. Deighton, Cambridge;  
Wilson and Sons, York; G. and J. Robinson, Liverpool; and A.  
Black, Edinburgh.

In 18mo. price 2s. 6d. half-bound, the 3d edition of  
**A PLAIN and SHORT HISTORY of  
ENGLAND, for Children:** In Letters from a Father to  
his Son. With a Set of Questions at the end of each Letter.  
By the Editor of "The Cottager's Monthly Visitor."  
Printed for J. G. and F. Rivington, St. Paul's Churchyard,  
and Waterloo Place, Pall Mall.

New edition, illustrated by numerous Woodcuts, in the highest  
style of the Art, by Baxter, in 3 vols. half morocco cloth,  
price 24s.

**OUR VILLAGE.**  
Sketches of Rural Character and Scenery.  
By MARY RUSSELL MITFORD.  
"It is quite a treat to have a new and complete edition  
of this garland of native flowers."—*Literary Gazette.*  
Whittaker and Co., Ave Maria Lane.

Just published, Volume the Second of

## V.

Strafford; a Historical Tragedy, in Five Acts.

By Robert Browning, Author of "Paracelsus." "This is the work of a writer who is capable of achieving the highest objects and triumphs of dramatic literature.... It seems to us that nothing could be more masterly than Mr. Browning's sketches of the leaders of the independent party: Pym and the younger Vane are wonderfully exact delineations. The very faces of the men are before us as we read."—*Examiner*.

## VI.

The Cultivation of the Grape-Vine on Open Walls.

By Clement Hoare.

New edition, with Additions, 8vo. price 7s. 6d.

"Mr. Hoare has thrown more light on the subject of vine culture, than any British Gardener who has written on the subject."—*London's Gardener's Magazine*."One of the best productions upon any horticultural subject which has been published for some years."—*Athenaeum*.

## VII.

Attila; a Romance.

By G. P. R. JAMES, Esq.

Author of "The Gipsy," "Mary of Burgundy," "Darnley," "Richelieu," &amp;c. &amp;c.

"In this production, which displays to great advantage all the excellences of the writer, we have his research, his descriptive powers, his style, his identification of character, his poetry, his historical accuracy, and his actual presentation of remote times, mingled with all the interest of a well-conceived and finely executed story."—*Literary Gazette*.

## VIII.

The Sacred History of the World.

By Sharon Turner, Esq. F.R.S. and R.A.S.L.

The Third and concluding Volume. 8vo. 14s.

## IX.

A Philosophical and Practical View of the Social Bearings of Education.

With Historical Illustrations of its Power, exemplifying the Wisdom of an early Formation of Character.

By J. Antrobus.

"Mr. Antrobus's essays deserve great attention, on account of the principles they so ably maintain; while his historical illustrations will be found to bear with strong interest on his graver arguments."—*Literary Gazette*.

In 8vo. price 10s. cloth.

A POPULAR MANUAL of the ART of PRESERVING HEALTH; embracing the subjects of Diet, Air, Exercise, Gymnastics, General and Physical Education, Occupations, Bathing, Clothing, Ventilation, &amp;c. Designed for the use of all ranks and professions in society.

## REVIEW OF NEW BOOKS.

*The City of the Sultan; and Domestic Manners of the Turks in 1836.* By Miss Pardoe, author of "Traits and Traditions of Portugal." 2 vols. 8vo. London, 1837. Colburn.

SINCE Lady Mary Wortley Montagu, except the modest and interesting production of Miss Walsh, we have had nothing of female observation upon the manners of Turkey; and were, therefore, prepared to welcome these volumes as agreeable accessions to our information upon a subject always of considerable interest, and now much enhanced by the curious transition state through which the Ottoman empire is at present passing. From Miss Pardoe, also, we had ground for expecting a pleasant performance of the task she had undertaken. In neither anticipation have we been entirely gratified, nor entirely disappointed. There is much to amuse and inform us in these volumes; but they lack spirit and condensation. The style is very ambitious; and there is a semblance of book-making in the prolix accounts of many things already quite familiar to the world. In our opinion, there might have been one excellent volume made of the materials; the outspreading of which has deteriorated the whole. Our extracts, however, will shew that there are many parts of considerable talent and attraction; and thus, though we cannot praise so highly as we wished, we have no cause to condemn aught but the faults to which we have alluded; viz., a style too florid, and a dwelling on well-known and familiar commonplaces.

Coming from the pen of a lady who enjoyed opportunities for observing her sex in Constantinople, such as male writers could not attain, we shall chiefly direct our attention to sketches connected therewith. Speaking of the inhabitants of the harem, Miss P. says:

"Their habits are, generally speaking, most luxurious and indolent, if I except their custom of early rising, which, did they occupy themselves in any useful manner, would be undoubtedly very commendable; but, as they only add, by these means, two or three hours of *ennui* to each day, I am at a loss how to classify it. Their time is spent in dressing themselves, and varying the position of their ornaments; in the bath; and in sleep, which they appear to have as entirely at their beck as a draught of water; in winter, they have but to nestle under the coverings of the tandoor, or in summer, to bury themselves among their cushions, and in five minutes they are in the land of dreams. Indeed, so extraordinarily are they gifted in this respect, that they not unfrequently engage their guests to take a nap, with the same *sang froid* with which an European lady would invite her friends to take a walk. Habits of industry have, however, made their way, in many instances, even into the harem; the changes without have influenced the pursuits and feelings of the women; and utter idleness has already ceased to be a necessary attribute to the high-bred Turkish female."

Our next quotation affords but a poor idea of the sultan; and puts him in a light very different from that in which we have been accustomed to behold him. We do not know how

far the writer's information can be depended upon.

"As in Japan, the popular belief is firm that the king never dies, so in Turkey, the sovereign is never permitted to imagine that he can grow old; and thus every officer of the household stains his hair and beard, and uses all the means with which art or invention can supply him, in order that no intrusive symptom of age or decay may shock the nerves, and awaken the regrets, of his lord and contemporary: the faded beauties of the seraglio are removed from his sight, the past is seldom adverted to, and the future is considered as his sure and undoubted heritage. Never did monarch lend himself to the delicious cheat more lovingly than Sultan Mahmoud; who, with all his energy of character, is the victim (for in his case I can apply no other term) of the most consummate personal vanity. We are accustomed in England to think of George the Fourth as the *ne plus ultra* of exquisites, the prince of *petit-maitres*; but what will honest John Bull say to a Turkish emperor, an imperial Mussulmaun, who paints white and red, and who considers himself sufficiently repaid for all the care and anxiety of a costly toilette, by the admiration and flattery of the ladies of the seraglio? And yet, such is the case; the immolator of the janissaries, the reformer of a mighty empire, the sovereign of the gravest people upon earth, is a very 'thing of shreds and patches,' a consumer of cosmetics, an idolator of gauds and toys, the sacrificing high-priest at the altar of self-adornment."

The following embraces a number of interesting traits:

"The Turk decorates the roof of his house, the prow of his caïque, the cap of his child, the neck of his horse, and the cage of his bird, with charms against the Evil Eye; one of the most powerful of these antidotes being garlic: and it must be conceded that, here at least, the workers of wo have shewn their taste. Every hovel has its head of garlic suspended by a string; and bouquets of flowers formed of spices, amid which this noxious root is nestled, are sent as presents to the mother of a newborn infant, as a safeguard both to herself and her little one. A blue eye is supereminently suspicious, for they have an idea that such is the legitimate colour of the evil orb: and you seldom see a horse, or a draught ox, or even a donkey, which has not about its neck a string of blue beads, to preserve it from the dark deeds of witchcraft. I was considerably amused on one occasion, when, being about to meet the carriage of a friend, the horse that drew it, either from idleness or caprice, suddenly stood still, and arabahje exclaimed with vehemence to his mistress, 'You see, madam, you see that the horse is struck—the new Hanoum has blue eyes!' turning his own on me as he spoke, with a most unloving expression. I am perfectly convinced that, had the animal met with any misfortune, or been guilty of any misdeed, during the remainder of the day, the whole blame would have inevitably been visited on my unlucky eyes, which had counteracted the effect of a row of glass beads, and a crescent of bone! To protect the reigning sultan from the power of the Evil Eye during his state pro-

gresses through the streets of the capital, a peculiar head-dress was invented for the imperial body-pages, whose ornamented plumes were of such large dimensions as, collectively, to form a screen about his sacred person. Even Sultan Mahmoud, who is superior to many of the popular prejudices, has just caused a firman to be published, prohibiting the women from looking earnestly at him as he passes them, on pain of—what think you, reader?—of subjecting their husbands or brothers to the *bastinado*! The Turkish laws are too gallant to condemn females to suffer this punishment in their own persons, and Mahmoud is consequently to be protected from the possibly fatal effects of the ladies' eyes, by their fears for their male relations. Another singular custom is that of pouring water where any one has fallen, to prevent a recurrence of the accident on the same spot, which is religiously observed by the lower orders; as well as flinging stones at the body of a decapitated criminal, in order to secure the dreams of the spectator from an intrusion of the ghastly object. No Turk of the lower ranks of society ever passes a shred of paper which may chance to lie upon his path: he always gathers it up with the greatest care, as the popular belief leads him to place implicit faith in an ancient superstition, that all paper thus obtained will be collected after death, and scattered over the burning soil through which he is to pass to paradise; and that, consequently, the more he is enabled to secure, the less suffering he will have to endure hereafter. A most extraordinary fact came to my knowledge a short time before I left the East, relative to the female Arabs of the harem. They have a species of society, or institution—I scarcely know how to term it—in which they are initiated from their girlhood, that they call 'babaluk,' whose principle of mystery is kept as secret as that of freemasonry; while the occasional display of its influence is wild and startling enough to remind the spectator of the priestesses of Delphi. Far from affecting any concealment of their participation in the pretended powers of the society, you cannot, when a guest in the harem, please an initiated Arab more surely than by inquiring if she be a babaluk; and the Turkish ladies frequently amuse themselves and their visitors, by exhibiting their black slaves while under the influence of their self-excited frenzy. When a sable Pythoness is informed of the wish of her mistress, she collects such of her companions as are babalukes, for there are sometimes several in the same harem, and a brazier of burning charcoal is placed in the centre of the saloon in which the ceremony is to take place. Round this brazier the Arabs squat down, and commence a low, wild chant, which they take up at intervals from the lips of each other; and then break into a chorus, that ultimately dies away in a wail, succeeded by a long silence, during whose continuance they rock their bodies backwards and forwards, and never raise their eyes from the earth. From the moment in which the chant commences, an attendant is constantly employed in feeding the fire with aloes, incense, musk, and every species of intoxicating perfume.

After a time, they fall on the floor in a state of utter insensibility, and great exertion is frequently necessary to arouse them from their trance; but, when once they are awakened, they become furious; they rend themselves, and each other; they tear their hair and their clothing; they howl like wild beasts; and they cry earnestly for food, while they reject all that is offered except brandy and raw meat, both of which they destroy in great quantities. Having satisfied their hunger, they renew the warfare that they had discontinued to indulge in, and, finally, roll on the floor with bloodshot eyeballs, and foaming at the mouth. A second trance ultimately seizes them, from which they are left to recover alone; fresh perfumes being flung into the brazier to expedite their restoration, which generally takes place in ten or fifteen minutes; and then it is that the spell of prophecy is on them. They rise slowly and majestically from the floor; they wave their hands solemnly over the aromatic flame; they have become suddenly subdued and gentle; and, after having made the circuit of the brazier several times in silence, they gaze coldly round the circle, until, fixing upon some particular individual, they commence shadowing forth her fate, past, present, and to come; and I have heard it seriously asserted, that they have thus divulged the most secret events of by-gone years, as well as prophesying those which subsequently took place. It is scarcely wonderful, even disgusting as a great portion of the ceremonial undoubtedly is, that many of the Turkish ladies occasionally relieve the tedium of the harem by the exhibition of the *babaluk*; that vague yearning to pry into futurity so inherent in our nature, coupled with the uncertainty on whom the spell of the sibyl may be cast, causes an excitement which forms an agreeable contrast from their customary *enui*. No second fate is ever foretold at the same orgies. When the first *babaluk* begins to speak, the others sink down into a sitting posture, occasionally enforcing her assertions by repeating the last words of any remarkable sentence in a long, low wail; and, when she ceases and takes her place among them, they are for the third time overtaken by a trance: the brazier is then removed, the spectators leave the room, the door is carefully closed, and the *babaluks* are left to awaken at their leisure. When they finally come forth, they resume their customary avocations, without making the slightest allusion to the extraordinary scene in which they have been actors; nor do they like the subject to be mentioned to them until several days have elapsed."

Our countrywoman having met a gallant Turk, who agreed to accompany her on the dangerous exploit of a disguised visit to the mosque of St. Sophia, we have a dashing account of the adventure.

"If we escape from St. Sophia unsuspected," said my chivalrous friend, "we will then make another bold attempt; we will visit the mosque of Sultan Achmet; and as this is a high festival, if you risk the adventure, you will have done what no Infidel has ever yet dared to do; but I forewarn you that, should you be discovered, and fail to make your escape on the instant, you will be torn to pieces." This assertion somewhat staggered me, and for an instant my woman-spirit quailed; I contented myself, however, with briefly replying, "When we leave St. Sophia, we will talk of this," and continued to walk beside him in silence. At length we entered the spacious court of the mosque; and as the servants stooped to withdraw my shoes, the *hey* murmured in my ear,—

"Be firm, or you are lost!" and, making a strong effort to subdue the feeling of mingled awe and fear, which was rapidly stealing over me, I pulled the *fer* deeper upon my eye-brows, and obeyed. On passing the threshold, I found myself in a covered peristyle, whose gigantic columns of granite are partially sunk in the wall of which they form a part; the floor was covered with fine matting, and the coloured lamps, which were suspended in festoons from the lofty ceiling, shed a broad light on all the surrounding objects. In most of the recesses formed by the pillars, beggars were crouched down, holding in front of them their little metal basins, to receive the *paras* of the charitable; while servants lounged to and fro, or squatted in groups upon the matting, awaiting the egress of their employers. As I looked around me, our own attendant moved forward, and, raising the curtain which veiled a double door of bronze, situated at mid-length of the peristyle, I involuntarily shrank back before the blaze of light that burst upon me. Far as the eye could reach upwards, circles of coloured fire, appearing as if suspended in mid-air, designed the form of the stupendous dome; while, beneath, devices of every shape and colour were formed by myriads of lamps of various hues: the imperial closet, situated opposite to the pulpit, was one blaze of refulgence, and its gilded lattices flashed back the brilliancy, till it looked like a gigantic meteor! As I stood a few paces within the doorway, I could not distinguish the limits of the edifice; I looked forward—upward—to the right hand, and to the left—but I could only take in a given space, covered with human beings, kneeling in regular lines, and at a certain signal bowing their turbaned heads to the earth, as if one soul and one impulse animated the whole congregation; while the shrill chanting of the choir pealed through the vast pile, and died away in lengthened cadences among the tall dark pillars which support it. And this was St. Sophia! To me it seemed like a creation of enchantment: the light; the ringing voices; the mysterious extent, which baffled the earnestness of my gaze; the ten thousand turbaned Moslems, all kneeling with their faces turned towards Mecca, and, at intervals, laying their foreheads to the earth; the bright and various colours of the dresses; and the rich and glowing tints of the carpets that veiled the marble floor—all conspired to form a scene of such unearthly magnificence, that I felt as though there could be no reality in what I looked on, but that, at some sudden signal, the towering columns would fail to support the vault of light above them, and all would become void. I had forgotten every thing in the mere exercise of vision: the danger of detection; the flight of time; almost my own identity—when my companion uttered the single word '*Gel, Come*;' and, passing forward to another door on the opposite side of the building, I instinctively followed him, and once more found myself in the court. What a long breath I drew, as the cold air swept across my forehead! I felt like one who has suddenly stepped beyond the circle of an enchanter, and dissolved the spell of some mighty magic. 'Whither shall we now bend our way?' asked my companion, as we resumed our shoes. 'To Sultan Achmet,' I answered briefly. I could not have bestowed many words on my best friend at that moment; the very effort at speech was painful. In ten minutes more, we stood before the mosque of Sultan Achmet, and ascending the noble flight of steps which lead to the principal entrance, we again cast off our shoes, and entered the temple. Infinitely less vast than St. Sophia, this mosque

impressed me with a feeling of awe, much greater than that which I had experienced in visiting its more stately neighbour. Four colossal pillars of marble, five or six feet in circumference, support the dome, and these were wreathed with lamps even to the summit; while the number of lights suspended from the ceiling gave the whole edifice the appearance of a space overlung with stars. We entered at a propitious moment, for the Faithful were performing their prostrations, and had consequently no time to speculate on our appearance. The chanting was wilder and shriller than that which I had just heard at St. Sophia; it sounded to me, in fact, more like the delirious outcry which we may suppose to have been uttered by a band of Delphic priestesses than the voices of a choir of uninspired human beings. We passed onward over the yielding carpets, which returned no sound beneath our footsteps: and there was something strangely supernatural in the spectacle of several human beings moving along, without creating a single echo in the vast space they traversed. We paused an instant beside the marble-arched platform, on which the muezzin was performing his prostrations to the shrill cry of the choir; we lingered another, to take a last look at the kneeling thousands who were absorbed in their devotions; and then, rapidly descending into the court, my companion uttered a hasty congratulation on the successful issue of our bold adventure, to which I responded a most heartfelt '*Amen*'—and in less than an hour, I cast off my *fer* and my pelisse in the harem of—Effendi, and exclaimed to its astonished inmates,—'I have seen the mosques!' Knowing what I now know of the Turks, I would not run the same risk a second time, though the Prophet's beard were to be my recompense. There are some circumstances in which ignorance of the extent of the danger is its best antidote. But the feeling that remained on my mind was vague, even to pain. I had seen St. Sophia, it is true, and seen it in all the glory of its million lamps; I had beheld it at a moment when no Christian eye had ever heretofore looked on it; and when detection would have involved instant destruction. I had lifted aside the veil from the Holy of Holies, witnessed the prostration which followed the thrilling cry of '*Allah Il Allah!*' and polluted, with the breath of a Giaour, the atmosphere of the true believers; I had looked upon the Cheik-islam, as he stood with his face turned Mecca-ward, his pale brow circled with gold, and his stately figure draped in white cachemere; and I had stood erect when every head was bowed, and every knee bent at the name of the Prophet."

Miss Pardoe was allowed to inspect the same place at a later period; but we shall conclude with only one further notice of the subject.

"The two huge waxen candles occupying the sides of the arched recess, or *mihrab*, at the eastern end of the building, are lighted every night, and last exactly twelve months; they are the very Gog and Magog of wax-chandlery, and must be at least eighteen inches in circumference. In making the tour of the gallery, we came upon a door that had been stopped with masonry; the frame into which it had originally fitted is of white marble, and remains quite perfect. There are traces of violence on the brick-work, which appears to have been secured by some powerful cement that has indurated with age, until it has acquired the solidity of stone, and has become capable of resisting any ordinary effort to remove it; and this door is the second miracle of St.

Sophia. The legend runs, that the united attempts of all the masons of Stamboul are powerless against the rude masonry that blocks the entrance of this passage, by reason of a wondrous and most potent talisman, which human means have as yet failed to weaken; but that it conducts to an apartment in which a Greek bishop is seated before a reading-desk perusing an open volume of so holy a nature, that no Moslem eye must ever rest upon it. Nor does the tradition end here, for both the Turks and Greeks have a firm faith in the prophecies which have been made, that St. Sophia will one day revert to the Christians, on which occasion the walled-up bishop will emerge from his concealment, and chant a solemn high mass at the great altar."

Some pretty poems, some engravings, and some Turkish legends lend variety to the work; and, taken altogether, it may be considered to give a fair view of Turkish habits and society.

*England; with Sketches of Society in the Metropolis.* By J. Fenimore Cooper, Esq. 3 vols. 12mo. London, 1837. Bentley.

THOUGH before Mr. Willis in point of time — for these volumes refer to some nine years ago — Mr. Cooper is behind him in public appearance. In several common respects the works are pretty similar. Both "strangers" were admitted to good and high society in England, and both have related the impressions made upon them, as men of different calibre of mind and views of life might be expected to do. Such productions are almost always entertaining; for people like to hear what is thought of their betters, or said of their neighbours.

Mr. Cooper, on leaving Paris, is told, "You are going from a town where there is little company and much society, to one where there is no society and much company;" but his account of his London visits do not justify the charge. On the contrary, he seems to have been very fortunate in most of his associations: yet his statements often dwell on the ridiculous features. Thus, being a guest at Holland House, he tells:

"During dinner, as the stranger, I had the honour of a seat next to Lady Holland. She offered me a plate of herrings between the courses. Being in conversation at the moment, I declined it, as I should not have done, according to strict etiquette, especially as it was offered by the mistress of the house. But my rule is the modern one of pleasing one's self on such occasions; besides, I never suspected the magnitude of the interest involved in the affair. 'You do not know what you say,' she good-humouredly added, 'they are Dutch.' I believe I stared at this, coming as it did from the mistress of a table so simply elegant and so *recherchée*. 'Dutch!' I involuntarily repeated, though I believe I looked at the same time as if it was a herring after all. 'Certainly, we can only get them through an ambassador.' What a luxury would a potato become, if we could contrive to make it contraband! I shall hold a Dutch herring in greater respect as long as I live. Unluckily there is nothing prohibited in America, and it is a capital oversight in graduating our comforts, it is such a pleasure to sin! I believe I got out of the difficulty by saying there were too many good things of native production, to require a voyage to Holland on my account. Still I frankly avow I ought to have eaten one, even to the fins and tail. From some such feeling as this, has probably come the old saying of 'fish, flesh, and red-herring.' There

are a thousand things in life which will not stand the test of philosophical inquiry, but on which no small part of our daily enjoyments depend. I have mentioned this little anecdote, not because it is particularly pertinent to the house in which I was dining, which would be particularly impertinent in me, but, because I think it illustrative of a principle that pervades the whole structure of English society. Things appear to me to be more than usually estimated here, by the difficulty there may be in attaining them, and less than usual by their intrinsic value. In citing such examples, one is always obliged to keep a salvo for poor human nature (and why Æsop made the animal in the manger a dog, I never could discover); but, apart from this, England is singularly a begrudging country. Every thing is appreciated by its price. They have an expression always in their mouths that is pregnant of meaning, and which I fancy was never heard anywhere else. They say a thing is 'ridiculously cheap.' Now when one becomes ridiculous from buying a thing at a low price, common sense is in a bad way. This is one of the weaknesses of man from which we are more than usually exempt, and I believe that with us, free trade may boast of having done more on this point than on any other. I was asked by the mistress of this house where I had learned to speak so good English: this surprising me quite as much as the herring! The old nobleman I have mentioned, had the civility to offer to take me to town in his chariot; and I was safely deposited in St. James's Place, about ten. As Lord Holland is a man of mark, it may be well if I add that he had an air of great benevolence, and that there were much nature and *bonhomie* in his manner. I thought his feeling towards America kind, and his disposition to speak of it stronger than usual. His wife is possessed of some property in New York, and he complained a little of the squatters; the land, he told me, lying on the Genessee, in Connecticut. You may judge from this single circumstance how much attention we attract, when a man made this mistake about his own property. The day may not be distant when lands in either Connecticut, or New York, will more avail his heir than the lawn before Holland House. Reform must move fast in England, or it will be overtaken by revolution. Sir James M'Intosh pithily observed, that he supposed 'there was about the same danger of finding a squatter in Connecticut, as there would be of finding one in the county of Kent.' He is the only man I have yet met in England who appears to have any clear and defined notions of us. They will not acquire this knowledge, simply because they do not wish to acquire it, until we bear hard on some of their interests, political or pecuniary, and then light will pour in upon them in a flood, as the sun succeeds the dawn. That day is not distant. After the herring, and before the dessert, a page, attired in a very suspicious manner, entered with a regular censor, such as is used before the altar, smoking with frankincense, and, swinging it about, he perfumed the room. I thought this savoured a little of 'Protestant emancipation.'"

At another aristocratic party, he thus describes two of the visitors:

"Both the bishop and the physician had a precise and potent manner with them, that shewed how broad is the separation between castes and the professions in this country.

'Mon tailleur m'a dit que les gens de qualité étoient comme cela le matin.'

We were about to take our seats, when the

bishop, who was on my left hand, bent over the table and uttered a sound that was singularly like that made by a hound gaping. He then commenced an apology to Lady —, who, in her turn, apologised to him, saying, 'You were quite right, my lord.' To my surprise, I learned the divine had been saying grace!"

We shall assume, that these slight extracts may serve to guide our readers to the spirit of the publication, and conclude with one very absurd and one amusing quotation: the first, relating to the usages in knocking at London doors; the other, to a court anecdote.

"A dozen uoblemen may have laid their own patrician hands on my knocker, within a fortnight. As I use the dining-room to write in, I am within fifteen feet of the street door, and no favour of this sort escapes my ears. Ridiculous as it may seem, there is a species of etiquette established, by which a peer shall knock louder than a commoner! I do not mean to tell you that parliament has passed a law to that effect, but I do mean to say, that so accurate has my ear become, that I know a lord by his knock, as one would know Velluti by his touch. Now a loud knock may be sometimes useful as a hint to a loitering servant, but it was a queer thought to make it a test of station.

"A Scotch officer, of no very extraordinary merit, but who had risen to high employments by personal assiduity and the arts of a courtier, was in the presence of George III. at Windsor, in company with one or two others, at a moment when ceremony was banished. That simple-minded and well-meaning monarch was a little apt to admit of tangents in the discourse, and he suddenly exclaimed, 'D——, it appears to me that you and I are just of a height: let's measure—let's measure.' The general placed his back to that of the king; but, instead of submitting to the process of measurement, he kept moving his head in a way to prevent it. Another tangent drew the king off, and he left the room. 'Why didn't you stand still, and let him measure, D——?' asked a looker on:—'you kept bobbing your head so, he could do nothing.' 'Well, I didn't know whether he wanted to be taller or shorter!'"

*A Practical Treatise on the Law of Trusts and Trustees.* By Thomas Lewin, Esq. of Lincoln's Inn, Barrister-at-Law. Large 8vo. pp. 789. London, 1837. A. Maxwell.

THE public has just been presented, for the first time, with a complete and systematic treatise upon the law of trusts. This subject is intimately blended with all our social relations. Few men pass through life so isolated, or so useless, as not to be called upon to exercise the important offices of affection and friendship. The duties of trustee, or executor, or administrator, or guardian, are far too responsible to be objects of attraction; but so long as the fabric of society holds together, every man, in his turn, must lend that assistance to his fellow men by which he has been himself benefited, and which it will some day be his own lot to need at the hands of another: and we presume, that all will gladly avail themselves of such knowledge as is necessarily required for the faithful discharge of duties which none can entirely avoid. Who, upon the marriage of some valued friend, can wish to belie his fidelity by resisting his entreaty to become the trustee of the settlement? Who can refuse to administer the estate of a deceased friend for the benefit of his family? It has long been

our wonder that, where information must be so generally wanted—where a mistaken line of conduct must lead to such irreparable consequences, no master-hand has hitherto been found to clear away the clouds of the law upon this subject, and expound to trustees, in plain and perspicuous language, what course they may pursue with safety to themselves, while they are *honestly* endeavouring to further the interests of others. But, in fact, a good treatise upon law requires no ordinary combination of talents. To extract a sound principle, it is often necessary to charge the memory with a score of conflicting cases at once, in order to trace their minute distinctions with ingenuity and judgment. What patience and what labour must be exhausted upon the perusal of so many hundred authorities as enter into the composition of a standard work! Mr. Lewin, we observe, has referred to about 1800 cases, of which each, upon an average, is cited *twice*; and it must be a very clear perception that can master all the circumstances of an involved statement upon a single perusal. No wonder, then, that a good law-book is so rare a production. Few have the ability and the assiduity *united*, to work out a system from so heterogeneous a mass of black-letter precedents. But, in the present case, the task has at length been accomplished; and we sincerely congratulate the author upon the termination of his arduous labours, and wish him, justly, those honours and wealth which his profession so bountifully heaps upon her few favourites. Among these, Mr. Lewin may justly hope from henceforth to be numbered.

The work is appropriately dedicated, with permission, to Sir E. B. Sugden; and every one must concur in the flattering, but not exaggerated eulogium, that the learned ex-chancellor is one "whose unrivalled legal attainments were long the ornament of the bar, and have lately shed a lustre upon the bench: that the profession is deeply indebted to him for his valuable writings, and the public for the judicious enactments that distinguished him as a legislator."

By way of introduction, the author has succinctly traced the whole history of trusts, from their first appearance in the reign of Richard II., down to the most recent improvements. We know not any number of pages comprising so much matter in so small a compass, at the same time that clearness and precision have been most admirably preserved. The body of the work is distributed into three parts: the first relates to the definition, classification, and creation of trusts; the second, to the estate and office of the trustee; and the third, to the rights of the person who has the beneficial interest in the trust. The most valuable portion of the work, and that on which the least information has hitherto been given, is undoubtedly the second part. The duties and powers of trustees are there stated, at the same time, with brevity and clearness; and we will venture to assert there is no person, professional or otherwise, who would not derive great benefit from a very careful perusal of that branch of the subject. To give some idea of the author's style, we shall quote, but not select, a paragraph from page 100, as containing some very sensible observations upon the subject of trustees, which both solicitors and clients will do well to consider.

"The number of the trustees is also a point very material to be considered; for, in most cases, the misapplication of the trust fund has arisen from want of due attention to this particular. A single trustee, whether originally

appointed such, or become so by survivorship, has the absolute and unlimited control over the property; and, should he become involved in difficulties, he is under a strong temptation to sustain his credit by resorting to a fund, of which he can, with certainty, possess himself, and without the fear of immediate detection. The fallacious hope of replacing the money before the day of payment arrives, has lulled the conscience of many, not the worst of mankind, when suffering under the pressure of poverty. There can be no objection to the appointment of a single trustee where, as in uses to bar dower, the trust reposed in him is merely a nominal confidence; but where the administration of the trust involves the receipt and custody of money, the safeguard of, at least, two trustees ought never to be dispensed with. And, on the death of one of the original trustees, no time should be lost in restoring the fund to its proper security, by the substitution of a new trustee; a precaution, it is feared, but too frequently neglected from motives of delicacy; the surviving trustee is sensitive, and conceives his honesty is called into question, and the *cestui que* trust (the person entitled to the property), often too ignorant of the world to see the necessity of taking precautions against fraud, are apt to suspect their legal adviser of a wish to create business at the expense of the estate. To guard against the constant recurrence of appointment of new trustees, it is common, at least where the property is considerable, to appoint four trustees originally; for then, on the decease of the first, or even a second, trustee, an immediate substitution is not very material, for, so long as the plural number remains, the necessary check is preserved. In the case of stock, it is a rule with the bank not to allow a fund to be transferred into the names of more than four joint proprietors."

In page 472 we find it laid down that a trustee may, at any time, retire from the office, by application to a court of equity, and that, "of course, where no misbehaviour is imputable to the trustee, the costs will be thrown upon the trust-fund." But is Mr. Lewin aware of the case of *Hamilton v. Fry*, 2 Moll. 458, where it is held, that if a trustee accept the office, he cannot retire without a special reason, except at the expense of his own pocket? And the same thing was decided the other day, in the case of *Howard v. Rhodes*, 1 Keene, 581. This we mention by way of suggestion, not of rebuke; as, in general, Mr. Lewin has brought up the cases, not only to the latest reports, but even to the day of publication; for we observe that he has given several from manuscript, and one or two of no little importance.

One great desideratum in a law book is facility of reference; and we think, from the perfect arrangement of the work before us, that the author has, on this point, been eminently successful. Besides the index of contents, systematically arranged at the beginning, we have a full index of contents, alphabetically arranged, at the end, and an index of cases. With such assistance at hand, it seems almost impossible for even a single proposition, throughout the volume, to escape the most superficial examination. Another object of paramount importance in a treatise abounding in references, is accuracy; and here the author appears to have spared no pains. We have submitted different parts of the work to a tolerably severe scrutiny, and we have been unable to discover any material error, and scarcely the most trifling one. We have little doubt, from the general care that has been bestowed upon

this treatise, from the ability and judgment with which the most difficult questions have been discussed and resolved, from the *lucidus ordo* that prevails through the whole work, the practitioner will find his labours abridged, and the public at large will meet with such a mass of intelligible law, that the necessity of consulting a professional adviser will, for the future, be greatly superseded.

#### *Standish's Shores of the Mediterranean.*

[Continued.]

It is a pleasure to return to this volume, to enrich our columns with a few more of its interesting extracts; and we cannot better begin than with the author's remarks on Sicily.

"*Sicula nimium ne crede puella*" has become a proverb; but wherefore, I am unable to determine. Inconstancy is the attribute of weak feminine nature. The restraints of Turkey, and the laws and reproaches of Europe, would fall innocuous on the sex, were they otherwise than varying in purpose; but that the Sicilians are more faithless than others, I am not prepared to admit. The French ladies have been accused of great volatility; but, let the English look at home, and other nations to their own fire-sides, and, perhaps, they may allow that women are pretty much the same every where. Here, as in all other countries (though a prejudice reigns against hot climates), the higher orders are sometimes lax in conduct from indulgence; and the lower profligate from want of money and want of education; yet nothing has struck me, since my arrival in the island, that denotes, generally, immoral conduct in its inhabitants. Many couples live happily and respectably, surrounded by their children, and enjoying the sweets of mutual confidence. The whole of the Sicilians are very fond of gestures, and, perhaps, no nation understands so well the mode of communicating by signs as they; a wink of the eye will almost, to their comprehensive understanding, express a sentence. I have heard it observed, that, when once offended, a Sicilian is slow to forgive: perhaps this may be true: he feels acutely, and, once wounded, time is required before the sore heals; revenge being no more than continued anger. An injurious word, or a slight affront, instantly raises the choler of a Palermitan to a degree which is wholly incomprehensible to the cold natives of the north. In the whole of my tour I have not seen a drunken man. The wines of the country are generally spirituous, and strong; perhaps the best are from Catania and Syracuse, although the *Marzala* has had the advantage of being most known to the foreign market. I confess, however, I prefer the productions of Spain, in this particular, to those of Sicily; and some Muscatel show wine which I tasted at Syracuse, did not strike me so good as what was offered me at Xeres, in Spain. The mode of farming is like that of the Egyptians, the antiquated custom of their forefathers. Florentine farmers have been introduced, by the more enlightened landowners, in order to cultivate estates, and improve, if they can, the scanty rent-rolls of the nobles. The horned cattle of the island are magnificent. The race-horses of *Agri-gentum*, in ancient times, were exported to carry away the prizes of Greece; but now the breed is altogether neglected. The mules are very fine, and not inferior to what I have seen in Spain. The soil suits every species of grain, except oats. The palm and the sugar-cane are scanty in appearance, because their culture has been neglected. The silver-mines did not repay

their proprietors for working. Sulphur offers, as may be supposed, a staple article of commerce in this volcanic country. The luxury and voluptuousness of the ancient inhabitants of the island have entirely disappeared; the 'Siculæ mense' now exist only as descriptions in history, while the cookery is similar to that of Italy. Macaroni is a favourite dish amongst all classes. A country so well supplied as this island is with meat, fruit, fish, and vegetables, must be naturally able to supply luxurious and ample food at a small cost; but the natives use these advantages as not abusing them; they are not excessive in their meals, and few would expend more than a few shillings for a repast, were their wealth even greater than it is. The traveller, used to the prices of Europe, will find himself served for a trifle in Sicily; that is, I mean, in the large towns. Of the arts and the artists, I can only say that the former are much neglected; the pay of the professors being almost always in arrear, and, in some cases, there being chairs named which do not exist; as in the instance of Arabic, at the university, of which language there is no master. As for the artists, Patania is the most popular modern one, in colours; and Pietro Novelli, the Morealese, the only ancient one, I confess, who pleases me. In sculpture, they have had Gagini, and now possess Villareale, a man, I may venture to say, worthy of a greater place in popular opinion than he holds. He was protected by Lord Bristol, and held the situation of statuary to Murat; but, at the change of political events, he was chained to Palermo, and compelled to languish in retirement, for the benefit of his native country, on a pitiful pension irregularly paid. He has not yet been paid the stipulated price of the late king's statue at Girgenti, which has been already seven years on its pedestal. The climate of Sicily is similar to that of Spain, though not so hot; it is between the thirty-sixth and the thirty-eighth degrees of latitude. At the period of my visit to the island, the seasons were, I am told, reversed, for we had stormy, cold weather on the 22nd of June, and I had often to complain, during my stay, of chill and damp evenings; this, too, at a period when the residents mostly cry out against the excessive heat. The gout, with which I am troubled, also haunted me perpetually, although the climate of Sicily is reckoned very favourable to that distressing complaint; and the late prince of Paterno, the last of his illustrious line, survived till ninety under its constant attacks. With what I have seen here I have been highly gratified; its remembrance will continue with me for ever. Long abandoned to idleness, I had never had the resolution to attempt this journey; those with whom I associated, more ignorant than myself, never pointed out its pleasures to me. Should I be able to stimulate others to the tour, I shall not consider my pen ill-exercised. They will gain certainly two things—health and information; and some, perhaps, a third—money, from economy exercised during the jaunt. They will meet no difficulties nor dangers. The lover of Grecian antiquities will find a large field for speculation; and the imagination can dwell with pleasure on as many spots in Sicily as in Greece itself. The country is more beautiful than the parent one; and, though the cloudless splendour of a Grecian sunset has always been the theme of poets, the Sicilian sky does not yield in beauty to any. Thousands are the glorious scenes which it presents to the imagination of the painter and the poet. On those sea-shores, fragrant with wild thyme and roses, and bathed

by the balmy warmth of the air, how often have I repeated the expression of Virgil—

'Carmina pastoris Siculi modulabor avenæ.'

The reed is here still an instrument of melody, and the natural one of the country at the present day. The dances of the peasants are accompanied with the primitive melody of a tambourine, and the pipe of Pan—in that respect differing from the custom of Spain, whose inhabitants adopt a guitar, although the two nations strongly resemble each other in their general habits and their usages.

"Amongst those who are skilled in the classic tongues, few can taste greater beauties in the original than in a translation. The pride of learned men, however, affirms the contrary; and all are willing to believe what is affirmed by the select; while the popular editions of ancient works, with collateral explanations, decide daily, in contradiction to what they would have believed. I confess, however, there is a pleasure in understanding the text, as well as the meaning, of such a poet as Homer, or the Greek tragedians; and, if our application of their words, or our estimation of their sentiments, may be sometimes erroneous, as we figure it to ourselves in perusal, the delusion under which we labour is at least a pleasing one, and preferable, perhaps, to the dry exactness of the grammarian, who dwells on syllables, and counts with rigour the exact construction of every sentence in a translation. The sylvan bard of antiquity, Theocritus, it is to be remembered, was a native of Sicily. I have not, in my tour, noted the plains of Enna, which are now lost and deserted. The lake of Proserpine is a fœtid marsh. The verdant bowers, the labyrinths of roses, and the enamelled meads on which Minerva, Diana, and Venus, according to the poets, wove the flowing garments of Jupiter, have all disappeared. Tradition alone points out where were the cave of Pluto, and the cradle of Ceres. Castrogiovanni, a modern town, with a population of twelve thousand inhabitants, occupies this former paradise, and its position is exactly in the centre of Sicily. These plains were once famous for beauty, but travellers will now seek it there in vain."

Of some of the feelings of the people, the following is an interesting trait:—

"The inhabitants of Palermo in particular, and the Sicilians in general, are desirous of remaining above ground as long as they can; and the vaults of the church of the Cappucini are filled with male and female remains of all for whom their friends have been able to procure admission, which was, however, easily obtained with money. The remains of the departed are confined in a chamber until the flesh has dried to the bones, which process requires a period of six months for completion. The skeleton is then dressed in the usual wearing apparel of the individual when alive, and placed in a niche of the wall, or an assigned situation in the long rows which occupy the sides of it. The males and females have different apartments allotted for their occupation, and the latter repose generally on beds or in coffins, whilst the males are placed erect. I saw also many trunks and boxes filled with dukes, generals, and ecclesiastics, all packed up for their long journey. The friars who have the management of the vaults, and belong to the church, live from charity, and yet contrive to feed many poor, and do much good, for sometimes nearly a thousand mendicants are daily fed with soup. These holy men thus worthily perform two duties; one of taking care

of the dead, and the other of providing for the wants of the living. In this monastic establishment of the Cappucini, I saw no good pictures; but at the entrance to the cemetery I observed the two copper-plates of the holy and sinful death-beds, which are Italian subjects, and which I have seen repeated in many places in Christian countries."

#### Earl's Eastern Seas.

[Conclusion.]

THE author's general remarks on the important island of Borneo will be read with interest.

"The island of Borneo bears the same relation to Eastern India that the continent of America bears to Europe; being a country in which the various tribes inhabiting the further east may find a refuge from religious persecution, or escape the disadvantages of over-population in the mother country. Thus, we find the coasts of the island to be inhabited by several nations totally unconnected with each other, governed by their own laws, and adopting their own peculiar manners and customs. The west coast is occupied by Malays and Chinese; the north-west coast, by the half-caste descendants of the Moors of Western India; the north part, by the Cochin Chinese; the north-east coast by the Sulus; and the east and south coasts, by the Bugis tribes of Celebes. In addition to these, there are no fewer than three distinct tribes, living in prahus, and wandering about the shores of the island: the Lanuns from Magindano; and the Orang-Badju and Orang-Tidong, source unknown. Except on a few spots on the north-west coast, where the Dyaks are to be met with near the sea, the aboriginal tribes have all retired into the interior. If an opinion may be formed of the capabilities of the unknown parts of Borneo, from those of the western portion of the island, it would appear that no country in the world can compete with it; since the districts occupied by the Dutch and the Chinese, in addition to the possession of a soil which vies in richness with that of any other island in the Archipelago, contain inexhaustible mines of gold and diamonds, which are so easily wrought, that the inhabitants are enabled to procure considerable quantities of both, with the most inefficient instruments."

"Their food consists chiefly of rice and fish; and as the latter can rarely be consumed in a fresh state, large quantities of salt are necessary for the cure in so warm a climate. With respect to the supply of salt, the interior of Borneo, like Africa, is dependent upon the frontier for the supply. The salt must be brought from the sea-coast, and the further it is taken into the interior, the more it increases in value; so much so, that at a Dyak town two hundred miles above Sambas, a measure of salt is exchanged for twenty times the quantity of rice. In the wilder parts of the island, cakes of salt, made by burning sea-weed, are used by the Dyaks in lieu of coin as a currency."

"The iron which is obtained in the interior is said to be valued by many of the wilder Dyaks, even more than gold; indeed, the latter is only sought for as the means of procuring foreign articles, for which they have acquired a taste. The iron must either be of an excellent quality, or the Dyaks have discovered a method of tempering it, which sets at defiance the competition of more civilised nations. I have heard of musket-barrels having been cut in two by a single blow of one of their swords, together with other tales, illustrative of their wonderful temper; and, from what I have personally witnessed, I am inclined to

give perfect credence to them. To test the capabilities of these weapons, I cut a twopenny nail in two; and although the temper of the one employed was considered as rather inferior, the edge was not in the least turned or injured. The blades of their swords are about two feet long, slightly curved, broad at the end, and bear a great resemblance to Turkish cimeters. They can only be used in cutting; being, in this respect, dissimilar to the favourite weapon of the Malays, the *kris*, which is intended for stabbing alone, and therefore perfectly useless as a cutting instrument.

"Concerning the religion of those Dyaks who have not been converted to Mahomedanism, I was enabled to discover that they believed in a Supreme Being, and in the existence of a future state. Some reverence is paid to deer, and great respect is shewn towards a black bird, resembling a magpie, which is considered to be an evil spirit; but that portion of their creed which obtains the greatest influence over their mode of life, arises from a supposition which they entertain, that the owner of every human head which they can procure will serve them in the next world. The system of human sacrifice is, upon this account, carried to so great an extent, that it totally surpasses that which is practised by the Battas of Sumatra, or, I believe, by any people yet known. A man cannot marry until he has procured a human head; and he who is in possession of several, may be distinguished by his proud and lofty bearing; for the greater number of heads which a man has obtained, the greater will be his rank in the next world: and this opinion naturally induces his associates to consider him entitled to superior consideration upon earth. A man of consequence cannot be inhumed until a human head has been procured by his friends; and, at the conclusion of peace between two tribes, the chief of each presents a prisoner to the other, to be sacrificed on the spot. The loss of human life occasioned by these latter-named ceremonies, falls far short of that which is produced by the necessity of obtaining a human head to grace the marriage rite,—a necessity which tands so strongly to check the increase of population, that had the lawgiver who introduced it, apprehended that the island would speedily become too thickly inhabited, he could not have hit upon a more efficacious mode of prevention; since, had the bachelors been permitted to cut off the heads of persons belonging to their own tribe, instead of being obliged to confine their aggressions to strangers, the entire population of the island must eventually have been exterminated.

"The Dyaks are apparently of the same race as the Battas of Sumatra, the Laos of continental India, and the Arafuras of Celebes, Gilolo, New Guinea (the inland inhabitants), and of the other larger islands in the Archipelago; all of whom speak dialects of the same language, and among whom the system of human sacrifice also exists, but not to so great an extent as with the Dyaks of western Borneo. The Battas slay and eat prisoners of war and criminals; and the Arafuras, and the aborigines of the northern parts of Borneo, occasionally slay a human victim when they imagine the deity to be offended, the heads being invariably preserved, probably as records of the event."

"Although it is my object rather to shew the present state of the Dyaks, than to make any endeavour to trace their connexion with any other people, yet, as my remarks may induce some future traveller in Borneo to institute some inquiries into the subject, I cannot refrain from noticing the extraordinary and

almost perfect resemblance which the Dyaks bear to those aboriginal tribes in South America, which occupy a similar description of country; namely, those who are found on the banks of the great rivers in Guiana: indeed, more difficulty would be experienced in discovering the particulars in which they differ from each other, than in tracing the resemblance."

With these brief selections we must be satisfied; but the entire work is extremely well worth the public attention.

#### MISCELLANEOUS.

*The Works of Lord Byron.* Complete in one volume. With Notes by Moore, Jeffrey, Scott, Heber, Rogers, Wilson, Lockhart, Ellis, Campbell, Milman, &c. &c. 8vo. pp. 827, double columns. London, 1837. Murray.

It is hard to be taught such lessons of self-preservation; but, being taught, it is gratifying to see how gloriously they are met. The cheap continental piracies of Byron, and their importation into this country by travellers and smugglers, having compelled Mr. Murray to adopt some course to protect his important property in that author's works, he has here met, and beat the enemy on their own grounds. For beauty of type and paper, for clearness, neatness, accuracy, and cheapness, it would be in vain for any foreign publishers to attempt to contend against this handsome volume. Its appearance will effectually put a stop to the cruel invasion of copyright in, at least, one instance; and shew that it may be done in others, where honest principle does not operate to prevent spoliation and robbery, alike injurious to trade and literature.

*Memorials of Oxford.* Edited by the Rev. James Ingram, D.D.; the engravings by J. Le Keux, from Original Drawings by F. Mackenzie. No. L. Oxford, Parker; London, Tilt.

THE present No. completes this pleasing topographical work; to which, in its progress, we have repeatedly called the attention of our readers. It is justly said of it in the Preface: "Amidst the variety of works relating to Oxford, the present will be found to be of a distinct character from all preceding publications: being the only embellished work which combines the academical with the civil history of the place; traces to their origin the various establishments which have existed at different times; monastic, aularian, ecclesiastical, or collegiate; and unites, with illustrations of the most interesting vestiges of antiquity, all that is most necessary to be known respecting statistical, parochial, and municipal matters."

*Opinions of Lord Brougham, on Politics, Theology, Law, Science, Education, Literature, &c. &c. as exhibited in his Parliamentary and Legal Speeches, and Miscellaneous Writings.* Pp. 504. London, 1837. Colburn.

A MEDLEY selection from the multitude of sayings and writings which have proceeded from the comprehensive mind of Lord Brougham, upon almost every possible subject. Of course, there is much to admire, much to question, much to agree with, and much to dissent from, as the minds of other men are constituted. Altogether, however, the volume is a proud testimony to human intellect.

*The Works of Thomas Gray.* 4 vols. 12mo. London, 1837. Pickering.

THE public are much indebted to Mr. Pickering for this handsome, yet convenient edition, of *Gray's Works*. It is the most complete collection of his poems, and rescues his correspondence from the omissions and corruptions

of Mason, besides adding some interesting letters to the number previously published. Gray was a quiet and retiring man, and, consequently, did not shine in those contemporary writings which bestow so much notice, as almost to make it fame, upon some of his contemporaries. He is, therefore, only to be studied and known in a production like this, for which we again express the cordial public thanks to the editor and publisher. It will long be an ornament to every library of English literature.

*Memoirs, Correspondence, and Manuscripts of General Lafayette.* Published by his Family. 3 vols. 8vo. London, 1837. Saunders and Otley.

LAFAYETTE is so essentially a historical character, that, though the public has had much of him before in a hundred shapes, and a great deal of what is contained in these volumes; yet it is desirable for the politician and statesman, as well as for observant readers of every class, to have the whole in a more complete and perfect form. Such is presented in the present work; into the various features of which we need not enter, but merely notice, that the additions are considerable, and, as coming from the general's family, may, of course, be considered authentic.

*Mémoires, &c. du Général Lafayette.* 3 vols. 8vo. Paris, H. Fournier, aîné; Londres, Saunders and Otley.

THE French edition of the foregoing work.

*Select Notes of the Preaching of the late Rev. Rowland Hill, A.M., by the Rev. E. Sidney, A.M.* 12mo. pp. 245. (London, Baldwin and Cradock; Norwich, Fletcher.)—"Such delight do I feel in my work (said Rowland Hill), that I could almost wish there might be preaching in heaven." Without entering upon the polemics of this little volume, we will merely say, that it exhibits some striking examples of that oratory which might prompt the wish in the foregoing quotation. "How defective are we in the most essential points, wherein we ought to serve the Lord! For myself, I cannot say that I do not strive, yet I feel like a bird who would mount higher, but his wings refuse to bear him up. I compare myself to the little lark that rises with the morning sun, and sings his lovely song aloft in the sky, but soon falls down to earth with an appearance of dissatisfaction that he can soar no higher. \* \* \* It is not the knowledge in man's head, but the grace in his heart, that makes his conduct to be wise and good. \* \* \* When I look into God's wisdom, I find it is concealed from me. I might as well attempt with outstretched arms to embrace the universe, as with my puny mind to conceive the infinite wisdom of my God. I might as well stand before the sun, and say I will take in all its beams to myself, as to say that I can imagine all the light of the divine intelligence. Yet the sun shines upon me, and gives me as much of his light as I want. \* \* \* You need not teach the bird how to fly, or the fish to swim; each has its own element, and delights to move therein. The element of a Christian is holiness; the people of God dwell therein, and it is as an atmosphere which gloriously surrounds them. \* \* \* Man, by a fatal partiality to himself, is unwilling to acknowledge that he has an evil heart; and is so unconcerned about his state, that he does not desire deliverance from it. What a lethargy! I knew an aged lady once who was lethargic; and when her servant attempted to rouse her, she was angry. The servant remarked, 'I never knew my mistress to be angry when she was well; but now she is ill she is very irritable.' Take care of this awful state of spiritual lethargy. Tens of thousands have died, and have been, I fear, lost from it. It is a fatal sign, when the sinner is angry with those who would attempt to arouse him from his danger!" The preacher was often very happy even in his most familiar illustrations.

*Col. Crockett's Exploits and Adventures in Texas, &c.* Pp. 216. (London, Kennett.)—Under the colour of being a sequel to the "Memoirs of Col. Crockett, like the continuations of "Don Quixotte," "Gil Blas," "Tristram Shandy," &c., the object of this little volume is to give an American version of the war in Texas, replete with all the horrors of barbarous and savage atrocity.

*National Education*, by Osmond de Beauvoir Prieux. 8vo. pp. circ. 411. (London, Saunders and Otley.)—We are afraid there is much of philosophic dream in this work; but the subject is of infinite importance; and, it must be added, that there is also much valuable suggestion for the consideration of those who feel an interest in the subject of national education.

*Memorials of Shrewsbury*, by H. Pidgeon. Pp. 225. (Shrewsbury, Eddowes).—Few places in England are more interesting than Shrewsbury; and we are glad to see so good a guide to its lions as the present volume.

These memorials are cleverly and numerous enlivened; and, altogether, the capital of Shropshire has reason to be proud of its native citizen, to whose literary tastes, diligence, and patriotism, it owes so useful and becoming a volume.

*Family Library*, No. LXIII. (London, Tegg).—This volume contains sketches of imposture, deception, and credulity; and is indeed a curious collection to illustrate the acts of rogues and folly. The frontispiece of Joan of Arc is hardly fair; for whatever merits were adopted to impose on the superstitious of the times, she was a remarkable character, and a high instrument of national redemption.

*A Popular Treatise on Warming and Ventilation of Buildings*, &c., by C. J. Richardson. 8vo. pp. 114 (London, Weale).—With eighteen zinc plates, this treatise contends that the best mode of warming and ventilating is by the circulation of heated water, in pipes, through and about buildings. It is ably written.

*Works of Calderon*. 12mo. pp. 298. (London, Senior; Dublin, Milliken; Edinburgh, Leasing and Forbes).—A volume from the Shakespeare of Spain, who sprang the "Faust" of Goethe, the "Manfred" of Byron, and the "Prometheus, unbound," of Shelley; and containing his famous "Magico Prodigioso," "In Vida es Sueño," and "el Principe Constance." It is very neatly, and, what is better, very correctly printed; and well worthy of the patronage of Spanish scholars. A portrait of the author is prefixed.

*Joseph and Benjamin*, &c. 2 vols., by J. S. C. F. Frey. (New York, Peter Hill; Levett, Lord, and Co.)—A series of letters, in which the author meets all the Jewish objections to the Christian belief and doctrines. There is much learning, and diligent investigation, and able argument, in these volumes.

*Goldsmith's History of England*, by E. Bellchambers. 4 small vols. (London, Allan, Bell, and Co.; Tegg and Son; Washbourne).—A neat little edition, the fourth volume containing the reigns of George IV. and his present majesty, written in a strong anti-tory spirit.

*Bosworth Field: the Fate of a Battlefield*, by the Author of "Britanny." 3 vols. (London, Smith, Elder, and Co.).—On its first appearance, we spoke favourably of the historical interest of this work, and it does credit to the public taste that it has so far confirmed our good opinion as to call for a second edition.

*The Popular Cyclopaedia*, &c. Vol. V. Part I. (Glasgow and Edinburgh, Blackie and Son).—From "Missolonghi" to "Peculium," this cheap and well-conducted publication is continued in the volume before us, with the same talent and ability which have distinguished its precursors.

*The Truths of Protestantism contrasted with the Errors of Popery*, as illustrated in the History of past and present Times. In a series of lectures by Ministers of Glasgow. (Glasgow, M'Phun; London, Cotes).—Thirteen lectures, the nature of which is sufficiently explained by the title-page. Of the polemics we say nothing except that they display zeal and ability; the historical illustrations are well sought up and applied.

*Margam Abbey, a Historical Romance of the 14th Century*. Pp. 380. (London, John Green).—A tale of the time of Edward II. in which the fair writer has reaped the beautiful site of Margam Abbey, in Wales, with royalty, chivalry, fair dames, and "clerical monks."

*Remarks on the Ecclesiastical Condition of the United Kingdom*, by David Robinson. Pp. 468. (London, Boone).—A subject of intense interest at the present era. The author writes upon it boldly, ably, and freely; censuring or approving all parties as his conscience and judgment dictate. Not so much a Tory as a Constitutionalist, he, however, leans to the Conservative side, and speaks indignantly against our present ministers.

*The Child's First Book of Manners*. Pp. 109. (London, Darton and Son).—Pretty enough instruction for children by way of dialogue, but, we are sorry to say, not always perfectly grammatical.—*A Little Book for Little Readers*. Pp. 132. (The same).—A nice selection of sweet and improving poems.

*Observations on the Preservation of Health*, by J. Harrison Curtis, &c. &c. Pp. 128. (London, Remshaw).—Full of judicious and sensible observations on the subject, gathered both from reading and from practical experience. Mr. Curtis, after setting out by putting us in the right roads to hear and see, very properly applies his advice to the whole physical and moral system of man.

*Gerardine; a Tale of Conscience*, by E. C. A. 2 vols. (London, Bookers and Dolman).—A religious novel, in which all the mysteries of the Christian faith, and much of the differences of opinion, are expounded according to the author's views, which are Romish, through the medium of a tale.

*The History of Banking in America*, &c. by J. W. Gilbert. 8vo. pp. 207. (London, Longman and Co.).—An important inquiry at the present moment. In a review of the causes of the pressure on the money market, the writer, who is the manager of the London and Westminster Bank, replies to Mr. Horsley Palmer's pamphlet, and defends the system of joint-stock banks.

*Memoirs of the Life and Writings of the Rev. Arthur Collier, M.A.* by R. Benson. M.A. 8vo. pp. 215. (London, Lumley).—Arthur Collier, an eminent metaphysician, who flourished a century ago, and author of the "Clavis Universalis," after long neglect, has at last found an able biographer in Mr. Benson. The "Clavis Universalis,"—being "a demonstration of the non-existence or impossibility of an eternal world,"—and other metaphysical tracts, are also republished in an octavo volume. They are of great rarity, and extremely curious.

*A Practical Treatise on the Grape Vine on Open Walls*, by Clement Hoare. 8vo. pp. 210. (London, Longman and

Co.).—This is a second edition, and worthy of being so, though we do not recollect the first. It seems to contain all that could or needed be said on the subject.

*W. Colson on the Hip-Joint*. 4to. pp. circ. 120. (London, Evans).—Seeing a new publisher's name, we presume this is a reprint of that valuable treatise which we noticed in the language of commendation which truth demanded, in our *Gazette*, No. 1033.

*The Life of the Rev. Donald Cargill*, by G. M. Bell. Pp. 132. (Glasgow, Dow; Paisly, Gardener; Edinburgh, Oliphant; Dumfries, Halliday; Stranraer, M'Coid).—One of the stoutest and sternest of the Covenanters has here the record of his life and death. It is a curious picture of the times, its persecutions, superstitious, fanaticism, and religious abuses.

*Mammon Demolished*, &c. by B. H. Draper. Pp. 101. (London, Darton and Son).—The successful essay for the premium offered by Dr. Conquest, for the best work on this subject, has been noticed in our pages. The present is one of the unsuccessful attempts, but still thought so well of as to induce its publication—in our opinion, deservedly.

## ARTS AND SCIENCES.

### ROYAL INSTITUTION.

MAY 26th, Mr. Snow Harris, on the phenomena of thunder-storms, cursorily explained the elementary principles of electricity, and proceeded to enlarge upon the mode of its accumulation, the course it invariably follows when discharged, and the most effectual means to palliate, or altogether to parry, the destructive energies, in the violent operation of discharges of lightning on ship-board. He also stated the several objections to, and prejudices against, the use of conductors in vessels, and cited particulars of accidents to ships by lightning, in support of his views. We will not follow Mr. Harris in the order of his lecture; but briefly describe and explain his illustrations of the phenomena of thunder-storms, as they were exemplified in its delivery. A subtle fluid, electricity, pervades all nature, proportionate to the capacities of bodies for it, producing a kind of equilibrium of force in every direction; but it may become unequally distributed by certain natural processes, changes in the temperature and constitution of bodies, &c.; and then this plus subtle principle exerts a self-adjusting tendency, to equalise itself by diffusion into bodies possessing a minus quantity. A reciprocal action, therefore, takes place between the overcharged and undercharged bodies, accompanied with an expansive force, so violent as to shatter the most compact bodies, offering an impediment to equalisation, and an evolution of heat intense to ignition and fusion of other substances. Accumulations of electricity in the atmosphere, producing discharges of lightning, may be thus explained. If two substances, conductors of electricity, the one being insulated, the other having an indefinite capacity for the fluid, were opposed to each other, and separated by a non-conducting or insulating body, the proportionate state of distribution may become deranged in the greatest possible degree, causing an intense electrical force. The above conditions are found in nature, in the relative position of the sea and clouds, and intervening air. The cloud opposed to a conductor of indefinite capacity, the surface of the earth or sea, the air being an intervening insulated medium; hence results a charged battery of enormous force; and the accumulated electricity, in endeavouring to regain a state of proportionate distribution, breaks through the air in its weakest point, falling directly on the sea or land, or through any elevated body which may happen to be immediately in the sphere of action. In every case of electrical discharge there are two points of action, whence it proceeds and whither it goeth. At the instant previous to the discharge, it seems, by a wonderful influence, to feel its way, and mark out, as it were, in advance, the course it is about to follow, which course is invariably through

the line or lines of least resistance, between those points. The points to and from which the electric matter is passing, are out of a ship into the sea and atmosphere—the ship being merely an intervening object—the explosion is experienced in the line or lines of least resistance; and the damage usually happens, not where good conductors are placed, but where they are not present. The fluid is transmitted in a low state of action through good conducting substances, concentrates at the instant of leaving them, producing the disastrous consequences of an expansive agent. This was shewn by passing a discharge of electricity along an interrupted metallic line, upon which heaps of wafers were placed alternately on the broken points and the connected parts: the latter remained undisturbed; the former scattered in all directions. By completing, then, the conducting power of the masts and hulls of ships, they may be placed in a state of the greatest security. The removal of resistance to the electrical diffusion in all directions, is the only principle on which safety depends in attempting to defend buildings or ships in thunder-storms. Some persons suppose ill consequences may be prevented by placing glass or other non-conducting bodies on the mast-heads, or on the most exposed points. What appreciable value can any insulating substance of this kind have in resisting lightning, the action of which, exerted probably between 100,000 acres of electrified clouds and the surface of the sea, breaks through a mile or more of dense air, the most perfect, if not the most compact, of all insulating bodies? The line of conduction, however, must be continuous. The masts, though erect, consist of many distinct portions; and it is often necessary to move one or the other, and sometimes to remove one or two altogether. We should, however, previously have stated, Mr. Harris's conductors are of a superficial kind, consisting of two lamina of sheet copper, laid one on the other, in lengths of about four feet, which are so placed as to admit of the closed joints of the one falling on the continuous portions of the other. Space will not allow us to shew how they are fitted to the mast and caps; but we will describe the illustration of the security afforded when the masts are lowered. Gold leaf was placed on paper, to represent masts partially struck; a discharge of electricity was passed over the gold, which was oxidated only in the line of least resistance; the portion supposed to be below the caps remained perfect. Whatever position, therefore, the sliding masts assume, there is still a continuous line of conduction remaining, as that portion of the mast and conductor, below the cap, is no longer in the line of action, and has no influence on the passage of the electric matter up to the point of fusion of the conductor. Mr. Harris concluded his lecture with a pleasing proof of the efficacy of his conductors; a model of a frigate fitted with them floated in a large trough of water; and astern, not connected with her immediately, a boat. At the frigate's royal mast-head was fixed a small bowl, containing gunpowder, and a similar one in the boat, to which were attached wires trailing in the water, the only medium of communication with the ship. A metallic ball, highly charged with electricity, was made to traverse over the mast-head, where it immediately discharged itself, ignited the powder there placed, and instantaneously that also in the boat; thus proving the security afforded the frigate. A similar discharge through a small mast, in two vertical parts, having within it an interrupted line of metal,

and some percussion and common gunpowder at the discontinuous points, forced them asunder, whilst a thin continuous slip of tin leaf placed externally prevented the electric matter entering the substance of the mast and the ignition of the gunpowder.

## GEOGRAPHICAL SOCIETY.

MAY 22. Mr. Hamilton, president, in the chair. — Read, 1st. Extracts from a letter from Col. Light, surveyor-general to the South Australian Association, dated St. Vincent's Gulf, Nov. 24, 1836, giving a very favourable account of the prosperity of the colony. He mentions that an excellent harbour, with three fathoms at low water, had been found; also, a creek, extending to within two or three miles of the Fresh-water Lakes; and that the site of the capital of the colony will, most probably, be fixed on the eastern coast of Gulf St. Vincent, in the parallel of about 35°, very near the stream marked in our maps as Sturt River. 2d. A letter from Captain Alexander, in South-east Africa, dated Nabees (Warm Bath), Jan. 1, 1837, stating that, having quitted the missionary station at Kamiesberg, whence his last despatches were dated, on the 16th November, he travelled with a caravan, composed of twenty persons, fifty horses, fifty bullocks, and a flock of sheep, towards the Orange River, over the most barren country he had ever witnessed. — stony gray plains, with low shrubby plants scattered over them. On the 23d they reached the Orange River at the junction of the Giep, or Hoom, one of its northern tributaries, and at about seventy miles from the sea; crossed it without difficulty, and continued, for three days' journey, to the north-east, till they reached the kraal of the chief Abram of the Bondlezwaart tribe, which is composed of sixty reed-huts, situated on each side of the dry bed of the river Hoom, only full three times a-year, in the midst of an extensive plain, with conical hills of 200 feet high, rising here and there. The population of the kraal is about 600. "Here are lions, springboks, zebras, jackals, ostriches, &c. close around us," says Captain Alexander; "and the chief has shot a lion within half a mile of the spot at which I am now writing. I have lately returned from a visit to Africaaner's kraal, about sixty miles east of this spot; and we are now only waiting for the thunder-rains of this month to start for the north, towards Walvisch Bay and the Damaras country. In the meantime, we are packing our specimens, and making preparations. I have got about fifty well-preserved bird-skins and some quadrupeds from Great Namaqua Land. The temperature of the warm spring, whence this spot derives its name, is 103° Fahrenheit." 3d. An account of the ascent of the Old Calabar River, for a distance of about 100 miles from the sea, in the Bight of Benin, to the village of Old Ecrick, in the Quorra steamer, by Messrs. Becroft and Oldfield. Sept. 30, 1836, started in company with 100 canoes, containing about fifty men in each, and proceeded up the river. At fifty miles from the sea, rounded the point of Cross River, and entered a reach running N.W., with from two to seven fathoms of water, and a strong current; islands and mangrove-trees very abundant. The next reach was in a N. by E. direction; and the river 800 yards wide. Continuing our ascent, the stream occasionally narrowed to 100 yards, and again widened out almost into a lake, studded with islands. At about ninety miles, the eastern shore began to rise into hills; and the river flows through deep banks till we reach the town of Old

Ecrick, seated on the slope of a hill, which rises 250 feet above the river, on its eastern bank. Immediately around the houses is a cleared space, beyond which is a forest of fine trees. From information collected during a stay of five days here, we are led to believe this fine river is a branch of the Quorra, diverging from that river below the junction of the Tschadda. Old Ecrick is situate in lat. 6° 40' N., long. 8° 10' west of Greenwich. On this subject, Captain W. Allen, who surveyed the River Quorra in 1833, comes to a different conclusion. His reasons are, briefly, that, in his passage up and down, he discovered no divergent of any size, save the river on its eastern side, between the Tschadda and Ibú; that the preservation of its breadth throughout this distance, and also its keeping the same general direction, and carrying down a larger quantity of diluvium to the sea, would tend to prove the Nún to be the principal trunk of the river; and, lastly, that, by the position assigned to Old Ecrick, it is distant eighty miles from the nearest point of the Quorra, with an intervening elevated tract of country: whence he concludes that the Old Calabar is a noble independent river; that it has its sources far away in the north-east; and, after having drained the south-eastern side of the elevated plateau, named King William's Range on the map, is turned to the westward by the Qua and Rumby Mountains, and empties itself into the sea in the Bight of Biafra, forming, with the Quorra, one common delta; but that, probably, there is water communication between the two streams, by the cross river which traverses their delta, and falls into the Calabar at about fifty miles from the sea. In illustration of this paper, Captain Allen's excellent chart of the River Quorra, or Niger, which, through the liberality of Mr. Macgregor Laird, a spirited merchant of Liverpool, he was enabled to make in the year 1833, was now, for the first time, exhibited to the public. This chart, which is on the scale of twelve inches to a degree, extends upwards from the sea about 400 miles, to the large town of Rabbá, marking the depth of water, and the features of the banks, and containing a very picturesque view of the point where the Tschadda pours in its collateral stream. 4th. A memoir, On the island of Old Providence, by Mr. C. F. Collet, R.N. On the eastern shore of Central America, distant about forty miles from the Mosquito Coast, lies the small island of Old Providence, in lat. 13° 21' N., long. 81° 22' W., celebrated, in former times, as the haunt of bucaniers, and, more particularly, of Morgan, whose name stands conspicuous in their annals. During the progress of the recent survey in the West Indies, under Captain Richard Owen, R.N., this island was thoroughly examined, and the dangerous coral reefs which surround it, at a distance to the northward of nine miles, investigated and accurately laid down in our charts; thereby rendering an important service to hydrography, and to commercial interests in general. The island is about four miles and a half long, by two miles and two-thirds in its greatest breadth; it is of an irregular shape, and may be seen at a distance of ten or twelve leagues, and is easily distinguished from the neighbouring isle of St. Andrew's, by the outline of its abrupt and peaked mountains; the highest of which, nearly in the centre of the island, rises 1190 feet above the sea. Separated from its northern end, by a cut of from twenty to thirty fathoms wide, is the island of Catalina, forming the northern boundary of a harbour so named, affording secure anchorage,

in from two to three and a half fathoms. Morgan's Head, named after the before-mentioned bucanier, is a very remarkable rock, nearly detached from the south-western point of the island of Calabria; it rises forty feet above the level of the sea, and bears a striking resemblance to the figure of a man's head. Fuel, water, and provisions, may be procured here in abundance. Cedar is plentiful, and quite equal in quality to that which grows on the Honduras shore, near Cape Gracias a Dios; it squares from twenty to twenty-four inches. Manchioneal is also common. Beef, pork, poultry, and fish, may easily be obtained, and of good quality; as, also, pigeons, guanas, and hickatees, or land turtle: the latter is found in abundance, and forms a delicious article of food. Yams, cocoa-nuts, plantains, &c., are plentiful. The population of the island is 242 persons, one half of which are slaves. Their chief employment is in raising cotton, and catching turtle, which form the principal articles of export, in exchange for which the inhabitants get British calicoes, clothes, &c. at an exorbitant price. The island is under the government of the republic of New Granada. Since the year 1660 it had been the resort of bucaniers, and many traces yet remain of the forts erected by them. Latterly, it was selected as the head-quarters of General Aurey, a French adventurer, who, with a commission from the government of Buenos Ayres, much annoyed the Spanish trade, during the struggle in which the colonies threw off the yoke of the mother country. The survey of the archipelago of islands, cays, and shoals in the West Indies, is continued under the direction of the Hydrographic Office, and executed by Lieut. Barnet, R.N., whose labours on the vast and dangerous cays near the Mosquito Coast, have entitled him to the gratitude of every West Indian navigator. The president announced to the meeting, that he had just received information of the establishment of a Geographical Society at Frankfort on the Maine; headed by the names of Kriegk and of Meidinger; and he confidently trusted it might be taken as an earnest that many valuable labourers are about to take a share in promoting the object for which this society is instituted, namely, the advancement of geographical science and discovery.

## GEOLOGICAL SOCIETY.

WEDNESDAY, May 17th. Rev. W. Whewell, president, in the chair. — A paper, by Mr. Peace Pratt, F.G.S., commenced on the 3d of May, and entitled "A Description of the Geological Character of the Coast of Normandy," was resumed and concluded. On referring to the previous accounts by Mr. De la Beche and Mons. De Caumont, he confines himself chiefly to those points which appear not to have been accurately described. The chalk cliffs which bound the coast between Cape Antifer and Cape La Fleve are composed of chalk marl, and rest upon a bed forty or fifty feet thick of green sand. To these succeed alternations of argillaceous beds, with ferruginous deposits, which appear to indicate the presence of the Gault and Hastings sand. These rest upon an argillaceous limestone, separated into thin beds by portions of clay, of which the upper layers contain *Gryphaea vinguia*, *Ostrea deltoidea*; and these, therefore, represent the Kimmeridge clay. In consequence of a fault — bringing down the argillaceous deposit called argile d'Honfleur to the level of the shore — it has been assumed that this also was equivalent to the Kimmeridge clay, like the deposit on the

northern shore of the Seine, although it really overlies the iron sand. The Kimmeridge clay again makes its appearance near Cricque Bœuf, and is seen resting on a calcareous rock, which the author considers equivalent to the Coral Rag formation, and that they do not represent the Portland beds. Near the mouth of the Touque, a deposit of clay rises from beneath the calcareous strata, containing *Gryphæa dilatata* and *Ostrea gregaria*, and, therefore, representing the Oxford clay. This forms the cliffs as far as Dives, and is seen near the mouth of the Orne, overlying a calcareous oolitic rock, which is usually considered identical with the cornbrash, but in fossil remains approaches much nearer to the forest marble of the west of England. They overlie two beds, filled with fossils, chiefly *Terebratula digona* and *T. plicata*, *Avicula inæquivalvis*, *Apicorinites rotundus*, &c.; and, therefore, representing the Bradford clay. The Caen freestone is usually considered to represent the great oolite of the west of England, but the few fossils found in it resemble those of the inferior oolite. Lias is distinctly seen for a few hundred yards, forming the base of the cliffs near St. Honorine. Hence Mr. Pratt concludes, it would appear from this rapid view, that nearly the whole of the strata found between the chalk and the lias in England are found on the coast of Normandy; the Portland, and perhaps the Purbeck beds, with the Kelloway rock, only, not being seen in this part of France.—A paper, by Dr. Mitchell, F.G.S., was also read, describing a well dug at Beaumont Green, on the premises of Mr. Munt, a magistrate for the county (Hertford), in which chalk was reached at the depth of 126½ feet, a spring met with 40 feet lower; but the excavation was continued for 17 feet below the spring, to form a reservoir. The most remarkable stratum in the section was one 15 feet thick of blue sand, with black pebbles. This, in very wet weather, was found to emit foul air, and in such quantities as to suffocate a well-digger when descending; a hawk flying over the well fell into it; and a similar fate befell smaller birds, as well as bees and flies. Dr. Mitchell has no doubt that the foul air was sulphuretted hydrogen gas, formed by the decomposition of water and iron pyrites. The neighbouring district, to the extent of four miles, is called "Foul Country" by the well-diggers. Nothing remarkable was observed in the well during dry weather. Its safety has since been secured, by bricking it from the chalk up to the surface.

## ZOOLOGICAL SOCIETY.

VISCOUNT GAGE in the chair. The usual monthly meeting took place on Thursday afternoon. From the report which was read, it appeared that the balance in favour of the society, carried to the account for June, was 1650l. 3s. 10d.; the number of visitors to the gardens and museum during May was 24,020. The society's live stock at present consists of 306 mammalia, 702 birds, and 17 reptiles. Twenty-five fellows were elected into the society.—A communication from Mr. Harvey, of Teignmouth, in Devonshire, which referred to a specimen of the electric ray, was lately read. The fish (exhibited) was caught in a trawl-net, near Teignmouth, and was presented to the society by Mr. Harvey. When taken, part of a specimen of the small spotted dog-fish was hanging from its mouth. The fishermen handle the electric ray, while it is alive, without being at all affected by it, always taking care to lay hold of the tail.—Mr. Yarrell exhibited a very large carp, taken by a net in a piece of

water called the Mere, near Payne's Hill, in Surrey. The length of the specimen was thirty inches; the girth of the body, at the commencement of the dorsal fin, twenty-four inches; the weight, twenty-two pounds. Mr. Yarrell observed, that he could find no record of any carp so large having before been taken in this country.

## BOTANICAL SOCIETY.

JUNE 1. J. E. Gray, Esq., president, in the chair.—Mr. Hopkins read the continuation of his paper On vegetable fermentation; treating principally on the formation of sugar in vegetables. The continuation of Mr. Wallis's paper, On the Flora of Chelmsford, was also read; from which it appeared that there are a great many rare plants to be found in that vicinity. Some discussion having taken place, the secretary announced donations of plants from Dorsetshire, presented by Dr. Bell Salter; also, donations of plants from Chelmsford, presented by Mr. Wallis. The president announced that the Society had now a large collection of plants, and that they would shortly be arranged and distributed among the members. The meeting then adjourned until July 4th.

## MARYLEBONE LITERARY AND SCIENTIFIC INSTITUTION.

THE fifth anniversary of this Institution was celebrated on Wednesday, by a meeting of its members and friends in the lecture-theatre. The chair was taken by Henry Thomas Hope, Esq. M.P., who, in a most eloquent manner, stated that the Institution had risen to a height of power that was truly gratifying; and that it had prospered in a way that was calculated to advance most materially the great object which it was its end and aim to promote. Societies of this nature (he said) were rising up every day, in all parts of the country, and were supported by all classes of persons; and he was happy to see that, so far from any thing like jealousy on the part of those who promoted these societies, there seemed to be a great desire that each should assist the other. This was a matter of great pleasure to him, for he looked upon the field of literature as a wide plain, rich in every thing that was calculated to benefit society, and only requiring the labour and industry of the husbandman to bring it forth.—Mr. Hemming gave an account of the rise and progress of this now important Institution, by which it appears that it once consisted of only twelve members.—A subscription was entered into for the purpose of increasing the library, to which the chairman most liberally contributed.—Several resolutions were moved by Sir Wm. Clinton, Sir James Hamilton, Mr. Hallam, Mr. Hornaden, the Rev. Mr. Grimston, the Rev. Dr. Jones, and Mr. Serle.

## LITERARY AND LEARNED.

## UNIVERSITY INTELLIGENCE.

OXFORD, May 25th.—The following degrees were conferred:—

*Doctor in Divinity*.—Rev. W. F. Hook, Vicar of Leeds, and late Student of Christ Church.

*Doctor in Civil Law*.—J. D. Harding, Oriel College.

*Masters of Arts*.—Lord C. Thynne, Rev. H. Glynn, Christ Church, Grand Compounders; Rev. W. A. Ormsby, University College; Rev. J. P. Clark, Worcester College; W. Froude, Oriel College; L. W. Jeffray, Balliol College; Rev. J. Brereton, New College; Rev. F. K. Eyre, St. John's College.

*Bachelors of Arts*.—H. E. Pratt, University College; T. W. C. Master, C. G. Wynne, Christ Church; W. F. E. Knollys, Merton College; J. R. Miller, Trinity College; I. P. Prescott, Oriel College.

The Theological Prize Essay, founded by Dr. Ellerton, for the present year, on "The Mission of John the Baptist," has been awarded to C. G. Hulton, B.A. of Braconne College.

The Prizes for the present year have been decided as follow:—

*English Essay*.—"The concurring causes which assisted the promulgation of the religion of Mahomet." P. C. Claughton, B.A. Fellow of University College.

*Latin Verse*.—"Marcus Crassus a Parthis devictus." J. J. Randolph, Student of Christ Church.

*English Verse* (Newdigate).—"The Gipsies." A. P. Stanley, Scholar of Balliol College.

The number of compositions sent in for the Newdigate, was 54; for the Latin Verse, 17; for the English Essay, 19.

## ROYAL SOCIETY.

MR. BAILY in the chair.—A paper On the development and extinction of the crystalline lenses of animals after death, by Sir David Brewster, was read. The author here pursues those interesting researches on the lenses of the cow, the sheep, and the horse, which he had previously instituted in reference to the lenses of the cod, the haddock, the lion, and the hare. In the course of his experiments, Sir David found many differences in the structure of the crystalline lenses of animals belonging to the same species, which led him to believe that they were to be attributed to sex, age, or health: in part confirmation of this, he found in old horses the crystalline structure entirely destroyed. In a separate paper, the author promises to state the conclusions which he has arrived at, in consequence of these experiments, especially in connexion with the cause and cure of cataract. The paper was accompanied by exceedingly delicate diagrams, which served much to illustrate its contents.

## SOCIETY OF ANTIQUARIES.

MR. AMYOT in the chair.—Mr. Markland, by permission of the Earl of Egremont, communicated a curious document relative to the noble family of Percy, in his lordship's possession, at Petworth. It was written by Henry Percy, ninth Earl of Northumberland, while confined in the tower, to his son, Algernon Percy, being "Instructions touching the management of his affairs." In some prefatory observations, Mr. Markland observed, that this eccentric and unfortunate peer was committed to the tower, as being connected with the gunpowder plot, and remained there for many years; and, by a sentence of the star-chamber, was subjected to a fine of £30,000, which was afterwards mitigated to £11,000. He was a man of refined taste, and drew round him, as companions, several persons noted for literature and science. Part of the "Instructions" was read, in which the earl tells his son that he had come to his title and estate when young and inexperienced, having succeeded to them on the death of his grandfather, on which he entered into a long course of dissipation and riotous expense, which brought him into serious difficulties, and impoverished his estate, which he attributes to the ill advice and ill management of his retainers, and others about him, and to the alleged rapacity of his grandmother, of whom, in common with the sex, indeed, he writes with no good will.\* The reading of the conclusion was postponed.

## "OES Y BYD I'R IAITH CYMRAEG."

*Ancient Welsh Literature* (under the patronage of the king, several branches of the royal family, and nobility and gentry of high rank and influence).—We rejoice to have had put into our hands a prospectus of a "Society for the Publication of ancient Welsh Manuscripts," which truly says: "It has long been a subject of lamentation, that the numerous unpublished

\* The part of this document read, reminded us somewhat of the character of Lord Byron, and his wayward petulance, when speaking of those about him in the early part of his career.

hardic and historical remains, still extant in the principality, and other parts of the world, should be allowed to continue in their present state of obscurity and precarious existence, without some effective measures having been adopted to lay their contents before the public, and secure them against the various accidents to which they are liable. In addition to the general decay which, from their perishable nature, these venerable relics have for ages been undergoing, within a short space of time whole collections have been destroyed by fire; and of those copies dispersed throughout the country in the possession of individuals, numbers, which are known to have existed a few years ago, are now nowhere to be found." Better late than never, however; and this society has for its object the transcribing and printing of such of these remains as may appear most deserving of publication, not merely as objects of antiquarian curiosity, but as contributing to the elucidation of British history, and being intimately connected with the origin and progress of modern European literature. It is expected that one of the first works put into the press will be the *Mabinogion*, or ancient legendary tales of the Welsh, with English translations. "I think," says an esteemed correspondent, "the existence of this society will prove of immense benefit to the literature of the country generally; and, from my own professional pursuits, I know that if the old Triads could be found complete, a great deal of light would be thrown on the origin of our admirable common law maxims. Coke, in several portions, is but another *Moelmutens*, or *Hoel Dda*."

#### LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

*Monday*.—Entomological, 8 P.M.; Marylebone, 8 P.M. (Mr. Hemming on Chemical Inventions, &c.)

*Tuesday*.—Linnæan, 8 P.M.; Horticultural, 3 P.M.; Society of Arts, 8 P.M. (Correspondence and Papers on a letter from Dr. Horsfield; a reference respecting the Wednesday-night meetings of the Society, and other matters. After which, a Joint Committee of Correspondence and Papers, and Manufactures, on Mr. Archer's letter respecting the Engravings of Needham's Cotton Machine.)

*Wednesday*.—Society of Arts, 7½ P.M.

*Thursday*.—Royal Society, 8½ P.M.; Antiquaries, 8 P.M.; Royal Society of Literature, 4 P.M.

*Friday*.—Royal Astronomical, 8 P.M.; Royal Institution, 8½ P.M.

*Saturday*.—H. R. H. the Duke of Sussex's (President of the Royal Society) Conversation at Kensington Palace.\*

#### FINE ARTS. BRITISH GALLERY.

IN our last Number we adverted to the opening of the Gallery of the British Institution, with a fine collection of works by the old masters, and we expressed the delight which we had experienced from a sight of them. We are not going to be so superfluous as to enter into a critical examination of these *chefs-d'œuvre*; but there is one circumstance which we noticed on a second visit to the Gallery, and which afforded us so much gratification, that we cannot refrain from calling the attention of our readers to it. We allude to the introduction of a single modern production—"Fishing-Boats, with Men-of-war in the Distance," by J. M. W. Turner. This noble picture is so placed in the Gallery, as to form a pendant to "A Fresh Breeze, with Men-of-war in the Distance," by Vanderveelde. From the opposite side of the room both performances can be contemplated with ease, and their various qualities compared and estimated; and we put it to the most cynical and inveterate *laudator temporis acti*, whether

\* We regret to state, that Mr. Frederick Hope's (President of the Entomological Society) Conversation for this evening is put off, on account of severe illness in the family.

ther there is a single point in which the old Dutch painter has the advantage over the modern English one? Our artists ought to feel much obliged to Lord Francis Egerton (to whom both these admirable works belong), for the opportunity thus afforded of most unequivocally shewing that, at least in one department of the fine arts, there is in this country living merit, as high as that which is attached to the greatest name, in that department, of former days.

#### EXHIBITION OF THE ROYAL ACADEMY. [Sixth notice.]

OF the numerous portraits in the West Room, one of the most peculiar and striking is—

431. *Portrait of a Gentleman Reading*. Sir D. Wilkie, R.A.—It is, we understand, a portrait of the artist's brother, and has evidently been painted *con amore*. The tones of the flesh, especially, are admirable; and the relief is perfect. We confess, however, that we think the profile shadow projected on the book is somewhat too distinctly marked: it divides the attention of the spectator with the real countenance.

We must content ourselves with merely enumerating, as other portraits in this room well deserving notice, 411. *Earl de Grey*, and 528. *The Son of Sir William de Bathe*. J. Wood; 419. *Mrs. Scaresbrook*. Mrs. J. Robertson; 423. *Major-General Sir Charles Dalbiac*. A. Morton; 425. *Lord Hatherton*, and 508. *Rear-Admiral Sir Edward Brace*. H. W. Pickersgill, R.A.; 432. *Mr. Serjeant Atcherley*. T. Phillips, R.A.; 447. *Richard Arkwright, Esq.*, and 534. *The Right Hon. Mr. Justice Coleridge*. Mrs. W. Carpenter; 462. *John Ellis, Esq.*. J. Hollins; 490. *A Lady*. R. Rothwell; 503. *Lord Montague*. H. P. Briggs, R.A.; 511. *The Right Hon. the Lord Mayor*. Mrs. C. Pearson; 536. *The Right Hon. Frederic Shaw*. T. C. Thompson; and 539. *The Rev. J. Leifchild*. J. Linnell.

The works in the Drawing and Miniature Rooms are in nowise deficient in the qualities that distinguish the larger productions of the pencil to which we have hitherto adverted. Among the views, we especially noticed, 577. *The Sacred Source of the Ganges, Himalaya Mountains*. T. Allom; a powerful example of the novel, wild, and romantic characteristics of Indian scenery.—549. *Part of the Fort of Rhotas Ghur, Bahar*, and 987. *The Fort of Agouree, on the River Soane, Bahar*. W. Daniell, R.A.; with more of extent and aerial perspective than the drawing just mentioned, not less picturesque and interesting.—749. *The Brocas Clump, and Eton College*. F. Nash; the broad and masterly execution of which, together with its effect and air-tint, are admirable.

In enamels, both from pictures and from the life, Mr. H. P. Bone takes the lead.—644. *Virgin and Child, after Vandyke*, is a faithful copy of the much-valued original, and a proof of Mr. Bone's mastery over the difficult process of his branch of the art; but 632. *Portraits of Lord Burghley and Lord Brownlow Cecil*, and other enamels from life, shew his original talents.—W. Essex, in 645. *Enamel of the Saviour, after Guido*; and 637. *Enamel Portrait of his Grace the late Duke of Gordon, after Sanders*, has made a great advance upon his former practice.—646. *Nymph and Child, after Hillon*, M. Takush, can have been executed by no tyro, although the name is new to us.

Among the portrait-drawings, Mr. A. Chalon has distinguished himself by the taste and elegance displayed in 551. *Mrs. W. Boothe*; 587. *Her Grace the Duchess of Montrose*; and 988.

*The Earl of Pembroke*.—591. *Mrs. Samuel Hoare and her Children*; 604. *Christabel and Capel, the Children of Barton Philips, Esq.*, and 682. *The Rev. Francis Cunningham, G. Richmond*, are all beautiful, and in what may be called a clear and expressive style of art.—721. *Portraits of Sir Francis, Lady Sykes, and Children*. D. MacIise, A., possesses a character and a style of composition resembling Vandyke; while 717. *A Lady at a Casement*, and 728. *A Lady at her Embroidery*, by the same able artist, exhibits more of the imaginative. There is great firmness and decision in 678. *Portrait of Sir John Dean Paul, Bart.* and 715. *Portrait of Lady Buckler*. F. Cruikshank; while 986. *Portrait of Mrs. Hodgson Cadogan*, Miss F. Corbux, is in a softer and more delicate style of art.—843. *Portrait of Allan Cunningham, Esq.* C. Fox, is a masterly drawing.—Well knowing the talents of the fair artist, we lamented to see 709. *Scene at a Fancy Dress Ball*. Mrs. Gent, which appears to be a highly finished gem, placed so far above inspection.

The Miniatures are more than usually numerous and excellent; and are seen to great advantage in their new situation. Uniting all the other qualities of art with that delicacy of execution which is peculiarly their own, they form a powerful focus of attraction. Our limits will not allow us to enter into detailed remarks; but we would call the especial attention of our readers to the talents and taste displayed in 878. *Viscount and Viscountess Falkland, and the Hon. Lucius Carey*; 853. *Mrs. Newdigate, and Charles Newdigate, Esq.*, and 826. *The Right Hon. Lady Caroline Turner*, by W. C. Ross; 836. *The Rebellious Ward*, 827. *Lady Knox*, and 832. *The Drowager Lady Rowley*, by S. Lover; 899 (erroneously marked in the catalogue 769). *His Grace the Duke of Roxburgh*, 879. *Her Grace the Duchess of Roxburgh*, and 772. *The Right Hon. Lord Louth, the Hon. T. Barnewell, Charles Martyn, Esq.*, and *Mrs. de Zulieta*, by A. Robertson; 866. *The King*, 862. *The Queen*, and 835. *Prince Ernest of Hesse Philippsihal*, by W. J. Newton; 819. *William P. Wood, Esq.*, by F. Cruikshank; 854. *Magnus Gilbert Meason, Esq.*, and 867. *The Infant Daughter of the Viscountess Milton*, by S. P. Denning; 785. *Mrs. Henry Daniell*, and 800. *Charles Millett, Esq.*, by W. Barclay; 792. *A Lady*, by W. Booth; *H. R. H. the Princess Victoria*, by H. Collen; *The Right Hon. Lady Mary Hoare*, by Maria Chalon; 898. *Master Luxmore*, by W. Egle, &c. &c.

559. *The Murrain of Beasts*, 973. *Plague of Hail*, and 720. *Cleopatra on the Cydnus*. G. Jones, R.A.; 760. *Flowers*. Mrs. Pope, and 576. *Fruit*. V. Bartholomew, are among the varieties contained in this room.

[To be continued.]

*National Monuments, &c.*—On Monday, the public meeting at the Freemasons' Hall, which we mentioned in our last Number, took place; Mr. Hume in the chair, and surrounded on the platform by Lord Ebrington, Sir G. Sinclair, Mr. Thomas Hope, Mr. C. Buller, Mr. Wyse, Dr. Bowring, and other members of parliament, besides many men of eminence in the literature and science of the country. Several able speeches were made, and resolutions in accordance with the views of the meeting, equally supported by Conservatives, Whigs, and Radicals, were moved, and, after some discussion, carried. With regard to the opening, gratuitously, of all national institutions, where national property was to be seen, there was no difference of opinion; but difficulties presented them-

selves on the question, as connected with the Royal Academy, whose exhibitions consist of private property, though shewn in a building erected at the public expense. At the conclusion, petitions were signed to his majesty and the two houses of parliament; and it seemed to be understood that all necessary negotiations, terms, or arrangements, were to be left to the discretion of Mr. Hume and the committee, who had already so zealously promoted these desirable measures.

## NEW PUBLICATIONS.

*Ryall's Portraits of Eminent Conservative Statesmen.* No. IV.

THE Marquess of Londonderry, Sir Charles Wetherell, and James Emerson Tennent, Esq. M.P., are the embellishments of Mr. Ryall's present number. A few weeks ago we noticed the admirable head of the hon. member: that of the noble Marquess (from a picture by Boxall) deserves equal praise; but we confess that we do not think the resemblance of the distinguished, though eccentric lawyer, perfectly satisfactory.

*David Salomons, Esq. Sheriff of London and Middlesex, 1835-6.* Painted by Mrs. C. Pearson; engraved by C. Turner, A.R.S. Moon.

STRONG resemblance, dignified character, and powerful effect, render this a very valuable portrait. It strikes us that the head is rather small in proportion to the figure; but, if it be so, it is a fault on the right side.

*The Rime of the Ancient Mariner*; by Samuel Taylor Coleridge. Illustrated by twenty-five Poetic and Dramatic Scenes, designed and etched by David Scott, Member of the Scottish Academy of Painting. Folio. Edinburgh, Alexander Hill; London, Ackermann and Co.

THE character of a "singularly wild and original poem," which Lord Byron gave to "Christabel," is equally applicable to "The Ancient Mariner." It is, indeed, the most imaginative and extraordinary of Coleridge's productions, and has already been the subject, in more than one instance, of graphic illustration; but the spiritual images of the poet have never been so finely and satisfactorily embodied as in the work before us. About six years ago we noticed a publication, by the same artist, entitled, "Of Man: six Monograms." Whoever has seen that publication, must be aware of Mr. Scott's peculiar fitness for his present undertaking; in which we recognise the same novelty and grandeur of conception, and the same daring and skilful execution, that called forth our admiration of the Monograms. "The suffering of the crew from heat and thirst," "The Spectre Ship approaching," "The Ghost's darting past," "The Mariner, alone alive, seeing all dead around him," "The Spirit of the South moving the Ship onwards," "The Spirits of Peace descending," and "The Mariner seeing his home," are among our favourite designs; but they all bear the stamp of a powerful mind, and a masterly hand.

*Some Account of the Art of Painting in Enamel.* By Alfred Essex. Taylor.

MR. ALFRED ESSEX is the brother of Mr. William Essex, to whose beautiful enamels we have frequently had the pleasure of calling the attention of our readers. With a view to facilitate his brother's pursuits, Mr. Alfred Essex states that he has devoted much time to the improvement of the colours proper for

painting in enamel. "One of the objects," he observes, "which I have endeavoured to accomplish, and in which I have not been unsuccessful, is, that they should be of the same colour when on the palette, as they will be when they have passed through the fire. The colours possessing this property, the artist is enabled to see, while proceeding with his work, the precise effect that will be produced after the painting has undergone fusion." This is a very valuable discovery, and will, no doubt, be properly estimated by the professors of the art.

It appears that the largest picture in enamel ever executed, is the late Mr. Muss's copy of the Holy Family by Parmegiano. It measures 20½ inches by 15½, and forms part of the royal collection at Buckingham Palace.

## SKETCHES OF SOCIETY.

*The Humours of the American Press* often attract notice on this side of the ocean; and the following recent selection will, we hope, serve to amuse our readers:

*A Tailor's Sign-Board.*—Microcosm's habiliments fashionably fabricated, invisibly renovated, metamorphosed, and depurated, by J. Wayte, cosmopolitan.

*Definitions.*—Experimental philosophy is the asking a man to lend you money. Moral philosophy is his refusing to lend any.

*A Desirable Locality.*—In New South Wales, an old maid is a much rarer animal than a black swan. The fair emigrants from England, no matter what their age or condition, are snapped up at once. It is even asserted, that they receive offers of marriage through a speaking trumpet before they leave the ship!! What a glorious country for those unfortunates who have passed the eventful period when they wonder who they will have, and, arrived at that, when they wonder who will have them.

*A New Yorkist* calls their omnibuses "infernal machines," and says, that they have more victims prostrated before their wheels than the car of Juggernaut; and he further observes, that "no circus has succeeded at New York since the introduction of these conveniences (query?); for the ground and lofty tumbling to be met with in our streets costs nothing to look at. In this, as in other things, it appears that Jonathan is determined to go a-head, or, at least, not fall far behind us Londoners.

*An American Journalist* is bold enough to impugn the doctrine of early rising in the following terms:—"We are no worshipper of the sun ourselves, and willingly confess that we don't belong to the rising generation: there is no doubt, to be sure, but that sleep, the great restorative, like other restoratives (champagne, for instance), may be taken to excess. Some constitutions require more, some less; but every individual should find out his own measure; and if your advocates for 'early rising' would make that the foundation of their arguments, and, moreover, use early rising, as a relative term to be dated from the hour of sleep, their labours would be more rational and more beneficial. As it is, all theories upon the subject are whimsical. We must rise early, forsooth, because the sun does, and the lark does: for the matter of that, the lark is not a respectable character—he is sometimes up all night; and, as for the sun, why, he gets up when he pleases, and not always at the same hour; indeed, if our memory serves us, there are some quarters of the globe where that red-faced Christian lies a-bed for months.

'Rise before the sun,  
And make a breakfast of the morning dew;  
Served up by Nature on a grassy hill,  
You'll find it nectar.'

You don't say so. There's a breakfast to recommend to a stout gentleman with an appetite. If he had written 'mountain dew,' now, there would have been some reason in it; but these poets are strange fellows; and Thompson wrote that panegyric in bed at mid-day. In conclusion, we are willing to believe that the 'rising sun' is a very magnificent object."

*A Yankee Judge.*—One of the judges lately appointed in Connecticut, in a recent charge to the jury, addressed them thus: "As I know nothing about the law, and presume that you do not, you must decide as you please."

*The Natches Newspapers* give, with every death that they announce, the name of the medical gentleman who officiated: the readiest method, to a dead certainty, of making known the relative extent of practice in the profession.

*A Favourite Actor* at New Orleans had a recent benefit: at the conclusion of the performance he addressed a crowded house in the following manner: "Gentlemen, as it is the modern custom to make a speech upon a benefit occasion, I appear at your call. I could make a long speech, but that's all flummery; you are here,—I have your money and am satisfied; I hope you are: good night."

*Wooden Types* are advertised in the American papers, of every character and size, and at so reduced a price, when compared with metallic letters, as to afford no unreasonable expectation of their superseding the latter. It would be a curious incident in the history of the art of printing, if this invention should lead to the revival of block printing, for such standard works as are now stereotyped.

*An American Paper* asserts that every fourth family in the United States possesses a poet!!!

*A New Word.*—An official order, published in a New England newspaper, calls upon certain persons to pay up their "behindments" (arrears) before the ensuing court-day.

*The Fulton Ferry*, at New York, is suffering under the same malady as afflicts the general government,—a plethora of revenue; the company being incapacitated from reducing their rates, or from increasing their dividends. This is a very distressing case, and it is consolatory to us to know that most of our joint-stock companies manage these things better in Great Britain.

## DRAMA.

*Drury Lane.*—An opera called *Catherine Grey*, an English historical subject, and composed by Mr. Balfe, has been produced here with applause, and played thrice in the course of the last ten days. Mr. Balfe, Mr. Seguin, Mrs. Wood, and Miss Romer, give the music most efficient support. The music itself is of a very pleasing character, and, in some parts, extremely sweet. A serenade is particularly beautiful. The poetical recitative does not seem to suit English tastes; but, altogether, we have much satisfaction in saying, that Mr. Balfe's fame is not diminished by this composition.

*St. James's and the Olympic* closed on Wednesday; the former having brought forward many deserving pieces, and cast them in a manner to earn the applause of the admirers of legitimate theatricals; the latter having also brought forward many clever novelties, to houses almost invariably crowded.

*Strand Theatre.*—A new piece, called *Bachelors' Buttons*, has been produced here with success. Mrs. Stirling assumes a variety of parts in it, all of which she sustains with much talent and spirit.

#### VARIETIES.

*Weather-Wisdom.*—We have no great reason to find fault, either with M. Arago, or Lieut. Morrison, this week; for, if not quite precise, they have not been far wide of the mark in their prognostications. According to the latter, this day will be cloudy, and "the 4th warm, cumuli, thunder showers. The 6th and 7th changeable, with rain and wind; thunder again in some parts on the 7th. 8th to the 10th, warm and pleasant weather."—*Apropos*, we have to acknowledge a note from Lieut. Murphy, who shall be attended to, if he will favour us with any predictions for the future.

*Joe Grimaldi*, the clown of clowns, is dead. He died suddenly at his residence, Pentonville, on Thursday last.

*Princess Victoria*, from a drawing by R. J. Lane. (Dickenson). A lithographic portrait which does great credit both to the taste and talent of Mr. Lane. Being by the command of the mother of our young princess, the artist has well chosen an attitude and expression of countenance to preserve the most pleasing idea of the original. It is a sweet production.

*Thalberg-Herz*, and a nondescript grotesque *piano-forte player*, with some score of fingers on each hand, are little plaster casts (published by D'Almaine and Co.), which are charming mantel-piece ornaments, and pleasing recollections of musical favourites. The likeness of Herz is capital, and the caricature most laughable.

*A New Mechanical Power.*—An application of electro-magnetism to the movement of machinery, has been made by a Mr. Davenport, of New England; and a model of apparatus for applying the principle, is now exhibiting in New York. Professors Silliman, Renwick, and others, have expressed an opinion, that the power of machinery may be increased from this source beyond an assignable limit. It is also computed by these learned men, that a circular galvanic battery, of about three feet diameter, with magnets of proportionable surface, would produce at least a hundred-horse power! and, therefore, that two such batteries would be sufficient to propel ships of the largest class across the Atlantic. The only materials required to generate and continue this power for such a voyage, would be a few sheets of copper and zinc, and a few gallons of mineral water.—*American Paper.*

*British Museum.*—We omitted to state, in our last Number, that, on Whit Monday, the new and admirable collection of Egyptian mummies and antiquities was opened to the public at the British Museum. We attended, of course, and were not less surprised than gratified to see the crowds that literally thronged every room of this establishment. From the highest class, whose carriages rendered Great Russell Street like Charing Cross on the Royal Academy exhibition-days, to the plainest mechanic, all proved that the national stigma of want of taste and interest for intellectual information, is wholly misplaced and false; and the knowledge and intelligence evinced, in our own hearing, by members of the humble class on the subject of Egypt, was well calculated to gratify every reflecting patriotic mind. It was the same on Wednesday. Greenwich fair may

be a loser, but assuredly the public and the nation will be gainers by thus throwing open, on holidays, the sources of rational amusement and instruction to those who have no other opportunities for visiting them. We regret to see the Etrurian antiquities form so small a part of the collection; but Campanari's Etruscan exhibition will, doubtless, awake attention in the proper quarters, to this important portion of the past.

*Society of British Natural History, Antiquities, and Topography.*—We are informed that several scientific and literary persons are actively engaged in instituting a Society of British Natural History, Antiquities, and Topography. They intend to form a library and museum, illustrative of those subjects, which are to be further elucidated by the reading of papers, and the delivery of lectures at their weekly meetings. The natural history, antiquities, &c. of London and its suburbs, are the principal subjects to be investigated.

*Patronage of Literature.*—Simon Casii Chitty, a native of Ceylon, distinguished for having written a Gazetteer for that island, has been rewarded by government with the sum of 100 guineas.

*Zingarelli*, the composer, author of the opera of "Romeo e Giulietta," died at Naples on the 5th, aged 87; another instance of the longevity of musicians.

*Copyright.*—We rejoice to see Mr. Serjeant Talfourd's speech on the law of copyright, published in a correct form (by W. Moxon). It is a fine display of research and reasoning, enforced by brilliant eloquence.

*The Wellington Statue.*—Sir F. Chantrey, on whom the election for executing this work has fallen, attended the committee on Wednesday, when a conversation took place on the subject of the tribute. The result was, that a deputation was appointed to wait upon the Duke of Wellington, to state the circumstances to his grace, and request him to allow Sir F. Chantrey to be put into communication with him. Sir F., in reply to several questions, stated, that he would submit a model, or models, of his design, in, probably, three or four months; but as the first conception of such a group was one of its most important features, he did not like to pledge himself to an exact period. The statue itself, he thought, might be executed in four years, if no accident happened in casting the bronze, or otherwise, to retard it. As the funds are as yet inadequate to an equestrian statue and pedestal of a superior order, the committee resolved to keep the subscription open for a season; and it was agreed that, when Sir F. Chantrey's figure of Sir Thomas Monro, now within a few weeks of being done, should be completed, that distinguished sculptor would invite the committee to see it, so as to furnish them with certain data whereon to estimate the character and attributes of similar productions.

On this matter, a correspondent has sent us the following good-humoured *jeu-d'esprit*, founded, however, on a slight error; for the decision was fifteen to fourteen, independently of the chair:—"On the recent decision, by the casting vote of the Lord Mayor of London, that the equestrian statue of the Duke of Wellington should be executed by Chantrey, and not by Wyatt.

The admirers of Wyatt  
As well may be quiet.

For if with his steel nothing else can compare—

Though Claudius and Peter are out of their wits—

It seems clear as mud to the knackers and cits,

That the choice of the *Horse* should be left to the

Mayor. *The Guildhall Laureate.*"

*Concert.*—On Wednesday, Messrs. Rousselot and Eliason had their annual concert, at the Concert-room, King's Theatre; and it was, altogether, one of the richest treats of even this *starry* season. Pasta and Grisi sang together; but as almost all the principal attractions of the musical season were congregated together, we need not enter into details. The compositions and performances of Messrs. R. and E. themselves were, nevertheless, among the chief charms of the entertainment, which went off to the utmost satisfaction of a numerous and fashionable auditory.

*London Amusements.*—Among the amusements of London, one novelty springs into existence to-day, viz. the *Hippodrome*, at Bayswater, where horse-races, and a variety of manly and healthful sports, are proposed to be cultivated. The races appointed for this afternoon, by Mr. Whyte, the spirited proprietor, who gives several plates of a hundred guineas, &c. seem to promise great amusement; and, we have no doubt, should the weather be at all favourable, will attract a vast crowd of spectators. Under proper management, such an establishment, so near the metropolis, must be a source of constant entertainment and recreation. The *Beulah Spa*, somewhat more distant, presents inducements to visitors of a different, and not less pleasing, kind. The drive thither is a very agreeable one, and the grounds and woods around are charming promenades. Every opportunity which can take the population of the close and smoky city into the sphere of country relaxation, with fresh air and exercise, is highly to be prized. The accommodations here, too, are excellently well conducted. *Vauxhall*, another of our resorts, is now to be opened for every night in the week.

*West London Literary and Scientific Institution.*—At a general meeting of the members, and others interested in this Institution, Lord Teignmouth presiding, his lordship pointed out the advantages to be derived from institutions of this nature; and the hon. secretary read the report, from which it appears that 208 members have already joined the Institution; that more than 5000. have been received for subscriptions and donations; that a library was rapidly forming; and that the affairs of the Institution were in a very prosperous condition.

*Picture Sales.*—Yesterday, nearly sixty of the admirable collection of Mr. Cosvett (see *Lit. Gaz.* of last year) were disposed of by Messrs. Christie and Manson; of which, as we did not see them till Monday, we could give our readers no intimation. But there yet remains for to-day, some twenty or thirty of the *chefs-d'œuvre*; and well are they worth a visit from every lover of the arts. In the adjoining room, also, is the town collection of Sir George Warrender; about an equal number of pictures, and including admirable Teniers, Gainsborough, &c. &c.

*Caricatures.*—H. B. has already given us a batch of other three clever political sketches on stirring subjects of the day. 485. A race for the Westminster stakes. Burdett beating Leader in a canter, and various well-known M.P.'s, &c. looking on with aspects of different expression—triumph or distress. 486. "Taking up a fare." Peel driving, with the King on the box; Sir J. Graham, cad; Wellington, guard; Lyndhurst, an outside passenger on the back seat; Lord Castlereagh, a footman, with a carpet bag; Lefroy and Shaw also passengers in front; and Burdett and Lord Stanley in admirable character—the latter opening the door, and the other stepping into the coach. 487, is Burdett, as Don Quixotte, attacking the Lion of Demo-

cracy in his den. The last is also finely executed; and both are well calculated to maintain the celebrity of the artist.

**The Suburban Gardener, No. I.** By J. Loudon. (Longman and Co.)—This is a most useful and admirable design: from the first No., and the experience of the writer, we are free to say, that there is nothing which can be required by the villa-poseessor, or cottager, near London, or elsewhere, which will not be ably and clearly taught by this publication.

### LITERARY NOVELTIES.

The French *Historical Commission* has just published four new volumes: the first vol. of the Anglo-Norman Chronicle of Benoit, a poet of the 12th century, edited by Michel; the History of the Crusade against the Albigenses, in Provençal verse, by William of Tudela, edited by Fauriel; the second volume of General Pelet's Military Memoirs of the War of the Succession, from the official documents; and a specimen of a projected Archaeological Society of France, on a very large scale, with numerous plates, including the arrondissements of Nancy and Toul.

### LIST OF NEW BOOKS.

Sketches in the Pyrenees; with some Remarks on Languedoc, Provence, and the Cornice, by the Author of "Slight Reminiscences of the Rhine," and the "Gossip's Week," 2 vols. 8vo. 24s.—Lives of Eminent British Statesmen, Vol. III., by John Forster, Esq., forming Vol. XC. of Dr. Lardner's Cabinet Cyclopædia, fcap. 8vo. 6s.—The Curate of Steinholt, a Tale of Iceland, 2 vols. post 8vo. 18s.—Ryland on Diseases of Larynx and Trachea, 8vo. 18s.—Geraldine, a Tale of Conscience, 2 vols. 12mo. 12s.—The City of the Sultan, by Miss Parodo, 3 vols. 8vo. 17. 12s.—Sacred Philosophy of the Seasons, "Summer," by H. Duncan, D.D. 18mo. 6s.—History of Mahomed and his Successors, by W. Syme, 18mo. 3s.—The Wrongs of the Caffer Nation, by Justus, 12mo. 5s.—Truth without Novelty, Part II. 18mo. 2s.—Rev. Thomas Biddulph's Plain and Practical Sermons, 3d series, 12mo. 5s.—A Selection of Fables, by Theresa Tidy, 18mo. 1s.—Rev. James Slade's System of Family Prayers, 12mo. 2s. 6d.—Transition, fcap. 8s.—The Peacemaker, by Bishop Hall, 32mo. 1s. 6d.—Aunt Dorothy's Tale, or Geraldine Morton, 2 vols. post 8vo. 11. 1s.—Distant Glimpses, or Astronomical Sketches, by F. B. Burton, 12mo. 4s. 6d.—Shaw's Specimens of Ancient Furniture, on tinted paper, 4to. 2l. 2s.—Shaw's Specimens of Plates and Furniture, from the Colleges of Oxford, 4to. 10s. 6d.; folio, 2l. 2s.—Remarks on Military Law and Flogging, by General C. J. Napier, 8vo. 7s.—Robinson's Magistrates' Pocket Books, 2d edition, by J. F. Archbold, crown 8vo. 1l.—The Poet's Daughter, 3 vols. post 8vo. 11. 12s.—Eureka, a Prophecy of the Future, 3 vols. crown 8vo. 1l. 11s. 6d.—Wardlaw's Discourses on Socinian Philosophy, 5th edition, 8vo. 10s.—De Porquet's First Italian Reading-Book, cloth lettered, 3s. 6d.

### TO CORRESPONDENTS.

Our card for the Annual Meeting of the Medico-Botanical Society reached us too late: in consequence of which, we regret to say, we missed the anniversary address by the president, Lord Stanhope, and the rest of the proceedings of the day.

We cannot advise in or procure the matter mentioned in letter from Manchester Street, Brighton.

J. H. is thanked, but we cannot insert the lines.

ERRATUM.—The price of Captain Alexander's new work on the subject of Western Africa, &c. was stated at 36s. in our last No.; it is only 32s.

### ADVERTISEMENTS, Connected with Literature and the Arts.

**BRITISH INSTITUTION, PALM MALL.**—The Gallery, with a Selection of Pictures by Ancient Masters, of the Italian, Spanish, Flemish, Dutch, and French Schools, is now open, and will continue open daily, from Ten in the Morning until Six in the Evening.  
Admission 1s.; Catalogue, 1s.  
WILLIAM BARNARD, Keeper.

**JUST OPEN.—DIORAMA, REGENT'S PARK.**—New Exhibition, representing the Interior of the Basilica of St. Paul, near Rome, before and after its Destruction by Fire; and the Village of Alagna, in Piedmont, destroyed by an Avalanche. Both Pictures are painted by Le Chevalier Bouton.  
Open daily, from Ten till Five.

**CHINESE and MANCHU LANGUAGES.**  
Mr. William Huttman respectfully announces that he gives Lessons in the Chinese and Manchu Languages.  
Terms may be obtained of him, at No. 31 Burton Street, Burton Crescent, and of Messrs. Allen and Co. Booksellers to the Hon. East India Company, Leadenhall Street.

**THE COMMITTEE of the BIRMINGHAM and EDGBASTON PROPRIETARY DAY-SCHOOL,** are desirous of engaging a Classical Master, to enter upon his Duties at the close of the next Christmas Vacation.  
The Salary will be 300l. per annum. Applicants must address their testimonials (free of expense) on or before the 1st of July next, to Mr. J. C. Barlow, the Honorary Secretary, Bennett Hill, Birmingham, from whom Copies of the Rules of the Institution, and any further Information, may be obtained.

**TO ARTISTS, TOURISTS, AND ADMIRERS OF THE FINE ARTS.**

**PARLOUR'S PATENT SKETCHING-CASE,** or Delineator, is confidently recommended to the notice of all persons attached to the science of drawing, as being infinitely superior to the camera-lucida, and all other instruments hitherto invented for the purpose of sketching. The sketching-case may be held in the hand, and a correct drawing made of any object or landscape; or it may be attached to a table in the same manner as the camera lucida. It is simple in its management, and does not exceed, in size, the common sketch-book.

By GEORGE S. HOOPER, M.D.  
London: Whittaker and Co. Ave Maria Lane.

**SKETCHES in the PYRENEES;** with some Remarks on Language, Provenance, and the Cornice. By the Author of "Night Reminiscences of the Rhine," &c. &c. "This is the most brilliant book of its class we can remember to have read. The writer, whoever he is, may at once claim the highest place in this class of literature."—*Examiner*, May 28, 1837.

"There is every where displayed in these volumes, such a keen, we may add, and poetic eye, for detecting what is beautiful or magnificent in nature, or picturesque in manners; and such a sweet and copious feminine style of expression, that it is impossible not to desire to accompany the writer from chapter to chapter, and to the close of the work."—*Monthly Review*, June 1, 1837.

London: Longman, Rees, Orme, and Co.

**THE CURATE OF STEINHOLM.**  
A Tale of Iceland.  
"There is throughout, a vein of truthful simplicity and good feeling, which is very refreshing. The part which describes the eruption of the burning mountains, possesses very great interest."—*Monthly Repository*, June 1.

London: Longman, Rees, Orme, and Co.

John Murray, Albemarle Street.

**THE NINTH BRIDGWATER TREATISE.**  
A Fragment.  
By CHARLES BABBAGE, Esq.  
"The volume here presented to the Public, does not form a part of the series of works composed under the will of the late Earl of Bridgewater. I have, however, thought, that in furthering the intentions of the testator, by publishing some reflections on that subject, I might be permitted to connect with them, a title which has now become familiarly associated in the public mind with the subject of Natural Religion."—*Extract from the Preface.*  
John Murray, Albemarle Street.

Price reduced to 5s. embellished with Five Engravings and several Woodcuts, No. XXXVII. of the  
**QUARTERLY JOURNAL OF AGRICULTURE, and PRIZE ESSAYS and TRANSACTIONS OF THE HIGHLAND and AGRICULTURAL SOCIETY OF SCOTLAND.**

### REVIEW OF NEW BOOKS.

*The Ninth Bridgewater Treatise; a Fragment.*  
By Charles Babbage, Esq. 8vo. pp. 240.  
London, 1837. Murray.

THE title prefixed to this book is, in our opinion, very objectionable. It is not a *Bridgewater Treatise*, nor like one, except in form and title; and we are disposed to quarrel with any author who hoists other colours than his own: nor could it be necessary in this case. No remarks coming from Mr. Babbage needed any trick of the trade to push them into popularity; his own high scientific reputation would, of itself, have attracted attention, and ensured respect, without the irregular appropriation of vicarious notoriety. However, having thus briefly and plainly noticed the transgression, we let it pass. The work contains some admirable arguments, tending to rebut the following charge, thrown out by Mr. Whewell, in his *Treatise on Astronomy and General Physics*.

"We may thus, with the greatest propriety, deny to the mechanical philosophers and mathematicians of recent times, any authority with regard to their views of the administration of the universe; we have no reason whatever to expect from their speculations any help, when we ascend to the First Cause and Supreme Ruler of the universe. But we might, perhaps, go further, and assert, that they are in some respects less likely than men employed in other pursuits, to make any clear advance towards such a subject of speculation."

Mr. Babbage steps forward as the ardent champion of the mechanical and mathematical philosophers. By several distinct illustrations, deduced from his own immediate discoveries in his calculating machine, he goes to demonstrate that the powers of mechanism, when put forth to their higher capabilities, become themselves accessories towards the interpretation of those cyclical alterations in the laws of nature, which, so long as they remain unexplained, seem to our limited vision to be violations of an ordained rule. But if we can instance in mechanism such regular changes, in obedience to some hidden law of the contriver, however distant the intervals may be at which such change takes place, assuredly the philosophy of mechanics has done much as an auxiliary towards throwing light upon, and supplying us with, practical illustrations of the more secret working of the machinery of the universe. At present, however, we must be content to leave the main argument, and offer only a few brief examples.

The following fragment on time, little as it goes to make good the title of the book to the *Ninth Bridgewater Treatise*, approaches the sublime:—

"Time and change are great, only with reference to the faculties of the beings which note them. The insect of an hour, which flutters, during its transient existence, in an atmosphere of perfume, would attribute unchanging duration to the beautiful flowers of the cistus, whose petals cover the dewy grass but a few hours after it has received the lifeless body of the gnat. These flowers, could they reflect, might contrast their transitory lives with the prolonged existence of their greener neighbours. The leaves themselves, counting their brief span by the lapse of a few moons, might regard as almost indefinitely extended, the duration of the

common parent of that leaf and flower. The lives of individual trees are but in the continued destruction and renovation which take place in forest masses. Forests themselves, starved by the exhaustion of the soil, or consumed by fire, succeed each other in slow gradation. A forest of oaks waves its luxuriant branches over a spot which has been fertilised by the ashes of a forest of pines. These periods again merge into other and still longer cycles, during which the latest of a thousand forests sinks beneath the waves, from the gradual subsidence of its parent earth; or in which extensive inundations, by accumulating the silt of centuries, gradually convert the living trunks into their stony resemblances. Stratum upon stratum subsides in comminuted particles, and is accumulated in the depths of the ocean, whence they again arise, consolidated by pressure or by fire, to form the continents and mountains of a new creation. Such, in endless succession, is the history of the changes of the globe we dwell upon; and human observation, aided by human reason, has, as yet, discovered few signs of a beginning—no symptom of an end. Yet, in that more extended view which recognises our planet as one amongst the attendants of a certain luminary; that sun itself, the soul, as it were, of vegetable and animal existence, but an insignificant individual among its congeners of the milky way:—when we remember that that cloud of light, gleaming with its myriad systems, is but an isolated nebula amongst a countless host of rivals, which the starry firmament, surrounding us on all sides, presents to us in every varied form: some as uncondensed masses of attenuated light; some as having, in obedience to attractive forces, assumed a spherical figure; others, as if further advanced in the history of their fate, having a denser central nucleus surrounded by a more diluted light, spreading into such vast spaces, that the whole of our own nebula would be lost in it: others there are, in which the apparently unformed and irregular mass of nebulous light is just curdling, as it were, into separate systems; whilst many present a congeries of distinct points of light, each, perhaps, the separate luminary of a creation more glorious than our own. When the birth, the progress, and the history of sidereal systems are considered, we require some other unit of time than even that comprehensive one which astronomy has unfolded to our view. Minute and almost infinitesimal as is the time which comprises the history of our race compared with that which records the history of our system, the space even of this latter period forms too limited a standard wherewith to measure the footmarks of eternity."

The following subject is also beautifully carried out by Mr. Babbage.

"The principle of the equality of action and reaction, when traced through all its consequences, opens views which will appear to many persons most unexpected. The pulsations of the air, once set in motion by the human voice, cease not to exist with the sounds to which they gave rise. Strong and audible as they may be in the immediate neighbourhood of the speaker, and at the immediate mo-

ment of utterance, their quickly attenuated force soon becomes inaudible to human ears. The motions they have impressed on the particles of one portion of our atmosphere, are communicated to constantly increasing numbers; but the quantity of motion measured in the same direction receives no addition. Each atom loses as much as it gives, and regains again from others, portions of those motions which they in turn give up. The waves of air thus raised, perambulate the earth and ocean's surface, and in less than twenty hours every atom of its atmosphere takes up the altered movement due to that infinitesimal portion of the primitive motion which has been conveyed to it through countless channels, and which must continue to influence its path throughout its future existence. But these aerial pulses, unseen by the keenest eye, unheard by the acutest ear, unperceived by human senses, are yet demonstrated to exist by human reason; and, in some few and limited instances, by calling to our aid the most refined and comprehensive instrument of human thought, their courses are traced, and their intensities are measured. If man enjoyed a larger command over mathematical analysis, his knowledge of these motions would be more extensive; but a being possessed of the unbounded knowledge of that science would trace every the minutest consequences of that primary impulse. Such a being, however far exalted above our race, would yet be immeasurably below even our conception of infinite intelligence; yet, by him, supposing the original conditions of each atom of the atmosphere, as well as all the extraneous causes acting upon it, to be given, its future and inevitable path would be clearly traced; and supposing the interference, also, of no new causes, the circumstances of the future history of the whole of the earth's atmosphere would be distinctly seen, and might be absolutely predicted for any even the remotest point of time. Let us imagine a being, invested with such knowledge, to arrive at the predicted moment. If any the slightest deviation exists, he will immediately read in its existence the action of a new cause; and, through the aid of the same analysis, tracing this discordance back to its source, he would become aware of the time of its commencement, and the point of space at which it originated. Thus considered, what a strange chaos is this wide atmosphere we breathe! Every atom, impressed with good and with ill, retains at once the motions which philosophers and sages have imparted to it, mixed and combined with it in ten thousand ways, with all that is worthless and base. The air itself is one vast library, on whose pages are for ever written all that man has ever said or even whispered. There, in their mutable but unerring characters, mixed with the earliest, as well as the latest sighs of mortality, stand for ever recorded, vows unredempted, promises unfulfilled, perpetuating in the united movements of each particle, the testimony of man's changeable will. But if the air we breathe is the never-failing historian of the sentiments we have uttered, earth, air, and ocean, are, in like manner the eternal witnesses of the acts we have done.

The same principle of the equality of action and reaction applies to them: whatever motion is communicated to any of their particles, is transmitted to all around it, the share of each being diminished by their number, and depending jointly on the number and position of those acted upon by the original source of disturbance. The waves of air, although in many instances sensible to the organs of hearing, are only rendered visible to the eye by peculiar contrivances; whilst those of water offer to the sense of sight the most beautiful illustration of the transmission of motion. Every one who has thrown a pebble into the still waters of a sheltered pool, has seen the circles it has raised gradually expanding in size, and as uniformly diminishing in distinctness. He may have observed the reflection of those waves from the edges of the pool. He may also have noticed the perfect distinctness with which two, three, or more series of waves each pursues its own unimpeded course, when diverging from two, three, or more centres of disturbance. He may have observed, that in such cases the particles of water where the waves intersect each other, partake of the movements due to each series. No motion impressed by natural causes, or by human agency, is ever obliterated. The ripple on the ocean's surface caused by a gentle breeze, or the still water which marks the more immediate tract of a ponderous vessel gliding with scarcely expanded sails over its bosom, are equally indelible. The momentary waves raised by the passing gale, apparently born but to die on the spot which saw their birth, leave behind them an endless progeny, which, reviving with diminished energy in other seas, and visiting a thousand shores, reflected from each and, perhaps, again partially concentrated, pursue their ceaseless course till ocean be itself annihilated. The track of every canoe, of every vessel which has yet disturbed the surface of the ocean, whether impelled by manual force or elemental power, remains for ever registered in the future movement of all succeeding particles which may occupy its place. The furrow which it left is, indeed, instantly filled up by the closing waters; but they draw after them other and larger portions of the surrounding element, and these again once moved, communicate motion to others in endless succession. The solid substance of the globe itself, whether we regard the minutest movement of the soft clay which receives its impression from the foot of animals, or the concussion produced from falling mountains rent by earthquakes, equally retains and communicates, through all its countless atoms, their apportioned shares of the motions so impressed. Whilst the atmosphere we breathe is the ever-living witness of the sentiments we have uttered, the waters, and the more solid materials of the globe, bear equally enduring testimony of the acts we have committed. If the Almighty stamped on the brow of the earliest murderer the indelible and visible mark of his guilt, he has also established laws by which every succeeding criminal is not less irrevocably chained to the testimony of his crime; for every atom of his mortal frame, through whatever changes its severed particles may migrate, will still retain, adhering to it through every combination, some movement derived from that very muscular effort, by which the crime itself was perpetrated."

In conclusion, we cordially recommend Mr. Babbage's *Fragments*, distinctly as such, to our readers. The acute remarks of an enlarged mind on important and interesting topics, cannot fail of being welcome. We take our leave

by expressing our hope, that the framers of our criminal code will weigh the subjoined aphorism, which Mr. Babbage puts forth while speaking of punishments, "Make but the offender better, and he is already severely punished." This is well worth the price of the volume.

*Nick of the Woods; a Story of Kentucky.* By the Author of "Spartacus," &c. Edited by W. H. Ainsworth, Esq. 3 vols. 12mo. London, 1837. Bentley.

WE are under an obligation to Mr. Ainsworth for his introduction to *Nick of the Woods*; a tale from the pen of Dr. Bird, whose genius is highly appreciated in America. Some of his works have already been transplanted to this country, and have thriven under the fostering hand of Mr. A. K. Newman: but this last, and, as the editor says, "in some respects, the most striking of his efforts," was reserved for Mr. Bentley. In his Preface, Mr. Ainsworth alludes to some of the principal features of this, as follows:—

"His descriptions of the forest scenery of North America are every where marked by great power.—The gloom, the solitude, the gigantic height of the trees, the tangled intricacies of the wilderness, the forlorn log-house, the rushing torrent, the perilous ford, and the almost interminable extent of the vast and 'immemorial woods,' are delineated by Dr. Bird with a master-hand. To the reader of romance, nothing is dearer than fearful adventure, hair-breadth escapes, and profound mystery. In these qualities, Dr. Bird's work is conspicuous; and, though the scene of action is dreary and sombre, gleams are ever and anon thrown over it, by the freaks and humours of his comic characters, like bursts of sunshine on a desolate landscape."

We shall now proceed to give an extract or two, illustrative of the characters of Captain Stackpole and Nathan Slaughter, leaving the others to speak for themselves.

Roaring Ralph and Bloody Nathan are thus introduced to the hero and reader. Ralph is captain by courtesy, having only been the leader of depredatory bands of horse-stealers; he is dressed in the style of a back woodsman; his appearance rendered somewhat martial by rifle, tomahawk, and hunting-knife.

"As soon as he saw the commander of the station approaching, he cleared the throng around him by a skip and a hop, seized the colonel by the hand, and, doing the same with the soldier, before Roland could repel him, as he would have done, exclaimed, 'Glad to see you, cunnel; same to you, strangerer—What's the news from Virginnie? Strannger, my name's Ralph Stackpole, and I'm a ring-tailed squealer!' 'Then, Mr. Ralph Stackpole, the ring-tailed squealer,' said Roland, disengaging his hand, 'be so good as to pursue your business without regarding or taking any notice of me.' 'Tarnal death to me!' cried the captain of horse-thieves, indignant at the rebuff, 'I'm a gentleman, and my name's *Fight!* Foot and hand, tooth and nail, claw and mud-scraper, knife, gun, and tomahawk, or any other way you choose to take me, I'm your man! Cock-a-doodle-doo!' And with that, the gentleman jumped into the air, and flapped his wings, as much to the amusement of the provoker of his wrath as of any other person present. 'Come, Ralph,' said the commander of the station, 'whar'd you steal that brown mar' thar?'—a question whose abruptness somewhat quelled the ferment of the man's fury, while it drew a roar of laughter from the

lookers-on. 'Thar it is!' said he, striking an attitude, and clapping a hand on his breast, like a man who felt his honour unjustly assailed. 'Steal! I steal any horse but an Injun's! Whar's the man dar's insinivate that? Blood and massacre-ation! whar's the man?' 'H'yar,' said Bruce, very composedly; 'I know that old mar' belongs to Peter Harper, on the north side.' 'You're right, by Hooky!' cried Roaring Ralph; at which seeming admission of his knavery, the merriment of the spectators was greatly increased; nor was it much lessened when the fellow proceeded to aver that he had borrowed it, and that with the express stipulation that it should be left at Bruce's station, subject to the orders of its owner. 'Thar, cunnel,' said he, 'thar's the beast; take it; and just tell me whar's the one you mean to lend me,—for I must be off afore sunset.' 'And whar are you going?' demanded Bruce. 'To St. Asaph's,' which was a station some twenty or thirty miles off, replied Captain Stackpole. 'Too far for the Regulators to follow, Ralph,' said Colonel Bruce; at which the young men present laughed louder than ever, and eyed the visitor in a way that seemed both to disconcert and offend him. 'Cunnel,' said he, 'you're a man in authority, and my superior officer; wharfo' thar' can be no scalping between us. But my name's Tom Dowdle, the rag-man!' he screamed, suddenly skipping into the thickest of the throng, and, sounding a note of defiance; 'my name's Tom Dowdle, the rag-man, and I'm for any man that insults me! log-leg or leather-breeches, green-shirt or blanket-coat, land-tratter or river-roller,—I'm the man for a massacre!' Then, giving himself a twirl upon his foot that would have done credit to a dancing-master, he proceeded to other antic demonstrations of hostility, which, when performed in after years on the banks of the Lower Mississippi, by himself and his worthy imitators, were, we suspect, the cause of their receiving the name of the mighty alligator. It is said, by naturalists, of this monstrous reptile, that he delights, when the returning warmth of spring has brought his fellows from their holes, and placed them basking along the banks of a swampy lagoon, to dart into the centre of the expanse, and challenge the whole field to combat. He roars, he blows the water from his nostrils, he lashes it with his tail, he whirls round and round, churning the water into foam; until having worked himself into a proper fury, he darts back again to the shore, to seek an antagonist. Had the gallant captain of horse-thieves boasted the blood, as he afterwards did the name, of an 'alligator half-breed,' he could have scarce conducted himself in a way more worthy of his parentage. He leaped into the centre of the throng, where, having found elbow-room for his purpose, he performed the gyration mentioned before, following it up by other feats expressive of his hostile humour. He flapped his wings and crowed, until every chancieer in the settlement replied to the note of battle; he snorted and neighed like a horse; he bellowed like a bull; he barked like a dog; he yelled like an Indian; he whined like a panther; he howled like a wolf, until one would have thought he was a living menagerie, comprising within his single body the spirit of every animal noted for its love of conflict. Not content with such a display of readiness to fight the field, he darted from the centre of the area allowed him for his exercise, and invited the lookers-on individually to battle. 'Whiar's your buffalo-bull,' he cried, 'to cross horns with the roarer of Salt River? Whar's your

full-blood colt that can shake a saddle off? h'yar's an old nag can kick off the top of a buck-eye! Whar's your cat of the Knobs? your wolf of the Rolling Prairies? h'yar's the old brown b'ar can claw the bark off a gum-tree! H'yar's a man for you, Tom Bruce! Same to you, Sim Roberts! to you, Jimmy Big-nose! to you, and to you, and to you! Ar'n't I a ring-tailed squealer? Can go down Salt on my back, and swim up the Ohio! Whar's the man to fight Roaring Ralph Stackpole? Now, whether it happened that there were none present inclined to a contest with such a champion, or whether it was that the young men looked upon the exhibition as a mere bravado, meant rather to amuse them than to irritate, it so occurred that not one of them accepted the challenge; though each, when personally called on, did his best to add to the roarer's fury, if fury it really were, by letting off sundry jests in relation to borrowed horses and regulators.\* That the fellow's rage was in great part assumed, Roland, who was at first somewhat amused at his extravagance, became soon convinced; and, growing at last weary of it, he was about to signify to his host an inclination to return into the fort, when the appearance of another individual on the ground suddenly gave promise of new entertainment.

"If you're rarely ripe for a fight, Roaring Ralph," cried Tom Bruce the younger, "here comes the very man for you. Look, boys, thar comes Bloody Nathan." "Thar!" exclaimed Tom Bruce, slapping Stackpole on the shoulder, with great glee, "thar's the man that calls himself Dangler! At him, for the honour of Salt River; but take care of his fore-legs, for I tell you he's the Pennsylvany war-horse!" "And ar'n't I the ramping tiger of the Rolling Fork?" cried Captain Ralph; "and can't I eat him, hoss, dog, dirty jacket, and all? Hold me by the tail, while I devour him!" With that, he executed two or three escapades, demivoltes, curvets, and other antics of a truly equine character, and galloping up to the amazed Nathan, saluted him with a neigh so shrill and hostile, that even White Dobbin pricked up his ears, and betrayed other symptoms of alarm. "Surely, colonel," said Roland, "you will not allow that mad ruffian to assail the poor man?" "Oh," said Bruce, "Ralph won't hurt him; he's never ambitious, except among Injuns and horses. He's only for skearing the old feller." "And who?" said Forrester, "may the old fellow be? and why do you call him Bloody Nathan?" "We call him Bloody Nathan," replied the commander, "because he's the only man in all Kentucky that won't fight; and thar's the way he beats us all hollow. Lord, captain, you'd hardly believe it, but he's nothing more than a poor Pennsylvania Quaker: and what brought him out to Kentucky, whar thar's nar another creatur' of his tribe, thar's no knowing."

As Nathan approached, Ralph executed several demivoltes, and meeting Nathan—

"Bloody Nathan!" said he, as soon as he had concluded his neighing and curvetting, "if you ever said your prayers, now's the time. Down with your pack, for I can't stand deer's ha'r sticking in my swallow, no how!" "Friend," said Bloody Nathan, meekly, "I beg thee will not disturb me. I am a man of peace and quiet." And so saying, he endeavoured to pass onwards; but was prevented by Ralph, who, seizing his

heavy bundle with one hand, applied his right foot to it with a dexterity that not only removed it from the poor man's back, but sent the dried skins scattering over the road. This feat was rewarded by the spectators with loud shouts, all which, as well as the insult itself, Nathan bore with exemplary patience. "Friend," he said, "what does thee seek of me, that thee treats me thus?" "A fight!" replied Captain Stackpole, uttering a war-whoop; "a fight, stranger, for the love of heaven!" "Thee seeks it of the wrong person," said Nathan; "and I beg thee will get thee away." "What!" said Stackpole, "ar'n't thee the Pennsylvany war-horse, the screamer of the meeting-house, the bloody-mouthed b'ar of Yea-Nay-and-Verily?" "I am a man of peace," said the submissive Slaughter. "Yea, verily, verily and yea!" cried Ralph, snuffling through the nostrils, but assuming an air of extreme indignation; "Strannger, I've heerd of you! You're the man that holds it agin duty and conscience to kill Injuns, the red-skin screamers, that refuses to defend the women, the splendiferous creaturs! and the little children, the squall-a-baby d'ars! And wharfo?" Because as how you're a man of peace and no fight, you superfluous, long-legged, no-souled, crittur! But I'm the gentleman to make a man of you. So down with your gun, and 'tarnal death to me, I'll whip the cowardly devil out of you." "Friend," said Nathan, his humility yielding to a feeling of contempt, "thee is theeself a cowardly person, or thee wouldn't seek a quarrel with one thee knows can't fight thee. Thee would not be so ready with thee match." With that, he stooped to gather up his skins; a proceeding that Stackpole, against whom the laugh was turned by this sally of Nathan's, resisted by catching him by the nape of the neck, twirling him round, and making as if he really would have beaten him. Even this the peaceful Nathan bore without anger or murmuring; but his patience fled, when Stackpole, turning to the little dog, which by bristling its back and growling, expressed a half inclination to take up its master's quarrel, applied his foot to its ribs, with a violence that sent it rolling some five or six yards down the hill, where it lay for a time yelping and whinling with pain. "Friend!" said Nathan, sternly, "thee is but a dog theeself, to harm the creature! What will thee have with me?" "A fight! a fight, I tell thee!" replied Captain Ralph, "till I teach thy leatherified conscience the new doctrines of Kentucky." "Fight thee; I cannot and dare not," said Nathan; and then added, much to the surprise of Forrester, who, sharing his indignation at the brutality of his tormentor, had approached to drive the fellow off. "But if thee must have thee deserts, thee shall have them. Thee prides theeself upon thee courage and strength,—will thee adventure with me a friendly fall?" "Hurrah for Bloody Nathan!" cried the young men, vastly delighted at his unwonted spirit, while Captain Ralph himself expressed his pleasure, by leaping into the air, crowing, and dashing off his hat, which he kicked down the hill with as much good will as he had previously bestowed upon the little dog. "Off with your leather night-cap, and down with your rifle," he cried, giving his own weapon into the hands of a looker-on, "and scrape some of the grease off your jacket; for 'tarnal death to me, I shall give you the Virginny lock, fling you head-fo'most, and you'll find yourself, in a twinkling, sticking fast right in the centre of the 'arth!" "Thee may find theeself mistaken," said Nathan, giving up his gun to one of the young men; but instead of rejecting his hat, pulling it down tight over his brows. "There

is locks taught among the mountains of Bedford, that may be as good as them learned on the hills of Virginia. I am ready for thee." "Cock-a-doodle-doo!" cried Ralph Stackpole, springing towards his man, and clapping his hands, one on Nathan's left shoulder, the other on his right hip: "Are you ready?" "I am," replied Nathan. "Down then you go, war you a buffalo!" And with that the captain of horse-thieves put forth his strength, which was very great, in an effort that appeared to Roland quite irresistible; though, as it happened, it scarce moved Nathan from his position. "Thee is mistaken, friend!" he cried, exerting his strength in return, and with an effect that no one had anticipated. By magic, as it seemed, the heels of the captain of horse-thieves were suddenly seen flying in the air, his head aiming at the earth, upon which it as suddenly descended, with the violence of a bomb-shell; and there it would doubtless have burrowed, like the aforesaid implement of destruction, had the soil been soft enough for the purpose, or exploded into a thousand fragments, had not the shell been double the thickness of an ordinary skull. "Huzza! Bloody Nathan for ever!" shouted the delighted villagers. "He has killed the man," said Forrester; "but bear witness, all, the fellow provoked his fate." "Thanks to you, strannger! but not so dead as you reckon," said Ralph, rising to his feet, and scratching his poll, with a stare of comical confusion. "I say, strannger, here's my shoulders, but whar's my head? Do you reckon I had the worst of it?" "Huzza for Bloody Nathan Slaughter! He has whipped the ramping tiger of Salt River," cried the young men of the station. "Well, I reckon he has," said the magnanimous Captain Ralph, picking up his hat: then walking up to Nathan, who had taken his dog into his arms, to examine into the little animal's hurts, he cried, with much good-humoured energy, "Thar's my fo'-paw, in token I've had enough of you, and want no mo'. But I say, Nathan Slaughter," he added, as he grasped the victor's hand, "it's no thing you can boast of, to be the strongest man in Kentucky, and the most sevaragous at a tussel,—y'har among murdering Injuns and scalping runnegades, and keep your fists off their top-knots. Thar's my idear: for I go for the doctrine, that every able-bodied man should serve his country and his neighbours, and fight their foes; and them that does is men and gentlemen: and them that don't is cowards and rascals, that's my idear. And so, fawwell." Then, executing another demivolte or two, but with much less spirit than he had previously displayed, he returned to Colonel Bruce, saying, "Whar's that horse you promised me, cunnel? I'm a lick'd man, and I can't stay here no longer, no way, no how. Lend me a hoss, cunnel, and trust to my honour." "You shall have a beast," said Bruce, coolly; "but as to trusting your honour, I shall do no such thing, having something much better to rely on. Tom will show you a horse; and remember you are to leave him at Logan's. If you carry him a step further, captain, you'll never carry another. Judge Lynch is looking at you; and so bewar!"

Many of the other characters are finely drawn, especially Telie Doe; and the interest, though wild, and perhaps somewhat exaggerated, is nevertheless often of intense power, and generally well sustained through the three volumes. We shall therefore conclude with sincerely recommending *Nick of the Woods* to our readers.

\* "It is scarcely necessary to inform the reader, that by this term must be understood those public-spirited citizens, amateur Jack Ketches, who administer Lynch-law, in the United States, in districts where regular law is but inefficiently, or not at all, established."

*Flora's Gems; or, the Treasures of the Parterre.* Twelve Bouquets, drawn and coloured from nature, by James Andrews. With Poetical Illustrations, by Louisa Anne Twamley, author of "The Romance of Nature," &c. Folio. London, 1837. Tilt.

"Oh, the daisy it is sweet!" sang old Chancer, nearly five hundred years ago; and flowers were the only "things that pretty bin," which could allure the old bard from his books, and draw him into the fields, where "he did shape him for to lie" on his elbow and side, watching Flora's fair children, as they opened their perfumed eye-lids before the "golden eye of day." Poetry, poor poetry! is but little cared for now; but her attendants, the flowers, are as much beloved as they were in the olden time, when Innocence offered up her garland to the Gode, and the path which the sandalled feet of the blushing bride trod, was strewn with "rain-bowed odours." Where are the quaint gardens of the olden time? the days when they grew only hollyhocks and sunflowers, that threw their lofty heads towards heaven; for what mail-clad old Norman cut-throat could stoop in his cumbrous hauberk to look at the beauty of a violet, or inhale the perfume of a pink? But the bearded barons had lovely daughters; beings with sublime eyes, that bent down (with their white tunics floating around them like water-lilies), as they tended their oddly shaped flower-beds; and a few choice plants might bloom in their turret-windows; and a white hand now and then be seen between the massy iron bars, holding a curious long-necked jug, not unlike the head and body of a crane, and watering the drooping flower-bells. And flowers grew in Eden! Roses and woodbines, and many a trellised stem, never seen again after the Deluge, may have drooped over the head of Eve, as she sat in the calm of evening, and mingled among her long ringlets, until her azure locks seemed like portions of the starry jessamine; and Adam mistook them for flowers. But these are odd conceits, day dreams that gather around us in our dotage, when we shut our eyes, and are away "charioted by Bacchus and his pards." But our ancestors had not such delightful "deceits" as these to look upon in the dreariness and desolation of winter; such sweet pictures, that want but fragrance, and a breath of the gentle wind, to give them motion; and then we might live all our lives among flowers. Could not the same hand that has here challenged Nature, with her palette, to the contest of colours, hit upon some sweet device wherewith to perfume these likenesses of living beauty, and thereby cheat Nature of her odours as well as her hues? Marry, we have had many a *billet-doux* that would have made

"The light wings of Zephyr, sick with perfume,  
As they waved o'er the gardens of Gul in their bloom;"

and deem it not impossible that such things may yet be done: then, as old Pepys says, "it would please us mightily." We know not which we love best among these groups of loveliness; we halt amid heath, hyacinth, hollyhock, and heliotrope, and look at the gentle camellia and the lovely convolvulus, and columbine, and cyclamen, and know not which to choose: even Iris cannot wholly captivate our eyes; for, in the next page, we are flirting with a China-aster, sighing out our soul before sweet-peas, or languishing before a white geranium. We stand still before a stock, feel larkish with a larkspur, or find an appetite while gazing upon Narcissus, which makes us prefer sheep to shadows, instead of pining away.

They are, indeed, beautiful; there is a *naturalness* about them such as we have rarely seen excelled; we could almost fancy that the hand of Nature had fashioned them, or that the Spirit of the Flowers had stolen forth in the still twilight, and thrown around them her magical tints.

"Oh! they are beautiful to see,  
Like ladies from a far country."

The poetry is occasionally very pleasing; and there are several happy and original thoughts which only a love of the flowers could have produced. We are sorry to put any qualification in our praise on a lady of so much promise as the author; but it is our opinion, that the plan, plot, incident, or what not, on which some of these poems are written, is not in the best harmony with the spirit of the work. For instance, we have poems written to follow groups of flowers, in which no allusion is made to the illustrations. "The naming of the Iris" is a happy exception; and it is on that and similar models that the poetry should have been written. We speak this kindly; and it is what we would have whispered to the lady's own ear, had we had the pleasure of her acquaintance. It is easy to bespatter a work with fulsome praise; but not so to point out a fault, and shew a method of remedying it. "The Hollyhocks in the old Garden" are well managed: the associations of the scene—the change—childhood—and all those interwoven recollections springing from what has been, and what is, are wrought out in a true poetical spirit. The following description of the hollyhocks is new and beautiful:—

"They seemed a fairy city of tall spires,  
Wreathed, as for some high festival, with flowers,  
Rose-like, but far more changeful in their garb,  
And interwoven with peeping points of green,  
Restraining each wild in her proper bounds  
Of full-blown splendour. Looming to the top  
The yet unopened buds, enfolded close  
Within their paly calyxes, all seemed  
Like veiled nuns beside the gorgeous show  
Of their gay rainbow relatives."

#### The Lilac Tree.

"The buds, like childhood, blooming bright  
With deep and ruddy glow;  
The blossoms, like a maiden's cheek  
More pale—yet lovelier so."

#### Power of Poetry.

"These poet's dreams  
Shed o'er the fable-haunted flowers a glow  
Of sweet imaginings, that touch the heart  
And please the fancy; while the blossom's self,  
In all its wealth of colour, fragrance, form,  
Appeals but to our senses."

#### The Columbine: "Folly's Flower."

"Then gather roses for the bride;  
Twine them in her bright hair;  
But, ere the wreath be done, oh! let  
The Columbine be there:  
For rest ye sure that follies dwell  
In many a heart that loveth well."

#### Beauty in Death.

"Thy Lily, like full many another flower,  
Fair as herself, has known that 'tis to die.  
She ne'er will hear thee at that fatal hour,  
Beneath her lattice, tell her of the lark,  
Nor greet thy summons with as sweet a voice  
E'en as the warbler's own! Her gentle eyes,  
Those soft dove's eyes, which thine did ever meet  
So lovingly, are closed on earthly things;  
They ne'er will see again yon mountain's crest,  
Nor watch with thine the fleeting vapours curl  
Around its hoary front. Their light is quenched,  
Their beaming language dim and wordless now;  
Though wont to speak such kindness and love,  
That all her looks were clear as uttered words,  
Heralding ever what her lips pronounced.  
And they made melody all air they breathed!  
For Lillian's self was music, and her soul  
Of harmony shed over all around  
Its blessing influence."

After such specimens as these, our readers will perceive that, if we approve not of the plan, we cannot deny but that the work contains many passages of beautiful and sterling poetry.

*Eureka: a Prophecy of the Future.* By the Author of "Mephistophiles in England." 3 vols. 12mo. London, 1837. Longman and Co.

THE author has endeavoured to furnish an original view of what he supposes the world and its inhabitants will be some centuries hence, when Columbia is an over-populated empire, and Australia, &c. sending forth colonies, while the greater portion of modern Europe is desolate, and London like Palmyra or Baalbec. In this attempt, we regret to say, we recognise none of the talent of "Mephistophiles." His characters, roaming the seas in a ship, might as well date 1837 as 2837; and neither the bloody piratical contests, nor the comic relief, nor the general, nor the particular descriptions, seem to us to be deserving of praise. The work purports to be that of a German student, and opens thus:—

"Guten morgen, Wilhelm!" said I, as I entered the chamber of my fellow-student. "How are you this morning? You look better—your eyes are brighter, and your cheek possesses more colour than usual." "I am better, mein freund," observed the youth, raising himself up from the bed till his back rested upon the pillows. "But what have you there?" "A fresh supply of flowers for you, Wilhelm," I replied; "and I bought them of the prettiest mädchen I ever saw in the market-place." "Ich danke ihnen für das Geschenk," murmured the grateful student. "You know I love flowers better than any thing upon earth."

Now, we should like to know why a German student, if he could say "How are you this morning," or, "you know I love flowers," should not also be able to say, good morning, or, I thank you, instead of *guten morgen*, or, *Ich danke ihnen!* Such hotch-potch writing is quite ridiculous.

We will not go into the story, which has so utterly disappointed us, but select a bit of the humorous, to shew that our censure is only too justly incurred. The honest men are retaking their vessel from the pirates, and Roly Poly is a black cook:—

"At this instant, when Oriel and his party were unavailingly attempting to make good a footing upon the deck, assistance came from a quarter from whence any thing so welcome had never been anticipated. Roly Poly was pursuing his avocations in the cook-house when he heard the affray, and, looking out, observed exactly the state of the opposing parties. By him the pirates had never been regarded with any thing like affection. They had treated him with great disrespect. They esteemed not his art, and spoke contemptuously of his skill. His resolve was soon made, and as quickly executed. Dipping a mop in a copper of boiling water in which his cookery was going on, he hurried, as fast as his fat limbs could carry him, upon deck. 'See how Roly Poly come to 'ast him friends,' cried he, exultingly, as he began to use his strange weapon among the pirates, with a dexterity that scattered them right and left. 'Ha! you call my boofiful puddin' 'choke dog'—take dat, you libellous vagabone,' and with a forcible sweep the scalding mop descended upon his face, sending him howling off his heels. 'Ha! you say my lumptious soup wishy-washy—take dat, you ignrant jackmorass!' and a resistless blow upon the ear levelled him with his companion, yelling with pain; and thus he proceeded till he had cleared a way for Oriel Porphyry and his coadjutors, who quickly silenced all opposition. 'I hab you now, you fellar!' shouted Roly

Poly, striding in triumph over one of his victims, and seemingly intent upon ramming the scalding mop down the man's throat. 'Like your imprence, I tink, you fellar! to go for to say I boil sich nice puddin I make in nassy dishcloth!' 'Hubble, bubble, hubble, bloo!' said the choking wretch. 'Now I gib you puddin debblis nice, you fellar!' cried the fat cook, ramming away with all his might. 'Hobble, a bobble, a gobble, a gloo!' were the only sounds that were heard in reply. 'Dis nebber boil in nassy dishcloth, you fellar!' 'Grow, a row, a row, ow, oo, oo, oo!' 'Like your 'bominable imprence, you fellar!' 'Rug, a rug, a glug.' 'Take debblis good care you nebber say no more sich diclus impossibilities. Ha! him dead as herrin' now,' observed the unrelenting negro; and then adding, 'but serb him berry right—berry right, indeed—a fellar!' he shouldered his mop, and turned on his heel. 'Up with the anchor, and get out to sea as fast as you can,' exclaimed Oriel Porphyry."

This Oriel, after sailing about a long, long while, returns to Columbus, and is made Emperor of Columbia. We conclude with one of his intermediate adventures, an Irish one, in the English Channel.

"What are these vessels approaching us in this threatening manner," inquired Oriel Porphyry, as he noticed several old crazy-looking boats, filled with men who were coming towards them, with their crews howling, screeching, and yelling, with all the strength of their lungs. 'I do not think they mean us any good,' replied the captain: then, turning to some of the sailors standing scrutinising the appearance of a strange fleet, evidently bearing down upon them, he exclaimed, 'Get the long gun ready, and give these fools a taste of grape if they attempt to attack us.' 'Ay, ay, sir!' replied one of the men; and every disposition was made to repel any assault that might be attempted. As they approached nearer, it was observed that these vessels were a vast number of large open boats, some with sails, but most without; and they were so crammed with men, that many of them were in danger of sinking every minute. Their crews were clothed in ragged vestments of every colour and description; and they were armed with old swords, pistols, guns, pitchforks, and bludgeons; and these they displayed as they advanced, shouting all the time in wild savage tones perfectly deafening. A larger boat was in advance of the others; and in a conspicuous situation in this vessel stood up a tall fierce-looking man, with his head bound round with a hay-band, and a tattered blanket dropping from his shoulders. He brandished a rusty sword as he approached, and gave orders to those who followed, which appeared to meet with implicit obedience. When he came within gun-shot of the Albatoross, he turned round to his followers and addressed them. 'Boys,' said he, pointing to the ship, 'yonder's the furrenners. It's meself as 'ill take their big baste iv a ship if ye 'll be all to the fore. Divle a care ye may take ov their darty guns that their pointing at yese—their made ov wood they are, and sorrow a harm they can do, bad luck to 'em. Keep your powther dry, boys, and look to your flints, and iv we don't kill, and murther, and throttle every mother's son ov 'em, I'm not King Teddy O'Riley.' 'Sheer off there, you ragamuffins,' shouted the captain through a speaking-trumpet. 'Sheer off, or I'll sink ev'ry soul of ye within gun-range.' 'Down wid the darty furrenners!' screamed King Teddy O'Riley. A shower of balls whistled past the captain, and

on came the over-loaded boats, with their crews yelling in the most frantic manner. There appeared to be at least five or six hundred of them; and it was judged expedient to put an immediate stop to their progress. The long gun was discharged, which sunk the foremost boat, and killed the greater portion of its crew. The rest hesitated when they beheld their monarch swept into the sea; and a well-directed fire of musketry made them glad enough to commence a retreat as fast as they could, screaming, in hideous chorus, as long as they could be heard. 'Take a boat and see if you can save any of those rascals sprawling in the water,' exclaimed the captain to the midshipman Loop. 'Yes, sir,' was the reply; and the boat having been lowered, a party proceeded to pick up the wounded and drowning. They succeeded in saving several, among whom was their illustrious leader, King Teddy O'Riley, who was brought upon deck, looking very much deprived of his dignity, his coronet of hay-bands wet and dirty, and his blanket of state shrunk out of all shape. He created considerable surprise among his captors, and not without sufficient cause, for nothing could exceed the eccentricity of his appearance. His hair was thick and long, and of a dark red colour. Large bushy whiskers of the same tint surrounded his cheeks. His nose was remarkably red, and his face seamed with the marks of the small-pox. Below his cloak was a long coat, which did not appear the more royal for being out at the elbows, and for having lost half its skirt. His lower garments hung upon him like a bag, and they had the legs rolled back up to the knees. A pair of old boots, exceedingly down at heel, out of which the toes of his majesty were seen to peep, in spite of the straw with which they were lined, completed his costume. 'And who the deuce are you?' demanded the captain, after he had sufficiently scrutinised the appearance of his prisoner. 'Faix and isn't it King Teddy O'Riley I am?' replied the man. 'And what part o' the world are you king of, I should like to know?' asked Hearty, in considerable surprise. 'Faix and ain't I king ov Blatherumskite?' said the other. 'And where, in the name o' all that's wonderful, is Blatherumskite?' inquired the captain. 'And is it yourself that does n't know where Blatherumskite is?' exclaimed his majesty, in seeming wonder. 'Well, the ignorance o' some people is amazin! Not know Blatherumskite! Be the holy jaspers, that bates Bannagher, and Bannagher bate the divle. And Blatherumskite, sich a jewel ov a place! Why Blatherumskite's the finest kingdom, and has the finest pape under the sun. Its full ov commodities ov all sorts. It dales in turpentine, brickdust, soft soap, and other swatemates; tracle and train oil, pepper and salt, and other hardware; pigs, buttermilk, paraties, and other kumbustibles. Not know Blatherumskite, indade! Be this and be that, you're as ignorant as a born brute.' 'And what induced you to fire at me, Mr. King Teddy O'Riley?' demanded the captain. 'Faix and wasn't it only just to kill ye we fired at ye?' replied the king, with the utmost simplicity. 'It was, was it?' exclaimed Hearty; 'and for what reason did you attack the ship?' 'Wid no other rason in life than to take it,' responded his majesty. 'I was jist a lading the boys to make a decint on England, wid the hope ov being able to pick up a few thrifles, when we seed your ship. The top ov the morning to ye,' says I, 'and if I don't be afther ransacking ye intirely, small blame to me there 'll be.' And then we pulled away at the divle's own rate, and a mighty dale ov divarsion the boys had

about what they'd do wid the big ship when they'd got her, when, widout wid your lave or by your lave, I was regularly kilt, smashed, and smothered into the wather. And here I am.' 'Well, King Teddy O'Riley, we must be under the necessity of hanging you,' observed the captain. 'Hang me!' shouted the man, in perfect amazement. 'Hang a king!—hang King Teddy O'Riley? Hang the King ov Blatherumskite? Why its rank trason! Ye'll not be afther thinkin ov doin sich a rebellious action. I shall feel obliged to ye if ye wont mintion it.' 'And what would you have done with us if you had succeeded in your ridiculous idea of taking the ship?' inquired Hearty. 'Faix and wouldn't we have kilt every sowl of yese, and taken the rest prisoners?' replied his majesty. 'Then we cannot do better than follow your example,' observed the captain; then, turning to some of his men, who appeared to enjoy the scene with particular satisfaction, he exclaimed, 'Get a rope ready at the fore-yard arm, that we may hang this fellow!' The sailors, with great alacrity, made the necessary preparations. 'Be all the holy saints bewtix this and nowhere, ye'll not be afther taking away the life ov a poor king!' exclaimed his majesty of Blatherumskite, with the greatest earnestness and alarm. 'What'll I do now? Sure and I'm in a bad way! Sure and I'll be done for intirely! And is it to be hanged I am?' continued he, looking wofully at the rope that was dangling ready for immediate use. 'Is King Teddy O'Riley to be kilt afther sich a villanous fashion? Oh, what a disgrace for Blatherumskite! What a dishonour to a king! Oh! what 'ill I do—what 'ill I do?' 'Is the rope ready?' inquired Hearty. 'All right, sir,' said the boatswain. 'Then hoist him up,' replied the captain. The men proceeded to fulfil the command of their officer. 'Oh, it's in a pretty way I am!' exclaimed the unfortunate monarch, with tears in his eyes. 'Be the holy jaspers, wouldn't I change places wid any body as would like to be hanged in my place. It's yourself, Murphy O'Blarney, that's the good subject,' said the king, addressing one of his companions, with particular and impressive emphasis. 'Sure, and ye've got more patriotism than to let the King ov Blatherumskite be hanged, when it's your own loyal neck as would fit the rope so azy.' Murphy O'Blarney did not seem to hear. 'Bad luck to the likes ov yese for a traitor,' murmured his majesty. Then, turning to another of his subjects, he said, 'Larry Brogues, it's great confidence I place in ye—ye're a jewel ov a man intirely; and if ye 'ill jist be afther doing me the thrifling favour ov being hanged in my place, the best pig I have shall be yours.' Larry appeared as if he had lost all relish for pork. 'I always said ye were a base ribbel!' muttered the angry monarch, turning from him to address a third. 'Mick Killarney, a sinsible boy you've shewed yerself afore to-day, and little's the praise I take to meself for not having rewarded ye according to your desarts; but if ye'll shew your superior desarmment, by letting the little bit ov a rope be placed round your neck instead ov mine, it's meself that 'ill make a man ov ye when I get back to Blatherumskite.' Mick Killarney turned the only eye he had in his head to another part of the ship. 'There's more brains in the tail ov a dead pig, than 'ill ever come out ov yer thick skull, ye villain!' exclaimed King Teddy O'Riley, in a thundering rage: then he looked very pathetic, wiped his eyes with a corner of his blanket, and began to chant, in the most miserable tones, the following words:—

'Who'll bile the paratics, and pale 'em and ate 'em?  
Who'll drink all the buttermilk I used to swallow?  
Who'll hand round the whisky, and take his own share  
too,

Wid mighty convanience?

Oh! Teddy O'Riley, your reign's put a stop to,  
Small blame to your sowl, you're a king now no longer!  
You're smashed all to smothers, and dished up and done  
for,

In a way most amazin.

Not brave Alexander, or Nebuchadnezzar,  
Who went out to grass wid the rest of the cattle;  
Not Moses, or Boney, nor yet Cleopatra,  
Were treated so vilely.

Its meself that is up to me eyes in awament,  
To see you desaved and surrounded by villains,  
Who are wantin to place your poor neck in a halter—  
Bad luck to their mothers!

Is it rope you're desirin? the divle a ha'porth.  
Is it hanged that you would be? not me, then, by japers.  
Oh! there's sinse and there's rason in your own way ov  
thinkin,

You're cliver intirely.

But sorrow a hope have ye got to indulge in,  
For there hangs the rope like a murthin biaguard,  
Wid a knot at one end, and a noose at the other.  
Oh! what 'il I do now?"

We trust our readers, by this time, will  
know where Blatherumskite is to be found.  
"Eüenza!"

### Standish's Shores of the Mediterranean.

[Third notice: conclusion.]

WE have no further observations to offer on a  
work which so intelligibly speaks for and re-  
commends itself. Speaking of the cathedral of  
Palermo, the author says:—

"The ancient cathedral of Palermo served,  
at the epoch of their occupation, as a mosque  
for the religious rites of the Saracens, who  
have left in it some almost unintelligible in-  
scriptions in Arabic, valuable only to the curious  
in that language. Professor Morso occupied  
himself in translating them from the Cufic to  
the modern Arabic tongue. After the expul-  
sion of the Mahomedans, the Normans used  
the building for a church, and it rose to the  
dignity of a Christian place of worship, and  
was endowed and enriched with many gifts by  
the Bishop Gualterio Offamilio, a relative of  
Ruggieri, in the interval from 1160 to 1194,  
during which period he governed this church.  
He destroyed, however, in his religious zeal,  
much of the ancient architecture, but left one  
compartment or chapel, if it may be so termed,  
entire. Almost as much damage has been  
done to monuments of ancient art by Christian  
as by barbarian enthusiasm; and in the present  
instance, many other adjoining churches and  
buildings were sacrificed, in order to gain  
ground for the completion of this cathedral.  
In its nave are sepulchres consecrated to the  
remains of Anfunus and Henricus, sons of  
Ruggieri, together with those of the two wives  
of the latter prince; and the founder, Gualterio,  
is interred also in the same neighbourhood.  
Thus perish and pass away all mortal things,  
and all worldly splendours; the cold stone  
survives to mark the last abode of him who  
drew it from the quarry."

This is finely expressed, and worthy of  
poetry—but we continue our notes.

"There is one monument which rises from  
the pavement of this church, entitled the  
'Eternal Respect,' from the great name which  
adorns its tablets; under it repose the mortal  
remains of Frederic the Second of Sicily, at  
whose court literature was cultivated, learned  
men patronised, and the arts encouraged, during  
a period when the whole of the rest of Europe  
was immersed in ignorance and barbarism.  
The Italian of Dante was the language of the  
island at that period, and it has changed little  
even at the present time from its original frame:  
it may be said that the language of that great

poet, as well as of Petrarch, was and is the  
dialect of the present day.

"To those who have seen the various horti-  
cultural establishments in England, France,  
Germany, and Holland, the botanical garden  
of this capital presents nothing new; save that,  
whereas in the north artificial means are used  
for producing vegetation and bringing plants  
to maturity, in Sicily nature does every thing,  
and the climate supplies of itself what with us  
is gained from fire. There are, however, for-  
cing-houses here also; and one that was made in  
England, being destined for Vienna, was pre-  
sented to the institution which it now adorns,  
in 1799, by Maria Carolina of Austria. The  
collection of plants is very valuable. I saw two  
specimens of the *Cycas revoluta* from India,  
which cost 500*l.* sterling; and I am told that,  
in the grounds, there are eighteen thousand  
varieties of vegetable nature. The palms which  
I observed bear fruit, though it never attains  
its full perfection, nor is it at all equal to what is  
brought from the African coast; it is, how-  
ever, eatable, and the servants of the garden  
consume it. At no great distance, to the south  
of the botanic garden, is the site of some an-  
cient Arab remains, called 'Mar Dolce;' and  
it is here that antiquaries suppose the famous  
lake of 'Albehira' to have existed, which was  
a piece of water for recreation, filled with fish,  
and serving for the diversion of the Mahom-  
medan chiefs of the city. Professor Morso,  
who writes on the subject, endeavours to fix  
the account of this lake; but the only author-  
ity we have concerning it is the description  
given by a Jew, called Benjamin, of Tudela,  
in Navarre, who travelled in various parts of  
the world, more, it seems, for observing the  
synagogues of his countrymen, than from any  
love of general knowledge: and it has been  
suspected that he has given accounts of many  
places he never saw, and, amongst them, of  
this. He affirms that, in his time, there were  
splendid pleasure vessels on this piece of water,  
used by the grandees of the country for sailing.  
All, however, is now dry, and even the site of  
the water uncertain. Near to this spot is an-  
other very memorable one in the annals of  
Sicilian history: I mean the tragic theatre of  
the Sicilian Vespers.

"Santa Rosalia was a native of Sicily, and  
related to the ancient Norman kings of the  
isle; her birth-place was Palermo. She flour-  
ished in the time of the second King William,  
and was a friend of Queen Margaret, who,  
during the minority of her son William,  
reigned in his stead. It seems, however, that  
her holiness preferred the retirement of a her-  
mitage to the splendour of a court; and, in-  
deed, it often happens that those familiar with  
the latter, descend to a choice of the former  
without regret. All is not gold to the mind  
that glitters to the eye; the sword of Damoc-  
les is suspended over our splendid banquets,  
and retirement from the world with but little  
is preferable to the embarrassment of great  
riches and power:—

'Puræ rivus aque, sylvaque Jugerum  
Paucorum, et segietis certa fides moræ,  
Fulgens imperio fertilis Africa  
Fallit sorte beator.'

To be master of time, to read, to walk, to muse  
at will, to repose at an early hour, and watch  
the breaking of the rosy morn through the  
shades of night; to be unembarrassed by cares  
for others, and unsolicitous for each passing  
event; to enjoy tranquil slumbers, and taste  
with pleasure the unsophisticated viands pro-  
vided by nature; to glide through life without  
counting days, marking them only by kind

acts; and to welcome the seasons in some rural  
pursuit, as they revolve;—this is to live happy,  
this is to exist in good earnest: and when the  
hour-glass of time has run through the allotted  
space of existence, the virtuous and tranquil  
spirit will receive the release of nature without  
repining, and exist again, and play round the  
spots it once loved, in the approving voice of  
those who are left behind. Perhaps, in suc-  
ceeding ages, that pure fame will descend to  
posterity; and when time has stamped long  
past events with the marvellous, a beneficent  
genius will rise from the memory of the past,  
and be hailed by the unsuspecting vulgar at  
every village-feast with devotions and rejoic-  
ing. Santa Rosalia lived in a happy seclusion,  
unknown to and unnoticed by the great; her  
death caused no sensation; and it was only in  
the commencement of the seventeenth century,  
that a supernatural and simultaneous impulse  
in a body of the clergy guided them to explore  
her long deserted and almost unknown grave.  
The remains of her mortal being were dis-  
covered, and conducted through the plague-  
infected town, upon which the malady ceased.  
No supernatural cause elicited the disease,  
though a supernatural agency is said to have  
extinguished it. The vehement haste of the  
Spanish viceroy, Philiberto of Savoy, to possess  
a Turkey carpet, proceeding from the infected  
East, without proper fumigation, spread the  
pestilence through Palermo."

From Sicily Mr. Standish went to Naples;  
and his description of the Museum is beautifully  
written, though we can only detach an anti-  
quarian fragment:—

"I obtained," he says, "two favourable  
specimens of the Greek urns of Agrigentum,  
from Signor Politi, during my stay at Gir-  
genti, and he reckoned them amongst the best  
that had fallen under his notice; they are  
diminutive in size and composition to what are  
seen here, but not inferior in quality; they  
have also the merit of never having been  
broken; whereas, half of the ancient urns in  
this Museum have been repaired; they are, in  
the first instance, dug out in pieces, and then  
put into the hands of a workman, who joins  
them together, and afterwards glazes them so  
well as to defy the most minute scrutiny. The  
only test is nitric or muriatic acid, which will  
eat away the superficies, and so shew the cre-  
vices. Restorers are equally skillful, and charge  
as high for repairing these urns, as their bre-  
thren of the profession do for pictures. It may  
be noted, that the Sicilian Greek vases have  
generally a red ground, with black figures;  
whereas, those of Nola have invariably a black  
ground, with red figures. The price of all these  
articles, however, has fallen considerably of  
late, and more especially since the excavations  
made by Prince Borghese, at his villa, near  
Rome, the *subterranea* of which abound with  
objects of the same class, not yielding in excel-  
lence of workmanship, or beauty of form, to  
any others, either from Sicily or Nola. The  
armour, the household appendages, and the  
surgical instruments, found both at Pompeii  
and Herculaneum, are very interesting, and  
differ little from those used in the present day;  
I particularly observed this in the instruments  
serving for the obstetric profession. We are  
dragged into the world now as we formerly  
were; time has not changed our natures nor  
our necessities, and the part we have played,  
and play, is, to issue into life painfully, to live  
with anxiety, and to depart with fear. I saw  
no Roman bed capable of holding two persons;  
they are very narrow and solid; what I saw  
were made of bronze. There is some Grecian

armour from Paestum, which, though worn by time, is still intelligible in form. The appearance of the modern imitations is so near that of the original, that any theatre, or any armourer in Europe, could supply a complete suit for Achilles, were he to return again to-day; perhaps not quite so perfectly as the god Vulcan, but quite sufficiently so to equip the hero for battle, and enable him to brave Hector and the Trojans. The articles of glass found in the two ancient cities present novel forms, and are of various colours, green, white, and a very beautiful blue; but I saw none of purple: the fact, also, which Pliny asserts, and which has been doubted, is determined in his favour; namely, that the Romans used glass to their windows, of which several panes are to be seen in this Museum; thicker, indeed, than in that of modern use, but in quality and size the same. The ancients had a fanciful and elegant taste for their vessels; all we have might have been borrowed from them; many of their glass cups might be imagined to have been fused in the present day. Their gold ornaments appear mostly to have been laboured with the hammer. The spiral form of the serpent, for armlets and bracelets, was popular with them; but they employed little chiselled work. They used pendants for the ears, rings of gold and silver, and bracelets, with collars of all metals. The collection of papyri is more worth seeing, from the process of detaching the folds, than from the materials themselves, which resemble dry hard rolls of tobacco. The different layers are unfolded by applying gum and gold-beater's skin to the cinders, which communicate with a wheel. The width of each line of manuscript is not more than two or three inches, and five persons superintend the operation. The lines are printed on paper as they occur in the original; and what has perished in the process of opening, is supplied by the divination of some Greek professor, and distinguished by red letters. Some of the cinders are wholly unmanageable, and what has, as yet, come to light, are not the works of any very eminent man."

The fine arts are always touched with a master hand and feeling: we quote the following as curious:—

"The church of the princes of San Severo contains three monuments, for which the government is said to have offered thirty thousand dollars, which were not considered an adequate price by the family to whom they belong: and they are really curious from the extraordinary effect produced by their drapery and accessories. The first represents the mother of Don Raimondo, one of the princes, under the shape of a female figure of Modesty, covered with a veil of marble, so managed as to shew all the muscles of the body underneath. The second is that of the father of the same prince, under the allegory of a man delivering himself from the snares of vice by aid of a good genius. The snares of vice are represented by cords, which encompass the body, all formed from the same piece of marble, but touching the figure in very few places. The third is a dead Christ, covered with drapery, supposed to be damp with the dew of death: and, perhaps, no illusion can be more forcibly expressed than what is seen in this figure. The tranquillity of eternal repose, the relaxation of inanition, and almost the incipient dissolution of decay, are presented to the eye; indeed, the contemplation of it, in the solemn abode of death, gives a sickening sensation to the frame, and I was glad to escape into the open air and the sunshine, to avoid the effect of the painful representation. Corradini was the inventor of

this style amongst the moderns, and wrought here, as also did Queirolo: the former was a Venetian. The Greeks did not often labour to give the effect of muscular action through garments; but it is exhibited in the Esculapius of Syracuse; and Canova, amongst the moderns, was generally successful when he attempted it."

The following will interest our musical readers:—

"As the Neapolitan school of music is famous in Europe, I will note that which is in the monastery of San Pietro di Majella, in the quarter of the town called San Giuseppe. The number of scholars of both sexes, educated free of expense, is one hundred. Somelli and Paisiello left their manuscripts and posthumous works to this establishment, and the lessees of the different theatres are obliged to deposit here the partitions of music which are presented on the different stages. There are two directors, one of whom is the famous Cherubini, for the vocal, and there is another for the instrumental department. The musical library is fine and well-chosen. Besides masters for music, the pupils have the advantage of professors, who instruct them in various other branches of knowledge, necessary for the education of youth. This establishment is, however, exceeded in consequence by that of Vienna, which contains five times the number of scholars, has an archive of seven thousand works in ancient and modern music, with a gallery containing the portraits of almost all the early and contemporary luminaries and distinguished cultivators of the tuneful art."

And now we must conclude with a lecture to our travelling countrymen, which comes with peculiar force from the pen of Mr. Standish:—

"Let me address a few words to my countrymen travellers. You come abroad to save money, to mix with foreigners, and to improve your manners, as well as, in some instances, to avoid your debtors; attend:—money may be saved more agreeably in England than on the Continent, if people are not ashamed of economy; and those who are subject to such false shame do not deserve to be rich. When England is abandoned for France, you should call to mind what Casimir Delavigne, the best modern French poet, says concerning the English nation, and he echoes only the voice and spirit of all his fellow Frenchmen:—

'La France dans son sein ne les peut endurer,  
Et ne les recevroit que pour les devorer.'

And, again (on occasion of the death of Jeanne d'Arc, and the invasion of the British):—

'La France jamais ne perit toute entière  
Que son dernier vengeur fut il dans la poussière;  
Les femmes, au besoin, pourrout les en chasser.'

Now then, ladies and gentlemen, go and spend your money, and enrich a nation which hates and despises you; you will find, moreover, almost all agreeable places of the Continent as dear as your native land, and you will want many comforts, even if you live expensively there, which you might have at will in your own country. As for society, you are ridiculed in it: I have not yet visited a nation which does not amuse itself with the formal manners of the British. As for improving your manners, that may be done if you come early, are extremely prudent, and get rid of your English prejudices; but many a family has to lament the exposure to temptations, which have perverted the minds, and ruined the prospects of its members, who might have lived respectably from youth to age in their own country, by

their not knowing how to choose between the levities of foreigners and their really estimable qualities. When you can eschew the bad, and seize the good,—for no human natures are perfect,—you will certainly improve; but if, to the heaviness of an English disposition, you add the frivolity of the foreign one, you become 'leaden zephyrs,' and little else than heterogeneous, inconsistent creatures, with heads of bulls, and tails of serpents. The experiment is perilous. As for the bands of ruined gamblers, of desperate adventurers, who pollute by their contact the very steamers in which they cross the Channel, live they in Paris, in Naples, or in Vienna, they will soon be known, speedily scouted, and invariably exposed; let them herd together, and let the nation be purified by their departure, which has had the misery to give them birth. As for you, gentlemen, who travel for fashion, as long as you have guineas to spend in Europe, you will receive lip honour; when you are no longer serviceable to the people you visit, you will be thrown upon the dunghill. I am sorry to say that we are not popular abroad; the wars we entered into with France have caused the destruction of all the south of Europe; Germany is demoralised, Russia is jealous and angry, Italy discontented, Sicily and Spain ruined, Holland indifferent, and France friendly only from interest: how, then, can we islanders be well viewed by these nations, when, in addition to political discontent, we so frequently attract private animosities by our prejudices, our difference of habits to those we live amongst, and our general exclusiveness in sympathies, and predilection for whatsoever is English? In making these strong charges and remarks, I am, however, free to admit that there are exceptions, and that a travelled, well-educated, and well-disposed Englishman, is an ornament and a benefit to the circle, wherever it be, in which he moves: of these I know, I am happy to say, many, and value and respect their acquaintance; but, 'odi profanum vulgus.'"

To all which we say, Amen!

#### MISCELLANEOUS.

*Temples, Ancient and Modern; or, Notes on Church Architecture.* By W. Bardwell, Architect. Large 8vo. pp. 234. London, 1837. Fraser & Williams.

A BEAUTIFUL and valuable work, got up with much taste, and full of information. It is dedicated to his majesty, and merits the royal honour. The illustrations are very numerous and interesting, and the notes, well digested, give an insight into the history of almost every remarkable temple erected to Jehovah from the earliest periods. The accounts of those of the middle ages are peculiarly acceptable; but the whole, in spirit, in detail, in execution, and in instruction for the future architect, deserves the highest approbation and public patronage.

*The Penny Cyclopædia, Vol. VIII.* London, 1837. Knight.

THE first article in this volume is enough to recommend it: it is on Copyright, and, therefore, at this moment, particularly worthy of attention. The last word is Dionysius.

*An Epitome of Niebuhr's History of Rome; with Chronological Tables, and an Appendix.* By Travers Twiss, B.C.L. Vol. II. 8vo. pp. 269. Oxford, 1837. Talboys.

A VERY valuable addition to classic learning, which clearly and ably embodies all the latest efforts of the laborious Niebuhr. The chronological tables are excellent; and, indeed, the

whole is a work most fitting for the library of every intelligent reader.

*The Waldenses, or Protestant Valleys of Piedmont and Dauphiny.* By William Beattie, M.D. Illustrated in a series of Views, taken on the spot by Messrs. Bartlett and Brockendon. First Quarterly Part. Virtue.

"Of all nations or provinces," observes the writer of the Introduction to this interesting volume, "where the noblest virtues have been called into action, and where love of country, and zeal for religion, have alternately endured the most grievous calamities, or led to the most glorious results, these Valleys of Piedmont—a spot scarcely noticed in the maps of Europe—stand forth in brilliant distinction. From the magnanimous traits, heroic sacrifices, and startling incidents, which their history presents, it has all the character of an ancient epic; all the materials and variety of a tragic drama, but of a drama stamped with the seal of truth."

The views in this part of the work are nineteen in number, and are full of romantic beauty. The peculiar and picturesque costume of the figures contributes much to their effect: and, in some of them, military demonstrations and movements add great animation to the scene.

*The Poet's Daughter.* 3 vols. 12mo. London, 1837. Macrone.

THERE is too much, and too little, in these volumes. Too much love, murder, and sudden death; too much fine writing, and too little originality and truth. The young writer, and the *Poet's Daughter* is obviously the production of youth, does not want talent; there is a perception of both feeling and nature, but there is no dramatic power. The story lies over too great a space, is broken with an infinitude of episodes, and is improbable, "exceedingly." Its author has published too soon.

*Encyclopædia Britannica, Vol. XV. Part I.* Edited by Prof. Napier. Edinburgh, 1837. A. and C. Black; London, Simpkin, Marshall, and Co.; Dublin, Cumming.

THIS work continues to advance briskly. It seems to have climbed the alphabetic hill, and to find the last half of the road easier and easier. This Part proceeds from *May* to *Mon*—the last word being that magical one, *Money*; which, and *Mollusca*, *Mining*, *Mines*, *Minerology*, and the *Microscope*, are its leading articles.

*The Tour of the Don.* 2 vols. 12mo. (London, Groombridge; Sheffield, G. Ridge).—We took up these volumes under the mistaken notion that they related to the Don of Russia, but found them to contain a series of pleasant sketches, made during a pedestrian tour in Yorkshire. They originally appeared in the *Sheffield Mercury*, and possess more than mere local interest to recommend them to publication in this collected form.

*The Antiquities of Athens, and other Monuments of Greece, &c.* Pp. 103. (London, Tilt; Leicester, B. Coombs and Co.).—A small and very neat quarto, in which the finest monuments of Grecian art, as measured and delineated by Stuart and Revett, are brought under the notice, and before the eye of the reader. It is a pretty manual, and though the explanations are concise, they are satisfactory. No fewer than seventy clever plates illustrate the volume.

*White's Natural History of Selborne.* Pp. 411. (London, Orr and Smith).—"Ever charming, ever new," this fresh and popular volume is most welcome in a new edition, enriched by notes from the pen of Mr. Edward Blyth. The quantity and value of the additional matter render the work infinitely more acceptable, and throw much light on every branch of the natural history of England.

*Sonnets*, by Edward Moxon. 8vo. pp. 75.—A second edition of Mr. Moxon's very sweet compositions, and got up in a style worthy of the matter.

*The Politics of another World*, by Mordecai. 8vo. pp. 374. (London, E. Wilson, jun.).—We don't like the politics of this world, and could, therefore, hardly be seduced into an admiration of those of another. This is, however, a strange rhapsodical book—letters from red dragons, beasts with seven heads, angels in myrtle trees, unclean spirits, leviathans, &c. &c.—and if I am to have, it is aimed at the Church of England and episcopacy.

*Sketch of Western Virginia.* Pp. 117. (London, E. Bull.).—A little volume to promote the sale of certain estates in

Western Virginia, and instruct British settlers in the best measure for establishing themselves in that province. There is a good map, and the accounts and descriptions are plain and intelligible.

*De Porquet's First Italian Reading Book.* Pp. 251. (London, De Porquet and Cooper).—A nice collection of Italian stories, &c. and well calculated to lead the student into the agreeable paths of Italian literature.

*Select Lyrical Poems of the Germans, with a Translation of all Unusual Words and Difficult Passages, and Explanatory Notes*, by W. Klauer-Klittowski. Pp. 456. (London, Simpkin, Marshall, and Co.; Rolandi; Dublin, Milliken; Paris, Barrois).—A very excellent selection of German lyrics, and accompanied by such able critical remarks and explanations as must greatly enhance the value to the German student.

*Scelta di Prose Italiane tratte da Celebri Scrittori, Antichi e Moderni.* Pp. 280. (London, East).—Another good selection, and well calculated to promote a pleasant acquaintance with the language of Italy.

*Amram, a Tale of Bagdad.* Pp. 312. (London, J. Richardson).—An Eastern story, in which the capture of Bagdad by the Tartars, and the death of the last caliph of the Abbasian line, are the principal features. The other incidents are various, but not much out of the usual order.

*Adventures in Search of a Horse*, by Cavett Emptor, Gent. Pp. 392. (London, Saunders and Otley).—A third edition of a volume at once very useful and entertaining, in which the mysteries of horsemanship are famously exhibited.

*Picturesque and Historical Recollections during a Tour through Belgium, Germany, France, and Switzerland*, by M. O'Connor, Esq. Pp. 960. (London, Orr and Co.).—A pleasant little volume in many instances; but few, we believe, will agree with the writer, that the Duke of Wellington was, throughout the war, a shocking bad general, and only saved by the peace from being obliged to surrender to Soult at Toulouse!

*The Pocket Lacon*, selected by J. Taylor. Pp. 463. (London, J. T. Cox).—A selection of a thousand passages from a multitude of writers, and done with judgment and discretion.

*The Philosophy of Human Nature, in its Physical, Intellectual, and Moral Relations*, by H. M'Cormac, M.D. 8vo. pp. 564. (London, Longman and Co.).—A comfortable treatise, in which the author contends for our perfectibility to a large degree here, and to a glorious extent hereafter. It is written with much warmth and feeling.

## ARTS AND SCIENCES.

### THE BRITISH ASSOCIATION.

THE Liverpool meeting of the British Association is fixed for Monday, the 11th of September next. We learn, with pleasure, that the places for holding the various sections are exceedingly convenient; and that, notwithstanding the mercantile pressure of the times, there is likely to be a very gratifying assemblage of the Association, to illuminate, for a while, the gloom, the partial gloom, we hope, that has fallen on the princely commerce of the merchantants of Liverpool.

### LINNEAN SOCIETY.

MR. FORSTER, V.P. in the chair.—Read, an account of several new species of *Orchideæ*, natives of British Guiana, by Mr. Schomburgk. The descriptions were illustrated by drawings. Several of these species were remarkable for the beauty of their flowers. The next paper was a description of a tree, a native of the same place, called the snake-nut-tree, which appears to constitute a new genus of the natural family *Terebinthaceæ*. The seed is coiled up, snakelike, within the nut; hence, no doubt, have originated a belief in its supposed virtues as an antidote to the bite of serpents. It forms a large tree, of the aspect of the walnut (*Juglans regia*), and was found by the author on the banks of the Essequibo. A plant of the *Linaria arenaria*, in flower, from the collection of Mr. Jansson, was exhibited. At the anniversary, Robert Brown, V.P. in the chair, the Duke of Somerset was re-elected president; the other officers stand as heretofore.

### GEOLOGICAL SOCIETY.

WEDNESDAY, 3d May (continued). Rev. W. Whewell, president, in the chair.—A paper was read On some recent elevations of the coast of Banffshire, by Mr. Joseph Prestwick, jun. F.G.S. That an uplifting of the shores of

the Moray Firth has taken place subsequent to its having assumed its present outline, is proved by the existence, in several places, of a raised beach. In Banffshire, its height above the present high-water level varies from six to twelve feet. It occasionally abounds with shells now inhabiting the adjacent seas, such as *Patella vulgata*, *P. lavis*, *Trochus sinisterrimus*, *Littorina littorea*, and *Turbo retusus*. To this upheaving of the land the author attributes the draining of the former lowlands, as he conceives is indicated by the remains of drained peat-mosses. A section of one of these presented a total thickness of about five feet, including two irregular layers of gravel and quartz grit, with fresh-water and land shells. In a paper On the *Gamrie Ichthyofauna*, read before the Society in April 1835, Mr. Prestwick stated that, having been informed of the occurrence of lias in the dark clay and sands, which in many parts of Banffshire cap the old red sandstone and schistose rocks, he had inferred that these beds might be outliers of lias. Having, however, subsequently visited that country, and examined that deposit at Blackpots and Gamrie, he found the lias fossils in separate masses, and associated with rolled fragments of the older rocks. He also met with, at Gamrie, in a bed of light-coloured sand, alternating with dark clay and beds of gravel, the following recent shells:—*Astarte Scoicia*, *Tellina tenuis*, *Buccinum unda*, *Natica glauca*, *Fusus turricola*, *Dentalium dentalis*. They were extremely friable, but perfectly uninjured. This deposit or drift attains in places a thickness of 250 feet, and rises to a height of 350 feet. In conclusion, the author attributes the origin of this drift to a denudation of the lias and older formations; and he infers, from the perfect preservation of the fossils, and the superposition of the beds, that its accumulation was gradual.

17th May.—Extracts were read from two letters from Sir John Herschel, from the Cape of Good Hope—the first to Charles Lyell, Esq. dated 20th February, 1836; and the second, in explanation of this, to R. J. Murchison, Esq. of the date of 15th November, 1836. In these, the author, taking for granted a high degree of central temperature in the earth, which many geologists admit, and with which all are familiar, proceeds to explain his views respecting the necessary consequences of the transfer of pressure from one part to another of the earth's surface, by the degradation of existing, and the formation of new, continents; by pursuing into its consequences, according to admitted laws of this hypothesis, of a high central temperature: his object being to get a geological *primum mobile*, in the nature of a *vera causa*, and to trace its working in a distinct and intelligible manner. Thus, assuming an equilibrium of temperature and pressure within the globe, the isothermal strata, or curves of equal temperature, will be spherical; but when they approach the surface, will, by degress, conform themselves to the bottom of the sea, and the surface of continents. If, therefore, we suppose these isothermal strata under the bottom of any great ocean to be parallel to its concavity, when this comes to be filled up, the bottom may become horizontal, or even bulge out into a convexity, and the equilibrium of temperature will be immediately disturbed, because the form of a stratum of temperature depends essentially on the bounding surface of the solid above it. The temperature, therefore, will immediately begin to migrate from below upwards, and the isothermal strata will gradually change their form from the con-

cave to the horizontal, or convex form. The former bottom of the ocean will then acquire a temperature corresponding to its then actual depth, while a point as much below it as itself is below the surface, will acquire a greatly higher temperature, and may become even melted. Hence, therefore, instead of saying, as heretofore, "Let heat from below invade (for which no reason can be assigned) newly deposited strata, then they will expand, melt," &c., we may commence a step higher, and say, "Let strata be deposited, then, according to known, regular, and calculable laws, heat will gradually invade them from below, and will expand or melt them, as the case may be. But if, from the inequality of pressure, some support give way, a crack may take place, extending upwards, and a piece of the solid crust break down and be plunged into the liquid below, this will, from the simple hydrostatic pressure, rise into the crack above; but, as it gains height, it is less pressed: and if it attain such a height that the ignited water can become steam, the joint specific gravity of the column is suddenly diminished, and a jet of mixed steam and lava will be forced up, giving rise to all the phenomena of earthquakes and volcanoes. But if all goes on in quiet, the only consequences will be the obliteration of organic remains, and lines of stratification, &c., and the formation of new combinations of a chemical nature, &c.—in a word, the production of metamorphic, or stratified primary rocks.

## ROYAL INSTITUTION.

FRIDAY, June 2. Mr. Brockedon on medal and cameo engraving. Into this subject we have already fully entered, in No. 1047 of the *Literary Gazette*, for Feb. 11th, of this year. The subject is one to which the art, in itself beautiful, and the late discussions about it, have given considerable interest, especially the important improvements invented and patented by Mr. Bate. We cannot better describe what Mr. Brockedon exhibited and explained than we have already done in the Number alluded to, where we reprinted the whole of the evidence given by that gentleman upon the subject before the House of Commons. At the Royal Institution he exhibited what had been done; and, by means of a large wooden model of the machine, made rough traces in chalk from a cone. The subject of the lecture, however, was not, we think, a favourable one for an audience, and less capable of being clearly explained to them than to a committee of inquiry, like that of the House of Commons. Those, however, who found it difficult to understand the principles, were interested in the facts and processes exhibited, particularly a paper model, which exhibited the difference between distortion and foreshortening, and a diagram which shewed the courses of the lines by the old and the new machines over a cone. A sheet of prints, from rare medals, beautifully ruled by the machine, was liberally distributed among the audience; but the scuffle to obtain them, in spite of the declaration that there was enough for all, must have led to the destruction of many, in the not very decorous scramble to obtain them.

## ZOOLOGICAL SOCIETY.

THE Council have resolved to offer annual medals, or an equivalent sum in money, by way of premiums, for subjects connected with Zoology, and the premiums for the year 1837 are as follows:—

1. For importing either a pair of Musk Oxen: or a specimen of the Hippopotamus, male or female; or a pair

of the *Ornithorhynchus paradoxus*; 2. To the breeder of the greatest number of Curassows in the year 1837; 3. To the importer of a male and female Indian Pheasant, of a species not already alive in this country; 4. To the breeder of the best specimens of Indian Fowls in the year 1837; 5. To the breeder of the most rare or most interesting foreign quadruped in the year 1837; 6. For the best Essay on the Care and Treatment of the species of the genus *Felis* in confinement.

The conditions will, we presume, be promulgated, or may be learnt at the Society's offices.

LITERARY AND LEARNED.  
UNIVERSITY INTELLIGENCE.

OXFORD, June 1. — The following degrees were conferred:—

*Masters of Arts*.—H. Hall, Student of Christ Church; Rev. G. E. Peake, Magdalen Hall; E. P. Shirley, Magdalen College; Rev. C. P. Peters, Queen's College; Rev. F. Jones, R. Ward, Oriel College.

*Bachelors of Arts*.—T. W. Whiphram, Balliol College; J. S. Phillips, Exeter College; J. Hatsell, Oriel College; F. Menzies, Scholar, C. T. Nesbitt, Brasenose College; H. J. Gore, Postmaster of Merton College.

CAMBRIDGE, May 31. — The following degrees were conferred:—

*Master of Arts*.—Rev. F. Maynard, Caius College.  
*Bachelors in Civil Law*.—Rev. C. Chichester, Downing College; W. M. R. Haggard, Trinity Hall.  
*Bachelor in Physic*.—W. A. Guy, Pembroke College.  
*Bachelor of Arts*.—F. W. Rawes, Caius College.

## ROYAL SOCIETY.

MR. LAWRENCE in the chair.—Part of a paper by Mr. Farr, one of the lecturers of St. Bartholomew's Hospital, was read. This communication treats of that interesting portion of the animal kingdom, the class *Polypi*. The author, in connexion with his subject, incidentally notices the zoophytes, and wonders not that, in the first instance, they were considered by some naturalists as belonging to the mineral kingdom; and by others, as Tournefort and Ray, to the vegetable; the great improvements in the microscope, however, opened a new field for observation. In 1828, a communication was made to the Royal Academy of Sciences, at Paris, announcing the discovery of an anal and oral opening in polypi, which was also, about the same time, ascertained by Ehrenberg, who made this important distinction the basis of his classification. Mr. Farr, it appears, directed his attention to these researches, chiefly during visits to the Isle of Sheppey—rich in such subjects—during 1835: and in that portion of the paper which was read, he details the results of various experiments conducted by him with the camera lucida. In making these, he guards against the introduction of artificial light, which is altogether inadequate for pursuing, with satisfaction, such delicate inquiries. He then describes the complicated machinery, by which is carried on protrusion and retraction. Several gentlemen were elected into the Society, and others were introduced, and took their seats for the first time as fellows.

## SOCIETY OF ANTIQUARIES.

MR. HUDSON GURNEY in the chair.—Sir Henry Ellis exhibited a facsimile copy of a plan of the town of Terronon, France, and the siege of it, temp. Henry VIII. It is the more valuable, as the place was entirely destroyed after its capture; the original is in the Cottonian collection. The reading was concluded of the Earl of Northumberland's "Instructions touching the management of his affairs," addressed to his son during his imprisonment in the Tower, for being connected with the Gunpowder Plot. It bore the style of a man of cultivated talent and education; but the subject was a general captious tirade against the female sex, in all their situations in life.

LITERARY AND SCIENTIFIC MEETINGS  
FOR THE ENSUING WEEK.

Monday.—Royal Geographical, 9 p.m.; British Architects, 8 p.m.; Marylebone, 8½ p.m. (Mr. Delille on French Literature).

Tuesday.—Zoological, 8½ p.m.; Society of Arts, 8 p.m. (Mr. H. Wilkinson on the Manufacture of Sword-blades; Architectural (Essay by G. Alexander)).

Wednesday.—Society of Arts, 7½ p.m.; Geological, 8½ p.m.; Graphic, 8 p.m.; Medico-Botanical, 8 p.m.

Thursday.—Royal Society, 8½ p.m.; Antiquaries, 8 p.m.

Saturday.—Royal Asiatic, 2 p.m.

## FINE ARTS.

## EXHIBITION OF THE ROYAL ACADEMY.

[Seventh and concluding notice.]

OF the Architectural Drawings in the Exhibitions of the Royal Academy it has never been our hint to speak, except in cases in which they possessed qualities generally attractive; such as may be seen in the present instance, in 1029, *The Mournful Obsequies of the valiant Raymond Bevinger*, G. P. Jenner; 1042, *Design for a Triumphal Bridge*, W. Barnes; 1084, *Baths erecting at Bournemouth, near Christchurch*, B. Ferrey; 1091, *The Ruins of Castle Acre Abbey, Norfolk*, J. Baynes; 1102, *View of Grey Street, Newcastle-upon-Tyne*, B. Green; 1128, *Design for the Interior of a Synagogue*, D. Mocatta. The last-mentioned is a splendid example of its kind, rivalling Asiatic or Moorish magnificence.—Some table or mantel models in the Architectural Room are well deserving of notice; as 1151, *Status of the Lady Adelaide Lennox*, R. C. Lucas; 1152, *Monument to Earl Grey*, J. and B. Green; 1153, *Status of the Marquess of Douglas*, R. C. Lucas; 1154, *Bust of the Right Rev. Daniel Wilson, Lord Bishop of Calcutta*, C. A. Rivers; and 1157, *A Group of Orphans*, in marble, T. Sharp.

Of the construction of the room devoted to Sculpture, we have already said we do not think so highly as of that of the rooms appropriated to Painting. A single and steady light is advantageous to a picture: to a statue it is indispensable; as, with cross lights, forms become undistinguishable. We understand that, in the first instance, when a stick was placed perpendicularly on the middle of the floor of the Sculpture Room, it cast three shadows!!! After profound deliberation, one of the windows was shut up, so that the stick now casts only two shadows!! It is with great diffidence we advise the closing of another window: the stick will then, perhaps, cast but one shadow!

Shapes of grace, and lines of beauty, are among the first qualities of sculpture. In the development of these qualities, taste, judgment, and sentiment, are essential ingredients. As illustrations of this fact, we may point out 1178, *A group in marble, representing Hylas surprised by the Naiades*, J. Gibson; 1179, *Group in marble, Maternal Affection*, E. H. Bailey, R.A.; 1180, *Marble statue, Nymph at the Bath*, R. J. Wyatt; 1177, *Girl and Lizard*, H. Cardwell; 1169, *A statue in marble, representing Love disguised as a Shepherd*, J. Gibson, R.A.; 1160, *Euphrosyne, a statue in marble*, R. Westmacott, R.A.; 1168, *Status in marble, Female Suppliant*, S. Macdonald.—Of commemorative statues, the dignified, the commanding, and the venerable, are the leading characteristics. The following are fine exemplifications of them. 1161, *Marble statue of Sir John Malcolm, G.C.B. for Westminster Abbey*, Sir F. Chantrey, R.A.; 1162, *Marble statue of John Dalton, D.C.L. Manchester*, Sir F. Chantrey, R.A.; 1165, *Statue of the late Dr. Babington, to be placed in the Cathedral of St. Paul*, W. Behnes; 1167, *Monumental Figure of Viscount Brome*, E. H. Bailey, R.A.; 1183, *Mural Monument to the Memory of Mrs. Cole*, R. W. Sievier;

1164, *A Monumental Statue*, J. Gibson, R.A. —The marble busts are numerous, well-arranged, and of a very high order of art. Among the most striking are 1206, *Mrs. Thomas Jarvis*, T. Butler; 1207, *The late Rev. John Wilcox, M.A.*, E.W. Wyon; 1208, *The Baron de Lagos*, J. Gallagher; 1248, *Andrew Amos*, Esq. E. Ryley; 1210, *The late John Abernethy*, Esq. W. Groves; 1217, *Samuel Cartwright*, Esq. S. Joseph; 1218, *Sir John Bayley*, R. J. Wyatt; 1219, *The late Sir William Franklin, K.C.H.*, S. Joseph; 1224, *Chevalier Buckhausen, Consul-General of Russia*, P. Turnerelli; 1226, *The late Percival Pott*, P. Hollins; 1227, *Sir John Beckett*, Bart. M.P., W. Behnes; 1230, *The Rev. Dr. Penfold*, W. Behnes; 1235, *Mrs. Charles Tennant*, J. Fillans; 1231, *The late Sir Thomas Munro*, R. W. Slevier; 1241, *Daniel O'Connell*, Esq. M.P., C. Moore; 1255, *Allan Cunningham*, Esq. J. Fillans; 1271, *Dr. Robert Southey*, Sir F. Chantrey, R.A.; 1273, *Earl Grey*, E. H. Bailey, R.A.; 1281, *The late Admiral Sir Michael Seymour*, Bart. E. H. Bailey, R.A.; &c. —These are diversified by 1284, *Cabinet Statue of Lord Viscount Melville*, and 1283, *Cabinet Statue of His Royal Highness the Duke of Sussex*, J. Francis; as well as by a variety of fine alto and basso-relievos, classic and historical: viz. 1192, *Wicliffe preaching to the People*, R. Westmacott, jun.; 1202, *Part of a Monument to be erected in Westminster Abbey, to the Memory of Dr. Bell*, W. Behnes; 1190, *Mercury presenting Pandora to Prometheus*, R. Westmacott, jun.; 1196, *Dante and Beatrice*, M. L. Watson; 1193, *Psyche*, W. C. Marshall; 1185, *Model of the Shield of Achilles*, J. Henning, jun.; &c. &c.

In taking leave, for the present season, of the Royal Academy, we beg to repeat our best wishes for their prosperity under their new roof; and, as one of the elements of that prosperity, we strongly recommend to them a more careful sifting of the works offered for exhibition. They would also consult their dignity by declining to insert any unmeaning and ridiculous quotations in their catalogue.

**Lottery of Pictures.** — Our readers, both those who love the fine arts, and those who feel what that love ought to generate towards the artists whose talents have delighted them and adorned their country, will, we are convinced, read the following brief statement with sympathy and interest. By the death of the late R. Jackson, R.A., his widow and family were left in straitened circumstances, which put it out of the power of the mother to rear and educate her children in the manner that would become them and her, and afford them a fair chance of making their way with credit in the world. In some measure to remedy this, a few friends, including patrons of the art in the highest ranks of life, have proposed a lottery of seventeen pictures, the property of the late distinguished painter, most of them his original productions, but including his noble copies of the Three Marys, of Annibal Caracci, and the Christ in the Garden, of Coreggio. These two will be the principal prizes; and are, indeed, worthy of being so. We believe the tickets are ten guineas each, and that the whole number to be issued is only sixty; so that there will be nearly one prize in every three. But, were there only one in thirty, the object deserves the consideration of the liberal and the good.

THE OTTLEY COLLECTION OF ENGRAVINGS. It is very gratifying to us to be able to notice, that, in the present depressed state of mer-

cantile affairs, the sale of this well-known collection has not in any way been affected; on the contrary, the ardour for collecting the fine works of the early engravers is evidently on the increase, as many of the more rare and important prints have here produced greater prices than obtained for them at the sale of the celebrated collection of Sir Mark Sykes, some ten or twelve years since, when they were considered to have arrived at their maximum. Our readers will recollect that, on the death of Mr. W. Young Ottley, we gave a brief memoir of his life, with a notice of his several distinguished works on the history of early engraving and painting. Mr. Ottley's whole life and fortune were devoted to the advancement of the fine arts; and, at his death, the arrangement and sales of his valuable collections were placed in the hands of Mr. Sotheby. The sale (occupying fourteen days), which has just been concluded by him, formed the principal portion of Mr. Ottley's collection of prints, and has produced three thousand pounds. The collection was particularly rich in the works of the early German and Italian masters; and the annexed brief selection of a few of the rarest, with the prices at which they sold, may not be unacceptable to our readers.

Rembrandt—Dutch School.		£.	s.	d.
St. Francis at the Entrance of a Wood, from the	Barnard collection	7	2	6
Old Haring, from the same collection		22	0	0
Beggars at the Door of a House		4	12	0

Italian School.		£.	s.	d.
Adam and Eve in Paradise, by Marc Antonio		5	5	0
Christ taken down from the Cross, by the same,	from the collection of Sir P. Lely	20	15	0
St. Cecilia, after Raffaele, by the same, from the	Mariotto collection	24	10	0
The Judgment of Paris, by the same		16	0	0
Apollo Belvedere, by the same		7	0	0
The Galates, by the same		7	2	6
The Pest, after Raffaele, by the same		5	0	0
St. John the Baptist, by Campagnola		7	5	0
A Set of Ornaments, by J. Andrea		8	12	0
La Puissance d'Amour		25	10	0
The Four Dancing Nymphs, by And. Mantegna		11	0	0
The Baptism of Christ, by Gir. Mocetto		25	0	0
The Madonna, by the same		10	10	0
The Assumption of the Virgin, by Botticelli		22	0	0

The impressions from the works of Niello, and the large woodcuts, concluded the sale. The Niello were principally purchased by Mr. Ottley, at the sale of Sir Mark Sykes's collection; and they have, in several instances, produced greater prices, though upon an average much about the same. We are glad to find many of the rarest, and the finest, were purchased for the British Museum; as also several of the more curious and unique prints throughout the collection.

#### NEW PUBLICATIONS.

*An Essay on the Education of the Eye with Reference to Painting. Illustrated by Copperplates and Woodcuts.* By John Burnet, F.R.S. 4to. pp. 73. London. Carpenter. THERE are few artists in the present day who

have shewn more varied talent — there are few writers in the present day to whom art is more indebted — than Mr. Burnet. His valuable "Practical Hints on Painting," were noticed in the *Literary Gazette*, as the three parts, of which the work is composed, made their successive appearance. We have now to introduce to our readers a further production, containing many suggestions calculated to be highly useful; especially at a period when the public attention has been so recently called to the subject by the Report of a Select Committee of the House of Commons.

"In a country so largely connected with manufactures as this is (says Mr. Burnet), we cannot but wonder why the education of the eye has not been more generally cultivated; observing, as is also the case with the ear, that its education in after life rarely gives the possessor those advantages which result from a proper direction having been given in youth: nor do I see why drawing should not accompany the elements of reading and writing, the complicated forms of the letters in many languages presenting a more serious obstacle than what is required in the rudiments of drawing; and I have no doubt but that a very short time would be sufficient to enable a scholar to draw objects with tolerable correctness. Without this education, not only are the most valuable advantages often lost, but the mind is deprived of one of its chief sources of correct information and the hand remains in a manner paralysed and unable to record what the eye takes cognisance of; whereas, when they advance in mutual contact through a course of early instruction, this difficulty is overcome."

"The power of seeing objects correctly (he afterwards remarks), is gained by a careful examination of their general appearance, and of the component parts which produce such general appearance; it is necessary, therefore, before proceeding to delineate any object, to observe it attentively in the first instance, to examine it as a whole, so as to be convinced of its great leading features, the various shapes the principal lights take, also the forms of the darks, what occasions them, and why they are darker at one place than at another; the size and shape of the smaller component parts, where they are congregated most, and where the greatest vacuum is situated, where portions are seen entire, and where they are intercepted. Without the eye taking cognisance of all these before proceeding, it will be impossible to give a just representation, either in the detail or in the general effect; it will, moreover, have a prejudicial influence, inasmuch as it will lead to a style of drawing without feeling, character, or decision. One reason why the drawings of eminent artists are superior to all others, is the great intelligence every line indicates, the smallest touch being expressive of the character; another advantage this previous contemplation of the subject has, is the storing of the mind with materials for future occasions, when it is necessary to have recourse to the memory. Knowledge in drawing, as well as in other sciences, is having ready a mass of materials, which we can apply to the subject in hand. Drawing much improves us as little as reading much, unless we contemplate and understand as we proceed; those who have acquired a readiness of hand without correctness and study, have but the shadow instead of the substance; and though to the unlearned their works have the appearance of excellence, yet to educated eyes they seem in the light of forgeries, or like the language of him who talks speciously of a subject he does not understand. After the

hand has once acquired this delusive dexterity, the student becomes contented, and unable to execute any thing correctly in future. \* \* \*

"Notwithstanding the foregoing remarks, careful drawing and minute finishing are to be regulated in a great measure by the nature of the work in hand, otherwise these qualities, excellent in themselves, are liable to be caught at, as an excuse for doing something which requires the least exertion of the mind. Though it is absolutely necessary to be able to draw correctly whatever may be placed before you, yet it does not follow that the same labour is to be carried into the subordinate parts, otherwise a long portion of life might be spent in delineating the intricate ramifications of trees and plants, or in mapping out with painful fidelity the hedges and ditches of a whole country. The correctness of which it is necessary to be possessed is to be employed in rendering with accuracy the vital portions of all works, frequently leaving the minor passages to be filled up from our general knowledge and practice. How vexatious is it to see young men attending academies and museums, month after month, drawing from antique statues, in place of bestowing their whole care in giving the outline and form correctly, waste their youth in industrious idleness, in representing the flaws and excoriations of the mutilated marble, or in smoothly stippling in a surrounding mass of background!"

How true is the following observation:—

"The real trouble in life, in all professions, is the trouble of thinking; to escape which, the most laborious trifling is caught at, but, if fairly grappled with in the outset, every thing becomes clear, and, in after life, that which is a continual annoyance to many becomes one of the greatest gratifications. Why is it, that to the eye of an artist the drawing of a complicated plan is rendered clear at a glance, while to others it requires a multitude of figures of reference and a long explanation? It is, that his mind has been educated in continual intercourse with the eye; and the constant habit of reflecting on cause and effect has rendered a numerous assemblage of lines intelligible to him, which, to others uneducated, appear like a species of hieroglyphic."

Form, perspective, chiaro oscuro, invention, composition, arrangement, harmony, and other qualities of art, are separately treated by Mr. Burnet, with great knowledge and ability, and their principles are illustrated by some exceedingly clever etchings and woodcuts, after Raffæle, Titian, Rubens, Rembrandt, Cnyp, &c. As we cannot transfer any of these illustrations to our pages, we must refer our readers to the volume itself; with some of the concluding passages of which we shall close our notice.

"Objects drawn from nature possess a very characteristic difference from those drawn from the combinations of fancy, or from those images presented to the imagination. We find in sketches from nature many minute circumstances, a truth and precision, a variety and beauty, that objects drawn from memory, or those images under the guidance of the mind only, have no pretension to; the latter possess the general appearance merely like the confused character of nature presented to indistinct vision; or, if made out with detail, the minutiae contain a select set of touches or forms, become agreeable from habit, which constitutes mannerism; such imperfections can be avoided only by having accustomed the eye, in the first instance, to a scrupulous exactness in delineating objects from nature, as one or two parts left out may destroy the richness and variety of lines, and

an unequal proportion of the forms may deprive the copy of the truth and beauty of the original. These peculiarities are also to be examined and contemplated upon, that this character may be engrafted upon works of imagination."

But it is not nature alone that must be studied. A reference should be constantly made to the master-pieces of art.

"Raffæle, by taking advantage of the works of those who had preceded him, carried the art to a state of perfection, which the study of nature, notwithstanding his constant application to her, never could have enabled him to achieve; the contemplation of the fine works of antiquity created elevated visions of ideal composition, while his constant application to nature for the details enabled him to give a reality and identity to the creations of his imagination. Without the eye being made acquainted with the beauties of those who have advanced the art to its present state, either progressively, by studying the best works, or by commencing a course of drawing from antique sculpture, it will be impossible to select what is beautiful in nature, or be able to choose one point of view more interesting than another."

"The art of studying from nature may be therefore considered as implying that which we perceive through the medium of our own eyes, and those things made apparent through the spectacles of other men; for seeing nature does not merely mean seeing the exact length and breadth of any object, but means the power of discerning her beauties and defects, those portions which are to be preserved, and the mode of heightening their effect upon the eye of the spectator, and the several parts which operate detrimentally to the general arrangement of the whole, which are to be intercepted by other objects, or left out entirely. For, as the accidental combinations of nature are thrown together uncontrolled by the likings or dislikings of any one, the greatest study is necessary, so as to form a complete work which shall possess all the appearance of chance combined with the most skillful adjustment: for example, what a variety of appearances do not the effects of light and shade produce upon the same scene, viewed at various times of the day, or seen under the advantages or disadvantages of accidental arrangements of objects; this power of discernment is therefore to be acquired by the study of the works of those who have excelled in the different departments of the art, and afterwards perfected in searching out and contemplating the beautiful combinations which lie scattered in the endless varieties of nature: this mode of study alone can enable one artist to surpass another in the power of selection; and the same scene, bald and ineffective in the hands of one, may be rendered full and of rich effect by another who has watched a more favourable arrangement, and who has followed up and completed the various hints derived from accidental combinations. Thus, the study of nature is conducive to perfect the education of the eye, by careful investigation of her works ourselves, and by being able to comprehend and appreciate the works of those who have most successfully studied her; and this not in a lukewarm or superficial manner, but with that noble enthusiasm which stimulated the genius of Michael Angelo through a long life, and even, when deprived of the power of vision from old age, made him order his attendants to convey him to the gardens of the Medici, that he might feel and pass over with his hands the glorious remains of Grecian art, on whose statues he had founded his own education."

*Her Royal Highness the Princess Victoria.*  
Engraved by T. Woolnoth, from a Miniature by H. Colten. Ackermann and Co.  
A GRACEFUL and pleasing portrait; but we will borrow L. E. L.'s charming lines to describe it.

"Fair art thou, princess, in thy youthful beauty;  
Thoughtful and pure, the spirit claims its part;  
Gazing on thy young face, a nation's duty  
Bursts forth into the homage of the heart.  
O'er thy high forehead is the soft hair braided,—  
Be never darker shadow on that brow!  
Not yet one tint of youth's sweet hues is faded;  
The loveliness of promise lights thee now."

#### ORIGINAL POETRY.

CUPID DISARMED.

By Henry Brandreth,

(In illustration of a Landscape so called, by Arnald.)

NYMPH of the woods, with darkly-flowing  
tresses,

And robe of grace, that flutters in the breeze!  
Seekest thou Love, to court his soft caresses,  
Where, by calm waters, wave green myrtle-trees?

Or would'st thou rob young Cupid of his quiver,  
Bow, arrows—all that makes the bosom thrill?  
Armed or unarmed, by mountain, grove, or river,  
Spite of thy guile, Love will be victor still.

Sleep where he may, he's still of beauty dreaming;  
Whether tall cedars frown on Cashmere's rose,  
Or mirth and music, and gay banners streaming,  
Hail him as monarch, mid eternal snows:  
And wherefore, wood-nymph, steal away his quiver,

Bow, arrows—all that makes the bosom thrill?  
Armed or unarmed, by Ganga's sacred river,  
Or the dark Danube, Love will conquer still.

'Neath the cold moonlight, India's graceful  
daughters

Round starry Cama lead the lotus dance:  
Now the frail lamps of fate illumine the waters;  
Now, like twin fire-flies, beams affection's  
glance.

And would'st thou rob young Cupid of his quiver,  
Bow, arrows—all that makes the bosom thrill?  
Armed or unarmed, by mountain, grove, or river,  
Spite of thy guile, Love will be victor still.

E'en break the shafts and snap the bow asunder;  
Reigns there no Venus in the realms above?  
From pole to pole rolls on the awful thunder;  
Vulcan has forged immortal shafts for Love!  
Then wherefore, wood-nymph, steal away his quiver,

Bow, arrows—all that makes the bosom thrill?  
Armed or unarmed, by Ganga's sacred river,  
Or the dark Danube, Love will conquer still.

#### SKETCHES OF SOCIETY.

THE ASTROLABE OF SIR FRANCIS DRAKE,  
At Greenwich Hospital.

"She sent for him, and he came;  
With him, his astrolabe he name:  
With points and circles marvellous,  
Which was of fine gold precious."

Gower's Conf. Aman. B. 3.

IT is a curious fact, deserving of general notice, that amongst the many interesting relics preserved at Greenwich Hospital, in commemoration of the distinguished achievements of our great naval commanders, the Astrolabe of the famous Sir Francis Drake now forms a conspicuous and very important object of attention. It is deposited within a glass case upon a sort of tabular pedestal, which was erected for its reception, in the centre of the platform of the Painted Hall, in August 1831, on its presentation by his present majesty, who has, on many previous occasions, testified a particular pleasure in contributing to the memorials of British valour and enterprise collected at Greenwich Hospital. A suitable inscription round

the slab bears record of this very appropriate gift of a naval monarch to the maritime museum of the nation. The upper part of the pedestal is constructed in the form of a capstan (an engine used in raising the anchor at sea), and most appositely consists of "heart of oak;" the base is of imitation-granite; and the astrolabe rests upon a short rod placed in the centre of the slab, where, by an ingenious mechanical contrivance, it is sustained in an open position of its various parts, which would otherwise collapse, and thus present a *congeries* somewhat resembling the figure and arrangement of a watch, when closed; requiring to be separately opened, at each division, for inspection of the contents. This unique and truly interesting apparatus comprises the mariner's compass, sun-dial, ring-dial, quadrant, table of latitudes and longitudes, planetary sphere, lunar almanac, and other tables and instruments, forming the constant astronomical guide of the immortal Drake throughout his various expeditions, and which, being habitually suspended by a chain round the neck of the wearer, as a becoming addition to the dress of that period, was of easy reference in his observations a-shore as well as at sea. The different portions of its intricate interior, together with the case which incloses it, are constructed of the deeply alloyed gold employed in articles of jewellery during the early part of Elizabeth's reign; and on the dial appears the following inscription:—"Humfray Colle made this diall, anno 1589." It will be seen, on reference to the list of engravers annexed to Walpole's "Anecdotes of Painting in England," that the above artist was an eminent goldsmith and engraver, and held a situation in her majesty's mint. The device, on either lid of the case, implies a very suitable allusion to Sir Francis's projected enterprise of circumnavigating the globe; though, probably, meant only as a general illustration of the success usually attendant on indefatigable perseverance in any of the pursuits of life. It represents a lofty tree, at the foot of which a pair of idle squirrels are engaged in mutual frolic, satisfied with the vain enjoyment of the present hour, and unwilling to encounter the fatigue of scaling the heights above them; whilst, on the summit of the highest bough, are exhibited, by way of antithesis, a couple of laborious snails, who, by dint of long-continued and unwearied exertion, have at length surmounted all the dangers and difficulties of the ascent, and are apparently exchanging their congratulations on the accomplishment of their task; thus typifying, in a plain and characteristic manner, the important truth, so forcibly exemplified by the witty *Æsop*, under his well-known fable of "The Hare and the Tortoise:"—"that great natural abilities, without due application, will ensure no ultimate advantage to the possessor; while a constant and untiring devotion to the objects of our calling, however for a season retarded through an inferiority of genius, will eventually gain for us the elevation we seek, notwithstanding the seeming distance, circuitry, and numerous obstacles of the approach. There are many other emblematical figures engraved on the case; but whether they present any analogous reference to the above, it would be difficult to determine, as they are partially erased through the friction of the metal by long-continued wear; and the only further embellishment which attracts our observation is a cable, aptly introduced as coiling round the edge of the case, which is circular and richly chased. The following memorandum is engrossed on two cards of considerable size, suspended on opposite sides of the slab, and

refers to the manner of its preservation in later times:—

"This Astrolabe, constructed for Captain (afterwards Admiral Sir Francis) Drake, prior to his first expedition to the West Indies, in 1570, and subsequently preserved in a cabinet of antiques belonging to the Stanhope family, was presented, in the year 1783, by the Right Hon. Philip, fifth Earl of Chesterfield, K.G. on his quitting England as ambassador to the court of Spain, to the Rev. Thomas Bigsby, A.M. of Stanton Manor, Derbyshire, who had, in the preceding year, married the Hon. Frances Stanhope, widow, his lordship's step-mother. In 1812, that gentleman having ruptured a considerable blood-vessel, in anticipation of approaching death, gave it as a token of affection to his youngest brother, Robert Bigsby, Esq. of Lion-hill House, Nottinghamshire, the father of him who has the distinguished honour of presenting it to his majesty."

Of all the illustrious names which throw such splendour on the reign of Elizabeth, that of Sir Francis Drake stands pre-eminent. Whether we regard his undaunted courage and great nautical skill as the first English circumnavigator,—his fortitude and persevering industry, whereby he performed such brilliant naval achievements, acquired immense wealth, and ennobled his country,—or the vast extension of commerce produced by the important discoveries made during his indefatigable career of glory,—his character, for all that can exalt the hero and intrepid commander, is so firmly fixed in the hearts of his countrymen, that time can never tarnish his justly acquired laurels. It must be an object of national interest to preserve even the most inconsiderable relic, as a memorial of one who, by divine favour, was enabled to confer such permanent advantages on the state (for it must be remembered that he was the author of our commerce in the East as well as the West), and a very high degree of estimation must be therefore due to those distinctive records of his exalted skill and enterprise, which are presented in his various astronomical tables and instruments. Such apparatus, besides being peculiarly characteristic of the genius and pursuits of the renowned individual to whom they formerly belonged, are valuable, also, as affording interesting *data* of a bygone state of science: and a prouder evidence of their importance, as objects of national esteem, cannot be adduced, than is derivable from the honourable station assigned to them by his majesty in Greenwich Hospital, where they will be transmitted to posterity as an everlasting monument of the fame of Sir Francis Drake, rendered yet more interesting and valuable to the public, as the gracious and appropriate gift of King William the Fourth.

#### THE DESCRIPTIVE !

How luckless is the descriptive writer whose pages fall into the hands of the unimaginative! The happy phrase, "picture to your imagination," may in vain appeal to those who literally expect that they shall be made to understand without mental exertion. A scene is in my recollection, which the hope of enlisting that sympathetic vision, enabling the reader to become the companion of the traveller, induces me to describe; merely premising that, should I prove perfectly unintelligible, a result not at all improbable, I trust those who peruse this sketch will be kind enough to believe, that the fault rests with themselves—not with the narrator. We are in the little island of Ascension—Fifteen hundred feet above the level of the sea;

and deeply set in a mountain range, the extreme height of which rises to nearly twice this elevation, is a vast circular hollow, doubtless the now barren womb of an ancient crater. So much being evident to the most superficial observer, we may easily guess the appellation that has been assigned to it. Never was there such a formation on island or continent, inland or coastward, but it was entitled and called, "The Devil's Punch-bowl." Now, just fancy this thirsty gentleman's punch *brulée* boiling over, and flowing down the side of the aforesaid bowl even unto the sea; thus wasting no small drop of the crater. Again, paint to your imagination—in water-colours, of course—a huge water-spout, one of Nature's journeymen, wandering about out of employ, ready for a job, no matter what. Well, over the sea it comes like a Corinthian column, with an over-proportioned capital, or a Broddignag cauliflower with an elongated stalk. "Hey day," said the genius of the water-spout: "what! another of the devil's punch-bowls? Here goes, to water his grog for his misdeeds." And with this pertinent, or rather impertinent remark, down came the flood like a thundering avalanche—splash, dash, hiss, and bubble, generating more steam than would supply all the locomotive engines of all the railroads in the world for twenty years. In a second, the lava-bed was fairly blown up, and rocks and cinder-hills scattered in every direction. Yes! here was "the devil to pay," and no wonder, for the loss of his tippie. However, as the water-spout, not finding more mischief to do, went off in the vapours, and the Old Gentleman was speedily burnt out in that quarter, it is supposed they never came to a proper settlement. This I take to be about the occasion of the vast ravine I shall attempt to describe; though, to be sure, the career of a few tropical torrents, since this primary cause, may have some slight sprinkling to do with the appearance presented, seeing that sailors declare of such showers, three drops go to a bucket-full. But it is now time to examine the effect produced by all this convulsion. If you please, then, we will descend by the irregular superficies of an almost perpendicular wall, composed of scoria, which, commencing some hundred feet from the edge of the Punch-bowl, introduces us to the higher extreme of an inclined plane, running nearly a mile in a direct course to the sea. I have taken the liberty of calling this formation an inclined plane, as thus it might have been when the surface of the devil's superfluous punch had just cooled, and before the water-spout paid its unceremonious visit: but now, never was inclined plane so little inclined to plain; for the whole course is strewn with immense blocks of lava, many tons in weight, among which we must wind our way carefully, lest the smaller portions of obsidian wound our feet, the path we tread being, apparently, composed of broken wine-bottles. Where the detached masses, sometimes towering above our heads, allow us to gaze on either side of the gorge we are descending, on one hand, we behold black continuous heights of unvarying hue; while, on the other, the lava crags, assuming divers tints of red or gray, mingled with more murky shades, are rent unto fantastic forms, giving to view smaller and more precipitous gullies: these bear on their cindery beds mighty rocks, which appear so loosely poised, that they remind us of ships ready to launch from their slips; and we almost momentarily expect them to thunder down, and join their monster brethren in the larger ravine. Rather unpleasant to be in the anticipation of such an event; so, if you please, we will get out of this

scene, together with its description, as soon as possible.

R. J.

### VARIETIES.

**Weather-Wisdom.**—Our prophet was not sterling for the last week. The 4th had no thunder-showers; the 6th was not changeable; and the 8th, instead of being warm and pleasant, was most unseasonably cold. Lieut. Morrison, however, says (and it will be amusing, at least, to compare him with the annexed from Mr. Murphy), "10th, warm, high wind, or rain and general thunder storms. 11th brings sudden showers: these will be frequent towards the middle. A change on the 15th. Cool rains, very gloomy—long low clouds about."

To the Editor of the Literary Gazette.

"London, 6th June, 1837.

"Sir,—Availing myself of the suggestion you were so good to throw out in acknowledging the receipt of my note of the 1st instant, in the last Number of the *Literary Gazette*, viz. that if any more of my calculations, as connected with approaching changes of the weather, were sent to you, they would be attended to, I take the liberty to enclose herewith a *Weather Table* for the present month. It is, as the former, founded on calculations connected with the assumed influence on the weather, exercised by the meteoric action of the moon; and will give you an opportunity of judging as to the degree of credit to which these principles of calculation are entitled: the indications of the weather marked in this table being only intended in the light of approximations, or mean results. And, as I am not acquainted with the indications of the weather put forward by M. Arago, or Lieut. Morrison, so frequently noticed in the columns of your journal; and that I am totally ignorant of the principles of calculation resorted to by them, I shall not, I trust, be accused of plagiarism by either of those gentlemen, in the event of any conformity—a circumstance I much doubt of—appearing between their predictions and mine.—I have the honour to be, &c. P. MURPHY."

[We have only copied from the present date, as, though written before, the preceding nine days would now be *posthumous*.—Ed.]

*Weather Table for June 1837, by P. M.*

Days.	Weather.	Days.	Weather.
10.	Fair.	21.	Rain.
11.	Rain.	22.	Fair.
12.	Changeable.	23.	Changeable.
13.	Rain.	24.	Fair.
14.	Rain, and probably a gale, or thunder.	25.	Rain.
15.	Fair.	26.	Rain.
16.	Rain.	27.	Rain, and probably thunder.
17.	Changeable.	28.	Rain.
18.	Rain.	29.	Changeable.
19.	Changeable.	30.	Rain.
20.	Rain.		

**Historical Engravings.**—Many of our readers are aware that a very extraordinary collection of engravings were in the possession of Mrs. Sutherland, of Merrow, Surrey, which we now learn from the *Oxford Herald*, has been presented to the Bodleian Library of Oxford. We read that, "In the convocation holden on Thursday last, the University seal was affixed to a letter of thanks to Mrs. Sutherland, for her munificent donation of 18,700 prints and drawings, being an illustration of Clarendon's and Burnet's Histories, in 61 volumes, to be placed in the Bodleian Library."

**The Stadium.**—On Thursday, there was a day fête given by Baron Berenger, at Cremorne House, being the first of the season since the improvements of the garden. The beautiful site of these grounds, on the banks of the Thames, and the admirable manner in which they are laid out, render them very popular and attractive: on this occasion they were well filled. One performer, who was to walk through fire, made a complete Moloch of the business, and gave the visitors a hearty laugh. In all else the entertainment went off capitally.

**The Hippodrome.**—The sports of the Hippodrome, on Saturday last, went off with great éclat. The day was very auspicious, and the spacious grounds, animated with company, and commanding fine views all around, presented

a gladdening scene. The races and steeple-chases were well contested; and the latter, in particular, seemed, from their novelty to most of the spectators, to create a great deal of interest. To the honour of Mr. Whyte, the proprietor, be it stated, that neither gambling-booth or sale of spirits were permitted, though he was tempted by large offers to allow both trades to be exercised; meaning the place for manly sport and healthful recreations to all classes of our crowded metropolis, he could not adopt a principle which would entitle him to higher patronage and encouragement.

The *Ascot Cup* of this year deserves notice in our columns, among the most elegant productions of art, perhaps, ever designed for a similar purpose, and one which we owe to the fine taste of Count D'Orsay, who made the original drawing for it. It consists of two centaurs, side by side, but turned in opposite directions, admirably sculptured, and supporting a beautifully shaped shallow vase, to hold flowers or fruits, for the centre of a table. Even Lord Westminster, with all his wealth, must be esteemed fortunate in winning such a prize—certainly the most appropriate and classical that has rewarded the victor in any English race.

**Sir Graves Houghton.**—It is always with pleasure we notice literary or scientific honours bestowed by foreign nations upon our distinguished countrymen; and, therefore, the election of Sir Graves Houghton to be a corresponding Member of the Royal Academy of Sciences of Berlin, finds a welcome record in the *Literary Gazette*.

**The Printers' Pension Society.**—The last report of this Society, we are glad to say, marks its progressive improvement in means, and consequent extension of ways, in which to make its benevolence valuable to the deserving objects whose sufferings it was formed to alleviate. The committee have sent us notice of their aquatic excursion, for the benefit of the funds, on Monday, when we trust that fine weather, and crowds of friends, will attend their charitable effort.

**Ashmolean Society, May 22.**—At this meeting the secretary read a paper, written by the late Mr. Titby, which gave an account of an Arabic translation of the conics of Apollonius, prefaced by two treatises; one on methods of drawing the conic sections, translated from Clavius; the other, on a property of triangles, by Binos Mousa. The diagrams of the MSS. were frequently wanting, or incorrect. The terms for the different lines are literally translated from the Greek, with the single exception of focus, with the important properties of which Apollonius was very imperfectly acquainted. The paper concluded with recommending the publication of scientific works in Arabic, as a means of increasing the knowledge of the people of India. Dr. Daubeny then gave an account of, and exhibited, an instrument which he has invented, for the purpose of bringing up water from great depths.—*Oxford Herald*.

TO WILLIAM WORDSWORTH,
